## Order of the Secretary of War to Mine Planters.

### EXTENSION OF REMARKS

OF

### HON. ALBERT JOHNSON,

OF WASHINGTON,

IN THE HOUSE OF REPRESENTATIVES,

*Friday, May 19, 1916.*

Mr. JOHNSON of Washington. Mr. Speaker, I have twice called the attention of the present Congress to a remarkable order issued on April 28, 1916, by the War Department. The order bears the signature of Secretary of War Baker, and calls upon the captains of the mine-planting ships to discharge immediately all members of the crews of these ships who are not citizens. Then follows this remarkable statement:

By citizens is meant American-born citizens.

The issuance of this order resulted in the discharge of quite a number of trusted and long-employed employees of the mine planter *Ringgold*, including Swedish born, Finnish born, Danish born, and others born abroad, but all naturalized citizens of the United States.

Mr. Speaker, the United States can not, under the Constitution, discriminate between its citizens in this manner; and this order was not only illegal but extremely unfair, and without the slightest warrant. The matter first came to my attention through the following telegram:

We, the undersigned members of the crew of the United States Army mine planter *Ringgold*, have been notified that we will be discharged because we are not American born. Being naturalized citizens of the State of Washington, we think this gross discrimination against foreign-born citizens, and we therefore ask you to do us a favor and look into this matter for us.

Very respectfully,

JOHN W. CARLSON.
ALFRED CHRISTIANSON.
CARL THOMASSON.
L. HERMANSEN.
WILLIAM MATHEON.

Carlson is a native of Finland, Christianson was born in Denmark, Thomasson in Norway, Hermansen in Norway, and Matheon in Finland. All are naturalized citizens. A few days after receiving the telegram Congressman JOHNSON received the following letter from Anton Greenroos, who also had been discharged because, although a naturalized citizen, he was not native born. His letter states the situation exactly. It follows:

HON. MR. JOHNSON,
*Washington, D. C.*

DEAR SIR: This is to let you know that I was a member of the civilian crew of the mine planter *Ringgold* at the time of my discharge on account of my foreign birth.

I was not present at the time when the telegram was dictated and sent to you, so my name was not included in it; but I will now state fully all details of my residence in this country from the day I landed to the date of my discharge.

I landed in Boston in 1903, then went to New York and took out my intention papers on the 20th of October, 1903. I started work on the mine planter *Ringgold* November 10, 1904, as fireman; was then promoted to oiler and worked in that position until May 7, 1910.

I took out my citizenship or naturalization papers May 7, 1910, and became assistant engineer on that date. Have been on the same vessel up to the time of my discharge.

I was born in Finland. Always since I became a citizen of this country I have tried to the best of my ability to promote its welfare and to do what is right. I don't say this on account of the position. I would point out that though I have been a citizen of the United States for several years I have received no more consideration in this matter than if I had been a newly landed immigrant.

Hoping to hear from you what is being done in regard to this matter, I remain,

Respectfully, yours,

ANTON E. GREENROOS,
*Seattle, Wash.*

In discharging Greenroos and the others Capt. Colley, commanding the *Ringgold*, gave each a certificate of character, and certified to their faithful performance of duty. Capt. Colley's letter to Greenroos concludes with the following paragraph:

He is being discharged this date due to no fault of his own. It is for the convenience of the Government, due to the fact that he is not an American-born citizen.

The contention is made that the United States, with sixteen and a half million foreign born within its borders, nearly all of whom are naturalized, can not in fairness make such discrimination between its citizens. A citizen is defined by the Constitution, and each citizen has equal rights.

Commenting on the War Department's order, the Bellingham (Wash.) Herald printed the following editorial:

Just why the Secretary of War has made such an order is hard to understand. There are no more loyal citizens of the United States than the Scandinavians. But from a political standpoint the administration probably believes it is "playing safe" with such an order, for the rea-

son that Scandinavians are generally Republicans, and so many assaults have been made on other "hyphenates" that a sweeping order to discharge those of foreign birth from Government service will not prove expensive from a voting standpoint. But it is none the less outrageous and will be resented.

As a contrast to the methods by which foreign-born citizens are debarred from one branch of the Army, the following telegram stands out in strong relief:

TACOMA, WASH.

In order that they might enlist for service in Mexico, two foreigners appeared at the office of County Clerk McKenzie yesterday and took out their first papers, declaring their intentions to become citizens of the United States. One was Enoch Arvid Ablon, age 33, who has been in this country two years, coming from Sweden, and the other was Joe Maccarto, age 23, an Italian, who has made his home here since 1904.

## Condition of Old Indians in the Northwest.

### EXTENSION OF REMARKS
OF
### HON. ALBERT JOHNSON,
OF WASHINGTON,
IN THE HOUSE OF REPRESENTATIVES,

*Friday, May 12, 1916.*

Mr. JOHNSON of Washington. Mr. Speaker, during the consideration in the House of the Indian appropriation bill I had occasion to point out the sad condition of many very old Indians in my part of the country. I undertook to show that although comparatively wealthy in this world's goods, they were often at the actual point of starvation through inability to make use of that which is theirs—and all through burdensome and unnecessary governmental red tape.

I presented several actual cases of Indians, some 100 years old, with means, yet beggars. Now I wish to present another case which has come before the commissioners of Grays Harbor County, Wash. I present a statement from the Aberdeen (Wash.) Daily World:

A peculiar phase of the Federal Indian laws is shown in the case of Dud Yerks, white husband of a Taholah Indian woman, now in the Hoquiam general hospital as a county patient, although the family owns timberland on the reservation valued at upward of $7,000. Yerks's illness will deprive his wife and her child of their chief breadwinner, and if they happen to be out of funds they will have to accept charity despite the fact that Mrs. Yerks owns 80 acres of valuable timberland. The law provides that Indians must hold their claims for 24 years before they can dispose of them.

County Commissioner Phil S. Locke, speaking of the Indian laws this morning, said that the chief difficulty seems to be that the laws are drawn up in the form of a code intended to suit the Indians of the West as well as of the Middle West. "The trouble with this code," said Locke, "is that the Federal Government authorities are seeking to run the affairs of the Indians of the timber sections just as they do those in Oklahoma and other Middle West States."

Locke and others are of the opinion that the Indians ought to have some way of securing money when in need, especially when they hold timber tracts worth thousands, but which they are prohibited from selling.

## Child Labor Bill.

### EXTENSION OF REMARKS
OF
### HON. EDWARD KEATING,
OF COLORADO,
IN THE HOUSE OF REPRESENTATIVES,

*Tuesday, August 8, 1916.*

Mr. KEATING. Mr. Speaker, we are about to pass the Federal child labor bill. I introduced this bill on the opening day of the session, and on Wednesday, February 2, 1916, it passed the House by a vote of 337 to 46. On August 8, 1916, it passed the Senate with certain amendments, and to-day the House is placing the seal of its approval on the bill as amended by the Senate. Within a few days it will be signed by Woodrow Wilson, President of the United States.

I want to take advantage of this opportunity to reaffirm a statement that I have repeatedly made since the bill passed the Senate: The lion's share of whatever credit may attach to the enactment of this legislation belongs to the President of the United States. I believe I am well within the facts when I say that if he had not intervened on behalf of the child labor bill its opponents would have succeeded in pigeonholing it for this session, and in all probability would have talked it to death at the December session.

Presidents have been frequent visitors to the great gray Capitol of the United States. They have come on many errands. Some have hastened here to urge that the interests of business be safeguarded; others have pleaded that labor might be protected; some have demanded war, and others have prayed for peace, but Woodrow Wilson, of New Jersey, was the first Chief Executive of this Nation who journeyed to the Capitol for the sole and exclusive purpose of demanding that the boys and girls of this country be given a chance—the chance that God in his mercy and wisdom intended should be theirs.

History will have much to say concerning this great leader of Democracy, but I do not believe there will be any page of that fascinating chronicle that posterity will linger over more tenderly and affectionately than the one that tells the story of how, when a struggle was being waged in the Senate of the United States between those who would conserve and those who would exploit the childhood of the Nation, Woodrow Wilson put aside the most perplexing problems that ever beset a Chief Executive and entered the lists as the champion of the tots of industry who were incapable of waging their own battle.

The mothers of the land blessed him when he kept us out of war with Europe, their prayers ascended to high heaven in his behalf when he proposed a peaceful solution for the Mexican difficulty, and to-day, from Maine to California, they are calling on God to safeguard him because he has become the "emancipator of children in industry."

THE SOUTH AND CHILD LABOR.

Mr. Speaker, a persistent attempt has been made to brand this bill as sectional legislation. Its opponents have insisted that we were striking at the South, and I am inclined to think that some of the gentlemen who voted against the bill permitted themselves to be influenced by this sophistry.

This is not sectional legislation. It is Federal legislation, and its beneficial effects will be felt as much in the West and East and North as in the South.

Fortunately those who sought to confuse the issue failed to accomplish their object, as is well illustrated by an analysis of the vote in the House and the Senate.

Of the State delegations in the House only four—those of North Carolina, South Carolina, Mississippi, and Georgia—contained a majority opposed to the bill. All the other State delegations had a majority in favor of the bill, some of them a solid vote for the bill. The 45 southern Representatives who voted against the bill are only one-third of the southern representation in the House.

In the Senate, counting those who voted for or against, or were paired for or against the bill, we find that out of 32 southern Senators 10 voted against the measure. Of the Democratic membership of the Senate 11 out of 56 were recorded against the bill and of the Republican membership 4 out of 40 were recorded in opposition to the bill.

On the day I introduced the bill in the House, Senator OWEN, of Oklahoma, a southerner born and bred, rendered a similar service in the Senate. While the measure was pending before that body the task of explaining and defending its provisions devolved upon Senator JOE ROBINSON, of Arkansas, a brilliant and courageous son of the South.

No measure ever had a more loyal champion, and it is particularly gratifying to the friends of child-labor legislation that the work of this distinguished Senator has received nation-wide recognition. The following editorial from the New York Times emphasizes that point. The editorial is headed "A southerner against child labor," and reads as follows:

There is not a little of significance in the fact that it was a southern Senator who undertook the defensive explanation of the child-labor bill upon which President Wilson is urging Congress to act at once. The effort to exclude children from factories has encountered of late its chief antagonism in the South, the northern manufacturers having for some time past been content—or discontent—to accept such restrictions as were inevitable and to do little more than to call as much of attention as they could to the unfairness of compelling them to compete with manufacturers still permitted to use child labor. That is a just grievance, as industrial grievances go, and though it could be met, of course, and has been, by denial of any man's right to do a wrong thing merely because other men were doing it, still that reply does not meet satisfactorily the situation created by the discrimination in question.

That Senator ROBINSON was able to show, by many quotations from southern papers, the existence in the South, as in the North, of a widespread sentiment against permitting—which is the same thing as compelling—children to work in mills will be hailed with satisfaction by all in both sections of the country who have come to realize the many and serious evils incidental to a premature assumption of life's burdens.

When the overwhelming majority of the southern Senators and Representatives supported the child-labor bill they were voicing the sentiment of their constituents. To say that the people of the South are in favor of permitting greedy and unscrupulous employers to exploit their children is a cruel libel which will

not be accepted for a minute by anyone who is in touch with southern sentiment.

We may take it for granted that the people of the South speak through the newspapers of the South, and with the permission of the House I will insert as part of my remarks editorials from the leading papers of the southern States advocating the passage of this bill.

Before doing that, Mr. Speaker, I desire to insert an article on the child-labor bill from the pen of Frances Wayne, which appeared in the Denver Post, of Denver, Colo. It follows:

No more crying of children!

No more going to work at dawn and dragging away at dusk for little people who have never had time to learn the meaning of childhood!

No more exploiting of children by men greedy for wealth and more wealth!

No more chance for father to sit around all day while sonny and sis toddle to the factory, mine, mill, or cannery to earn his and their living!

No more hideous slavery of childhood to bring the blush of shame to the name and fame of this, our country!

All the misery and cruelty of machinery, bad air, crowding, body-killing work done, of childhood done away with, ordered abolished by the most powerful voice of this world to-day—the voice of Woodrow Wilson.

Since the world began and men wanted something for nothing, children have been put to work. They were usual features of the scenery of industrialism. Then one day civilization found its ears opened to a new note when Elizabeth Barrett Browning asked:

Do you hear the children weeping, O my brothers,
Ere the sorrow comes with years?
They are leaning their young heads against their mothers,
And that can not stop their tears.
The young lambs are bleating in the meadows,
The young birds are chirping in the nest,
The young fawns are playing with the shadows,
The young flowers are blowing toward the west—
But the young, young children, O my brothers,
They are weeping in the playtime of the others,
In the country of the free.

It was in 1843 that Elizabeth Barrett Browning asked the British Government what it intended to do for the children in the mines and factories of Great Britain, and in a flame of anger she drew the picture of existence as these children endured it.

SEVENTY-THREE-YEAR CRUSADE WON BY WILSON.

Seventy-three years is long enough for the sacrifice of thousands of children to greed, but at last it has come to an end or, under the provisions of the Keating child-labor bill, it will come to an end in one year from the time the signature of Woodrow Wilson is affixed to make it a law.

The end of child labor was distinguished when Elizabeth Barrett Browning wrote her startling poem; it became more clear when former Senator Beveridge, of Indiana, made a tour of the South and with his own eyes saw thousands of children slaving in cotton mills, in canneries, and in the East and Middle West found them working long hours in mines.

On his return from that tour Senator Beveridge introduced a bill abolishing child labor.

The South and Pennsylvania rushed against that bill like the Germans rushed through Belgium and left it in tatters, and no President lifted his voice in behalf of the children.

Beveridge out, Representative Palmer, of Pennsylvania, took up the cudgels for the children. He introduced a bill in the House abolishing child labor. When his bill had met with the fate of the Beveridge bill, Palmer openly charged Senator PENROSE with having used more than $2,000,000 to encompass his defeat for reelection to Congress and to kill the child-labor bill.

Then Colorado stepped into the fray for the children—Colorado, with the best child-protection laws of any State of the Union, has sent EDWARD KEATING to Congress from the third district, and it was EDWARD KEATING who took up the fight where Mr. Palmer had been obliged to relinquish it.

VOICES OF LITTLE ONES TUGGED AT HEARTSTRINGS.

There was no mention of child labor in the Democratic platform on which Woodrow Wilson and his party had walked to power. But Woodrow Wilson at times is a law unto himself. He is a stickler for State rights, as witness the suffrage problem, but Woodrow Wilson, like former Senator Beveridge, had made a tour of the South and had seen things which did not look well in his sleep.

President Wilson knows that the women of the country desire the ballot for a number of reasons, chief of which is to use the vote in behalf of enslaved childhood. In the suffrage States and in other States where women have been devoting energy and talents to government, legislation has been devised to protect children in the rights of childhood, but the process has been slow and the children of the South and of Pennsylvania and other Commonwealths have been left at the mercy of greed.

What cared Woodrow Wilson that the South was standing on its State-rights prerogative and denied to Congress the power to send children into the sunlight and to school?

What cared he for the limitations of a party platform, when the voices of children were crying to him for help?

Not a snap of his finger cared Woodrow Wilson for any of those things when he thought otherwise.

NOW WOMEN MAY TURN EYES TO NEW GOAL.

And so the United States Senate received orders to pass the Keating child-labor bill without delay, let the South and Pennsylvania roar as they would. One sharp command from the Wilson voice, one stroke of the Wilson pen, and the children are released to childhood and the energies of philanthropists and social workers and women voters may turn to other channels. The cause is the greatest on earth, because no nation is greater than its children's opportunity.

There are plenty of laurels for the brows of the champions, plenty for the brow of Beveridge, plenty for the brow of Palmer, plenty for the brow of KEATING, and a great white sheaf for the memory of Elizabeth Barrett Browning.

I also desire to insert a letter on the child-labor bill addressed to the New York World by Hon. James M. Curley, for many years a distinguished Member of this House and now mayor of the city of Boston. Mr. Curley's article is as follows:

TO THE EDITOR OF THE WORLD:

The greatest moral, economic, and political victory achieved by a party has been won through the courageous Democratic leadership of President Wilson in the assured enactment of the child-labor bill. Think well of the tremendous issue at stake. Over 500,000 little children are enfranchised, and the little hands that have labored in an eternal midnight at the bottom of the mines will now enjoy the sunlight, and little lives torn and emaciated by the exacting labors under the pitiless heat of the southern mills—operated by northern capital—in the still watches of the midnight hour will now rest in the manner that Divine Providence intended when the world began.

I have no words to express my enthusiasm. God willing, I hope to discuss this great moral and economic issue demanded and secured by the Democratic Party of this country upon every platform in Massachusetts during the coming fall.

Honest labor will again receive its just reward. Honest hearts and willing hands, ever ready to accomplish the toil for the Nation, will again receive a just return, and wages will not be materially lowered by reason of the injustice of child-labor proposals.

Sometimes when I have thought of the little children reaching the spindles in those southern cotton mills resting about on a level with their heads, under the glaring light of huge electric arcs, in stifling heat, in the dead watches of the night, it seemed to me that northern capitalists who were willing to accept such blood money in dividends were almost as guilty as those soldiers who stood helpless at the foot of the cross when the Saviour of Mankind was crucified.

I am especially gratified by the provision that will prevent children under the age of 16 years working in either mines or quarries. This means an utter and entire change in the conduct of anthracite mines of Pennsylvania, where there has been a shameless disregard of every moral right to which children are entitled, and the toll of little lives in tribute to the wealthy coal barons of this country will cease.

There has been a most pernicious abuse of the labor of children in the canneries situated in various parts of the country, and I am pleased to note that under the provisions of the Keating child-labor act this wearisome toil at a starvation wage will cease, because all children under 14 years are prohibited from such labor. The provision reads, "mill, cannery, workshop, factory, or manufacturing establishment," and will absolve the little ones who in some States have worked in sheds, because under a State law a shed could not be called a cannery.

The withholding from interstate commerce of the labor of children under 14 years is a most effective instrument, and in this provision Senator OWEN and Congressman KEATING made their strongest winning fight.

I also note with pleasure that no child between the ages of 14 and 16 years shall be employed more than eight hours a day. This is a most excellent provision, for there have been shocking abuses, especially in the South, in the hours of duration at which children have toiled.

Another excellent provision is that no labor of children shall begin before 6 o'clock in the morning or after 7 o'clock at night. This will effectively prevent the night labor of children in Southern mills, which has been the curse upon our country.

I have addressed strong messages of congratulations to both Senator ROBERT L. OWEN of Oklahoma and Congressman EDWARD KEATING of Colorado, my personal friends, upon their great victory. They deserve the hearty acclamation of every self-respecting citizen.

JAMES M. CURLEY,
*Mayor of Boston.*

BOSTON, *August 9.*

And now, Mr. Speaker, I desire to insert editorials from various southern newspapers illustrative of southern sentiment on the subject of child-labor legislation:

[From the Asheville (N. C.) Citizen.]

THE CHILDREN WIN.

The announcement that the Democratic Senators favoring child-labor legislation, headed by Senator JOHN W. KERN, of Indiana, had determined to push the Keating bill through at this session will come as welcome news to all who have labored unceasingly in behalf of suffering childhood. The victory has not been an easy one, by any means. The general public is aware that the most powerful influences were brought to bear in an effort to stifle all action on child-labor legislation at this session of Congress. When the situation looked darkest President Wilson went to Congress with the urgent request that the Keating bill be passed at this session, and he made it clear to Democratic Senators that they could not afford to evade their obligations to the country in this matter.

While there is glory enough to go around for all supporters of the Keating bill, the credit for victory must lie largely with the President and with Senator KERN, that tireless and energetic legislator from Indiana, who has the happy faculty of being nearly always on the right side of every national question. Senator KERN'S Democracy has been always of that unquestionable type which has endeared him to the people of his own State and has made him a national figure.

While all who have worked so zealously in behalf of the Keating measure, which would forever end child slavery in this country, have a proud share in this signal triumph over the most powerful interests that have yet arrayed themselves against national legislation, they will not begrudge the tribute which is due the President and Senator KERN. Had it not been for the watchful insistence of the latter that the bill be passed at this session, the President's request would have been lost sight of in the senatorial caucus.

Thus there is added to the long list of Democratic achievement the enactment into law of a bill which sounds the death knell of traffic in childish bodies. Hereafter mill, mine, and factory owners will have to pay living wages to full-grown men and women, instead of dwarfing the citizenship of the future by employing children in order to swell the profits. For such as these there will be no sympathy. They have bargained and trafficked in the children of the Nation and have brazenly fought every effort made to better the condition of these little ones. Now for them it is Waterloo, everlasting and glorious.

[From the Shreveport (La.) Journal.]

THE CURSE OF CHILD LABOR.

President Wilson is incontestably right in demanding from Congress a measure of child-labor reform which the national Democratic Party has promised the people. If the Senate permits a few selfish Members of that body to stand in the way of enactment of a satisfactory Federal child-labor statute, it will be doing the cause of the child worker an almost irreparable injury and, at the same time, will be shaking public confidence in the national Democracy. We can imagine nothing that would be of greater service to the Republican Party in the national campaign than Democratic repudiation of a covenant with the people affecting the moral and physical well-being of hundreds of thousands of youthful toilers, whose mute appeal for human sympathy and protection should silence every argument for maintenance of existing conditions in the child-labor marts of America.

—

[From the Norfolk (Va.) Dispatch.]

It is no credit to the South that any of its Representatives in Congress are opposed to a child-labor bill. No section should thrive on the toil of human beings.

—

[From the Shreveport (La.) Times.]

PASS THE CHILD-LABOR BILL.

President Wilson deserves the greatest commendation for his efforts to force a reactionary Senate to consider the Keating-Owen child-labor bill, which has been pending before that body since February.

A highly organized and well-paid lobby, supported largely by southern cotton-mill owners, who object to losing the profits on exploited children, has been successful so far in preventing action on this legislation. Now they plan to "postpone" the bill until the short session next December, and then talk it to death in a filibuster. There is no other conceivable reason why they object to its consideration at once. If it comes to a vote in the Senate the vote for it will be overwhelming. Few Senators will dare record themselves as in favor of child exploitation if it comes to a show-down.

The bill is exceedingly reasonable in its provisions. It prohibits the interstate shipment of commodities produced by the labor of children under 16 in mines and quarries, or under 14 in mills and factories; prohibits night work of children between 14 and 16; and provides an eight-hour day.

There is no form of preparedness more vital than is provided in legislation of this kind. The future of America depends on the kind of race that inhabits it. And the race is absolutely dependent on the children.

The gentlemen who want to grind profits out of the toil and blood of little children are as unpatriotic as a traitor who sells military secrets to an enemy in time of war.

Most important of all, the children are entitled to playtime, recreation, and education. The only product worth while for a nation is human welfare. And the children are capable of producing the largest amount of that valuable commodity. A nation which permits its children to be exploited is growing poorer every day in the only commodity it is worth while to produce. No matter how "great" it may be in terms of exports and imports, national wealth, crops, and other commodities—if it is producing a deficit of human happiness, it is a world failure.

Pass the child-labor bill! It is up to you to see that it does so!

—

THE CHILD-LABOR LAW.

[From the Memphis (Tenn.) Commercial-Appeal.]

As long ago as last February Congressman KEATING, of Colorado, introduced into the House a bill intended to control child labor. The House passed the bill and sent it on to the Senate. Because of its conditions it was referred to the Committee on Interstate Commerce, and there it was "put to sleep," to use the popular term for such sequestration.

The bill is most carefully drawn to avoid treading on that highly prized principle of Democracy, State rights.

The Government can not interfere with the individual State's prerogative in dealing with its own children. Unless the States themselves enact protective legislation for their children and minors the manufacturers can snap their fingers at any outside orders. But there is a way to reach them through their purses, and that way the Keating bill chose.

For it lies in the province of the National Government to say what shall and shall not be handled in interstate commerce. There is where it had the whip handle on the manufacturers and miners who are sapping the vitality from the youth of so many States by child labor. It is supreme when it comes to such regulations.

Of course, no manufacturer with business acumen can afford to run his plant for local home trade; there would not be enough of this to justify either his investment or his ambition. That is where the Government gets its hold on him.

And that is why this Keating child-labor bill has been in the hands of the Interstate Commerce Committee.

But its long stay there is becoming a public scandal. The childhood of the country, that part of it that is held in bondage by the overlords of shop and mill, is being drained of joy and happiness and virility. Every day the bill is held up and its protection denied to them they are sinking deeper into that physical and mental lassitude that comes of overwork.

The President is urging the passage of the bill and the people should back him up in a general demand for it. They say the soldiers in the trenches are "cannon fodder"; with equal grim truth we may call the children in the mills "factory fodder." Good red American blood is too good and too precious to the Nation to be thinned and wasted thus in the early days of life.

If Congress does nothing else before it adjourns it ought to enact this child-labor bill into a law that will protect the helpless childhood wherever a factory sets up its spindles or a mill or cannery throws the shadow of its smokestack.

—

[From the Raleigh (N. C.) Observer.]

SENATE'S DUTY PLAIN.

The Washington Post can not be accused of hostility to capital. Rather, it has always been the champion of capital. It has consistently argued for the manufacturer and for all possible consideration that the Government can give the employers of the country.

The Post is not afraid of the child-labor bill. The measure which has been put through the House should also be passed by the Senate, the Washington paper says. It states the whole case when it says: "The mills and factories will survive the hardships which may come to them. The injustice that may be done to children in some cases will be more than overbalanced by the benefits that will accrue to most of them."

The friends of the child in North Carolina regret that an adequate law was not passed for this State. They would have preferred for the deserved consideration for the little ones in North Carolina to have come at the hands of the State. But the State not having seized its opportunity, childhood's champions in the State are willing to see the desired reform come through Federal sources. They do not anticipate any of the accompanying evils which the foes of the legislation predict.

The bill should become law. The country owes it to the child. As the Post says, the benefits will overbalance the disadvantages. The Senate's duty is plain.

—

[From the Greenville (Miss.) Democrat.]

THE CHILD-LABOR LAW.

The Vicksburg Herald comments on the attempt to hold up the passage of the child-labor law in the Senate, and the efforts of the President to have the bill passed as a fulfillment of the party's platform pledges, as follows:

"According to Washington dispatches, 'the Democratic leaders are worried over the holdup of the child-labor bill by a small group of cotton-mill operators.' The remark is deemed warranted—that when the party platform was charged with an enactment of 'an effective child-labor bill' not one of these 'cotton-mill Senators' raised a chirp against it. Then was the time, and the party convention was the place, to oppose such a measure as unconstitutional or violative of party principle. But it is in the Senate that pledges whose nonfulfillment handicaps the party fail. The House has long since passed such a bill. Aroused by criticisms of the Senate's holdup, the President seeks to compel action that will remove a campaign stumblingblock, and the press and the public should back him up against 'the small group of cotton-mill Senators.'"

—

[From the Laurel (Miss.) Leader.]

PASS THE CHILD-LABOR BILL.

President Wilson deserves the greatest commendation for his efforts to force a reactionary Senate to consider the Keating-Owen child-labor bill, which has been pending before that body since February.

A highly organized lobby, who object to losing the profits on exploited children, has been successful so far in preventing action on this legislation. Now they plan to "postpone" the bill until the short session next December, and then talk it to death in a filibuster. There is no other conceivable reason why they object to its consideration at once. If it comes to a vote in the Senate, the vote for it will be overwhelming. Few Senators will dare record themselves as in favor of child exploitation if it comes to a show-down.

The bill is exceedingly reasonable in its provisions. It prohibits the interstate shipment of commodities produced by the labor of children under 16 in mines and quarries, or under 14 in mills and factories; prohibits night work of children between 14 and 16.

There is no form of preparedness more vital than is provided in legislation of this kind. The future of America depends on the kind of race that inhabits it. And the race is absolutely dependent on the children.

Most important of all, the children are entitled to playtime, recreation, and education. The only product worth while for a nation is human welfare. And the children are capable of producing the largest amount of that valuable commodity.

Pass the child-labor bill! It is up to you to see that Congress does so.

—

[From the Galveston (Tex.) News.]

A TEXAS OPINION.

The child-labor bill is denounced as an invasion of State rights, and it is said that only by distorting the interstate-commerce clause can any constitutional warrant be got for it. Senator BORAH has discovered that the President himself thought so many years ago, when his chief employment was the writing of books in a closet. Since then the President has gained a more intimate view of child labor and of its consequences, with the result that his opinion as to constitutional limitation has become less academic. The President now thinks it is no more than a reasonable exercise of the interstate-commerce clause of the Constitution to enact that goods which are produced at the cost of the moral, intellectual, and physical wasting of children shall be kept out of the channels of interstate commerce. The bill he favors would leave every State free to do what it pleases as to child labor; every State could, if it should elect, train babies to the tendence of the shuttle. Its only inhibition is against the shipment of the particular goods thus produced outside the boundaries of the State in which they are made. This, it is said, would be an assault on the State's sovereignty.

Nevertheless, it seems to us, truth runs the other way about. To forbid the interstate shipment of goods made by children interferes less, if at all, with the right of the State to do in this matter as it pleases than it does to permit the shipment of such goods in interstate commerce. For when child-made goods are given access to interstate commerce the effect in many instances, if not in all, is to balk the State which either has legislated against child labor or contemplates doing so. Ordinarily man-made goods can not compete with child-made goods, so that this unfair competition puts a constraint on the State which has forbidden child labor or desires to do so. It has in a practical sense lost its freedom of decision. It is deterred from doing what it wishes to do by the economic cost of indulging its wish. Its right to forbid the working of children before either their brains or their bones are formed is practically violated as a consequence of the failure of the Government to protect it from the economic coercion of another State. Such a bill as the pending measure will make for the freedom of the States, because it will enable those States which wish to forbid child labor to do so without requiring those States of contrary disposition to do so.

—

[From the Raleigh (N. C.) Progressive Farmer.]

NATION MUST ACT.

Since southern manufacturers with their vast wealth and influence have used their power to prevent suitable child-labor legislation by State action, nothing remains but for the National Government to handle this matter.

[From the Hickory (N. C.) Democrat.]

UNFAIR TO MANUFACTURERS.

Every time a southern manufacturer goes to Washington and pleads the cause of southern mills he is adding votes to the Keating bill. Right or wrong, the country is convinced that child labor should be dispensed with, and no amount of arguing or pleading will convince Congressmen that the manufacturers are sincere. The Democrat is not an advocate of national legislation, but it does not expect to see any relief from the State and, unlike Senator TILLMAN, it does not see the destruction of local self-government in child-welfare legislation any more than it sees it in Government control of water power, national conservation of other natural resources, and a hundred things the Federal Government is doing.

In the testimony of various manufacturers there has been a variance. Some assert that children are employed for their own benefit; others assert that southern mills are forced to employ children and work longer hours in order to compete with New England mills, which enjoy cheaper freight rates; and still others declare that the children are employed to enable their parents to live. All these might be good reasons.

But we can not get away from the fact that southern mill owners are being assailed from every quarter of the country, that in a measure the whole South is indicted by the public opinion of the country—whether right or wrong—and that this section, and North Carolina in particular, will feel the sting of criticism more and more as the years pass, unless the Keatingites win.

This is a feature that the Democrat would respectfully submit is worth considering by our manufacturers, many of whom it knows to be the best men in the community, and all of whom, it has reason to believe, are far above the average business man in intelligence and public spirit. It is not fair to them to be placed in a false position before the world.

—

[From the Hickory (N. C.) Record.]

There are only a few defenders of those who would stand for the system in North Carolina. A rich Commonwealth can not afford to be backward in the matter of child labor, and North Carolina manufacturers should let the world know that they are willing to go as far as any State in practical welfare legislation. Wholesome legislation is coming, and it would be much better if the broad-minded men among the manufacturers would take it upon themselves to see that good laws are made and then obeyed.

—

[From the Greenville (S. C.) Home Circle.]

The Keating child-labor bill meets with favor in Congress. It passed by a vote of 337 to 46. This bill prohibits the interstate shipment of the products of child labor, under a heavy penalty, but excepts boys and girls' clubs.

If the bill passes the Senate, it then becomes a law. And it will be of a great benefit to all mill workers. It means better pay for the grown people that have children. It gives the children the benefit of education, while it don't prohibit children from work on the farms. And it don't prohibit children from working in cotton mills, but it does prohibit the shipping of child-labor products outside of the State in which produced.

—

[From the Journal of Labor, Atlanta, Ga.]

TRAFFICKING IN CHILDREN.

It was a brave thing for WILLIAM SCHLEY HOWARD to take the stand he did in the National House of Representatives when the bill to limit the product of child labor to the State of its production was up for consideration, and which passed the House with a splendid majority. Mr. HOWARD'S championship of the child as against its exploiters represented the true spirit of the thoughtful South.

—

[From the Rome (Ga.) Herald.]

THE CHILD-LABOR BILL.

The Keating child-labor bill barring from interstate commerce the products of child labor has passed the National House of Representatives by a vote of 337 to 46. This is probably a forerunner of what will happen in the Senate. Under the provisions of the bill a heavy penalty is imposed for interstate shipment of any commodity made in whole or in part by children under 16 years of age.

Unless the children are protected, the foundation of the Government will soon begin to totter. There have been from time to time enacted in all States child-labor laws. The great trouble has been that these laws have never been enforced as they should be. Usually the lobbyists in the State capitals have managed in some sagacious way to add a rider to the child-labor bill which effectually impedes the real purpose of the law. Now that the Federal Government has taken a hand in the game of child protection the children of the future will be substantially looked after.

The Keating bill has been a source of contention for some time. It was prepared during the last session of Congress but was not presented at that time. Now that it has been passed with such a convincing vote in the lower House, its ultimate passage in the Senate can be safely predicted, but it is not probable that the vote will be so emphatic.

—

[From the Spartanburg (S. C.) Herald.]

THE KEATING CHILD-LABOR BILL.

Capt. Ellyson A. Smyth, president of the South Carolina Cotton Manufacturers' Association, appeared before congressional authorities in Washington yesterday in opposition to the Keating child-labor bill, a measure the discussion of which has placed the textile-manufacturing States of the South in an embarrassing position before the whole country. The Keating bill has passed the House by a large majority and now goes to the Senate for consideration. Members of Congress from North and South Carolina and some from Georgia opposed the measure vigorously, but with little effect other than to cause the country generally to regard conditions in these States as much worse than they are.

And with all due respect to Capt. Smyth, who is the spokesman for the southern manufacturers, his words, as reported in the press dispatches this morning, have brought neither relief nor conviction that the textile interests of this part of the country are not wrong in the ground they have taken for opposing this bill. The more the opponents of the bill talk the more the country is inclined to believe the manufacturers are actuated by a desire to work children and to keep down wages.

—

[From the Charleston (S. C.) Review.]

GREEDY MANUFACTURERS.

By a vote of 337 to 46 the child-labor bill passed the National House of Representatives. In looking over the personnel of the body we find that the 337 represent the people and that the 46 represent the corporations. Now it is up to the Senate, and we will soon have a chance to count up those who are in favor of the people and those who are for the interests. If this bill becomes a law, and there is not much doubt of it, it will accomplish what the States affected have repeatedly refused to do—thinking themselves safe in the hands of the different legislatures, many members of which are and have been mill owners and stockholders—protect the children. The mill owners had an idea they could run their factories forever on the cheap labor of infants. But the people tired of this sort of business and were compelled to appeal to the people at large in order to save the children, with the result that the popular branch of Congress passed the bill for their relief, and it is hoped by all lovers of little children that the Senate will do likewise by them.

—

[From the Galveston (Tex.) Tribune.]

THE CHILD OR THE MILL.

Quite recently the Committee on Labor of the House of Representatives at Washington approved a bill having for its purpose the discouragement of child labor. The provisions of the measure forbid the passage outside the State in which were originated the products of mines, quarries, or mills the result of child labor. It was expected that most of the opposition to the proposed law, if any opposition developed, would come from the factory regions of New England or the mining fields of Pennsylvania, but the surprising development in connection with the measure was that the most vigorous opposition to its passage came from Representatives of the Southern States. While the South has very few mines and not enough factories to be entitled to much space in tables of statistics, it is known that this section has for years been anxious that the cotton factories of the Nation be established where they logically belong—in close proximity to the cotton fields, in the section where most of the raw material is produced.

It may be true that conditions in the South Carolina mills are much better than they were in the New England cotton mills during the time children were worked, but even ideal conditions will not warrant the steady employment of children of tender age for long hours and in the close atmosphere of a factory with its lint-laden air and disagreeable odors which no factory has ever been able to entirely eliminate. There are men, plenty of them, who would not accept financial gain at the cost of a child's death, but they are never brought face to face with conditions as they actually exist and probably believe that their dividends are earned honestly, but there are others who would take advantage of anything that offers that their incomes might be made to show an annual increase, and it is against these avaricious ones that such laws as the one proposed are made.

No one argues that a child should not be made to work, but the work should be suited to the ability of the child and ample provision should be made for the recreation of those who are to in the future carry the burdens of society, commerce, and State.

—

[From the Gainesville (Ga.) Herald.]

The purpose of the bill is to prevent capitalists from coining child blood and child flesh into dollars.

No measure has ever come before Congress for the protection of humanity that is equal to this measure. Anyone at all familiar with the reports of committees who have investigated the factory and shop life of the country, especially that of eastern cities, who has a spark of love for humanity in his bosom, a particle of sympathy left in his heart, or an atom of justice in the make-up of his patriotism will necessarily favor this bill to take the children out of these sweatshops, factories, and mills, where their very life is being ground out of them and where every hope is being smothered and where every opportunity to even become normal men and women is blasted.

—

[From the Americus (Ga.) Times-Dispatch.]

CHILD-LABOR LEGISLATION.

The lower branch of Congress is said to be ready to again pass the Keating child-labor bill, which would prevent shipment across State lines of the products of the labor of children under a certain age. It is the belief that the Senate will attempt to die without action, just as it did last session. This will be more difficult, however, because the life of this Congress—two years—began in December, and friends of the measure in the Senate, if they be sincere in their desire to get the bill on the statute books, can make life very miserable for its opponents.

There has been a marked advance in Congress in the past few years against this highly objectionable kind of child labor. When Senator Beveridge demanded restrictive legislation along about 1906 he was looked upon as a visionary and his bill went to the Judiciary Committee, where it was put to death on the ground that it was unconstitutional and therefore not fit to be even discussed in public place.

The thing is very much alive, however. Some day it will become a law.

—

[From the Augusta (Ga.) Herald.]

GOOD REASONS FOR DISCOMFORT.

"We pray for the comfortable, who do not care for anything so long as they are left at ease." From a prayer by Rev. Levi M. Powers at the inauguration exercises of the Gloucester, Mass., municipal council on January 17.

There are many classes of these comfortable persons, and sometimes it becomes society's duty to stir them up a little bit. Just now there is the Keating-Owen bill, concerning which some prosperous, charitable, and altogether complacently comfortable persons prefer to remain in ignorance.

The Keating-Owen measure was introduced into Congress with the object of prohibiting the shipment in interstate commerce of goods in the production and manufacture of which child labor has entered.

Many very comfortable persons do not care to know that State legislation has not protected little children from exploitation. There are, in fact, a dozen States with very good child-labor laws—from which the canning industries are carefully exempted.

And so tots of 5 and 6 are permitted to snip beans or top cans from 4 a. m. for just as many hours as they can be kept awake in the season of ripe vegetables; and in certain fish canneries children of 8 and 10 work 15 and 16 hours a day in the busy season.

Details of some of the glass works of Pennsylvania, the coal mines of West Virginia, and the textile mills of Georgia, Alabama, and Mississippi would stir up a considerable amount of unrest among the comfortably ignorant if they would read the reports of the national child-labor committee.

The main opposition to the Keating-Owen bill in the Senate is expected from the southern cotton-mill interests, but—and this a most disturbing bit of information—these mills are often owned by members of New England corporations.

How can you help, not being a Senator or a southern mill owner.

You can help to stir up the too comfortable about the condition of child labor and they will see to it that the Senate becomes uncomfortable enough to pass the Keating-Owen bill.

[From the Norfolk (Va.) Pilot.]

CHILD LABOR.

Any issue that strikes directly at the pocket nerve of a community is always a disturbing one in politics. The question of regulating child labor by law is not an exception to this rule.

The national Democratic platform contains a plank specifically pledging the party to favor such legislation, and a bill now before Congress in conformity with that promise has the indorsement of the administration. To arrest the physical and mental development of childhood for the sake of a few pennies saved or made, as the case may be, is the maddest of extravagances, from whatever angle regarded, moral or material. Stunt the childhood of one generation and whence are to come the sturdy men and women to do the work of the next?

There are laws to protect adults in every department of labor, yet presumably they should be able to take care of themselves. Yet balk is made when like protection is asked for the children who are helpless unless the shield of Government be thrown over them. To deny this guardianship would be cruel, unjust, and, as a matter of mere material policy, easily beyond computation.

[From the Macon (Ga.) Telegraph.]

MILLS AND CHILDREN.

The Telegraph realizes the seriousness of the cotton mill as a factor in the social development and progress of the South. Increasingly industry is following its natural bent and getting the manufacturer as close to the producer as possible, and so we are getting more and more textile mills each year because we are the textile staple producers. There is much to be said against the cotton mill's coming. It really doesn't help the community much, if it does not actually injure the standard of the race itself. A few people are bettered by them; a great many are affected in just the opposite.

The worst feature, of course, is the effect of the work, the pay roll and its limitations on those who tend to the spindles all day long. Not much is paid for this work, because it is not, as a matter of fact, worth much. Again, even these pay rolls can not be met unless the mill owner sells his product at a profit. If he makes any substantial increase in wages or reduction in hours and the other fellow doesn't, the only thing accomplished is the certain bankruptcy of the man who wanted to do better by his employees. But something has to be done. We've got to quit working our children, and that means raising the wages of adults.

For instance, let us look into the attitude engendered on the part of many mill owners by the necessities, if such they be, of their business, as exemplified in the hearings before the committee looking into Federal child-labor legislation. David Clark, editor of the Southern Textile Bulletin, is on the stand:

"Congressman KEATING. Did the mill owners of North Carolina, in effort to ameliorate the condition of the employees, support Gov. Kitchin in his recommendation? (This was a recommendation for rigid inspection of factories.)

"Mr. CLARK. I did not favor inspection.

"Congressman KEATING. Was that because you did not have faith in the State inspectors, or because you had a good deal of faith in the mill owners? * * *

"Mr. CLARK. It is largely a grafter proposition. * * *

"Congressman LONDON. What do you mean by a grafting proposition?

"Mr. CLARK. I am not prepared to give you the facts, but my understanding is that if you pay you get a clean bill of health.

"Congressman LONDON. You believe your mill owners would resort to corruption in order to escape a fair inspection?

"Mr. CLARK. Not more than any others; not more than was necessary.

"Congressman LONDON. You mean they would resort to corruption of a Government official?

"Mr. CLARK. Well, yes; if they were held up."

Asked about compulsory education—which, in the opinion of the Telegraph, is the only real solution of the problem—Mr. Clark gave voice to the following rather remarkable indictment against the statesmanship of North Carolina, of which those who come from it boast so loudly and lustily:

"When these people (the families of the operatives) come from the mountains they do not believe in education. That is the reason we do not have compulsory education in North Carolina, because the isolated mountain districts would go Republican if we forced compulsory education upon them."

The following are excerpts taken from the testimony of mill owners and their representatives at the hearing:

"If a mill operating 11 hours a day employs children only 8 hours, it would probably require additional machinery.

"The cotton mill has done more than anything else in the South to save the people from the farm.

"If this law passed, and the younger children were taken out of the mills, the families would go back to the farm.

"If this bill passed, it would affect 35 children between 14 and 16 in our mill of 400 people. This would necessitate our building eight new houses to take care of the new families that would be brought in.

"A roll of cotton cloth made by child labor is just as long, just as wide, just as white, and just as good as if made by adults.

"Congress never tried between 1830 and 1860 to prevent interstate commerce in the products of slave labor.

"You can't fix an age limit for child labor any more than you can tell when a pig becomes a hog."

[From the Savannah (Ga.) Labor Herald.]

Three cheers for the Members of Congress who supported the Keating-Owen child-labor bill, which scored such a success; the vote was 337 to 46. It is to be hoped that the Senate will give it equally as large a majority.

[From the Dallas (Tex.) News.]

THE HOUSE VOTES FOR KEATING BILL.

The Keating bill to exclude the products of child labor from the channels of interstate commerce passed the House by a vote of 337 to 46. The passage of the bill was clearly foreseen, but an agreement so nearly unanimous was hardly to be expected.

The measure now goes to the Senate. That body has been, in time past, something of a citadel for the opponents of child-labor legislation. Defeated everywhere else, they have been able to retire into the Senate and hold out against public sentiment. Undoubtedly the Keating bill will encounter the same stubborn opposition in the Senate that its several predecessors have. But the Senate must be somewhat impressed and persuaded by the size of the majority in the House, made up as it is so largely of men who are shrewd and unremitting in their efforts to find out what is wanted of them. To the Senate this huge majority must signify that public opinion not only desires but demands the enactment of this measure. If the bill shall fail in the Senate, it is likely to be because its opponents filibuster, for the indications are they will not be able to muster a majority.

[From the Beaumont (Tex.) Enterprise.]

The fight made by southern Congressmen against the Keating anti-child-labor bill, which passed the House Wednesday, was not creditable either to them or to the people whom they represent, for while the bill, if it passes the Senate and becomes a law, will not have the effect of preventing child labor in the several States when the manufactured product is sold only within the State, it goes, probably, as far as the Federal Government can proceed against an industrial evil.

[From Atlanta (Ga.) Way.]

HOW GEORGIA'S CONGRESSMEN VOTED.

The House has passed the Keating child-labor bill by a big majority. Now it is up to the Senate to complete the good job.

The Keating bill puts an end to interstate commerce in goods made in mills which employ children under 14 years of age, or in which children under 16 years of age work more than eight hours a day or work before 7 o'clock in the morning or after 7 o'clock in the evening.

The bill is not so deep as a well nor so wide as a door, but it will do for awhile.

It at least puts an end to child slavery—a shameful thing.

The amazing thing is that 45 Members of the House of Representatives could be found to vote against this bill.

We wonder how any of these 45 men would like to have his little girls work in one of those mills where, as the sworn testimony shows, the poor little creatures had ice water dashed in their faces to waken them when exhausted nature made them fall asleep at their weary tasks. Yes, sir; we do wonder how you would like that, Mr. Congressman—you, you were not ashamed to vote against this bill for the rescue of these poor, helpless little creatures, these children who have no childhood, no play, no sunshine in their hearts, no hope in the future but the dull drudgery of the factory, the duller drudgery of forlorn and slatternly wifehood and motherhood or the path that is lined a little way with primroses and then descends so swiftly, alas, to hell.

Let us hope for the honor of the Nation and for the sake of the decencies and the humanities that there will arise no defender of this child slavery when the Keating bill is put upon its passage in the Senate of the United States.

[From the Memphis (Tenn.) Commercial-Appeal.]

But the right to grind the hope and health and joy out of little children by long hours of hard labor in close factories or dark mines belongs to no man and no corporation of men. And it is against the greed of these would-be grinders that the child-labor committee has formulated its bill. The members of this committee are not speaking from hearsay information. They have personally inspected the mills, the sweatshops, and the mines, where the blood and hope of the undeveloped children have been coined into factory products. It is in behalf of these children that they are seeking to arouse public sentiment, that Congress may be induced to pass a national law that will be effective and protective.

[From the New Orleans Picayune.]

CHILD-LABOR LAW PASSED.

The House of Representatives, we are glad to see, has passed the Keating child-labor law barring from interstate commerce the products of child labor in mine and factory by the immense majority of 337 to 46. The bill now goes to the Senate for its approval; and with this overwhelming majority in the House there is no reason to doubt that it will soon become a law. The only opposition came from the South and particularly from the two Carolinas, which employ many children in their cotton factories and which have claimed that they can not manufacture cotton goods in competition with New England unless they are allowed to employ the cheapest possible labor—that of children. An effort has been made to shame them into the passage of adequate State child-labor laws like the other Southern States, but this has been found impossible. It was felt by many that legislation of this kind rightly belongs to the State, and that it was a strained construction of the interstate commerce provision of the Federal Constitution under which Congress proposed to interfere in this matter. This view was responsible for the many defeats this measure has met with before Congress.

Time has convinced the country that the only way in which relief could be obtained was through a national law; that the present system of working children in mines and factories is abominable, is against every instinct of humanity to-day, and further that there is no truth in the claim that the southern mills, situated in the midst of cotton fields and with everything in their favor, can not compete with establishments

a thousand and more miles away. It is because they have reached this view of the case that a majority of the southern Members have refused to longer support the proposition of employing child labor in hard factory work and voted for the Keating bill.

The law will pass Congress without difficulty and without doing the slightest harm to the southern mills, which are not as weak as their owners pretend. Even if it did affect some of them unfavorably, the South can not afford, any more than other sections of the country, to sacrifice its children to this manufacturing Moloch.

—

[From the Montgomery (Ala.) Advertiser.]

WOMEN AGAINST CHILD LABOR.

The General Federation of Women's Clubs has given its indorsement to the Keating-Owen child-labor bill now before Congress. Nine State federations have already indorsed the bill, and many of the members of these clubs are cooperating actively with the National Child Labor Committee in its campaign for it. Now that the General Federation has put its stamp of approval on the bill, many other club women who have been waiting for the General Federation to take the lead will join with the National Child Labor Committee in its efforts to have it passed by the present Congress.

—

[From the Roanoke (Va.) World.]

THE MODERN SLAVERY.

Those people of the South, and they may be counted by the million, who take a broad view of things and who want to see their Nation developed along the highest lines, are following with profound regret the attitude of southern Representatives toward the Keating-Owen child-labor bill.

This bill is designed to prevent the employment of children under 14 and to limit the hours of work for children between 14 and 16 to eight hours a day. In the large majority of States of the Union a law similar to this is in force, but in some southern States it is far below the standard which the best thought of the country plainly establishes.

Opposition to the Keating-Owen measure comes almost entirely from the South, and particularly from Virginia and North and South Carolina. Such opposition, in our judgment, does not express the convictions of Virginia and Carolina people. In fact, it misrepresents them. It advertises them before the world as champions of modern slavery.

—

[From the Tampa (Fla.) Times.]

STATE RIGHTS AND CHILD LABOR.

The question of State rights has been injected into the fight against the Keating child-labor bill, now before Congress, and warfare on the measure, led by some southern Senators and Representatives, will be bitter.

The southerners who present strongest opposition to the measure represent States in which cotton mills are located, and therefore their fight is made in behalf of cotton-mill interests, headed by New England and southern capitalists. It seems almost impossible to place a decent child-labor law on the statute books of these States, which is anything but creditable to their political leaders and legislators. We object to Government interference with State rights, but the spirit of protection demands that something be done in behalf of the toiling children of Commonwealths the political representatives of which positively refuse to "see the light."

—

[From the Meridian (Miss.) Star.]

NOT SECTIONAL MEASURE.

The fight made by southern Congressmen against the Keating anti-child-labor bill which passed the House Wednesday was not creditable either to them or to the people whom they represent; for while the bill, if it passes the Senate and becomes a law, will not have the effect of preventing child labor in the several States when the manufactured product is sold only within the State, it goes probably as far as the Federal Government can proceed against an industrial evil.

—

[From the Montgomery (Ala.) Journal.]

OVERWHELMING SENTIMENT BEHIND IT.

The Keating bill to bar from interstate commerce the products of child labor, which passed the House February 2 by a vote of 337 to 46, a majority which even surprised friends of the bill, is one of the most stringent in some of its features of any reform measure that has yet passed that body.

While a few Members of the South voted against the bill, the RECORD shows that, with the exception of one vote, that of PARKER of New Jersey, a Republican, not a single Member from the Northern and Western States voted against the bill.

A Washington correspondent, in commenting on the passage of the bill, expresses the opinion that "the tremendous vote against the effort to invoke State rights to continue a national wrong must be regarded as evidence of the breaking down of the old State-rights sentiment, even among Democrats. The southern men opposing this bill offered all the old arguments against the invasion of State authority by the Federal Government without making the slightest impression upon anyone but themselves."

"Northern and western Democrats and a number of southern men also," he says, "merely laughed at the suggestion that an evil should be allowed to continue because it is sanctioned by a State."

This is the same argument that has been used against the passage of a national prohibition amendment and the legislation against the conservation of natural resources.

—

[From the Greenville (S. C.) Circle.]

Here are the facts and the reasons why the cotton-mill owners don't want this bill passed:

First. When children are excluded from the mills they have to go to school, be educated, and enlightened.

Second. Ignorance is what pleases the cotton-mill authorities.

Third. Education means light, knowledge, power, emancipation, and freedom.

Fourth. The cotton manufacturers have been made vastly rich by working children at half wages, doing grown folks' work.

Fifth. When this bill is passed they well know they will have to pay the grown folks enough to support the children anyhow. If they don't the farms are inviting them.

Sixth. As long as they can keep the workers in ignorance they can cheat and rob them and control them more.

Seventh. When the textile workers are better educated they can get better employment, therefore demand better wages—a decent living.

The above are some facts and reasons why this bill is opposed by the money powers.

Didn't the mill owners circulate and beg their employees to sign petitions asking for this bill not to be passed, because it would seriously interfere with the factory business?

—

[From the Thomasville (N. C.) Charity and Children.]

The Keating child-labor bill passed the House by an overwhelming vote last week. It will have a harder time in getting through the Senate, but will no doubt pass that body if it ever comes to a vote. We do not like the Federal inspection feature of the bill, and there are several other objections to it; but the cotton-mill men have only themselves to blame. If they had not strangled any kind of child-labor law in the last senate that assembled in North Carolina this Keating bill would not have come upon them. They ought to have allowed our State legislature to deal with the subject. Having forbidden that, they must take their medicine.

—

[From The News, Lynchburg, Va.]

CHILD-LABOR LAW.

Opposition to the child-labor law now under consideration in the United States Senate comes almost entirely from southern Representatives. This opposition, it is said, will be overwhelmingly defeated whenever the issue reaches a formal vote. For the present it is having tremendous effect in delaying action, and it is not improbable that it may postpone a definite decision until next session. President Wilson, deeply interested in the matter, has made a personal appeal to administration Senators to uphold the measure and to assist in carrying it through before Congress adjourns. In reply to an intimation that some sort of compromise or delay might be in order, the President has said: "Action at this session." All persons who keep in view the ultimate purpose of human life and the vast potentialities for usefulness in every child will cherish the earnest hope that Mr. Wilson's efforts may prove successful. Antagonism to child-labor legislation comes chiefly from cotton interests in the South. In the lower House, where the measure was adopted by a large majority, practically every vote in opposition came from the Southern States.

—

[From the Greensboro (N. C.) News.]

THIS STATE AND THE KEATING BILL.

It is the fashion, we suppose, to regard the Keating child-labor bill as a Yankee enterprise intended to oppress and humiliate the South. That sort of thing was settled in the sixties. Why kick against the pricks? It is also more or less the fashion to think, or at least to speak, of this measure as directed exclusively against the cotton-mill interests. Be that as it may, the thing has loomed up for years as inevitable. We see no particular sense in anybody worrying about it, even those who we suspect are going to be injured in pocket.

And there are some who weep about poor old State rights. The trouble about that in North Carolina, so far as this particular right is concerned, is that our tears are strongly suspected of being of a crocodile nature. We have made the pretense of believing that child labor ought to be legislated against. We have legislated against it, somewhat, and our legislators winked the other eye when they did it. Who doubts whence came the latter inspiration? It is always a species of hypocrisy, and occasionally of ghastly hypocrisy, to pass such laws without provision for their enforcement. It inevitably alienates the moral sympathy of the world. If we believed in regulation in this State we have had abundant opportunity to exercise the right of a State in that particular. If we do not believe in it we should never have made a pretense of it. People active in this work say that North Carolina is the main argument in favor of the Federal law. Men and brethren, we have not in this thing been anxious to avoid the appearance of evil.

As for the Keating bill, we might as well recognize what looms up before us like a mountain, and that is that the moral sentiment, or the prejudice, if any reader prefers, of the United States as a whole is fixed and emphatic. It is good politics and good sense for the President to demand its passage; it is legislation that is demanded by the platforms of both parties, and the Democrats are in control. The enterprise is plainly that of sawing one plank from the platform of the opposition.

—

[From the Richmond (Va.) News Leader.]

CHILD-LABOR BILL AND ITS CRITICS.

Congress owes it to the Nation, but particularly to the puny, undersized, overworked children of the factories, to pass the Keating child-labor bill, which has had the sanction of the House and has been held up in Senate committee for several months. In calling at the Capitol Tuesday, unannounced, to urge Democratic Senators to overturn the Democratic caucus program, which would have deferred action on the bill at this session, the President was emphatic in making known his wishes, not only in this regard but also in reference to the workmen's compensation act. To go before the country with both these worthy measures to the credit of his party will add measurably to Wilson's prestige, especially as the Republicans in the past persistently evaded taking action on either. That the bill has been determinedly obstructed in the upper House is notorious.

—

[From the St. Louis (Mo.) Democrat.]

FEDERAL LAW NECESSARY.

It is difficult to imagine any worthy motives for opposition to the immediate enactment of the Federal child-labor law. All the political parties are a unit in their platforms in demanding such a law. The chief reason for this unanimity is the realization that there must be uniformity not only in enactment but in enforcement of child-labor legislation. Within the last few years nearly all the States have revised their laws with the view to conserving the minds and bodies of future citizens. Even Alabama at last yielded to the pressure and enacted a detailed child-labor measure, which went into effect last September. But the laws differ much in details, and there is still greater difference in enforcement. The machinery is so inadequate in some States as to encourage the suspicion that the lawmakers were not sincere.

The problem is peculiarly a national one. Under the freedom of interstate commerce the goods of one State must meet the competition of those of every other. The State that enforces a drastic child-labor law is likely to find its industries at a disadvantage, because of their

products coming into competition with child-made products from other States. Thus virtue is punished. Furthermore, the virtuous State does not even save its own children. They may be taken by the trainload to other States and put to work under conditions that stunt them mentally and physically. Federal legislation is essential, both for the protection of the industries of virtuous States and for the protection of future citizens of the Nation. The President should find the Senate responsive to his demand for immediate action, however the Senators may construe his sudden interest in the subject.

[From the Wheeling (W. Va.) Register.]

CHILD-LABOR BILL.

The child-labor bill now on the Senate Calendar can not be passed too soon. There is an expected opposition to its consideration at this time from southern Democratic Senators, and this opposition may prove strong enough to hold it over to the congressional session next winter. But the child-labor bill is progressive humanitarian legislation that is sure to come sooner or later.

[From the Bowling Green (Ky.) Journal.]

CONGRESS AND CHILD LABOR.

President Wilson went to the Capitol recently to urge the representatives of his party to pass a national child-labor bill before the adjournment of the session. Recently the Democrats in Congress held a caucus for the purpose of determining what bills should be passed before going-home time. They neglected to include child labor among the measures fixed upon for action.

President Wilson acted wisely in urging the passage of this law. Ten years ago there was not a dozen Members of Congress of either party who wanted a child-labor bill passed. Senators and Representatives said that if Congress by law should attempt to save the health and the lives of American children and thereby safeguard the future citizenship of the country, the Constitution of the United States would be shattered. The great document was sacred and must be spared if it cost the life of every baby in the land.

[From the New Decatur (Ala.) Daily.]

CHILD LABOR.

The Keating child-labor bill, barring from interstate commerce the products of child labor, has passed the House of Representatives and is now up to the Senate. According to press dispatches from Washington this much-needed and strictly humanitarian legislation is being strenuously opposed in the upper House of Congress, which, because of limited membership and more conservative tendencies, is usually regarded as the inner defenses of the antiprogressives.

A special to a Birmingham paper to-day says:

"Among those fighting the bill are representative men from every State of the Union, Alabama being represented by Scott Roberts, treasurer of the Adelaide Mills of Anniston."

It is easily apparent that the "representative business men" from Alabama who are opposing the liberation of the child from the dwarfing blight of legalized juvenile slavery are the cotton-mill owners.

What argument can these men advance?

There is but one—that it means money in the pockets of the textile producers for the childhood of Alabama to be deprived of its inalienable right to growth and development.

The argument is purely commercial. It places money above manhood, gain and greed above brawn and brain. No child allowed to grow up in the fetid atmosphere of the cotton mills, with young lungs filled with dirt and lint, can ever reach an unimpaired maturity.

[From the Greenville (S. C.) Piedmont.]

CHILD LABOR IN THE SOUTHERN STATES.

(By request from Industrial Journal.)

There are two great evils connected with child labor in the southern cotton mills. The first is its effect upon the South in an ethical sense. The second is the effect upon the mills of the North, where a generation of effort has succeeded in eliminating child labor.

As to the first proposition, it is deplorably evident that the employment of babes, children, youths, and women long hours at low wages threatens the foundation of the American social system—the American home—and constitutes a form of slavery, white slavery, slavery more detestable and repugnant than that which drenched the favored Land of the Sun in blood four decades since, for it saps the vigor, health, and strength out of its victims in a few years and then discards their worn-out bodies to starve or become a burden to another generation of their kind. It is more far-reaching than the chattel slavery of antebellum times, because it lowers the moral tone of a whole community by accustoming men to the idea of tender children working while the father is idle as a result of an iniquitous system; it is more abominable than the slavery of old, because the negro was furnished food and medicine when sick, quarters calculated to keep him healthy and vigorous, and reasonable rest periods in the less busy seasons of the year, while the victims of rapacity and greed of the later dispensation are not able to have equivalent comforts even while in the prime of their productivity.

And there you have the effect of child labor and its analogues upon the people of the community. I could dilate upon it from now until eternity and could add nothing to its ghastliness. The system is an attack upon the moral and physical health, not alone of its immediate victims but of the community at large.

There is a certain class of bipeds who receive money from a certain other class of their kind who are held as beneath man's contempt, and yet that money I hold to be holy when compared to the fat dividends wrung from the souls and bodies of babes compelled to work 11 and 12 hours a day for a paltry dollar a week, or any other sum.

That mills employing even an inconsiderable portion of its help on such terms should pay dividends abnormally large is not to be wondered at, but those dividends are accursed in the sight of God and man, and the State or nation which permits of such a system is no more fit to live than the male and female amercers who profit from the toil.

It is strange, it is dreadful, that the moral phase of this question has not appealed to our brothers and sisters in Israel, whose devotion to the meek and lowly Nazarene is made a matter of perennial public manifestation.

"But," reason the stockholders, the presidents, the managers, and the powerful Podsnaps of the press, "it is impossible to establish this industry in the South unless we resort to child labor, and without this industry we will not be so wealthy as we will be with it."

Then let's be poor, and clean morally, and strong physically; our children drinking in God's pure air afield and absorbing knowledge, primitive though it be, in the log schoolhouse; our women folks—crackers and clay-eaters and goober-grabbers included, Mr. Jeems Yellowplus—our women folk tending their babies and their flocks and even their gardens, sun-blackened and knotted of hand, but still fit and fain to walk 4 miles, if need be, to the cross-roads house of worship to listen to the homely truths which are not yet beribboned to suit the esthetic eye of Mrs. President or Mrs. Stockholder, nor yet loud enough to drown the music of coupon-cutting scissors.

But Israel sulks! She has taken down her harp from the midst of the willows fringing the waters of Babylon. Nor does she longer refuse to sing the Lord's song in a strange land. The fatherhood of man—a tiresome phrase. Israel appears to need that financial support which she receives as a sort of conscience fund from the profit sharers in 20 per cent mills.

It behooves organized labor to take up the cudgels disdained by Israel, and in order to effect its purpose it may have to emulate the example of the millmen of the North a generation or so ago, and invade the field of politics in order to secure remedial legislation. Nor is it only for the tender youth of the South that the organized laborers of the South are called upon to exert their strength. Just as surely (and in the proportion) as 20 per cent exceeds 4 per cent in the eyes of the greedy exploiters of child labor, just so surely will efforts be made, if the system is perpetuated in the South, to have the Northern States repeal their child-labor laws—on the score that otherwise the cotton-spinning industry of the North will seek the more "inviting" field. Sectional animosity will be rekindled as its last sparks are fading into ashes, and what is now a Southern sore will become a national cancer, eradicable only by knife and at the risk of the patient's life.

## Naval Appropriation Bill.

### EXTENSION OF REMARKS

OF

### HON. JOHN H. STEPHENS,

OF TEXAS,

IN THE HOUSE OF REPRESENTATIVES,

*Tuesday, August 15, 1916.*

Mr. STEPHENS of Texas. Mr. Speaker, I shall vote for the adoption of this conference report for these reasons:

First. The failure of this Congress to pass the bill freeing the Phillipine Islands makes us for an indefinite time a world power and calls for a large navy.

Second. The recent slides which have put (we hope temporarily) the Panama Canal out of commission, indicates that we should have an adequate Navy in both oceans to properly maintain the Monroe doctrine on this hemisphere and to properly protect our coast cities on both oceans. Ours is a Janus-faced Nation, facing Japan and other oriental countries on the Pacific coast and all of the warring nations of Europe on the Atlantic coast. It behooves us to pick our flint and keep our powder dry by providing in advance for anticipated trouble by building an adequate navy for our national defense.

Third. One group of the warring nations of Europe have by their reckless submarine warfare brought us to the verge of war, and, on the other hand, the other warring group are unjustifiably interfering with our mails and in many ways interfering with our neutral commerce, which unjustifiable actions threaten to involve our country in foreign complications and possibly in war. Thanks to the patriotic, wise, and judicious handling of these vexed questions by the Wilson administration we have so far escaped a conflict with either group of these warring powers, and I believe that under the same wise guiding hand and statesmanship we will continue to be kept out of war.

These reasons have impelled me to accept the inevitable conclusion that in order to properly defend ourselves from the threatened foreign aggression above pointed out—all of which are of recent origin—that a large Navy is a pressing necessity at this time, but if it is found not to be, then the next Congress can repeal this law, and the ships provided for in this bill, not then under contract will not be built, and that part of this appropriation will not be used. Mr. Speaker, I am now—as I always have been—of the opinion that the recently concocted and money-promoted preparedness craze that has swept over this country like a forest fire have been originated and financed by the capitalist combinations that have been made richer by billions of dollars out of this war scare through the manufacture of war materials.

Now, is it not meet and proper that the capitalist and other minions of predatory wealth who have gotten up this nation-wide war dance should contribute largely out of their own profits toward paying for the vast military program that they have succeeded in promoting? Therefore, this Democratic administration shows its wisdom and justice in proposing to raise these funds by increasing the income and the inheritance taxes and the taxes on the manufacture of munitions of war, so that the

burden of militarism would fall on the manufacturers of munitions of war and on the wealth of this country and not upon the great masses of consumers, as would be done if this money had to be raised by means of a protective tariff, which means, together with the issuance of interest-bearing bonds, are the methods proposed by the Republican Party and their present candidate, Mr. Hughes, for raising these vast preparedness funds. Mr. Hughes has always opposed an income tax, and this proves conclusively that himself and his party favor the classes as against the masses. The classes are enabled to escape direct taxation on their wealth by means of the Republican protective tariff.

Several years ago Gov. Hughes, now Candidate Hughes, an active figure and political leader in the great State of New York, was called upon frequently to give his views upon questions of governmental importance. Some of those views have now come forward like ghosts of an unfortunate past to give him reasons to pause in his pursuit of further distinction, and doubtless cause him some grief.

Already his organs and advocates are in the harassing difficulty of explaining away his attitude as governor of New York on the proposed amendment to the Federal Constitution providing for taxing incomes.

The facts are these:

On January 5, 1910, as governor, he transmitted to the legislature a certified copy of the congressional resolution proposing an income-tax amendment to the Federal Constitution. He accompanied it by a special message, the concluding lines of which were: "I therefore deem it my duty as governor of the State to recommend that this proposed amendment should not be ratified."

Opponents of the proposed amendment were highly pleased with the governor's message. It was the response of a faithful servant to them who had so often and so unstintedly contributed to the success of his party.

His party, too, at least its legislative representatives, opposed his message, for the New York Legislature, Republican in both branches, promptly voted to reject the amendment.

This action took place April 20, 1910. Five days later President Taft appointed Gov. Hughes a Justice of the Supreme Court of the United States.

Just one year later, when Gov. Dix, a Democrat, was in the governor's chair at Albany, the legislature did ratify the amendment which Gov. Hughes and a Republican legislature had rejected. The income-tax law has now been in operation for several years. It has the sanction of the American people; it was drafted by a Democratic Member of Congress and enacted by a Congress Democratic in both branches. All this in spite of the positive and forceful opposition of the now presidential nominee of the Republican Party.

In the meanwhile so satisfactory has proven the workings of the Democratic income-tax law, so thoroughly has it established the wisdom and statesmanship of its supporters and so thoroughly has it disproved the arguments of its opponents and their explanatory pleas in resistance that it will remain upon our Federal statute books for all time.

Will Candidate Hughes leave off his nagging, faultfinding speechmaking long enough to frankly tell the people whether he now favors or opposes the income-tax amendment to the Constitution and the laws enacted by the Democrats to carry it into effect; also whether he favors or opposes the election of United States Senators by a direct vote of the people; and also whether he favors the Democratic regional banking system or its brother Democratic law, known as the Rural Credit System, designed to help the farmers of this country to finance their activities at a low rate of interest? It would be of great interest to organized labor to know what he thinks of the several Democratic laws recently enacted in their interest by the Democrats, including the Clayton anti-injunction act. Does he not owe it to himself and party to frankly tell the voters what he thinks of the Democratic record on these vital questions? Will he do it? I answer, no. He dare not oppose these wise and just laws for fear of injuring himself and his party thereby, neither is he politically honest enough to approve any of them or to give the Wilson administration and the Democratic Party any credit for these constitutional changes or the enactment of these wise and beneficent laws in the interest of labor and the masses of the common people of our common country. I prophecy that he will continue to run over the country telling the people in effect that he favors everything that is right and opposes everything that is wrong. What will the great body of silent and independent voters in this country think of this political sphinx who dares not discuss with them face to face the merits or demerits of the above-mentioned Democratic legislation? Will they not repudiate his oft-repeated and threadbare platitudes and vote for that brave and conscientious and constructive statesman, Woodrow Wilson, whose administration has in the past 3½ years enacted more wise and beneficial national legislation than had the Republican Party in the 16 years immediately preceding the present Democratic administration?

## Mr. Bainbridge Colby Declares Himself for the Reelection of President Wilson.

### EXTENSION OF REMARKS
OF
### HON. ALBEN W. BARKLEY,
OF KENTUCKY,

IN THE HOUSE OF REPRESENTATIVES,

*Friday, August 18, 1916.*

Mr. BARKLEY. Mr. Speaker, under the leave granted to me to extend my remarks in the RECORD, I include a letter of Mr. Bainbridge Colby, of New York, declaring himself for President Wilson for reelection in 1916.

The letter is as follows:

MR. COLBY'S STATEMENT.

Chairman McCormick also gave out the following letter from Bainbridge Colby, who placed ex-President Roosevelt in nomination in the Progressive convention at Chicago, telling why he and other distinguished members of the Bull Moose Party will support President Wilson for reelection. Whereas he has vigorously opposed Hughes in a number of public utterances, it is Mr. Colby's first announcement that he is for Wilson:

"Your suggestion that there is ample foundation for effective and agreeable cooperation between the Progressives and the Democratic Party in the reelection of the President is true beyond all question, and I accept your invitation looking to such cooperation unhesitatingly and with pleasure.

"The achievements of the Democratic Party under the leadership of Woodrow Wilson in the field of progressive legislation constitute much more than an appeal for support. The record of the President is a veritable claim for such support upon all sincere Progressives, which the latter can not consistently ignore or deny.

"Particularly is this true as the opposition to the President's reelection proceeds from an unregenerate Republicanism that has weathered the danger of reform, reabsorbed its most vociferous critic, and abandoned itself again to rancid reaction.

"There they all are—the old guard. See for yourself. Count them if you wish. CANNON and PENROSE, SMOOT and GALLINGER, Jim Watson, Joe Kealing, Estabrook, RODENBERG, MCKINLEY, of Illinois, Hert, McGraw, Hemenway, Crane—not to speak of the others, too numerous to mention—all 'friends of the tariff' and among 'those fit to govern.'

"What business a Progressive has in such company as this I can not for the life of me see. They are the pickets and the monitors of privilege. Hughes is only their decoy and retriever. If he were elected, they would rope him and tie him, as they did when he was governor in Albany, reducing him to plaintive futility.

"There are, of course, reactionary elements in the Democratic Party. Until lately we had them even in the Progressive Party. But these elements in the Democratic Party are at the worst only a retardation and drag upon the steady forward push which the President has maintained. In the Republican Party the reactionaries are in the ascendant. They dominate the party, giving to it their character and features. It is the party of reaction, and the Progressives who have allied themselves with it are the most unfortunate of dupes.

"I am rejoiced to know and to be able to assure you that the President will receive an immense support from the members of my party. They recognize the simple courage, the rugged fortitude, and the quiet strength which have enabled him to guide his contrymen in peace and honor through the dangers of the last two years. They admire him. They are grateful to him. And, as Americans, they are impatient to manifest their loyalty to him."

## Increase of the Navy.

### EXTENSION OF REMARKS
OF
### HON. EDWARD COOPER,
OF WEST VIRGINIA.

IN THE HOUSE OF REPRESENTATIVES,

*Tuesday, August 15, 1916.*

Mr. COOPER of West Virginia. Mr. Speaker, under general leave granted to the Members of the House to extend their remarks in the RECORD on the Senate amendments to the naval bill, H. R. 15947, with special reference to amendment No. 238, increase of the Navy, I desire to say that I am, in the nature of things, opposed to a large increase in our standing Army or in our Navy, but in the present state of international affairs I deem it wise and good insurance to be prepared to take care of ourselves in the event we become involved in the quarrel now going on in Europe. "An ounce of prevention is worth a pound of cure," and under existing circumstances I feel we can not

afford not to provide the means of defending ourselves properly if attacked. I am satisfied the people of America are opposed to a large standing army, and will not stand for a large army after the present war is over, but we had just as well face the situation and frankly admit that we are not to-day in a position to keep a strong enemy from our shores.

The President of the United States should be informed as to the danger the country faces, and it is his advice to prepare, and prepare quickly, to face war if war should come. I do not agree with some that a large army and navy will invite war or force us into conflict. We do not want to prepare for war, but against war, and feeling as I do about the present state of the country, I must vote to prepare the country for any trouble which may arise out of the European conflict.

We all carry insurance, both life and fire, to protect our families. We have our "Safety First" clubs to protect the men engaged in hazardous occupations against accidents. Our National Government, through the Public Health Service, expends millions of dollars fighting diseases of all kinds; the Agricultural Department also spends millions fighting the enemies of nature, and I see no reason why the National Government should not expend millions to protect the homes of a contented and happy people from the jealous and greedy eye of a foreign foe. A nation of our wealth and influence can not afford at this critical time to hesitate to provide the means to carry to a successful conclusion any reasonable program advocated by our best naval thought for the proper defense of our country.

The plan as proposed by the Senate for the building of a Navy far exceeds in number of ships, tonnage, and equipment the plan advocated by the Republicans in the House and opposed by the Democrats in the House because it was too broad. Little did the Democrats dream their leaders in the Senate would not only adopt the Republican plan but go the Republicans one and many better. It is apparent our people have determined to adhere to a program of building which will within a few years mean that our country will be in a position to command respect beyond the waters of the Atlantic and Pacific. No matter to what clime an American citizen goes in pursuit of happiness the American flag will follow him and give him the protection to which he is entitled.

We can not afford to "play the fiddle while Rome burns." We can not afford not to inspect our fire department, and if the department needs more men and more equipment to take care of an emergency, to quench the fire if it should begin, to provide the men and the means to properly equip the same.

The President's failure to "stand still," as expressed so forcibly by my colleague, Mr. COOPER of Wisconsin, is reflected to-day in this House in the vote on the naval bill as redrafted and rewritten by the Senate of the United States. A policy of uncertainty and wavering vacillation has marked the course of the administration in the conclusions reached on this bill, the same as the policy of the administration regarding the course pursued in Mexico. First, we were led to believe Garrison's plan for a continental army was to be the plan behind which the administration would stand, but the President's recession from the continental-army plan, as proposed and advocated by Secretary of War Garrison, led to the resignation of Mr. Garrison and out of chaos and confusion the plan adopted finally for the Army and Navy has been written into law.

The minority of the Senate Finance Committee calls the attention of the country to the fact that additional appropriations for what may be called "preparedness" by the Congress do not exceed $390,000,000, demonstrating that outside the program of "preparedness" this Congress has made appropriations for approximately $200,000,000 more than any preceding Congress.

---

## Preparedness for National Defense Necessary.

---

### EXTENSION OF REMARKS

OF

### HON. AARON S. KREIDER,

OF PENNSYLVANIA,

IN THE HOUSE OF REPRESENTATIVES,

*Tuesday, August 15, 1916.*

Mr. KREIDER. Mr. Speaker, the question of "national preparedness" for self-defense is not a question of politics, and should not be regarded as such. For the last two years the daily papers and magazines have been filled with articles discussing every phase of national preparedness, and it seems the point under discussion is, "Does preparedness prevent war?" This question has been answered both in the affirmative and the negative, but I believe most of the thinking minds of the Nation have come to the conclusion, in the light of the European war, that, after all, "preparedness for national defense" is absolutely essential for this country.

I FAVOR PREPAREDNESS, BUT OPPOSE MILITARISM.

While it may be true that we are unduly excited at this moment, yet the facts are that we are woefully unprepared to defend our country against any nation with first-class naval and military equipment, and I am, therefore, in favor of the adoption of the report before the House; but I want to say here and now that while I favor national preparedness I am just as strongly opposed to militarism. It will, indeed, be a sad day when in our country we shall have a large standing army composed of hundreds of thousands of men whose only training and purpose in life is war.

I want my country to be and remain forever the great advocate of peace among all the countries in the world. I want the United States to lead in a movement to establish an international court of arbitration for the maintenance of perpetual peace among the nations of the world, and I thoroughly believe that it is both feasible, practicable, and possible that such a tribunal can and will be established when the war abroad ceases and the nations now engaged in this war have became exhausted, sickened, and horrified by the grim slaughter in which they have been engaged and have stopped long enough to coolly survey their fruitless record. I believe that then they will be ready to seriously consider this question.

I want to see our glorious flag continue to be the emblem of freedom, liberty, and justice, as against oppression, tyranny, and military despotism. The founders of our Republic designed this country to be a perpetual asylum of liberty and peace. They intended that the civil should remain forever above the military authority, but it should be remembered that the builders of our Government and the framers of the Constitution of the United States were not so-called "pacifists," or "peace-at-any-price" men; the infant Republic was born and created in the throes of revolution, which lasted for a period of seven years and eight months.

WHAT OUR EARLY PRESIDENTS THOUGHT OF PREPAREDNESS.

At the very beginning of our national life the country was warned by the first Presidents that in order to maintain peace we must be prepared for war. In Washington's first annual address, among other things, he said:

> To be prepared for war is one of the most effectual means of preserving peace—

He urged the people to prepare to quell and suppress any insurrections which may come from within or repel any invasion which may come from without.

In his third annual message, speaking of the militia, he said:

> This is certainly an object of primary importance, whether viewed in reference to the national security to the satisfaction of the community or to the preservation of order—

And strongly urged the establishment of competent magazines and arsenals.

In his fifth annual message, among other things, he said:

> If we desire to avoid insult, we must be able to repel it; if we desire to secure peace, one of the most powerful instruments of our rising prosperity, it must be known that we are at all times ready for war.

In his eighth annual message, speaking of the country's inability to protect its foreign commerce, he said:

> Will it not then be advisable to begin without delay to provide and lay up materials for the building and equipping of ships of war and to proceed in the work by degrees in proportion as our resources shall render it practicable—

And so forth.

President John Adams, in a special message to Congress, used these words:

> With a view and as a measure which even in time of universal peace ought not to be neglected, I recommend to your consideration a revision of the laws for organizing, arming, and disciplining the militia to render that natural and safe defense of the country efficacious.

In President Adams's second annual message he says:

> An efficient preparation for war can alone secure peace; we ought, without loss of time, lay the foundations for that increase of our Navy to a size sufficient to guard our coast and protect our trade.

Thomas Jefferson strongly advised compulsory military service.

James Monroe also advocated compulsory military service.

I simply refer to these messages to show the attitude and, as it were, the prophecy and advice of the early Presidents. In the light of what has occurred since then, we must acknowledge the wisdom of the policy advocated. For the truth is that, notwithstanding our high aims and pure motives, the hopes and aspirations for permanent and universal peace, the facts are that the fate of nations is still being decided by their wars.

This is sad, but nevertheless true. In the light of human history and experience we should never forget that the only safe guide for our footsteps is to walk in the light of the past.

THE WORLD NOT YET READY FOR UNIVERSAL PEACE.

For thousands of years the peoples of the earth have been, as it were, at each other's throats in terrific struggle. Within the memory of men now living, every important nation on the globe has fought one or more wars, and our own country is no exception to the rule. For ages it has been the dream of philanthropy and the hope of religion that the perfection of the Christian life and the advance of civilization would do away with all wars by illuminating the reason, softening the heart, and taming the savage qualities of man; but has this been realized? The terrible struggle in Europe is indication it has not. The Sermon on the Mount is the chart of the soul on the sea of life and its beatitudes are the glorification of the virtues of gentleness and mercy, love and peace. Nearly 2,000 years have passed since the sermon was delivered, and yet, to-day, the pathetic and appalling spectacle is presented of the so-called Christian nations of Europe employing all the ingenuity and methods that fertile brain and scientific aids can furnish or devise for the sole purpose of the destruction of human life. We all hope and pray that the time will come, and I believe it will come, when wars shall cease, but that time is "not yet."

OUR NEED FOR A LARGER ARMY AND NAVY.

I believe that we, a Republic of 100,000,000 people, with several thousand miles of coast line to protect, with important insular possessions to defend, with the Panama Canal to fortify and guard, and the Monroe doctrine to maintain, should be amply prepared to do so, not only with a sufficient and adequate Navy but with an Army of sufficient size and a system of military training which will give us adequate protection during times of peace and adequate defense should war come.

With this purpose and object in view and in mind, I shall support this report. I believe that my position represents the sentiment and wishes of a very large majority of my constituents.

The people of my district are a God-fearing and peace-loving people. They pray for peace perpetual with national honor unimpaired, but at the same time they are red-blooded Americans, who love their country, believe in it, adore its flag, and are ready, if need be, to fight and die for both. This has been evidenced from the very beginning. Whenever this country needed men to defend it, Pennsylvania and the eighteenth congressional district in particular, have always been the first to respond to their country's call. The gallant sons of Pennsylvania have in every war in which this country has engaged been an honor to the State and a credit to the Nation. They believe, as I do, in both peace and preparedness—peace, if possible, with honor and national self-respect; in preparedness as a guaranty of peace as well as a guaranty of victory should war come. It is well known on the floor of this House that I have lent all the influence and votes I have had in order to secure the enactment of a reasonable preparedness program, and while the laws enacted are, in many particulars, not as I would have written them, yet I consider them an improvement and steps in the right direction. I voted for the Kahn amendment to the Hay bill providing for a regular army of 220,000 men. This amendment was defeated; later I voted for the Hay bill, regarding it, however, as entirely insufficient but yet a short step in the right direction. Later, when the bill came back from the Senate, I voted for the Chamberlain or Senate amendment to the Hay bill. This amendment was again rejected by the House. Later I voted for the conference report which provided for approximately an Army of 206,000 men. This report was adopted.

OUR NAVY COMPARED TO THE OTHER NAVIES OF THE WORLD.

In considering legislation of this kind, I believe it is well to compare our Navy with the navies of the five leading nations of the world. The following table gives the tonnage and relative standing at the outbreak of the European war, provided all vessels in course of construction were completed:

| | |
|---|---|
| Great Britain | 2,713,756 |
| Germany | 1,304,540 |
| France | 899,915 |
| United States | 894,889 |
| Japan | 699,916 |

The following is a list of dreadnaughts and battle cruisers, and are as follows:

England built 29; building or authorized, 17; total 46.
Germany, 17; building or authorized, 11; total, 28.
United States, 8; building or authorized, 7; total, 15.
France, 3; building or authorized, 9; total, 12.
Japan, 2; building or authorized, 6; total, 8.

All the countries now at war have greatly increased their building program, and these figures do not hold good after July, 1914. In the above totals vessels that are over 20 years old are not included unless they have been reconstructed and rearmed within five years. From the above it will be noticed that we stand practically third among the navies of the world, but in equipment and auxiliary vessels, and especially among submarines and aircraft, our Navy is woefully deficient.

THE NEED OF SUBMARINES.

I have no positive information as to the number of submarines owned by the various powers, but we know that they are well supplied and thoroughly equipped in undersea craft, and especially is this true of Germany. In the naval bill passed by the Sixty-third Congress provision was made for an increased number of submarines, but up to this time we have practically none that are worthy of the name. Commander Stirling, in his testimony before the Naval Affairs Committee of the House of Representatives, said that we had only one submarine that he thought could take part in maneuvers at sea. I wish to say that the press and the public generally have been censuring Congress for not providing the means and authorizing the strengthening of our Navy. In this they are mistaken. Congress has been anxious and willing, especially the Republican Members of Congress, to supply the money and authorize the construction of an adequate Navy. As evidence of this, I will quote from the hearings before the Committee on Naval Affairs when the bill was framed which passed the Sixty-third Congress.

Secretary Daniels, speaking for the administration, had requested Congress "to provide for eight new submarines." Admiral Fletcher said:

I think it would be a reasonable precaution to provide a few more submarines, considering our extensive coast line in the Atlantic and Pacific.

Further along in his testimony the admiral said:

I think a reasonable increase in submarines—somewhere about 8 or 10—would be a proper increase.

Notwithstanding the request for only 8 or 10, Congress appropriated for and authorized the construction of 18 new submarines, but they have not been constructed. It was only a few months ago that the contracts were let for their construction, and then the builders were given 18 months in which to complete them, so that they will not be available for use until nearly four years after their construction was authorized. This delay is uncalled for and is unnecessary—we know England is building the same type and size of submarines now in Canada in five months and we are furnishing the materials—and it is due entirely to the indifferent and inefficient management of the department under this administration. I am told, and I think it is true, that Congress has appropriated, not including the bill now under consideration, about $200,000,000 for warships and auxiliary vessels which are simply "under construction," and therefore are not now available. The failure of the Navy Department to see to it that these vessels are constructed and put into commission deserves to be and has been severely criticized on the floor of the House as well as by the press.

AIRCRAFT.

In regard to the equipment of our aircraft, our position is extremely humiliating. According to the best information, the aircraft equipment provided by various nations prior to the outbreak of the European war was as follows:

France was equipped with 22 dirigibles and 800 aeroplanes.
Great Britain was equipped with 19 dirigibles and 400 aeroplanes.
Belgium was equipped with 2 dirigibles and 100 aeroplanes.
Serbia was equipped with 60 aeroplanes.
Germany was equipped with 40 dirigibles and 1,000 aeroplanes.
Austria was equipped with 8 dirigibles and 400 aeroplanes.
United States was equipped with 23 aeroplanes.

In the case of the United States there were not more than two aeroplanes of the same pattern, and none of them modern in type or equipment.

The first step toward organizing an air service for the United States Navy was taken in 1911 under the Taft administration. This was the beginning, when our knowledge as to the possibilities of aviation was limited, but considerable progress was made. The Sixty-third Congress, however, appreciating our lack of equipment, appropriated $1,000,000 to be expended in developing aviation for the Navy. In a statement issued recently by Secretary Daniels he says:

Congress gave us $1,000,000 to begin upon an elaborate plan the real development of aviation in the Navy. At that time the Navy had but four aviators and no satisfactory machines. A special training school has been established at Pensacola, Fla., and we now have

about 40 machines in operation down there. The armored cruiser *North Carolina* has been equipped successfully as a mother ship for aeroplanes and participated in the recent exercises at Guantanamo.

Now, the facts are that when the appropriation of $1,000,000 was given to the Navy Department the General Board of the Navy had recommended the establishment of four aviation schools, but the only school established is at Pensacola, and I am informed that there have never been more than 15 aeroplanes in commission there at any one time. It is true that the *North Carolina* did go down to Guantanamo, but she carried only nine aviators and only four aeroplanes, no launching device, no radio for aeroplanes, no bomb-dropping device; and while there the fleet was so undermanned, we are told, the aviators had to do ship duty, which left little time for the aviation exercises. It was the purpose to use the aeroplanes to spot the fall of shot during gunfire practice, and in an effort to accomplish this an officer rigged up a radio set, but it was insufficient to meet the demands. This lack of equipment also prevented the working out of other naval problems, such as directing the movement of the fleet by advising it of the movement of the enemy ships. The launching device for aeroplanes was developed and tested before Mr. Daniels became Secretary of the Navy. I am calling attention to these facts to show that the fault is entirely with the executive and administrative department, and is not, as is generally supposed, the fault of Congress in not providing the money and authorizing the development of this service.

When the present bill was being framed the General Board of the Navy offered two plans: No. 1 recommended $5,000,000 for aviation purposes; plan No. 2 recommended $3,000,000 for aviation and $11,000,000 for ammunition. Plan No. 1 did not make mention of ammunition. Secretary Daniels, however, recommended only an appropriation of $2,000,000 for aviation purposes and $8,000,000 for naval ammunition, which were the amounts carried when the bill was reported in the House. When the bill was before the House, Representative ROBERTS of Massachusetts, the ranking Republican member of the Committee on Naval Affairs, offered an amendment providing for an increase from $2,000,000, which the bill carried at the request of the Secretary to $3,500,000. I voted for this increase and was glad the amendment was adopted. I might state here also that the present bill when it came from the committee provided for 20 submarines. Representative ROBERTS also offered an amendment for which I voted increasing the number from 20 to 50. This amendment was adopted.

You will notice by the foregoing, and I wish to emphasize the fact, that the Republicans in Congress, with the aid of some of the Democrats, have been able to secure the necessary appropriations; but the trouble is that the administration through inefficient management and a lack of disposition to put into execution a proper and necessary program of preparedness, are directly responsible for the woeful inefficiency and deplorable condition of our Navy, and even the passage of this bill will not give us what we want unless the administration is aroused to action and a sense of its duty by the insistent demands of public opinion.

As another evidence of the seeming indifference governing every action of the department is the fact that the battleships provided for in the naval bill passed by the Sixty-third Congress are not being constructed with a view to early completion. The truth is that the keels of none of these ships have been laid and will not be laid until possibly in the month of November or later, notwithstanding the fact that the ships were authorized and the money appropriated for their construction several years ago. Even after the keels are laid, I think, 33 months is given to complete the ships, and after this 18 months more will probably elapse before they are equipped and commissioned. It is a known fact that we have no aircraft to-day worthy of the name, and it is indeed a sad reflection on the administration that with all the money available no better showing has been made in two years time, and especially at a time when President Wilson was traveling throughout the country and proclaiming to the people "that we may be plunged into a war at any moment."

Again, as a comparison, we might refer to the British Navy. When Lord Churchill became the head of the British Navy he found there were only a few aeroplanes and aviators in the service. He added aviators and aeroplanes of the most approved and modern type by the hundreds in a remarkably short time. It might also be stated that in the hearings before the Naval Affairs Committee, when the larger appropriations—those recommended by the navy board—were urged, Secretary Daniels said he did not know what to do with the money in case it was appropriated. And when the same matter was brought to the attention of Representative FITZGERALD, chairman of the Appropriations Committee, he was asked whether he was not aware that the General Board had recommended an appropriation of $5,000,000 for aeronautics, he replied, "I did, and that is the reason I paid so little attention to their recommendations." It seems to be the old story over and over again, that all the testimony offered by those in a position to know something of the subject under consideration is rejected and the advice of those who know nothing of the matter is accepted.

It is a notable and impressive fact, demonstrated by the European war, that the nations which were prepared for some particular purpose to meet certain contingencies have demonstrated the wisdom of their precaution. Noticeably on the one hand, England with her navy, and on the other hand, Germany with her army. Another noticeable and impressive fact is the universal efficiency of the industrial system of Germany. Of larger and more peculiar significance to us than any one single circumstance was the thorough and complete preparedness of the Swiss Army and its readiness to respond to the utmost demands of the situation. As a consequence Swiss territory has been respected and held inviolate.

IMPOSSIBLE TO COMPARE THE COST OF PREPAREDNESS WITH THAT OF WAR.

Above all, it seems imperative that we have an adequate Navy. The Navy must always be our strong right arm of defense.

Regarding the financial burden that preparedness will necessarily bring, I wish to say that the burden of cost is frequently greatly and grossly exaggerated. This is especially true of the Navy. Should we desire to compare the cost, a single battle on land would cost us more than it will cost to construct a powerful Navy; a single year of war with any first-class power will cost us more than the most elaborate program of preparedness ever suggested. And should we unhappily become involved in a conflict with a first-class power, who would stop to ask the cost on the day of battle; who or how could you measure in money the value of the dead or the agony of the wounded and dying, the suffering and privation of the widow and orphan? What is human life and human blood and human suffering worth measured in gold? In fact, we all agree it is not a question of cost. No; no; it is solely and entirely a question, "Will preparedness reduce the chances of war?" If so, I am sure we are all in favor of preparedness.

LOSS OF LIFE LESS IN NAVAL THAN IN LAND BATTLES.

Again, a strong Navy is more to be desired than a strong Army. The loss of life and human suffering is much less in battle, yet its power in shaping the destiny of nations is fully equal to that of the Army. The heroic Nelson destroyed forever Napoleon's dream of a universal empire, yet in doing so he lost but 1,690 men. Admiral Togo sent this message to the commander of the fleet *Tsu Shima*, "The rise or fall of the empire depends on to-day's battle." He was right; that day decided the mastery of the seas in the Far East and made that little island empire a world power and cost the lives of only 116 men.

The fight between the *Serapis* and the *Bon Homme Richard*, where John Paul Jones, when asked to surrender, declared that he had "just begun to fight," was one of the most desperate battles ever waged on the seas. It placed the name of that brilliant American admiral among the immortals, yet he lost only 150 men.

On Lake Erie Admiral Perry fought one of the fiercest of all naval battles and won a victory that vitally affected the world's history, yet he lost only the lives of 27 men.

Admiral Farragut struck one of the most deadly blows against the Confederacy, losing only 37 men. The fight between the *Merrimac* and *Monitor* at Hampton Roads changed the naval affairs of the world and sealed the doom of the Confederacy, yet in this battle not a single life was lost.

Spain was hopelessly defeated in our war with her when the Battle of Santiago ended. It was the most complete naval victory ever fought on the ocean, and yet the Americans lost only one man.

In the Battle of Manila Bay not a single American life was lost.

The loss of life in all the important naval fights of our Nation's history which have had such a tremendous effect upon our destiny and civilization does not equal the loss of life in a single skirmish on land.

With a powerful Navy we can protect our country without great loss of life. The property loss of a naval battle is nothing compared with a loss that would follow if our country were to be invaded.

Upon the British Navy to-day, as has been the case many times in the past, rests the fate of the British Empire.

ECONOMIC AND INDUSTRIAL PREPAREDNESS ALSO ESSENTIAL.

It is necessary, however, to bear in mind that the Navy must be built and secured in advance, and in connection with

this I might say that military and naval preparedness mean nothing in modern warfare unless closely correlated with economic and industrial preparedness. Modern battles are not won by soldiers and sailors alone, but the necessary equipment is also essential. Proof of this may be found in the fact that the munition workers of France and England constitute numerically a larger army than the army of British and French soldiers in the trenches of Europe. The man who manufactures the machine gun, the shrapnel shell, is quite as essential and important and necessary as the soldier who actually uses the gun or fires the shell. Nor, indeed, is only preparedness necessary; the sinews of war not only consist of an army and navy and the equipment of same, but all these are dependent upon what I shall term commercial preparedness; that is, all the enterprises of manufacture, transportation, and distribution, so that the resources of the country can be put behind any body of men enlisted in the Nation's defense and be able to supply all their varied needs.

The matter of transportation is one of the all-important elements entering into preparedness. I need only to call your attention to the recent experience we had in transporting the comparatively few soldiers comprising our National Guard to the border to demonstrate our utter lack of preparedness along this line. German efficiency in the marvelous development of her roads and railway system with a view to military strategy and expedition is world famed, and has given her the greatest advantage she enjoyed at the beginning of the war. Her ability to transport vast bodies of troops overnight, as it were, from one frontier to the other has enabled her, more than anything else, to beat back from her territory the allied forces of Europe. It is the duty of Congress, as a matter of industrial preparedness, to frame such legislation as will give us complete control of railway transportation for the movement of troops in times of war as emergency may at any time demand. The patriotism of the owners and managers of our roads would undoubtedly render unnecessary drastic Government action to secure such control, but the sovereignty of the people over private interests should be ready and prepared to assert itself immediately if necessity arose. In addition to all these, there is still one other form of preparedness which I shall briefly mention, namely, intellectual and spiritual preparedness, and it is as much higher as the spirit of man is greater and nobler than his body; reason is stronger than brute force. It has been truly said "knowledge is power," especially military power. Brains are better than bullets. By this I mean to convey the idea that we must become an educated and trained people; we must not only have well-educated and trained officers in our Army and Navy, but we must also be a trained, educated, clear-thinking people.

My plea is for the maintenance of the rights and sovereignty of the plain citizen of this Republic and for the actual and absolute rule of the people under the representative form of government.

My plea is for the passage of laws that will make infamous and criminal the employment of children in sweatshops when they should be attending public school. I am an advocate of the public-school system. I do not deride or condemn American universities like Harvard, Yale, Columbia, Princeton, or Cornell, they are the jewels of our intellectual bodies, and let us hope there may be more of them, but the American university is not the great temple of intellectual and spiritual preparedness of the Republic.

It is rather the church and the public school building over which floats the Stars and Stripes, wherein the boy is taught to read and study the spirit of the Constitution of the United States. The public schools of America must be the great melting pot of patriotism and good citizenship. In the population of America are mingled representatives of nearly every race of every country on earth. This mass of humanity must be fashioned and molded into a homogeneous whole in the public school by the public-school teacher. There the minds of the young children, the future citizens of the Nation, must be filled with a spirit of Americanism, and must be taught an undivided allegiance to America—an allegiance that knows no fatherland and admits no loyalty except a devotion to the flag of our Nation. The child must be taught to glory in the achievements of our past and believe implicitly in the possibilities of our future.

To this must be added the teachings of the Bible and the church. There must be planted in the heart and soul of the child that love and reverence to Almighty God, his Creator, who dwells and rules in the hearts of men and shapes the destinies of nations.

This will result in an intellectual and spiritual preparedness, without which all other forms of preparedness are but achievements or manifestations of vulgar pride and brute force.

**On Adoption of Conference Report on Navy Bill.**

## EXTENSION OF REMARKS

OF

## HON. CYRUS CLINE,

OF INDIANA,

IN THE HOUSE OF REPRESENTATIVES,

*Friday, August 18, 1916.*

Mr. CLINE. Mr. Speaker, I am convinced that the conference report ought to be adopted. Great economic changes wrought by the war in Europe in which our relationships with foreign Governments have become serious require a larger Navy. The world's business has taken on such an aspect as "to alarm neutral and peaceful nations." The United States is no longer an isolated and distant power pursuing lines of development essentially of her own choosing. Her sudden development as a governing force in world politics and world commerce brings new duties and new complications that the American Congress must meet, and one of them is to put a larger Navy upon the seas—one that shall command respect from the greatest of white nations. I have no fear of invasion; I have no fear of a war for conquest. We only covet peace and peaceful commerce. I have heard for months the cry of danger from invasion by foreign powers from the Members of this Chamber. In this long session not a man has risen from his place and declared from what source or for what reason we were liable to attack. No man to-day asserts that we are liable to be attacked by England or France or Germany or Japan. The dreams of what might happen as related by the enthusiasts on this floor are as baseless as the wildest vagaries of Munchausen.

I have no fear, Mr. Speaker, of the nations at war, with 5,000,000 of their best, their most perfect, their most virile sons sleeping for all the future in the blood-soaked trenches of European battle fields—a burden of a hundred billions on the shoulders of their widows, their orphans, cripples, and old men, their industries paralyzed. No man sitting in this Chamber will ever see another great international war. But there is another reason, more convincing than the fear of invasion, that we will not be attacked. No nation has a grievance against the United States through which she could provoke us to war. We are the leading figure in the great family of nations, our Government, our prosperity, our liberty, the largest in the realm of organized society and yet protected by law, is a guarantee of our future. So, Mr. Speaker, some other reason must exist for supporting the enormous expenditure set out in the conference report. I am reminded that Candidate Hughes is spilling his complaints about the country, charging that the Democratic Party has been grossly extravagant and that we are shockingly unprepared. He fails to tell the people that during the 14 years his party was in continuous power it spent three thousand millions of the people's money on the Army and Navy alone, and turned over to the Commander in Chief an Army without sufficient men, without guns, without equipment, without a reserve, and the country without adequate fortifications; that it turned over to the Commander in Chief a Navy without men enough to man the vessels it had, without auxiliary vessels, without submarines, without battle cruisers. That was the product of the expenditure of three billions of the people's money. It requires an unusual development of nerve to go about the country asking that the Republican Party be returned to power to prepare for national defense.

When the war is over there will arise the fiercest contest for the world's trade ever witnessed. The very nations now struggling under enormous debt to maintain mountains of inflated securities and bank currency, without gold to support them, will organize for a conquest to rebuild the gold reserves they have lost and which is now in American vaults. The very force of economic conditions will compel the tripple alliance and the entente alliance to resort to every means imaginable to undermine vast volumes of our accumulated wealth, to reinforce their credit and bolster their inflated securities. Taking advantage of the conditions which we did not create, we have become the greatest export Nation in the world.

The means of carrying that merchandise is in the hands of our commercial rivals. That is the situation that confronts the greatest Government of the white race. Fifty years of supremacy in the administration of the Government by the Republican Party, during which it was drunken by the greed and avarice,

always fostered by a high protective policy, led to the abandonment of all other considerations, and our ocean commerce was driven from the seas and the American people left helpless in the hands of their trade enemies. The very fact that the United States had distanced every competitor in the world's markets with her goods is conclusive proof of her genius, her thrift, and her business ability. Mr. Speaker, the coming conflict will not be one of individual conflict. The two great clusters of nations will reenforce every individual and every private corporation that strikes for the rehabilitation of their trade and commerce. They will invade the markets we have captured while they were fighting each other. No private individual, no private corporation will find again that freedom for his genius that he once enjoyed. Back of him must stand his Government as a factor in the contest. The great growth of socialism in Germany and France has had its influence in shaping the national combinations in western Europe in the situation with which we are face to face. The war in which was spilled the fraternal blood of kindred nations in a common cause will cement their friendship and augment the force of the bitterness of the contest for supremacy. There can be no question but that conferences and agreements binding with each other have already been entered into by the respective contending powers against each other. Tell me what chance an American manufacturer will have single handed and alone against such a combination, when the very men he is fighting have the shipping he must have to carry his goods into a disputed market to compete with the shipowners' goods with his Government back of him. The United States, with 100,000,000 people, must assert herself to the world's business and take her place unhesitatingly. To do that she must have a great Navy as an auxiliary to a great merchant marine. Mr. Speaker, this people will not long condone the offense offered by a rival nation when it lifts its black-listed hand against our great neutral commerce and we be put in the humiliating position of negotiating for our rights on the high seas. A national boycott against a free and neutral people pursuing its legitimate lines of business is the most exasperating conduct a nation can engage in. The unwarranted assumption that England can dictate the kind of commerce we can carry, to whom we may sell, and under what conditions, ought to be challenged. The time is here when the iron grip on the ocean lanes of commerce ought to be released and the use of the seas be as free as the sunlight and the winds that blow. I am opposed to having our mails rifled, our noncontraband commerce seized, and directed to selected ports and told with whom we can do business. Commercial concerns far removed to the interior of the American Continent have come under the ban of the English black-list decree. Concerns that have violated no neutral right and whose business ought to be protected are the sufferers. The President of the United States ought to be clothed with all necessary power to meet the situation that the facts warrant.

Preferential tariff rates and differential rates ought to be weapons in his hands. I favor the measure known as the Webb bill, authorizing manufacturers to enter into agreements for the purpose of meeting these combinations across the waters. I believe the administration will speedily take steps to protect American business men engaged in export trade as against unwarranted decrees that seek to put them out of business by the process of blacklisting.

But I vote for the conference report for another reason. The assumption of additional responsibility under the Monroe doctrine calls for a great Navy. We want no anxiety about our source of strength when questions arise in which we have such a vital interest, not alone in ourselves but in the Republics south of us. To safeguard that interest, which has become as wide as the hemisphere in which we live, we need a great Navy. We create it as a guaranty wherever our flag goes as a guaranty of our commercial rights and equal treatment. Present economic conditions of the greatest export nation in the world admits the necessity of a great merchant marine. The nation that depends upon a lesser power in importance to do its carrying business is always at a disadvantage. There are but three ways to create a merchant marine: Construct it with private capital, subsidize private capital out of the Federal Treasury, or let the Government engage in the enterprise. We have waited for 50 years for private capital to develop a merchant marine. All persons and all parties are opposed to looting the Federal Treasury to subsidize private concerns. I am in favor of putting the Government in a position to aid commerce and guarantee freight rates to the shipper. In that way the Government can, if it desires to do so, aid private capital and be of service in initiating the construction of a merchant marine. No more critical time ever existed in the history of the country with reference to foreign trade than exists now. The spectacle of the world's greatest trade nation without means of carrying on its business is humiliating. We have ourselves the richest markets in the world. It is our duty to protect them, not by a prohibitive tariff, for that would destroy them, but by friendly intercourse and such interchange of commodities as shall give us a market for our constantly increasing products. We need not confine ourselves to the South American Republics. Beyond the Carpathians and the Black Sea are an innumerable people just awakening to their possibilities in a land that is unsurpassed in fertility and resources. The possibilities for the United States ought not to be misunderstood. It is a problem for the ripest statesmanship. Its solution will admit of no partnership with protected interests, but only such perspective as will bring within the range of its vision our relationship with the world's trade.

---

**Exit the Stop Watch.**

## EXTENSION OF REMARKS

OF

# HON. CLYDE H. TAVENNER,

OF ILLINOIS,

IN THE HOUSE OF REPRESENTATIVES,

*Friday, August 18, 1916.*

Mr. TAVENNER. What is the basis of the much-discussed Taylor system of "scientific" shop management?

Will it really enable a workman, without wearing him out prematurely, to earn more wages while putting in less time than he is now putting in per day, as Frederick W. Taylor, the originator of the system, contended? Or is the basis of the system in actual practice merely the "scientific" overworking of men for the purpose of increasing dividends regardless of whether the speeding up is injurious to the health and happiness of the victim?

It may be stated at the outset that the Taylor propaganda contains many excellent features of systemization and standardization. To these the workmen have not objected, could not object. It has been intimated the labor organizations oppose these reasonable and sensible features of the Taylor system, but there is not a word to substantiate it in the hearings of five investigations of the system—four by Congress and one by the Commission on Industrial Relations.

The Taylor system in its final analysis is based on extremes. This system is different from other so-called systems of "scientific" shop management principally in the fact that he covered in his propaganda all the ground covered by other labor-saving scientists—and they all went as far as they thought it would be humane to go—and then continued still further. It is these extremes, and these extremes only, that workmen oppose. It is these extremes and not the systemization and standardization features of Taylorism, which are to the mutual advantage of employee and employer that Congress has forbidden in Government arsenals and navy yards.

Many well-meaning employers and many men who are sincere in their desire to see the conditions of workingmen improved, have been misled as to what the Taylor system is and as to the motive behind it. I will mention, for instance, Mr. Supreme Court Justice Brandeis, a man who more than once has served the public and that, too, without being on the pay roll of the public. Justice Brandeis has spoken approvingly of the Taylor system methods. But with all respect to Justice Brandeis, I believe he is honestly mistaken in his idea that the Taylor system was conceived in the interests of man. It was not. It was conceived in the interests of greed, and in operation it exploits man and does not benefit him.

### ONLY ONE OUT OF FIVE WORKMEN COULD KEEP UP.

I do not believe the man lives who can successfully defend before an audience of average American citizens the Taylor system as Mr. Taylor himself described it.

Imagine Justice Brandeis, or any other man, confronted on the public platform with Mr. Taylor's own words, used in describing how he installed the Taylor system at the plant of the Bethlehem Steel Co.:

> The tasks were all purposely made so severe that not more than one out of five laborers (perhaps even a smaller percentage than this) could keep up.

I desire to repeat that the motive behind the stop watch and other speeding-up features of Taylorism is not efficiency, as the average man understands the meaning of the word, but an inordinate desire for a greater profit from the toil of man, and back of that desire is greed.

In its last analysis the Taylor system is simply the "scientific" grinding down of the spirit, the hopes, the ambitions, as well as the physical bodies of those who toil, and for what? In order that dividends may be increased. The thing is too inhuman and too murderous to be imposed on beasts of burden, to say nothing of imposing it upon fellow human beings. It may be said to the credit of the average American employer that he has refused to go to anything like the extremes that Mr. Taylor recommended.

As so well stated by the gentleman from Colorado [Mr. KEATING], the issue in the fight against the Taylor system is between those who want to hold a stop watch on *some one else* and those who have had the stop watch held on them.

ATTEMPT TO INSTALL SYSTEM IN GOVERNMENT ARSENALS.

Strange to relate, the Chief of Ordnance wants to install the Taylor system in the Government arsenals. The Sixty-fourth Congress deserves the unstinted thanks of the workers of the Nation for inserting in the Army, Navy, fortification, and sundry civil bills a provision prohibiting the use in Government arsenals and navy yards of the stop watch and other objectionable speeding-up features of the Taylor system.

This provision reads as follows:

Amendment offered by Mr. TAVENNERS

"*Provided*, That no part of the appropriations made in this act shall be available for the salary or pay of any officer, manager, superintendent, foreman, or other person having charge of the work of any employee of the United States while making or causing to be made with a stop watch, or other time-measuring device, a time study of any job of any such employee between the starting and completion thereof, or of the movements of any such employee while engaged upon such work; nor shall any part of the appropriations made in this act be available to pay any premium or bonus or cash reward to any employee in addition to his regular wages, except for suggestions resulting in improvements or economy in the operation of any Government plant."

The enactment of this legislation was accomplished in the face of the bitter opposition of the great manufacturers' associations of the United States.

Considering the powerful influences that opposed it; considering the treacherous parliamentary whirlpools through which it had to pass, and the dangers which beset it at every stage of its legislative journey, the workingmen of the Nation are to be congratulated upon its final passage by Congress.

ANTISTOP-WATCH LEGISLATION IMPORTANT TO ALL WORKERS.

This legislation is of importance to all workingmen, whether they are employed in Government establishments or not, because if the Taylor system could have been installed in Government plants, the fact could have been made use of to the disadvantage of employees in private plants where the installation of the system is contemplated. Private employers would be in the strategic position of being able to assert to their protesting employees that the Taylor system had been indorsed by the United States Government, and that if it was an inhuman and bad system Uncle Sam would not be putting his official stamp of approval upon it by introducing it in the Government arsenals and navy yards.

IDA M. TARBELL, NOTED WRITER, ONE OF THE CHIEF EXPONENTS OF TAYLOR SYSTEM.

One of the most enthusiastic advocates of the use of the stop watch is Ida M. Tarbell. Miss Tarbell is one of the foremost women writers of the United States. I have the greatest respect for her ability. But had she taken the other side of this issue, and condemned the use of the stop watch on human beings instead of indorsing it, she could have made more powerful arguments.

Miss Tarbell has, but let us hope only temporarily, taken up the cudgels for that school which believes that a sufficient indorsement of a working condition is the fact that men can be found who will work under it, or that men are to-day working under it, and that, anyway, if workmen are not satisfied with working conditions in a given shop, let them quit their jobs and seek employment elsewhere.

But it is no solution of the problem to say that a workman need not work under the stop watch if he is dissatisfied with it. This attitude does not work toward the solution of any labor problem, because it is based on the theory that labor is voluntary and not compulsory to an individual. There could be no greater mistake, because in the last analysis every self-respecting man must labor somewhere, for some one, in order to live. As a general proposition, the right of man to the opportunity to labor somewhere, for some one, must be conceded by the employer, and is conceded by him, if he is intelligent and fair. The right of a workman to labor in order to obtain food to sustain himself and those dependent upon him is an inherent right, almost like the right to breathe. Having been born into the world, the very least man has a right to expect from the world is the privilege of working in order to live.

Let us analyze this theory a little further: A man is born into the world. He discovers that title to the coal, timber, and other natural resources of the earth that were unquestionably intended by the Creator for *all* His children has rightfully or wrongfully been acquired by a comparatively few persons; that these sources of life, intended for the use of *man*, have been taken possession of by a mere handful of *men*. Our subject finds, too, that practically all wealth and industry are also controlled by a comparatively few.

Therefore, with practically all of the natural resources gobbled up and with wealth and industry controlled by the few, about the only chance for life remaining to the worker is the privilege of obtaining employment. If even this should be denied him he would have to perish, which, however, was not nature's intention with respect to man. Nature intended that man should live, and therefore it is man's right to labor to obtain the necessaries of life with which to live.

And having the right to labor somewhere, for some one, man has the right, also, to treat with his employers as to the conditions under which he shall labor.

To say that if a workman is dissatisfied with the Taylor system his proper course is to leave that particular employer is not in any sense a solution of the problem, because the problem would still exist in the next plant in which he might find work, and the next, and the next, and so on. It is not practical for a workman to be wandering about from shop to shop, and under such a method of solving labor problems the employers would invariably win, as the necessities of the workman and those dependent upon him would ultimately force him to accept employment at any wage offered and under any conditions that the employer might decide upon.

Therefore the solution of the problem arising out of the introduction of the Taylor system is not to suggest that the men should give up their positions, but mutual agreement between employer and employee as to which features of the system are fair and reasonable and which are unduly oppressive and therefore unreasonable.

IS THIS WHAT MR. TAYLOR MEANS?

A statement in Mr. Taylor's book on scientific shop management, which supplies food for thought, is this:

In all cases money must be spent, and in many cases a great deal of money, before the changes are completed which result in lowering cost.

One inference which might be drawn from this language is that at first men must be paid higher wages to induce them to set the fastest possible pace, but that in the end the men will be doing a greatly increased amount of work for the same pay received before the installation of the system. Evidence is available to sustain this inference.

When Mr. Taylor undertook to install his system in the plant of the Bethlehem Steel Co. the laborers handling pig iron were receiving $1.15 per day, and were handling between 12 and 13 tons per man per day. After the Taylor system was finally installed, the men were handling 48 tons per man per day, and the wages of the fastest workers had been increased to $1.85 per day. Thus it will be seen that before the installation of the Taylor system laborers were receiving 8.8 cents per ton for handling pig iron, and after it was installed they were receiving 3.8 cents per ton.

Mr. Taylor related that when he started in at the Bethlehem plant workmen were turning out 4 and 5 castings of a certain type per day, receiving therefor 50 cents each, and that he succeeded in speeding up the men to a point where they turned out from 8 to 10 castings per day. The price was reduced to 25 cents each.

Permit me at this point to quote from a colloquy between Congressman EDWARD KEATING, of Colorado, a member of the House Labor Committee, and Gen. William Crozier, Chief of Ordnance of the War Department, who is installing the Taylor system in the Government arsenals:

Mr. KEATING. You have shown that the efficiency of your establishment has been increased 274 per cent and the wages have been increased less than 33 per cent.

Gen. CROZIER. That is true.

Mr. KEATING. The practical result is that the efficient workman under the Taylor system is receiving one-half as much per unit for his output as the less efficient workman.

OUTPUT INCREASED 200 PER CENT, WAGES 33 PER CENT, IN INSTANCES.

Gen. Crozier admitted frequently that under the speeding-up processes workmen had increased their output over 200 per cent, and that the wages of some of the men had been increased as much as 33 per cent. The increased profit to the employer, therefore, is the difference between 200 per cent and 33 per cent, and even considerably more than this, because where there is an increase in the output of this proportion there is a considerable decrease in the overhead charges per unit, and because

not all the men are fortunate enough to receive anything like 33 per cent increase.

And this is the milk in the coconut! It reveals the motive behind the introduction of the Taylor system. Its sole object and purpose is to induce the workman to perform more work for less pay per unit. Its operation in the end is to decrease instead of increase wages.

That the system increases dividends for the employer there is no doubt. In fact, it is a get-rich-quick scheme for the employer who is heartless enough to use it to its final analysis, but there are very few employers who will resort to its use as Mr. Taylor described it.

WHEN A WORKMAN WEARS OUT FRESH MAN TAKES HIS PLACE.

Under the Taylor system the man is of secondary importance to the machine. Here is the "science" of it: Be careful of the machinery, because if it breaks down or wears out it costs money to repair or replace it. But if a workman breaks down or wears out, it costs the employer nothing to replace him. There are always fresh men waiting at the door to be employed. So as long as the supply of men holds out the Taylor system can go on.

But, whether Mr. Taylor took it into consideration or not, it is a fact that if a workman, because of long-continued overexertion, is finally thrown prematurely on the scrap heap, some one has to stand the loss even if the employer does not, and where the workman is the head of a family it is the family that must bear the burden. One of the principles of "scientific" shop management, it should be remembered, is that it is no concern to the employer what happens to the man who can not keep up to the pace.

THE SCIENCE OF PERSUASION.

Mr. Taylor laid great stress on his system of scientific "persuasion." Eight bosses assist in the "persuading." Five of them are directly over the workman urging him on.

The tasks laid out for the men are evidently so severe that at first the foremen themselves do not have the heart to insist upon the workmen under them performing the excessive amount of work "planned" for them. But Mr. Taylor foresaw the possibility of weak-hearted foremen, and he arranged to take care of them. He provided "overforemen." I quote from his book (p. 1397, par. 254):

BOSSES NEED NERVING AND BRACING UP TO THE POINT OF INSISTING THAT THE WORKMEN CARRY OUT ORDERS.

The functions of these overforemen are twofold: First, that of teaching each of the bosses under them the exact nature of his duties, and at start also of nerving and bracing them up to the point of insisting that the workmen shall carry out the orders exactly as specified on the instruction cards.

Mr. Taylor stated that foremen make a great mistake in trying to persuade several men at once. He indicated the way to successfully intimidate a workman is for all the foremen to center their persuasion "right onto a single man," and to keep after him until he is persuaded.

No workman—

Said Mr. Taylor—

can long resist the help and persuasion of five foremen over him. He will either do the work as he is told or leave. (P. 1479.)

It should be understood that these secrets of the Taylor system are generally not divulged to the employees, but are particularly for the consideration of employers. It is a part of the "science" of the Taylor system to introduce many of its features "quietly" and to "get them running smoothly in a shop before calling attention to the principle involved." When the effect of certain features of the system are finally realized, Mr. Taylor stated, "it invariably acts as the proverbial red flag on the bull."

But these are not all of the persuasive features that the originator of the Taylor system worked out. Here is an idea which can undoubtedly be employed with more or less success, especially on workers who have no other jobs immediately in sight and who have families that would be placed in want if they should quit their employment:

In piecework of this class the task idea should always be maintained by keeping it clearly before each man that his average daily earnings must amount to a given high sum (as in the case of the Bethlehem laborers, $1.85 per day) and that failure to average this amount will surely result in his being laid off (p. 1374, par. 166).

LAY OFF MEN "QUITE OFTEN" TO INTIMIDATE THOSE WHO REMAIN.

Men must be laid off occasionally, whether it is absolutely necessary or not, however. Mr. Taylor indicated this was necessary for the success of the system. Here is the philosophy in his exact words:

For the success of the system, the number of men employed on practically the same class of work should be large enough for the workmen quite often to have the object lesson of seeing men laid off for failing to earn high wages, and others substituted in their place.

It is no part of the "science" of the Taylor system to be concerned with any workman who can not keep up. Mr. Taylor stated it was really wonderful what a prodigious amount of work could be performed by the body of picked men who survived three or four years of his stimulating and eliminating processes. Nothing was said of bread earners who drop out in the preliminaries. The Taylor system concerns itself only with the survivors.

PUBLIC IS FOOLED SOMEWHAT AS TO JUST WHAT THE TAYLOR SYSTEM REALLY IS.

Mr. Taylor had two descriptions of his system. They differ somewhat. One was for the perusal of the general public, whose approval of his methods would be a valuable asset in imposing the system upon workmen in spite of their objections. To the public it was made to appear there was nothing about it objectionable to the workman, especially no such thing as hurry, and that it was, indeed, conceived in the interests of man instead of to exploit man.

Mr. Taylor had another description of his system intended for the eyes and ears of employers particularly. In this version he made no claim to being a humanitarian, but showed how after men have been speeded up and speeded up and speeded up they will be doing more work for less pay per unit, which, of course, means increased dividends, and increased dividends constitute the plot of the play throughout.

In other words, the picture Mr. Taylor drew of his system for the public was one of gentleness personified, while the other version left a vision of breakneck speed and enormous profits.

WHAT THE "SCIENCE" OF THE TAYLOR SYSTEM APPEARS TO BE.

A careful perusal of Mr. Taylor's various works explaining his system of shop management would indicate—

First. That the "science" of the Taylor system in its final analysis is the relentless speeding up of workmen by the setting of a task which, in some instances, but one out of five workmen can accomplish;

Second. That it is no part of the "science" to be concerned with any workmen who can not keep up to the pace of the fastest man on the part of an operation on which he is engaged;

Third. That if the Taylor system was adopted universally, a great army of workmen would be thrown out of employment or reduced in rank, such as mechanics being forced to take positions as laborers, because it is obvious that all men are not physically able to keep up, day after day and month after month, to a pace set by the fastest and freshest workers;

Fourth. That the Taylor system would tend to destroy organization among workmen, one of the corner stones of Taylor logic being the principle that workmen must be dealt with individually and not in masses or through committees; that it is no concern of one workman what happens to another. All men working under this system must be "satisfied"; the moment he becomes dissatisfied he must quit; otherwise there would be danger of his grievance becoming contagious and the "system" interfered with.

The Taylor system means, in a sentence, that the quickest time at which a job can be completed by a first-class man is to be the standard time at which all men are to be compelled to complete the same job, with a bonus—at least, to start with—for reaching the maximum speed, and a fine or discharge for not reaching that speed.

PRESS REPORT OF INDUSTRIAL RELATIONS COMMITTEE CONDEMNS "SCIENTIFIC MANAGEMENT."

The Committee on Industrial Relations spent thousands of dollars in an investigation of "scientific management." The conclusions reached by disinterested investigators and students should be read by any man who doubts that these so-called systems are to-day the gravest danger facing the workers in their struggle for freedom and well-being. Briefly, according to a press report issued by the Committee on Industrial Relations, the commission found:

"(1) That the cardinal principle of 'scientific management' is the pitting of each workman against the fellow workman at his side in a race for greater and greater output per minute and hour and day.

"(2) That constant dread of discharge is deliberately implanted in every worker's mind in order to drive him forward at top speed.

"(3) That this killing competition of worker against worker is the most efficient scheme ever devised to break down organization among employees by creating interests that are not common, but absolutely the reverse of common.

"(4) That it is a fact, proved over and over again, that employers operating under scientific management reduce the basic rate of pay to about that prevailing before the system was introduced, as soon as they have speeded up their employees to

the point where the latter are earning more than the prevailing rate of wages, as a result of their increased speed and productiveness. In other words, the workers' share of their increased production is taken away from them as soon as the standard has been set and the employers have demonstrated that the increased rate is possible.

"(5) After the basic rate has been reduced, the employee must keep up the same nerve-racking race or he will not receive even the lower rate.

"In the words of Andrew Furuseth, 'they will scrap the whole human race unless some power stops them.'

"If organized labor were strong enough to take an equal voice in administering so-called scientific management systems, it might be a different story. But with labor already fighting against odds for the right to organize, the net result of the Taylor system if generally adopted would be simply to destroy unionism and leave the workers helpless."

TAYLOR SYSTEM TRANSPLANTED IN ARSENALS FROM SHOPS OF THE WAR TRUST.

The attention of the Chief of Ordnance of the War Department was first attracted to the Taylor system at the plants of the Midvale Steel Co. and the Bethlehem Steel Co., two of the three concerns which constitute the War Trust in this country and to which concerns the War Department has awarded millions of dollars' worth of contracts for munitions of war, paying them from 20 to 60 per cent more than it would have cost to manufacture these supplies in the Government arsenals. The action of the Chief of Ordnance in transplanting the Taylor system from the plants of the Midvale and Bethlehem companies to the Government arsenals is additional evidence of the close cooperation between Army officers and the War Trust.

Gen. Crozier employed Mr. Taylor and his assistants to install the system in the Government arsenals.

It has been put into effect at the Watertown Arsenal and has been partly introduced at the Rock Island Arsenal. The employees at both establishments are opposed to the system almost to a man, and it was their protests that have brought about action by Congress.

In spite of the opposition of the workmen at the arsenals and in spite of the fact that four committees of Congress have investigated this system and reported adversely, the Chief of Ordnance has persisted in extending the system.

Relative to the activity of the Ordnance Department chief in introducing the Taylor system in the Government arsenals, the report of the Committee on Labor of the Sixty-third Congress, made to the House on September 30, 1914, had the following to say:

THE "SYSTEM" IS BEING FORCED IN.

The moving spirit behind the plan to install the Taylor system in the Government arsenals appears to be Brig. Gen. William Crozier, Chief of Ordnance of the War Department, who has jurisdiction over all of the Government arsenals. Gen. Crozier appears to be determined to install the stop watch and other objectionable speeding-up features of the Taylor system in the arsenals in spite of the protests of the workmen and even in spite of the strong denunciation of such methods by the special committee of the House of Representatives which investigated the subject during the preceding Congress.

This officer appeared before the committee and spoke in favor of the use of the stop watch and the Taylor system; and there appears to be every reason to believe that, unless Congress passes legislation absolutely prohibiting the use of such methods in the Government establishments, Gen. Crozier will proceed with the extension of the system, not only at Watertown and Rock Island, but in all the manufacturing establishments of the Government within his domain.

GENEROUS WITH WAR TRUST, BUT A SCIENTIST IN SHOP MANAGEMENT.

It is worthy of passing notice that while Army officers are not the least bit saving with the people's money when awarding contracts to the Bethlehem Steel Co., paying this concern 35 per cent more than they could obtain the same work for by Government manufacture, they are extreme economists when it comes to using the stop watch on a workingman.

Although Gen. Crozier's own testimony before the Appropriations Committee was that the arsenal workmen are turning out work 35 per cent below the price of the private manufacturers, and are saving the Government hundreds of thousands of dollars annually, Gen. Crozier is determined to make them work still faster.

GEN. CROZIER HIMSELF TESTIFIES THAT ARSENAL EMPLOYEES ARE SAVING MONEY TO THE GOVERNMENT.

Let us turn for a moment to certain recent testimony of the Chief of Ordnance as to the present efficiency of the plant at Rock Island, Ill., and thereby ascertain if the necessity exists for any drastic change of method, or speeding up. On January 13, 1912, Gen. Crozier said before the special committee of the House of Representatives to investigate the Taylor system, and so forth, as follows—see page 1118 of hearings:

We have recently manufactured gun carriages and are doing it still for 3-inch rifles; that is, field guns, at $2,510.60, the exact cost. We purchased those rifle carriages from experienced manufacturers, who had had preceding orders for the same thing, for $3,398.82, an increase of 35.4 per cent over our own price. Our carriages were made at the Rock Island Arsenal.

We have manufactured there, at the same arsenal, caissons for $1,128.67, and we have purchased the same caissons from private manufacturers who had had previous orders for them, so that they had experience in the manufacture, for $1,744.10, which is 54.6 per cent greater than our own price.

On page 1117 of the same hearings Gen. Crozier stated as follows:

At the Springfield Armory the principal manufacture is small-arms rifles. We make a few other things, but the manufacture is almost entirely of the small-arms rifle. We manufacture that rifle for about $15, and in doing so I take into account what I think should properly be taken into account in the cost; but the Springfield Armory, like the other arsenals, is maintained as an arsenal of storage and issue, as well as a manufacturing place; and, therefore, in computing these costs, I have subtracted from the total expense of the Springfield Armory those portions which I consider result from its character as an arsenal of issue and storage. Unless somebody goes into the details quite closely, there may be a question as to whether I subtract quite as much as I ought to.

Therefore, I, last year, for the purpose of satisfying some persons who might have some doubt, made up what I might call an exaggerated cost of the rifles at the Springfield Armory—that is, I took every cent of money that was sent up to the Springfield Armory and charged it to the rifle. Whether it was for the payment of the clerks that were used in the issue of stores, the payment of the storehouse force, whether it was for the payment of the watchmen—they are the guards and custodians of the valuable property we have up there—I charged all the pay of officers and all the pay of everybody concerned to the rifle, and by that means I arrived at a cost of the rifle of $17.64 instead of $15—that is, I found I had to add to the cost as I had reported it about 17 per cent. Now, that then became a statement of an exaggerated cost which, whatever the rifle might cost properly, it could not possibly reach. It must have been below $17.65; and if it were possible to obtain the opinion of an expert, I would be glad to ask him if he thought the Springfield rifle could be produced by anybody else anywhere and purchased for $25. My own opinion is that you could not get it as low as $25 from any manufacturer.

The rifles are also made at the Rock Island Arsenal at practically the same figure.

ARSENAL COST OF LIMBERS IS LESS THAN HALF THE PURCHASE PRICE.

On April 2, 1912, Gen. Crozier stated as follows before a subcommittee of the Appropriations Committee of the House of Representatives relative to the cost of manufacture at the Rock Island Arsenal—see pages 637-638 of hearings:

The CHAIRMAN. Do your figures show the comparative cost of manufacture and purchase?

Gen. CROZIER. Yes.

The CHAIRMAN. Put them in the record, please.

Gen. CROZIER. I will mention a few of them for the record. I think I can mention them more summarily, so they can be better comprehended in the record, than if I put in all of these details. I will take the limbers for the 3-inch rifles. The average of three contracts gave a price of $1,518 a piece for those limbers.

Mr. CANNON. What is a limber?

Gen. CROZIER. A limber is the forward portion of the wagon which transports the gun, the forward portion of the gun carriage; and the average of five orders for manufacture at the Rock Island Arsenal was $684 a piece. The arsenal cost was less than half the purchase price.

* * * * * * * *

Gen. CROZIER. Now, for the 3-inch caisson, the average of five contracts shows a price of $1,708, and the average of six manufacturing orders given to the Rock Island Arsenal is $1,081. The 3-inch gun carriage proper—that is, the vehicle on which the gun rests and from which it is fired—gives as the average price three contracts, $3,268, and the average cost under five manufacturing orders at the arsenal was $2,341.

Mr. CANNON. Does that include overhead charges?

Gen. CROZIER. Yes, sir.

These figures, representing the cost of manufacture at the Rock Island Arsenal, include all overhead charges, such as pay of officers; interest on investment, which, for the ordnance department, is 3 per cent; insurance, allowance set aside for fire losses; and depreciation of plant.

It will be observed that the very shop in which ordnance materials are manufactured at approximately half the cost of purchasing from private contractors is the place where it is proposed to install the Taylor system. I submit the necessity does not exist for the installation of such a system of intensive production, with its accompanying disregard for the welfare of the employee, in a plant where efficiency has already reached such an advanced stage.

If the Chief of Ordnance had manufactured in Government arsenals all the munitions and supplies that he has purchased of the War Trust at excessive prices since he has been at the head of the Ordnance Department, he could have saved to the taxpayers more money than could be saved via the stop watch and speeding up of workmen in the next century.

LIFE IN THE MIDVALE STEEL PLANT.

Mr. Taylor received his first industrial training and first tested out his system at the plant of the Midvale Steel Co., in Pennsylvania.

Let us study the "science" of the shop management in this plant. C. H. Harrah, president of the company, happened to be testifying before the Committee on Labor of the House of

Representatives on Thursday, March 1, 1900, and the transcript of his testimony fortunately remains intact to this day to throw light on the working methods of the originator of the Taylor system:

"We had men with stop watches over the workmen working on an axle lathe, or whatever else it might be," said Mr. Harrah, "and every time a man looked up they took his time; every time he stopped to breathe they took his time, and in that way they got absolutely the amount of time employed in doing a certain amount of work.

"We made it a rule to run a machine to break," continued Mr. Harrah. "For instance, the life of a hammer bar may be two years. If that hammer bar does not break inside of the two years, I go for the forgemaster, because he is not getting the work he ought to out of the forge. It is the same way in the machine shop. If a lathe, the natural life of which might be two years, does not break down before that, I would go for the engineer in charge."

Mr. Harrah did not divulge information as to whether, in the event a workman failed to break down in a given number of years under the terrific pace scientifically mapped out by Mr. Taylor he would demand to know the reason, but he was frank enough to add, "We have absolutely no regard for machinery or for men."

Mr. Harrah's testimony was Tayloresque. See how well it corresponds with paragraph 312 of Mr. Taylor's book of instructions: "All employees should bear in mind that each shop exists first, last, and all the time for the purpose of paying dividends to its owners."

TAYLOR SYSTEM SMACKS OF ATMOSPHERE OF SHOPS IN WHICH IT WAS BORN.

After Midvale, Mr. Taylor installed his system in the plant of the Bethlehem Steel Co.

Thanks to an investigation of the Bethlehem Steel Co.'s strike in 1910, information is available as to conditions of labor in that concern's plants. The inquiry was made by the United States Bureau of Labor in 1910, under the direction of Ethelbert Stewart, a special agent of the Labor Bureau at the time, who bore the reputation of being one of the most experienced economic investigators in the country.

When this strike began there were no labor organizations in the plant; the company would not permit them.

The Government investigation revealed this:

That out of every 100 men 29 were working 7 days every week.

That out of every 100 men 43, including these 29, were working some Sundays in the month.

That out of every 100 men 51 were working 12 hours a day.

That out of every 100 men 25 were working 12 hours a day 7 days a week.

That out of every 100 men 46 were earning less than $2 a day.

These are the grim figures which the United States Bureau of Labor gives us of the working shifts of the Bethlehem Steel Co. as drawn from the company's own time books.

It may be imagined from the foregoing what a fine humanitarian atmosphere must abound at the Midvale and Bethlehem plants, where the Taylor system was born. And the Taylor system is just as humanitarian as the atmosphere in the shops from which it sprang.

AVERAGE OUTPUT OF AMERICAN WORKMAN EXCEEDS THAT OF GERMAN, FRENCH, AND BRITISH WORKER.

Is it true that the American workman "deliberately plans to turn out far less work than he is able to do, in many instances failing to do more than one-third or one-half of a proper day's work"? The originator of the Taylor system endeavored to convince the public that such is the case, and that this condition is the disease that his system of "scientific shop management" was aimed to cure.

Before endeavoring to estimate the value of a cure one must be sure of the disease to be cured. What are the facts? There are 63 prominent occupations in the United States in which the paying of workers by the piece is more or less common. Pieceworkers come within the scope of the Taylor system more than any others. Is it common sense that a pieceworker is going to do but "one-third or one-half" of a day's work? It is the universal experience that a pieceworker will do just as much work as he can to obtain the highest amount of wages possible on Saturday night. It is obvious, therefore, that the "disease" which Mr. Taylor set out to cure does not exist among pieceworkers. With the cost of living so high that the average workman must have steady employment to maintain his family, it is also obvious that day workers must do a full day's work. Otherwise they would be liable to speedily lose their positions and place their families in want.

Comparisons between the United States, Germany, France, and England have demonstrated time and again that the American worker turns out more work per man in a given length of time than the worker of any of the other three nations. The same comparisons also establish the fact that because of being compelled to work so fast the product of the American worker is inferior in quality to that turned out by the German, French, or British worker. The Taylor system, by means of the use of the stop watch and similar methods of sweatshop "speeding-up" processes, proposes to increase by one-third the present output per man, regardless of the additional terrific strain on the physical and mental constitution of the worker and the certainty of still further inferiority of quality in output.

Mr. Taylor frankly admitted his scheme was primarily aimed to "cheapen production." Is a decrease in the present labor cost in manufacture justified? Let us consider the steel industry, for instance. The United States Commissioner of Labor reports that the Steel Trust makes a profit on steel rails of $9.20 per ton. He also states that the labor cost of the same rails from the ingot is $1.16. In other words, the steel worker receives $1.16 for doing the work, while the Steel Trust magnates draw down $9.20.

APPLYING THE TAYLOR SYSTEM ON THE WOMEN AND CHILDREN WORKERS IN THE WOOLEN MILLS.

Here is a similar story from the woolen industry, which I heard first hand from Miss Josephine Liss, who accompanied the children of the Lawrence strikers to Washington:

"The reports in the newspapers have not told half the story of the outrages in Lawrence," said Miss Liss. She is a short, stout young woman, with a pretty face, but sad eyes, and has been working ever since she was 14 years old. "Take my case. I was walking quietly to my home one day during the strike, when I was stopped by a militiaman and told to go back. He called me horrible names and insulted me. When I refused to go back he attempted to stick me in the breast with his bayonet, and then I began to fight. I was knocked down, and then arrested and convicted.

"Even the most skilled workers do not earn more than $7 or $8 a week, and I can remember when my father was supporting a large family on $5 a week. The children earn about $4 a week. Most of us work in the mills, and our hours are long. And they are constantly putting in effect a faster pace through speeding-up systems. It means that we have no time or money for pleasure, but are practically slaves. It is not right that human beings should be treated so."

The question arises, if the proponents of the Taylor system could put their stop watches and other scientific methods of "persuasion" at work on these men, women, and children workers at Lawrence, setting paces, which in the language of the inventor, would be "purposely made so severe that not more than one out of five could keep up," what kind of fathers and mothers would the children make when they grew up? And what kind of children would their children be? This is as important to consider as dividends.

MEMBERS OF HOUSE RISK REELECTION TO STAND BY CAUSE OF LABOR—DESERVE FULL CREDIT FROM WORKERS.

In this connection I wish to thank my colleagues in the House, of both political parties, for the cooperation and aid which made possible the adoption of the amendments to the various bills prohibiting the use of the stop watch in Government establishments. My hope is that their constituents will appreciate their efforts in the cause of humanity and hold up their hands on election day, for they deserve it. I doubt whether the great manufacturing interests of the country worked so hard to defeat any legislation in the interests of labor that came before the Sixty-fourth Congress as they did the amendments prohibiting the use of the stop watch. Members of Congress came on the floor of the House on the day the anti-Taylor system amendment was up for a decision with telegrams in their pockets from powerful manufacturers' associations warning them to vote against these amendments.

There is reason to believe that the great manufacturing interests of the Nation will attempt to punish those Members of Congress who had the courage to vote for the amendments prohibiting the use of the stop-watch and other objectionable features of the Taylor system in Government arsenals and navy yards.

Here is a sample of the letters that have been received by Members of Congress who took a stand for the working people:

JULY 14, 1916.

Hon. ——— ———,
*House of Representatives, Washington, D. C.*

HONORABLE SIR: We noted that in spite of our earnest requests for fair-minded action on your part that you voted "yea" in favor of the Tavenner amendment to the fortifications bill, H. R. 14303.

We can but assume from this action on your part that your attitude is deliberately unfriendly to business interests and to employers, and we shall conduct ourselves according to this assumption. We are,

Very truly,

———— ————.

FUND WAS RAISED TO DEFEAT LEGISLATION AIMED AT THE TAYLOR SYSTEM.

A committee of manufacturers and efficiency engineers, known as the Committee of Ten, solicited funds from manufacturing interests in all parts of the United States for the avowed purpose of defeating this legislation. When the hearings on the bill opened before the Committee on Labor the first witness in opposition to the bill was Mr. James A. Emory, of the National Association of Manufacturers. He was the leader of the opposition before the Labor Committee and the chief supporter of the Taylor system. The Members of this House will probably recall Mr. Emory in connection with the Mulhall investigation in the Sixty-third Congress. After the exposé of the methods followed by Mr. Emory and the National Association of Manufacturers in opposing legislation in Congress in the interest of labor we did not hear much from Mr. Emory during the remainder of the Sixty-third Congress; but at the beginning of this Congress he reappeared first as the opponent of child-labor legislation and then as the opponent of my bill prohibiting the use of the stop watch.

The fight against the stop watch is not finished, but will in all probability be before the next Congress. It behooves labor to retain in Congress those who have been tried in the past and not found wanting.

THE VOTE ON THE STOP-WATCH AMENDMENT.

The CONGRESSIONAL RECORD of June 22, 1916, page 9791, records the following members as having voted in favor of the amendment prohibiting the use of the stop-watch and premium and bonus systems in Government establishments:

The SPEAKER. The question now is on agreeing to the Tavenner amendment.

Mr. MANN. Mr. Speaker, on that I demand the yeas and nays.

The yeas and nays were ordered.

The question was taken; and there were—yeas 197, nays 117, answered "present" 14, not voting 106, as follows:

YEAS—197.

The RECORD also records Mr. GALLIVAN of Massachusetts, Mr. HUMPHREY of Washington, Mr. SCULLY of New Jersey, and Mr. BLACKMON of Alabama, as being paired in favor of the amendment. It should also be stated that many of the 106 members recorded as "not voting" were out of the city when the matter was before the House, and had they been present, would have voted for the amendment.

ATTEMPT MADE IN SENATE TO KILL AMENDMENTS.

After the anti-Taylor system amendment was in the House inserted in the various bills heretofore enumerated, and the bills went to the Senate, various attempts were made to have the amendments stricken from the bills in that body.

Such an attempt was made on July 25, when a motion was made to strike the anti-Taylor system amendment from the Army bill. The attempt was defeated by a vote of 36 to 15.

HISTORY OF BILL TO PROHIBIT USE OF STOP WATCH IN GOVERNMENT ESTABLISHMENTS.

On January 11, 1916, I introduced a bill in the Sixty-fourth Congress providing for the abolishment of the Taylor system in arsenals, navy yards, and other Government establishments.

The bill is as follows:

IN THE HOUSE OF REPRESENTATIVES.

*January 11, 1916.*

Mr. TAVENNER introduced the following bill, which was referred to the Committee on Labor and ordered to be printed:

A bill (H. R. 8665) to regulate the method of directing the work of Government employees.

Whereas certain executive departments are installing in their respective establishments new systems of shop management, known by the generic term of "scientific management," which have for their purpose the attainment of the maximum efficiency from both plant and workmen; and

Whereas a stop watch is used in timing workmen while at work to ascertain the maximum amount of work possible for the most capable man in a given time, and making this the "standard time" in which work must be done, and by a system of premiums and bonuses, together with disciplinary measures sufficiently severe to enforce the system, this "standard time" is the speed to which all workmen must eventually attain if they are to retain their employment; and

Whereas experience has shown that the American workman, by his exceptional celerity, performs about twice the work performed by the manual worker of other countries, with the concomitant condition that the ratio of accidents here is from three to four times as high as in other countries; and the tendency of so-called scientific management through the above timing and bonus features will be to further aggravate the accident disabilities and mortality aforesaid and reduce the workman to a mere mechanical, instead of a social and moral, relation to his work, and, moreover, are unnecessary to secure adequate efficiency of labor; and

Whereas by a stop-watch time study you may be able to determine the time in which a piece of work can be done, but you do not thereby determine the time in which it ought to be done: Therefore

*Be it enacted, etc.*, That it shall be unlawful for any officer, manager, superintendent, foreman, or other person having charge of the work of any employee of the United States Government to make or cause to be made with a stop watch or other time-measuring device a time study of any job of any such employee between the starting and completion thereof, or of the movements of any such employee while engaged upon such work. No premiums or bonus or cash reward shall be paid to any employee in addition to his regular wages, except for suggestions resulting in improvement or economy in the operation of any Government plan.

SEC. 2. That any violations of the provisions of this act shall be deemed a misdemeanor and shall be punished by a fine of not more than $500 or by imprisonment of not more than six months, at the discretion of the court.

LABOR COMMITTEE RECOMMENDS PASSAGE OF BILL.

The House Committee on Labor held hearings on the bill and reported it favorably on May 17, 1916.

When it was ascertained that it might be impossible to obtain the passage of the bill prohibiting the use of the stop watch in all Government establishments at this session of Congress, owing to the fact that the "preparedness" bills were being given the right of way, the friends of the measure adopted the expedient of having the provisions heretofore mentioned tacked on the Army, Navy, fortifications, and sundry civil bills, which will prohibit the use of the stop watch and the premium or bonus features of the Taylor system in the arsenals and navy yards during the life of those appropriations.

I will quote from the report of the Committee on Labor which accompanied the bill, and which was submitted to the House by Hon. EDWARD KEATING, of Colorado.

I believe I am justified in taking some pride in this report, because it sustains practically all the statements I have made about the Taylor system in the five years I have been opposing it.

Report No. 698, to accompany H. R. 8665.

The Committee on Labor, to which was referred H. R. 8665, to regulate the method of directing the work of Government employees, introduced by Mr. TAVENNER, of Illinois, respectfully report the same back with the following amendments and recommend that as amended it do pass:

The object of the above bill is to end the use of the "stop watch" and the bonus and premium systems of payment of employees in Government arsenals and workshops.

EXTENDED HEARINGS ON BILL.

Your committee held extended hearings on the Tavenner bill, and many able witnesses appeared for and against the measure.

The opponents of the bill, led by Mr. J. A. Emery, chief counsel for the National Association of Manufacturers, declared that to eliminate the "stop watch" and bonus and premium systems would "penalize efficiency and encourage waste."

The supporters of the bill insisted that the combination of "stop watch" and bonus and premium was "in spirit and essence, so far as labor is concerned, a cunningly devised speeding and sweating system."

The majority of your committee feels that the proponents of the bill made so strong a case that we are justified in urging Congress to enact the legislation needed to drive the "stop watch" and bonus and premium systems from Government shops.

EFFICIENCY WITHOUT THE STOP WATCH.

The opponents of this legislation have much to say about "efficiency" and "scientific shop management," and they seek to create the impression that "efficiency" can not be secured unless (a) the workman's every movement is timed by a "stop watch," and (b) that the old system of day's pay is abolished and bonuses and premiums substituted therefor.

Your committee feels there is nothing in the evidence submitted at the hearings, or in the experience of mankind, to sustain either of these contentions.

In this city we have the Washington Navy Yard, employing thousands of skilled mechanics. The stop watch is not used there, and the commandant will assure you he has the "most efficient body of mechanics ever gathered together inside one fence."

The workmen at the Rock Island Arsenal have succeeded in defeating Gen. Crozier's attempt to introduce the "stop watch," and they have demonstrated their "efficiency" by producing munitions of war for very much less than the Government pays contractors for the same articles.

For instance, Gen. Crozier tells us that a 3-inch gun carriage for which contractors asked the Government $3,398.82 was produced in the Rock Island Arsenal for $2,192.27, a saving of practically one-third. And this is not an exceptional case. Gen. Crozier is the author of the following tables, showing the difference between contract and arsenal costs, and your committee urges Members of the House to carefully examine same.

Is it necessary to still further "speed up" workmen who have displayed the skill and industry needed to produce these results?

*Manufacture of artillery ammunition.—Statement of total arsenal costs and total contract costs for ammunition being manufactured at the Frankford Arsenal and provided for in orders issued between July 1, 1912, and Apr. 25, 1913, and which will be completed by June 30, 1914.*

WORKERS CONDEMN "STOP WATCH."

The workers' attitude toward the "stop watch" is stated in the following excerpt from the testimony of Mr. John P. Frey, editor of the International Molders' Journal, before your committee:

"Mr. SMITH. What objection has the workman to time study?

"Mr. FREY. Some have the feeling that it is humiliating to have a man standing over your back, or around you, with a stop watch, checking off every movement you make, trying to catch you beating some little time. Others object because it forces them to work harder and harder, and it puts into the employer's hands a power which they use unjustly against them.

"Mr. SMITH. You think the general objection is that it overworks the men?

"Mr. FREY. I should say from what the workers told me, that I interviewed, it was half and half. It was partly the feeling of humiliation in having some one stand over them with a stop watch, and others felt that the system meant making their work that much harder.

"Mr. SMITH. What is the feeling of the workmen about the Taylor system?

"Mr. FREY. I have not encountered one who favored it. All that I have interviewed are bitterly opposed to it.

"Mr. SMITH. Are the workmen generally opposed to a bonus system?

"Mr. FREY. Some of the workers—I want to revise that statement as to the Taylor system. I found some workers working under the Taylor system who said they did not consider it hurt them much.

"Mr. SMITH. But, generally speaking, you think you are safe in saying they are opposed to it?"

WHERE "STOP WATCH" IS UNRELIABLE.

The advocates of the use of the "stop watch" emphasize the "scientific accuracy" of the system, but the evidence submitted to your committee shows that the "time studies" made in Government plants are grotesquely inaccurate and unreliable.

The Federal Industrial Relations Committee, at the request of the Secretary of War, appointed three experts to investigate the "efficiency system" installed by Gen. Crozier at the Watertown Arsenal. One of these investigators, Mr. John P. Frey, testified before your committee. His colleagues were Prof. R. F. Hoxie, of the University of Chicago, and Mr. Robert G. Valentine, a prominent "efficiency" engineer.

Mr. Frey's written statement of the results of the "stop-watch" studies made at the Watertown Arsenal follows:

"An interesting and most valuable analysis of variations of output by the same workmen under 'scientific management' has been made by

Mr. Miner Chipman, and we give the following figures from the study which he made of the conditions existing at the Watertown Arsenal after the system had been introduced.

"The analysis of the men's output or so-called efficiency covered a period of one month, which makes it well representative of the unevenness with which the tasks had been set.

"For the month of March, 1914, employee No. 2518 worked on 224 jobs. His average efficiency was 121.35 per cent, but his efficiency on these jobs varied from 21 to 200 per cent.

"In September, 1913, employee No. 2681 worked on 91 jobs. His average efficiency was 96 per cent, but his efficiency on the several jobs varied from 39.3 to 149 per cent.

"Employee No. 2518 worked on 140 jobs during April, 1914. He was a most competent workman, as his average efficiency for the month was 121 per cent. His efficiency on the several jobs ranged from 45 to 172.9 per cent, these variations indicating largely the too short or too long time which had been set on the jobs by the time-study and task-setting man.

"Commenting on these figures, Mr. Chipman said in his report:

"'Mr. Taylor, in his "Shop management," emphasizes "that this system rests upon an accurate and scientific study of unit times," which is by far the most important element in "scientific management." He also says that time studies made by this method determine with scientific accuracy "the quickest time that can be made by a first-class man" and to the effect that this "quickest time" or "standard times" is so set that it can not be bettered.

"'What can be thought of the times set on these jobs when this workman on the 224 jobs of one month showed a range of efficiency (efficiency being the ratio of time taken to time allowed) from 21 to 200 per cent, with an average of 121 per cent, and the following month on 140 jobs a range of from 45 to 173 per cent, also with an average of 121 per cent?

"'This workman may be rated as consistently of high efficiency. Why, then, this extreme variation in efficiency unless the time allowed for each job was not set accurately and scientifically? Can we assume that the worker varied in efficiency to the extent shown by the chart? We do not believe so. The variation is one of time setting or inaccuracy of time study.

"'Of the 244 jobs in the first month the time on 13 jobs was correct, efficiency 100 per cent; on the remaining 211 jobs the time varied 2.755 minutes, or 22.2 per cent from a total standard time of 12,935 minutes.

"'A study of the various jobs indicates that the variations in efficiency are due in part to the time-study man and in part to changes in conditions affecting work.'

"On two jobs in the foundry examined by the writer a difference of 2 hours and 30 minutes had been set, though at the outmost there could not have been more than 10 minutes difference in the time to make the molds, as the patterns were almost identical and were made in the same flask, the only apparent difference being that a longer hub on one of the patterns required about 2 inches more sand in the drag.

"An interesting case, through which the worker was forced to suffer because of the error made in setting the time for the task, occurred in one of the machine shops visited.

"A machinist was given eight crossheads to finish, 44 minutes being allowed for the finishing of each crosshead. As this machinist took considerably more time he was punished for his failure to accomplish the task by being laid off for 30 days.

"During this period a more careful investigation was made of the job, and it was afterwards given to another machinist, who received a rate of 3 cents less per hour. The time allowed for the finishing of the task was increased 120 per cent, and, although the machinist working on the job had a rate 3 cents less per hour than the other, it increased the cost of production 78 per cent. The machinist who was disciplined, however, was not allowed anything for the unjust punishment which had been meted out.

"It would be possible to go on almost indefinitely in submitting evidence to prove that the time set on jobs by time-study men and task setters in shops where 'scientific management' has been applied has been anything but scientifically accurate. While in theory it should have been, what the workers are directly interested in is what occurs when application of a theory is turned over to employers and placed in practice. It is the practice and not the theory which most vitally affects the workers."

SENATOR LODGE ON THE "STOP WATCH."

Senator HENRY CABOT LODGE presented the case against the "stop watch" in graphic fashion during a discussion of the subject in the Senate during the third session of the Sixty-third Congress. Senator LODGE said:

"The one object of the time measure is to produce speed. Now, speed is not the only thing that the Government or any other employer or manufacturer is seeking for. There is something more important than speed, and that is quality. Speed has nothing to do with quality. Owing to great inventions of our time, owing to steam and electricity, we have carried speed to such an extent in all of our manufactures that certainly in many cases the product has deteriorated in quality as it has advanced in quantity and rapidity of production.

"The stop watch and the time measure can tell you nothing whatever about quality. It may be a basis of fixing wages or anything else, but the only thing we can possibly tell by time is speed. We all associate a stop watch with its use for racing horses. I dare say it is used now for racing automobiles, but not by a man buying horses for his ordinary use. In the days before automobiles I used to own horses and be very fond of them and drove them a great deal, but I never put a stop watch on a horse I was going to buy. I wanted to know his qualities; I wanted to try him; but I was not going to buy a horse to use on the track, and therefore I had no use for the stop watch. They use a stop watch to test a horse that is going on the track to race in the derby, for instance, or in any of our great races. It is of the utmost importance to know what the horse can do on the furlong or on the quarter mile or on the half mile, but it does not tell the story of his quality. It will tell the story of speed and the qualities necessary to speed, but there are many qualities it does not tell.

"Now, to put the stop watch on human beings may tell how fast they can work, but it can tell nothing of the quality of their work, nor how long they may work. A horse may be very good for a short spurt and absolutely worthless for a 4-mile race. It is a poor test. It is a promoter of the idea that the one thing to do is to turn out just as much as we can just as far as we can. That has gone through everything in this period of ours. It has deteriorated style, it has deteriorated literature, it has deteriorated art; it is deteriorating manufacture.

"I do not believe, Mr. Chairman, in standing over men with stop watches to see how far they can go under pressure in securing speed in performing a given piece of work. The very fact of a stop watch implies strain on every faculty, on every physical power, driving the heart and lungs and every muscle to the utmost possible point.

"In the days of slavery it was said there was one school of slave owners who believed it was more profitable to work the slaves to the last possible point and let them die than to try and care for them when they were ill and work them reasonable hours and treat them without a stop watch. Those who believed in working them to death, I imagine, were a very small and merciless minority, but there is always that disposition.

"I am a thorough believer in the best man getting the best wage and the hard-working man getting what his hard work deserves. I have no desire to see the thriftless and idle paid as well as the industrious, steady, and hard-working men, but I do not believe anything is gained for the Government or for anybody else in standing over a man with a stop watch to see whether under pressure he can do a certain piece of work in a given time. I do not believe it is sound economy."

TESTIMONY OF PUBLIC HEALTH SERVICE.

The United States Public Health Service has just issued bulletin No. 73, "Tuberculosis Among Industrial Workers," by Surg. D. E. Robinson and Asst. Surg. J. G. Wilson.

Those gentlemen are surely impartial and competent witnesses, and here is what they have to say:

SPEEDING UP.

"This is a natural resulant of the piecework system, and from the standpoint of the employees' health, does more harm than any other one thing associated with factory work. Although it works, or appears to work, to the interest of the employer by increasing the output of the individual workers, these good results are probably only temporary, as the pernicious effect upon the health of the wage earner will, in the end, have the opposite effect."

And again on page 16 of the bulletin, speaking particularly of the boot and shoe industry:

"One of the most noticeable things about the work in these factories is the high tension at which everyone seems to be working, as the work is nearly all instances in piecework and earnings naturally depend on the output. This high-pressure work or speeding, in our opinion, is one of the most important causes of the lowered physical vitality noticed among these workers, as the constant strain of work at top speed, week after week, must tell in the end. The human body is only a machine, too often a delicate one, capable of standing only so much abuse. With this high-pressure work for eight or nine hours a day, with but a half hour's breathing spell for lunch, coupled with the effects of dissipation and loss of sleep, we have a combination that only the strong can resist, the weak succumbing to any infection with which they come into contact. Moreover, the nervous organization suffers in this speeding process and neurasthenic individuals were frequently observed among both male and female shop workers."

A TYPICAL CASE OF "SPEEDING UP."

The Federal Commission on Industrial Relations, through Prof. Hoxie and his colleagues, devoted a year to the study of "scientific" management, including overstimulation or "speeding up." Here is a typical case taken from the testimony of Mr. Frey, one of Prof. Hoxie's assistants:

"One instance showing the extent to which 'efficiency experts' can develop methods of speeding the workers up to their physical and nervous limit made a permanent impression upon the investigators.

"The plant employed the usual forms of time and motion study for the determination of what the task should be, and the workers were paid a bonus if they accomplished the task. For example, if the time set upon a task was one hour, the worker, if he finished the job in an hour, was credited with an hour and a quarter's pay, based upon his hourly wage rate, so that if this was 20 cents he would receive 25 cents for the hour's work.

"This bonus was not considered sufficient to properly assist and stimulate the workers, so the foreman was also paid a bonus, this being based upon the number of workers under his charge who earned their full bonus. For the foreman's efficiency to reach 100 per cent it would be necessary for every worker in his gang to earn their bonus every hour of the working day. It was therefore to the foreman's interest to do all that lay in his power to see that every worker accomplished the task which had been set.

"However, this was but a part of the scheme or system which aimed to get all of the work possible out of the workers, for another factor entered largely into the plan. The time-study man and task setter was also paid a bonus which was based upon the number of workers who failed to make their tasks, the task setter's efficiency reaching 100 per cent only when every worker in a group failed to finish their jobs in the time set for the accomplishment of their tasks. The time-study man was therefore paid a bonus to set the tasks so high that the workers could rarely, if ever, accomplish them, while the foreman was paid a bonus based upon the number of workers who could be prevailed upon to finish their jobs within the time set.

"Under this system there were no rest periods or other provisions which would prevent the workers from being speeded up to their limit, but instead it became a contest between the time-study man and the foreman, the one depending for his extra wages upon setting the time so short for the finishing of the task that the workers could not make it and the other only receiving his bonus when he succeeded in having the workers accomplish these tasks. It was a clear case of playing both ends against the middle, the middle in this case being the unfortunate worker.

"In theory 'scientific management' would protect the worker from overexertion; in such an instance as the one just referred to the practical application of the system deliberately and with human ingeniousness aimed to secure the worker's last ounce of energy."

Many other cases could be cited, some so revolting as to be almost unprintable.

LABOR'S EARNEST OPPOSITION.

Labor, organized and unorganized, has systematically opposed the introduction of the system into Government plants. Gen. Crozier asserts that outside influences are responsible for the workers' hostile attitude, but the evidence submitted to your committee seems to completely disprove the general's theory.

The leaders of organized labor instead of fomenting trouble in the Government shops have with difficulty restrained the workers from throwing down their tools and quitting work. At the Watertown Arsenal the employees united to employ Miner Chipman, an engineer, to assist them in an attempt to induce the War Department to dispense with the obnoxious system.

Two hundred and thirty-five of the workers furnished Mr. Chipman with detailed information to enable him to complete his case. Of these,

214 were opposed to the system. Of the protestants, 113, or 52.8 per cent, were nonunion, and 101, or 47.2 per cent, were union.

All these men were asked to answer the following question: "Do you think the agitation is brought about through union labor or similar sources?"

They replied as follows: Noes, 137; yeas, 28; not answering, 70.

SYSTEM IN POST OFFICE DEPARTMENT.

Your committee found that the "stop-watch" system was being introduced in the Post Office Department in a most pernicious form. The pending legislation if enacted would, of course, end the evil at once.

In this connection your committee desires to call the attention of the House to the clear and convincing statement submitted to your committee by Mr. Edward Cantwell, secretary of the National Association of Letter Carriers, and which is as follows:

"Mr. CANTWELL. Mr. Chairman and members of the Committee on Labor, I come before you to-day to enter my protest against the stop-watch or time-measuring device system in vogue in the Postal Service and to urge the committee to carefully weigh all the evidence that will be submitted to them in the hope that they will make a favorable report to the House of Representatives on a bill that will stop this practice in the future.

"For the information of the committee, I submit herewith a memorandum of the speed standard and the result of a test made in the Cincinnati post office.

"On October 14, 1915, a test was made of 210 carriers in the Cincinnati post office, divided as follows:

"Forty-six six-trip carriers; 10 five-trip carriers; 30 four-trip carriers; 31 three-trip carriers; and 93 two-trip carriers. Out of a total of 210 men, 130 fell below the standard in this test. Of the six-trip carriers, 23 measured up to the standard and 22 fell below it. Five trippers, 2 carriers made the standard and 8 fell below; of the four trippers, 4 men made the standard and 26 fell below; of the three trippers, 8 measured up to the standard and 23 fell below; of the two trippers, 43 made the standard and 50 fell below; of the total number, 80 carriers measured up to the speed test of the department and 130 fell below.

"Of the test taken on Friday, October 15, 1915, out of a total of 206 men but 72 measured up to the standard and 134 fell below the standard.

"In the speed tests an allowance of one minute is made for answering communications. It hardly seems reasonable to suppose that any man could answer a communication from his superior officer in one minute. In answering an official communication it must be drawn up intelligently and contain the information sought by the official and couched in respectful language. I will leave for the committee to judge whether there is one among us who could pick up an official document requesting a reply, read it, and make an intelligent answer in writing in the space of one minute. For example, the superintendent of a post office hands an official communication to a letter carrier reading as follows:

"'Complaint is made by Mr. EDWARD KEATING, formerly of Congress Hall, that his mail is being left at that address, although he filed an order to forward his mail to the Continental Hotel.'

"On receipt of this communication the carrier must first ascertain if the accusation be true. He knows that for the past several days he has forwarded Mr. KEATING'S mail to the Continental Hotel, and he further knows that the order to forward is only three days old, so he calls at Congress Hall and inquires if he, by any chance, left a letter for Mr. KEATING at any time, and is told by the clerk that a letter was left for Mr. KEATING on the morning of the day that he left the hotel, and that he had sent one of the employees to the CONTINENTAL Hotel the next day with the letter. Mr. KEATING had not filed a removal notice until the day following his removal from Congress Hall, hence at the time the letter was delivered at Congress Hall no order was on file to forward his mail. This must be made clear to the superintendent, so the carrier writes him as follows:

"MARCH 30, 1916.

"W. H. HAYCOCK,
"*Superintendent of Mails, Washington, D. C.*

"SIR: Replying to the attached communication, I beg to advise that I have forwarded all mail addressed to Mr. KEATING to the Continental Hotel as per order since the order was received by me, but prior to the filing of the order and after he left Congress Hall a letter was delivered there for Mr. KEATING, which was later taken by an employee and delivered to the Continental Hotel.

"Respectfully submitted.

"JAMES P. MAHER, *Carrier 96.*

"This answer is intended to make it clear to Mr. KEATING that his mail is receiving the proper attention, and explains the reason the delivery of the letter to him by the employee of the Congress Hall Hotel was due to his failure to file a removal notice until they day after he had left. Now, anything less than this would not answer the purpose, and no man living could write the above in one minute. What I mean by that is that he could not take that official communication, read it, and find out what the assistant superintendent wanted to know, and then compose a letter and answer it in one minute's time.

"One-half minute is allowed for change of address, which is not sufficient for the purpose, unless a letter carrier can make all the changes of address from memory and not be compelled to consult his removal book. Should a letter carrier make a change of address from memory and forward a letter to the wrong address the letter is delayed, and the carrier is disciplined by having demerits charged against his record. To mark up and forward seven pieces of mail per minute depends entirely on the character of the marking up. If it is simply to mark the number of the district on which the letter is to be delivered, seven pieces of mail could be readily marked up in one minute. If, however, one or more pieces of mail requires looking up in an order or removal book, it would be a physical impossibility to mark up seven pieces of mail in one minute.

"The pace set in these tests is beyond the physical and mental endurance of an ordinary man, and if lived up to would result in the breaking down under the strain of any human being. The tests could possibly be made by a man of extraordinary ability and training for a period of one hour when a man is at his best. No ordinary man could stand the pace and maintain all the requirements set out in the rules and regulations covering these speed tests.

"The system has a tendency to make mere machines of men and to destroy all initiative and to have them lose personal interest in their work.

"This system destroys harmony of effort and cooperation between the officials and the working forces and with resultant harm to the public service. It seems to me to be poor policy on the part of the Government to institute a system among its employees that takes away from them the incentive to take pride in their work. It is carrying the policy of economy to extremes and has the tendency to foster discontent and unrest among the men who do the real hard work.

OBNOXIOUS SECRET TESTS.

"I will now cite a condition that prevails in the Postal Service that to my mind is without justification or excuse. I have presented to the committee copies of the department's speed standard, which in themselves are worthy of the serious thought and consideration of the members of the committee. The strain incident to keeping up with this so-called standard of efficiency is heartbreaking in the extreme, but the condition of the employees is aggravated by what is termed 'the secret tests.' Each carrier is subjected to this so-called speed test on one day of each month, the day and date being unknown to the carrier, and the testing being secretly made. The purpose of these secret speed tests is to keep all the men working at top speed mentally and physically every minute each day, as the carriers do not know what day they are being tested.

"On the day a carrier is subjected to the test, I have been informed, inspectors secretly count the pieces of mail of all classes that the employee handles that day, before the carrier receives his mail for routing. Several weeks after these secret tests are made the employee receives a letter to the effect that he is not 'working up to a standard satisfactory to the office.' A concise statement is embodied in the letter, showing the number of pieces of mail the carrier handled and how far he fell below the required standard. The communication contains a statement to the effect that 'it is hoped you will take such steps in the future to bring your work up to a standard as not to make it necessary to write you again concerning it.'

"I will leave to the judgment of the committee the class of man and kind of mind that could conceive putting these secret tests into force and effect, in order to keep men working under a constant mental and physical strain. I also leave to your consideration the sort of mental and physical condition a man of nervous temperament will be in at the end of his day's work. When employees who are honest and upright and conscientious are subjected to this constant suspicion and continual driving, they can not do good work. They are required to keep up the tests regardless of whether the conditions are favorable or unfavorable. Inclement weather, snow, rain, or icy sidewalks, poor or irregular car service or freezing cold cuts no figure when the secret tests are being made. Such a system can only result in breaking down the health of the employees who are required to keep up with it or will result in making mental wrecks of employees of a high-strung and nervous disposition.

"I have placed before you a statement of the facts gathered together from the complaints of the letter carriers in all parts of the country, and I appeal to you in their behalf to make a favorable report on the Van Dyke or Tavenner bills, with a recommendation to the Congress that it be enacted into law."

CONCLUSION.

In conclusion your committee would suggest:

The system so persistently urged by Gen. Crozier involves a fundamental, not to say revolutionary, change (a) in determining what is a reasonable day's work for an employee in the national arsenals and workshops and (b) in the method of compensating the workers, to wit, the substitution of the "bonus" or "premium" system for the age-old "day's-pay" system.

The workers affected seem to be almost unanimous in their opposition to the change. They insist it will be oppressive to them and will be without benefit to the Government.

So intense is this feeling that an attempt to install the system in all the Government workshops would, in the judgment of your committee, lead to very serious consequences.

In view of these well-established facts, it seems to your committee it would be the height of folly to permit Gen. Crozier to persist in his plan. Apparently, the only way to restrain him is to enact the bill under discussion, and your committee trusts the House will take prompt and favorable action.

EVERY COMMITTEE OF CONGRESS THAT EVER INVESTIGATED TAYLOR SYSTEM REPORTED ADVERSELY.

The Taylor system was also investigated by a special committee of the House during the Sixty-second Congress. Two of the three members of that committee are now members of President Wilson's Cabinet—William B. Wilson, the Secretary of Labor, and William C. Redfield, Secretary of Commerce. I will now quote from the report of that committee:

Government in a mill should be like government in a State.

It appears to your committee that no one can seriously object, and as a matter of fact no one has objected, to any system which so standardizes and systematizes the work to be performed that a greater amount of production is secured with the same expenditure of labor. Employer and employee alike and the public generally are interested in securing the largest amount and the best quality of production that can possibly be secured by the amount of labor expended. All men have a mutual interest in the accomplishment of that end. It is only when it comes to a division of that which has been produced that their interests diverge. It therefore follows that any system of management which has a tendency to destroy the power of employees, individually or collectively, to secure the equivalent of the production which properly belongs to them must be looked upon as being dangerous to the welfare of the community at large.

Efficiency must not be had at the cost of the men, women, and children who labor and who should be the primary beneficiaries from efficiency. We should study how to produce the best results in output while also producing conditions to make the most efficient men and women to produce that output, and this must be done by conserving in every way not only their health and physical and nervous vigor, but by creating such conditions as will permit them to work out their own happiness and contentment, secure wages which will enable them to live in such a manner as to maintain their own self-respect and sufficient leisure to enjoy the refreshing influence of mental and moral recreation.

The Taylor system of shop management may be divided into three general heads: Standardization, systematization, and stimulation. Efficiency may be gained in whole or in part by any of these ways, by any two of them, or by all three combined. Any or all of these devices may

be carried to an extreme. In the first two devices, namely, standardization and systematization, the expense which would be created by carrying them to an extreme would act as a check against the continuance of such a condition, but that check would not exist in that portion of stimulation which is applied to the workman.

The expenses of standardization and systematization are borne by the management, while the expense of stimulation in the form of increased energy is borne by the workmen. Any system of shop management which creates a burden charge through standardization or systematization which is too heavy for the shop to bear or which imposes burden charges through stimulation which are too heavy for the workman to bear should be discontinued.

That there is some loafing or soldiering amongst workmen has been shown by the testimony before your committee, but it is not general, nor does it occur in numerous instances compared with the total number employed.

Ordinary intelligent management under any system could eliminate it entirely or at least reduce it to the point where it would not be a serious hindrance to production. Because there are some loafers is no reason why the remainder of the workmen should either be compelled or induced to work up to the very edge of the breaking strain. There is need for production at the lowest cost, but no economic necessity can justify requiring workmen to speed up to the highest point which they can continue from day to day and from year to year, even without injury to their health and strength. To place workmen in a position of that kind is to put them in the position of a beast of burden which is required to go on from day to day performing a given task.

There is a margin between the work performed by the loafer and the maximum task for a man, and in that margin lies a proper day's work. What constitutes a reasonable day's work can only be determined by practical experience and intelligent observation. It can not be wholly determined by a stop watch or any other time-measuring instrument used only for a brief period of time.

*By the stop watch you may be able to determine the time in which a piece of work can be done, but you do not thereby alone determine the length of time in which it ought to be done.*

The time study of the operations of any machine can be made with a reasonable degree of accuracy, because all of the elements can be taken into consideration in making the computation. A machine is an inanimate thing—it has no life, no brain, no sentiment, and no place in the social order. With a workman it is different. He is a living, moving, sentient, social being; he is entitled to all the rights, privileges, opportunities, and respectful consideration given to other men.

*He would be less than a man if he did not resent the introduction of any system which deals with him in the same way as a beast of burden or an inanimate machine.*

In making a time study of the operations of a workman, all of the elements can not be taken into consideration, and consequently the computation can not be made with mathematical accuracy. There is no work that can be performed, or that is performed, that is not preceded by a mental process on the part of the workman. The more skill needed in the work, the greater the mental process which precedes the expression of it. So far as your committee has been able to learn, there is no method known to scientific management by which a time study can be made of the mental process preceding the physical act.

SENATOR BORAH'S COMMITTEE MADE REPORT CONDEMNING STOP WATCH.

Senator BORAH, chairman of the Senate Committee on Education and Labor, made a very exhaustive report of the Taylor system, following an investigation of the subject by his committee. This report condemns the speeding-up features of the Taylor system, reports they are wholly unnecessary, and recommends the passage of legislation prohibiting the use of the stop watch, and so forth, in Government establishments. This report is Senate Document, report No. 930, second session, Sixty-second Congress.

THE WORK OF N. P. ALIFAS, OF THE INTERNATIONAL ASSOCIATION OF MACHINISTS, IN THE FIGHT AGAINST THE TAYLOR SYSTEM.

Any recital purporting to describe the five-year fight that has been waged in Washington against the Taylor system would be incomplete without mention of N. P. Alifas, president of District No. 44, International Association of Machinists.

If there is anything that is inspiring to me, it is the sight of a workingman trying to improve the condition of his brother workers. I have had excellent opportunity to come to know Mr. Alifas, coming in contact with him almost daily for considerable periods, seeing him when the prospects for success in the thing he was laboring for seemed bright and when they seemed hopeless, and it is my great pleasure to testify that he has been faithful in the extreme to those he represents. Throughout the long fight he was, to my personal knowledge, patient, painstaking, and gentlemanly persistent in his effort to represent in Washington the views of his people. Being intimately acquainted with Mr. Alifas, I have no hesitancy in stating, and do state with the greatest of pleasure, that he is both an able and conscientious representative of labor.

He has made it his work to keep the Members of Congress informed of the status of the anti-Taylor-system measure, when it would come up for a vote, and as to the attitude of the arsenal and navy-yard employees toward this legislation.

Mr. Alifas appeared frequently before the committees of Congress in behalf of legislation abolishing the Taylor system in Government establishments. He testified at considerable length before the famous Commission on Industrial Relations on April 15, 1914, when the commission had under consideration the subject of "scientific management." His testimony was considered by those who heard it as especially clear-cut and to the point. Being himself a machinist and having been employed at the Rock Island Arsenal at the time the Ordnance Department began the installation there of a portion of the Taylor system, he was able to speak from first-hand knowledge, and at the conclusion of his testimony was congratulated by members of the commission upon the ability with which he handled the subject.

THE LA FOLLETTE SEAMAN'S LAW.

Another law which I supported and am deeply interested in is the La Follette seaman's law. As my position on this measure is fully outlined in a letter addressed to Mr. O. F. Hildebrandt, secretary of the Greater Moline Committee, Moline, Ill., I will include this letter in my remarks:

HOUSE OF REPRESENTATIVES,
*Washington, D. C., January 4, 1916.*

Mr. O. F. HILDEBRANDT,
*Secretary, The Greater Moline Committee (Inc.),*
*Moline, Ill.*

MY DEAR MR. HILDEBRANDT: I am in receipt of your letter of December 27, advising me of the action of the Greater Moline Committee, asking that I assist in bringing about amendments to the present seaman's law, so as to render it more favorable toward encouraging American capital to invest in the construction or purchase of ships, to be operated under the American flag.

In reply I have to say that under separate cover I am sending you a copy of the seamen's law, with the request that you point out in that law what provisions, if any, are working to the discouragement of the investment of capital in the construction or purchase of ships, and wherein the law needs amendment to bring about the results asked for in your letter and in the action of the Greater Moline Committee.

In this connection I want to submit these facts for your consideration: First, that the seaman's law was passed by the United States Senate October 23, 1913; that it passed the House of Representatives substantially in its present form upon August 27, 1914; that it became a law upon March 4, 1915; that long prior to the opening of the present war, August, 1914, every shipowner, every ship builder, every man who kept in touch with the situation throughout this whole country knew that legislation of the character embodied in the seamen's act would be enacted into law. Notwithstanding this fact, since August, 1914, there have been purchased from foreign owners and are now under the American flag ships which were formerly under the flags of other nations to the number of 170 of a capacity of over 570,000 tons. The addition of this tonnage since August, 1914, is the greatest acquisition that has ever been made to the tonnage of the American merchant marine in any year. Second, that at the present time there is building in the American shipyards for the merchant marine of the United States new vessels which will add 761,000 tonnage to the vessel capacity of this country; that this activity in ship building at this time represents the greatest activity that has ever existed in ship building at any one time from the foundation of this Government.

These two outstanding facts seem to me to demonstrate that there is nothing in the provisions of the seaman's law to discourage the purchase or the construction of ships for the merchant marine of the United States.

Within my experience with legislative matters here in Washington, I have never known of a piece of legislation which has been so misrepresented as the seaman's law. Prior to its enactment, and since it became a law, big shipowners of this country have misrepresented its provisions and their effects to business men and to business organizations. They have, through the public press, conducted a propaganda against this law and have misled those who have failed to study the provisions of the law, into believing that the act was designed and is a blow at American shipping. At the same time that they have been making this campaign of misrepresentation and have been tricking organizations composed of men with good intentions but with little or no information with respect to the act, to take action in opposition to it, they have been chasing over the world buying ships wherever they could and bringing them under the American flag. They have flooded the shipyards of our own country with orders and crowded them to work day and night to build new ships, at the same time that they have been representing to organizations such as ours that the law meant financial disaster and ruin to them.

The fact of the matter is that the seaman's act does two things. It provides greater safety for passengers on boats at sea than was formerly provided under the law and the regulations. I regret to say that the safety provisions of this law are not as adequate as they should be. I regret that this law does not provide lifeboat space for every passenger on board. I regret that it does not provide an adequate number of efficient seamen to man every lifeboat. Such protection was contained in the

original act as it passed the Senate, but unfortunately under the pressure of the shipowners was removed by the committee in the House, and the amended bill had to be accepted or no legislation could be secured. Does it not appear reasonable to you and to your committee that the men who undertake the transportation of passengers at sea should provide adequate and efficient safeguards against the dangers of the sea? Second, there is the provision of the seaman's act which has to do with the conditions of employment of seamen. You may not know, but until the enactment of this law the seamen employed on American ships and upon the ships of all countries coming into the ports of the United States were subjected to the provisions of a law almost identical with the fugitive-slave law; that these men were virtual slaves of sea masters; that they could not leave their employement at will; that if they would leave their employment the process of the United States courts was used to arrest, detain, and put them back on board ship and compel them to submit to involuntary servitude.

There may be, but I do not know him, an employer in the city of Moline who desires a mastery such as this over his employees; but if there be such, I unhesitatingly say that such a man is without understanding of the fundamental reasons for the Government which we have and which we honor. His opinion is not entitled to consideration, and I assure you that any man who advocates the repeal of the provisions of the seamen's act which abrogates slave conditions in the American merchant marine and in the ports of the United States will get no consideration by me of any such views upon this subject.

I am for men; I am for freedom. The provision of the seamen's act abrogating slaves was enacted for men. It was enacted for freedom.

I have submitted to you facts with respect to the shipbuilding and ship purchasing of this country, which demonstrate that the seamen's act has not interfered with the shipbuilding and shipowning interests of this country. I want to submit one more fact, and that is that the seamen's act has not increased unduly or unreasonably the cost of operation of American ships. Recently there has been a great amount of talk in the newspapers with respect to the conditions upon the Pacific Ocean. One of the men doing this talking is Robert Dollar, who operates a few small ships. A computation was made as to the increased cost of operation of one of the Dollar ships, and it shows that the increase in the cost of the operation of that ship under the provisions of the seamen's law would be about $6,000 per year, while the earning capacity of the ship is upward of $200,000 per year, which is an excess of its valuation. I will not stand, and I do not believe that the Greater Moline Committee will stand, for the patriotism (?) of the Robert Dollars, who, with an earning capacity of upward of 100 per cent on the value of their property, because of a trivial increase in the cost of operation, would have the American Congress restore slave conditions to American ships as a condition precedent to the maintenance of the American flag upon the sea. If that is the condition under which the American flag must be maintained upon the sea, better that it never floats from the masthead of a ship than that it cover and protect slavery.

Very truly, yours,

CLYDE H. TAVENNER.

## Universal Military Training and Service.

### EXTENSION OF REMARKS

OF

### HON. WILLIAM S. BENNET,

OF NEW YORK,

IN THE HOUSE OF REPRESENTATIVES,

*Friday, August 18, 1916.*

Mr. BENNET. Mr. Speaker, I find in the American Defense Magazine for September an article on universal military training and service, which may well form a part of the consideration of the naval bill.

This article, which was written by Henry Litchfield West, a former Commissioner of the District of Columbia and a well-known writer, sets forth that inasmuch as the United States will never possess a navy large enough to thoroughly protect our entire Atlantic and Pacific coast lines the defense of this country must ultimately rest upon a land force of citizen soldiery created under a system of universal military training and service.

This article is the first comprehensive review of this subject which I have seen and is a valuable contribution to the cause of preparedness for national defense. It is as follows:

UNIVERSAL MILITARY TRAINING AND SERVICE.

The National Security League, through its executive committee, recently issued a declaration of principles in which compulsory military training and service wholly under Federal control for all physically fit male citizens, was set forth as the first of the cardinal requirements for adequate preparedness. This action of the league, taken after many largely attended conferences and congresses held under its auspices had formally declared in favor of compulsory military training and service, marks another step forward in the presentation of the most vital issue which can engage the attention of the American people.

The assertion that the United States must ultimately adopt universal military training and service as the basis of national preparedness rests upon a logical and incontrovertible foundation. Two facts must be admitted, as follows:

First. That the United States will never possess a navy sufficiently large to thoroughly patrol and defend its extensive coast line.

Second. That American tradition and sentiment will prevent the creation and support of a permanent Regular Army large enough to combat successfully the enemy forces which could be landed upon our shores.

Granting that these two things are true, the defense of our country must inevitably depend upon an adequate force of citizen soldiery pursuing peaceful vocations under normal conditions, but thoroughly trained and equipped to meet immediately an emergency of threatened danger.

The Navy is only the first line of defense. If we should have a Navy of sufficient strength to overcome an opposing fleet or fleets at one or more points between Portland and Galveston or between Seattle and San Diego, the people of the United States could rest in certain security from attack. A Navy of this size is, however, beyond our fondest hopes. It has taken England centuries to build up the Navy which she now possesses, and the construction of a fleet equal to the British would not only require many years but would entail an enormous cost upon our resources.

Even now, when the United States stands fourth in naval strength, there are other nations which could overcome our ships at sea, thus insuring a clear highway for the landing of transports bringing literally hundreds of thousands of men.

A large standing army is equally impossible. As a matter of fact, this ought to be the case. To create and maintain a Regular Army of 500,000 men would be an enormous tax upon the American people, besides which it would be entirely out of harmony with all our traditions and ideals. Even should such an Army be authorized, it is doubtful if it could be recruited. While the United States pays more per capita for its Army than any other nation, it is extremely difficult to get men to surrender the opportunities of earning a livelihood in order to receive the meager compensation which the Regular Army affords. The effort to increase the Regular Army under the stress of the excitement on the Mexican border has not been successful.

Recent events have also demonstrated that a volunteer army is not to be depended upon. After much delay several regiments of the National Guard have been sent to the Mexican border, but a very large number of men in the ranks wore the uniform for the first time, and were absolutely untrained and unfit for the work assigned them. It is not fair, moreover, that the force thus summoned for service should be composed wholly of men who regard devotion to their country as a duty, while thousands of other men even better fit physically and financially for the sacrifice remain at home.

If we had had in this country a system of universal military training and service such as the Swiss have had for many years, the men sent to the border would have been taken from all ranks of life; there would have been equality in the matter of enlistment and, more important than all, there would have been preliminary training which would have gone far toward making the organization effective in the military sense.

We speak of universal military training as if it were something new and at variance with the principles of our Government. Nothing could be further from the truth. The bitter experiences of the Revolutionary War, when Washington secured an army with great difficulty, demonstrated to that great commander the fact that if our Republic were to exist in the future it must rely for its defense upon a trained citizen soldiery. He unquestionably had much to do with the constitutional declaration that "well-regulated militia is necessary to the security of a free State," and he went further in the statement that "a free people ought not only to be armed but disciplined."

He emphasized his belief that the safety of the Nation depended upon "an adequate stock of military knowledge for emergencies," and he advocated the spread of this knowledge among the entire American people. He saw very clearly that if the United States should become a Nation so pacific as to be unable to defend itself, it would unquestionably become a prey to the greed and aggression of some more powerful nation. "If we desire to avoid insult," he said, "we must be able to repel it; if we desire to secure peace, one of the most powerful instruments of our rising prosperity, it must be known that we are at all times ready for war."

Universal military training and service is the only system which is purely democratic. Thomas Jefferson, recognized as the founder and patron saint of the Democratic Party, emphasized this point of view. "We must train and classify the whole of our male citizens," he wrote to Monroe in 1813, after he had learned the lesson of unpreparedness in the War of 1812, "and make military instruction a regular part of collegiate education. We can never be safe till this is done." In 1814 he went still further and declared that it was an obvious truth "that we can not be defended, but by making every citizen a soldier, and that in doing this all must be marshaled, called by their ages, and every service ascribed to its competent class."

James Madison, a follower of Jefferson, urged, in his message to Congress on December 3, 1816, the organization of a militia which would include practically every physically fit male in the Republic, while James Monroe, in a message to Congress in 1822, urged the American people as a special duty "to be at all times prepared to defend the rights with which they are blessed, and to surpass all others in sustaining the necessary burdens and in submitting to sacrifices to make such preparations."

Any unprejudiced reader of American history must realize that if the counsel of the fathers of our country had been followed a century ago we would have been saved unnecessary sacrifice of lives and money. In all of our wars the flower of our citizenship has paid the

penalty of inexperience and unfitness. We have been victorious, but at tremendous cost.

In the Revolutionary War, when our forces numbered 395,000 as against 150,000 of the enemy; in the War of 1812, when we had 350,000 men enrolled, with only 57,000 against us; and when in the War with Mexico we had twice as many men in the field as the Mexicans, we were taught an experience which did not profit us. Even though we have never fought a first-class power throwing its full resources into the opposing balance, we have never been able to win except by putting armies into the field greatly in excess of the other side.

It is not necessary, however, to rest our case for universal military training and service upon our own history. Switzerland at the present day affords an object lesson which we would do well to heed. The question came before the Swiss people in the form of a referendum upon the occasion of the adoption of the federal constitution in 1848, and by a popular vote of 170,000 to 70,000 the Swiss people decided that "every Swiss is open to do military service." It is safe to say that to-day not one vote would be cast in Switzerland against the system which has been in vogue there nearly 70 years. Everyone knows that if it had not been for the demonstration of the instant ability of the Swiss people to defend their territorial integrity the German Army would have sought entrance into France through Switzerland. The Swiss Army is enrolled for defense, not for offense; and every student of the Swiss Army agrees that the Swiss system is the living refutation of the charge that military training hurts good citizenship. The Swiss is, above all things, a free man, and there is no taint of militarism in his nation. The trouble is, however, as was pointed out 16 years ago in a report submitted by Lieut. Col. William Cary Sanger, that "universal military service still remains a theory with us, but in Switzerland it is real and actual."

Side by side with Switzerland in the adoption of compulsory military training stands Australia. Emphatic evidence of the success of the system in that country is found in the address of Hon. William H. Hughes, prime minister of the Commonwealth of Australia, at Ottawa, February 19, 1916, in which he said:

"It had been very well for us and very well for mankind if Britain had prepared as well by land as by sea. If she had done that there would have been no war to-day. And this I say—and it is all that I shall say on this point—that Australia has been able to do what she has done because we have adopted as the corner stone of our democratic edifice the system of compulsory military training. We believe that there is but one way by which a nation, being free, can remain so, and that is that every man shall not only be willing to defend his country, but be able to do so. And we think that if it is right, as it surely is, that a democracy should educate its citizens so that the franchise shall be wisely exercised, for government by the many, if the many are not educated, is a doubtful good. So we think that the State should train the citizen so that he may be able to defend his country, his home, and his liberties."

On the other hand, England, having failed to adopt a system whereby its people would be ready to meet danger, has paid a terrible penalty. For more than a decade farsighted men in England have been pointing out that no provision was being made to train English citizenry so as to be available for defense. Possibly the futility of these appeals was largely due to the belief that the island was protected from invasion by the strength of the navy and that no conflict was possible which would involve English people. Events have proven, however, that this point of view was entirely false. It is now a matter of history that when universal war was declared on the Continent, England was able to send only a very few soldiers, comparatively speaking, to oppose the onward march of the German Army through Belgium into France. It called upon its colonial dependencies for help and then, after the war had begun, undertook to train and equip 4,000,000 of its citizens.

It was nine months or a year before Lord Kitchener felt that his men were in condition to be sent against the trained veterans of the enemy, and the result was that all attempts to check the onward advances of the German forces were at first futile. The United States would undergo a similar experience if to-day a hostile army should land upon its coast or cross its borders. The men who would instantly volunteer to save their country would be utterly unprepared, not only physically but in the essential of necessary training and equipment. Untrained millions are nothing but an untrained mob. It is a matter of education to bring the American people to a realization of this fact.

There is no doubt that the men who have labored successfully to make the National Security League a great organization have been aided in their diligent efforts to secure universal military training and service by the fact that the European war has demonstrated the necessity of providing this system as the basis of national defense. Like the founders of our Government, they are placing the lesson of experience before their fellow citizens and the outlook is that their efforts will be attended by a larger measure of success. In other words, evidences of an awakening in the American mind are happily apparent—an awakening which has unquestionably been largely stimulated by the effective work of the league.

The Chamber of Commerce of the United States of America, an organization composed of more than a thousand commercial bodies, at its recent annual convention recommended a resolution in the following language:

VII. The committee, recognizing the military obligation equally with the civic obligation as a fundamental duty of democratic citizenship in a republic and to establish a system which will affect every man alike, recommends that universal military training be adopted as a fundamental democratic principle of our military policy, and be enforced by law to furnish adequate land, sea, and industrial forces in peace and war.

This resolution was submitted to the constituent bodies and was adopted, after thorough discussion, by the surprisingly large vote of 889 to 56.

In addition to this, several newspapers have been conducting polls on the question of universal military training, and the Chicago Tribune reported on June 6, 1916, that out of 6,255 votes reported, 6,180 were in favor and 75 against. The Baltimore Sun reported a vote of 8,186 to 1,055 against, and similar appreciation of the necessity of universal training was recorded in Los Angeles and Philadelphia.

The National Educational Association, at a convention in New York City last July, attended by more than 25,000 teachers, adopted a resolution recognizing "the right of the community or the State to introduce such elements of military training as may seem wise and prudent," although it registered the belief that such training should be strictly educational in its aim and work, and that military ends should not be permitted to pervert the educational purposes and practice of the school. This recognition of military training in the schools, which is the underlying feature in universal military training, is gratifying evidence that the great mass of the educators of this country realize that such training is the foundation upon which national security must rest.

Another indication of the growth of public sentiment was evidenced at the banquet of the Merchants' Association of New York City, when tremendous applause followed the statement of Senator O'GORMAN, of New York, that compulsory training is the one indispensable thing we should have in this country.

It is noteworthy that many magazines which admittedly reflect the intelligence of the country are advocating universal military training. This is particularly true of Everybody's Magazine, while the Century Magazine says that it is the only purely democratic system of national defense and the ideal goal at which a self-respecting democracy must aim. The Ladies' Home Journal, which goes into 2,000,000 homes, editorially admits the futility of the volunteer service and urges military training for every boy in the land as the real essence of preparedness. Physicians also recognize the physical value of military training, as shown by the fact that the American Medico-Psychological Association, in convention in New Orleans on April 16, 1916, strongly recommended universal military training and urged legislation enforcing it because it "promotes in the individual strength of muscular and bony tissues, improves organic functions, quickens perception, furnishes discipline in self-control, inculcates obedience, and creates respect for authority."

As for individual indorsements, pages might be filled with utterances of men recognized as leaders. Space allows only the following:

Theodore Roosevelt: "I believe in universal service based upon universal training. I believe in this because I think it would be not only of incalculable benefit to the Nation in the event of war, but of incalculable benefit to the individuals undergoing it, and therefore to the Nation as a whole as regards the work of peace. The military tent where boys sleep side by side will rank next to the public school among the great agents of democracy."

Robert Bacon, former Secretary of State (after his recent visit to the Mexican border): "I am more than ever convinced that there is but one satisfactory solution for military preparedness of the Nation, in fact, for the maintenance and endurance of the Nation itself in a high place in the affairs of the world, and that is universal service—the spirit of service and sacrifice for the Nation. Unless we learn to speak in terms of a nation, and subordinate our local and material ambitions; unless the Nation, in claiming its international rights, learns to appreciate its duties and international obligations, the Nation can not endure as one of the respected members of the society of nations.

"There has been a great change in sentiment and opinion about universal service. Everywhere that I have been—in New England, the Middle States, the Mississippi Valley, the South, and the great Southwest, as far as Arizona—I have found but one opinion: That universal service for the Nation, whether it be enrollment for the military or for broader work of industrial efficiency for national purpose, is the only democratic principle of national life, and only by such service can we obtain justice and equality for all citizens of the great community. These are the undoubted facts, which have been emphasized by the lessons of this great world war, and which are proved beyond a question to the mind of anyone who is brought in close contact with the army now encamped along our border, both Regulars and Militia."

John Grier Hibben, president of Princeton University: "As citizens of this great Republic we must realize that patriotism has come to have deeper meaning, namely, recognition of personal obligation to one's country and readiness for sacrifice."

Newton D. Baker, Secretary of War: "I can not believe that I have the right to expect another man to defend my home and my family, if I am unwilling to defend them myself. It is essentially a democratic principle that every citizen should be willing to contribute his personal service to the common defense."

Gen. Leonard Wood: "The volunteer system has never succeeded and never will. The only true ideal is obligatory military service. Manhood suffrage and manhood service must go together."

Hon. JAMES W. WADSWORTH, United States Senator from New York: "We send our children to school so that they may fit themselves to combat forces of ignorance and vice, which, if allowed unrestrained within our borders, would soon destroy the Republic. Is it not likewise the duty of a true democracy to train its young men to combat successfully those forces which may attack its institutions from without?"

Cardinal Gibbons: "I believe in preparedness and in compulsory military service for all men of the Nation. Compulsory service is the best means to preparedness."

Samuel Gompers, president American Federation of Labor: "We must have a preparation that means a comprehensive development of all the powers and resources of all our citizens. In Switzerland every man is a soldier—not necessarily to go to war, but he has the physical and manual training necessary to defend himself, his family, and his country. Under that system the Swiss have developed a manhood, a character, that challenges the admiration of the world. We will be satisfied with nothing less in America."

John Purroy Mitchel, mayor of New York City: "I believe in universal male military training after the plan of Switzerland or Australia. I believe that the American people must and will come to this sooner or later. I pray that they may adopt it before national disaster and not after."

Henry L. Stimson, former Secretary of War: "This problem of national defense will never be permanently solved until it is distributed among the whole people by some system of universal liability to military training."

These expressions of thoughtful, experienced, and patriotic men should carry conviction to every mind. It is the definite purpose of the National Security League to give the widest possible publicity to these and other affirmative views, and a pamphlet issued by the league, dealing solely with universal military training, has already been given a large circulation. The campaign of education will be thorough and extensive because, in a Republic like ours, nothing can be accomplished except through legislation and laws can not be enacted until public sentiment approves. The first step toward legislation has already been taken through the introduction of a bill proposing a system of universal military training and service by Senator CHAMBERLAIN, of Oregon, chairman of the Senate Committee on Military Affairs. It is not necessary to present the details of this measure beyond stating that they provide for three classes, to be known as the "Citizens' Cadet Corps," between 12 and 17 years of age, inclusive; the "Citizens' Army," between 18 and 23 years of age, inclusive; and the "Citizens' Army Reserve," of persons 24 years of age and over, and that the training for

the members of the citizen army is to be not less than 120 hours, or 20 whole days, for six years, and not less than 10 whole days in camp of continuous training. The bill has not been pressed for passage because the necessity for its enactment is not yet fully appreciated.

The American people must, however, eventually realize that in universal military training and service lies the only safeguard for the Nation. In the meantime the National Security League is working earnestly, with hope and confidence, to hasten the day when a law fully realizing the ideal of universal military training and service shall be placed upon our statute books and the American people, proud of their Nation and determined to preserve its greatness, its liberty, its privileges, and above all, its honor, will be ready to defend it against all foes.

## APPENDIX.

### RESOLUTIONS INDORSING UNIVERSAL OBLIGATORY MILITARY TRAINING AND SERVICE.

[Adopted in referendum of Chamber of Commerce of United States of America.]

VII. The committee, recoginzing the military obligation equally with the civic obligation as a fundamental duty of democratic citizenship in a republic and to establish a system which will affect every man alike, recommends that universal military training be adopted as a fundamental democratic principle of our military policy and be enforced by law to furnish adequate land, sea, and industrial forces in peace and war.

[Adopted by the National Security Congress, Washington, Jan. 22, 1916.]

*Be it resolved by the National Security League,* That the defense of the United States must depend upon an adequate Navy and a National Army founded upon a system of universal obligatory military training and service. This system must be wholly under the discipline and control of the national authorities. We deprecate all steps which tend to obstruct or postpone the adoption of such a universal system.

[Adopted by the national defense conference of mayors and mayors' representatives. St. Louis, Mo., Mar. 4, 1916.]

*Resolved,* That recognizing the military obligation equally with the civic obligation as a fundamental duty of democratic citizenship in a republic and to establish a system which will affect alike every man in the republic, we approve and recommend the adoption of universal military training under Federal control throughout the United States.

[From the Century Magazine, July, 1916.]

### THE DEMOCRACY OF UNIVERSAL MILITARY TRAINING.

In the May issue of the Century, in an article entitled "Military training for our youth," the writer puts a pertinent question: "Is patriotism a duty that must be discharged by all, or a favor to be bestowed at will?" Obviously that means Are those of us who have not yet had the vision of the preciousness of our national existence content to accept it at the hands of charity? Is America going to be, without a protest, the one pauper among the nations? The question is not to be answered lightly. "Let George do it" must not be our national watchword when the very life of the Nation may be at stake.

It ought to be unnecessary even to ask the question; but there is a fact that we forget all too easily—democracy can exist only through education. Our average citizen knows little and cares less about the business of government. In matters that he understands he is the last person to be satisfied with inferiority of performance. Can you imagine the American public tolerating less than the highest aristocracy of skill in the one national affair that is thoroughly understood—baseball? Clearly, if the Nation were as solidly grounded in the rudiments of national business as in the requirements of the national game, it would never submit to the disgraceful clumsiness of our usual amateur performance.

There is one State that has already seen the source of our weakness in ignorance. Last spring a nonpartisan commission, composed of a college president, a journalist, a representative of organized labor, attorneys, and business men, was appointed by Gov. Walsh, of Massachusetts to study the question of "the practicability of providing military education for boys between the ages of 14 and 21" for the purpose of disciplining the youth of the Commonwealth and of "improving their physical, moral, and mental qualities," and to report the result of its investigations to the legislature with recommendations for legislation.

Through the summer that commission collected and analyzed public opinion and expert advice and submitted its report at the end of 1915. There were three recommendations—an enabling act permitting the State militia to cooperate with any scheme of Federal action that may be adopted; the institution of compulsory physical training in the high schools; a complete recasting of the militia law of the State in case the militia should be compelled by national neglect to remain a State force.

Those commissioners worked with a full realization of the essentially national character of the question of defense. They recognized the futility of recommending anything beyond the probabilities of immediate action, or anything based on the present feverish interest, that might fail to weather the test of the popular temper in normal times. They curbed the enthusiastic impulse to bespeak for the country general and compulsory military service, because they saw the absurdity in such a proposal from any single State. In the same way they stopped short of the ideal in asking for physical training in the high schools only, knowing well that less than a third of the boys would get the benefit, since the compulsory character of schooling ends with the grade schools.

Plainly the sum of their endeavor was to show the State that the quality of citizenship most sorely lacking in us is a sense of community duty; that this sense can be created by the habit of discipline only if the attempt is made early; that national strength, either for defense against aggression or for the business of good living, can be won only through education. We are notoriously lawless in America, but the remedy can be applied through the schools to the parents in our families. In our hysterical urge toward the development of the individual person we have lost sight of the chief value of education—discipline. Through discipline comes community consciousness, teamplay, and that is the beginning and the strength of civilization.

Last March there was a convention of mayors in St. Louis. The most important 75 cities in the country were represented, an imposing body of opinion from the whole breadth of America. They discussed the subject of defense, and the only proposal which met with unanimous indorsement was for universal compulsory military service. They knew that it is the only purely democratic system of national defense, that it is the ideal goal at which a self-respecting democracy must aim.

Massachusetts has been studying history and drawing conclusions. Understanding fully at last the pitiful failure of the voluntary principal in national service, as ridiculous in the military aspect as it would be in the payment of taxes or in education, and as unjust, the State is urged to train and discipline its citizens for the good of the common cause. It is a hopeful sign. After all, our country may really be learning. We may have reaped one tangible benefit from the great war, an awakening political conscience.

New York State has recently followed the example of Massachusetts.

If two States can make a forward step, so can other States, until we have in America a Nation united in support of ideals cherished in fact as well as in oratory.

[From the Ladies' Home Journal.]

### THE QUESTION FOR PARENTS. "SHALL THE MEN WHO WILL DEFEND THIS COUNTRY BE UNTRAINED?"

Now, all recent wars have demonstrated the futility of the volunteer service, and certainly the methods of modern warfare have proved its absolute inadequacy. * * *

The question, therefore, for parents of boys is not "Do we believe in war?" or "Do we believe in preparedness?" but "Are we willing that our boys shall be drafted for service in case of war absolutely unfitted and untrained?" That is the question that stares you and me, as the fathers of boys, in the face. I am not advocating the military training of our boys; I am not favoring or opposing preparedness here. That is not the function of this magazine. But I am a father of two boys, and I am asking myself the same question I am asking you: Whatever may be my personal view of war, am I willing to let my boys be drafted and go into war untrained, inefficient, for a foreign soldier, trained and efficient, to shoot at, and my boys unable to take care of themselves? There is no time for proper training once the boys are drafted. Military experts claim that a boy can be trained in six months' service with a week or 10 days each following year for "brushing up," so that a preliminary military training is not impossible for a boy earning his livelihood.

The question is ahead of us, and we can not dodge it: How are we going to let our boys face the possibility of being drafted for military service? As inefficient and unable to take care of himself, or, at least, as trained to the rudimentary knowledge of war? That is the real essence of "preparedness" for every parent of an American boy in good health to answer.

[From the New York Evening Sun, August 1, 1916.]

### FOR AMERICA!

Reasonable Americans comprehend that the safety of the United States demands at all times a force, ready for emergency work, larger than the one now mobilized on the Mexican border and a force which, at the same time, can be maintained under arms without the personal hardship and financial loss now being endured by our National Guardsmen. A large regular army might solve the problem. But to pay an army of such size would be extremely costly; besides which it has been found impossible to secure enough men to keep our present handful of Regulars recruited to maximum strength.

Senator CHAMBERLAIN'S bill, now buried in committee, to provide universal compulsory military training for male citizens of the United States would provide a way. This patriotic measure has evoked a howl of opposition from the hyphenated press, which interprets every such move as directed solely at Germany, and from that portion of the unhyphenated press which should be but is not able to distinguish between Prussianization and preparedness.

Criticism may be justly directed against this bill, but not against the fundamental principle of universal obligation in return for universal liberty on which it is based. The detail in which Mr. CHAMBERLAIN has erred most unfortunately is in stipulating that the six months of military service specified shall be performed during each citizen's eighteenth year.

Such a system would take the youths of the country when their minds were in the most acquisitive stage and their bodies not yet fully developed. It would interrupt the educational lives of those who would go normally in this year from preparatory school to college and who should be permitted to do so without interruption. It would be much better to require the service in the early twenties, just when the college men would be graduated into professions and the apprentices into journeymen in the trades. Not the least valuable feature of such a system would be the democratic postgraduate course in which men from every phase of American life would mingle on the same terms of equality on which Frenchmen meet in the French army during their period of military training.

The Chamberlain bill is the most thoroughly American defense measure that has been proposed to Congress. The cry of "conscription!" can be raised only by those who are blind to the fact that citizens of the United States are subject to-day to the most sinister form of conscription conceivable. Their Government gives them no instruction whatever in the most technical of arts, that of the soldier, yet it may draft them into military service in emergencies and send them inadequately trained into battle to fall victims more to their own ignorance than to the superior valor of the enemy. Americans need not be reminded that this draft power is not theoretical; it has been exercised already in the Civil War.

Such are the facts. If the American people will not awaken to the necessity for a system of universal training which will enable them to defend themselves with the least sacrifice of American manhood when they are compelled to go to war, the American people will pay for their refusal to understand. And the experience of Europe is that war will come not because but even though nations like France and England arm for their own protection.

[From the New York Sun, May 24, 1916.]

### SECRETARY OF WAR BAKER FAVORS TRAINING ENTIRE NATION.

WASHINGTON, *May 23.*

Secretary Baker, in an interview, came out squarely this afternoon for universal military training in the United States.

Secretary Baker said in his interview:

"As there exists a universal obligation resting on all male citizens of this country to defend the country in time of war, so there should be a universal willingness to train in times of peace against the day

of such emergency. So long as it might be possible to have universal training through volunteer service I should be in favor of limiting it to a voluntary service, but if adequate preparation for the national defense can not be reached through such a system I would favor a compulsory system.

"My belief is that educational institutions of our country should see to it that every boy in school has it instilled into him that one of the cardinal duties, if not the paramount duty, he will assume with citizenship is the obligation to defend his country in time of war, and if this is a duty, as I believe it is, then certainly the boy should be trained to perform that duty when the time comes for him to do so.

"I can not believe that I have the right to expect another man to defend my home and my family if I am unwilling to defend them myself. It is essentially a democratic principle that every citizen should be willing to contribute his personal service to the common defense."

—

[From an address by John Purroy Mitchel, mayor of New York City, at the National Security Congress, Washington, Jan. 20–22, 1916.]

A FUNDAMENTAL OBLIGATION—WITH CIVIC DUTY GOES MILITARY DUTY AND UPON BOTH OUR EXISTENCE DEPENDS.

I believe in universal male military training after the plan of Switzerland or Australia. I believe that the American people must and will come to this sooner or later. I pray that they may adopt it before national disaster and not after. I am as much opposed to militarism, as Europe knows it, as the most ardent pacifist, but I do believe that citizenship in a democracy carries with it a fundamental obligation; that mild and brief citizen training for a few weeks each year during adolescence and early manhood is the minimum necessary to realize the condition of a trained citizenship in arms. Anything less than this must be a makeshift, a mere temporary expedient, a perilous temporizing in the face of danger. The time to solve this question is now, when the attention of the Nation is focused upon it and its solicitude is acute.

We are passing to-day through a great crisis in our national life. The issue is more than national; it is as broad as the human race itself. Into our hands here has been committed the heritage of democratic government. It is our trust to perpetuate it, to develop it, to transmit it to posterity, a serviceable agent for the advancement of civilization and for the happiness of mankind. Here in this Nation and country of ours the efficiency of democracy is on trial to-day. Here under our free institutions through 130 years of effort and of progress we have developed governmental and civic efficiency. We teach our citizens the sense of individual civic responsibility, and they respond to it. During the greater part of the time, due to geographical location and the absence of hostile motives abroad, we have enjoyed peace. Now that science has obliterated distance and our prosperity and commerce supply the motive, we can no longer count upon an effective peace. Democracy, therefore, must meet the new conditions. But through its elementary sufficiency for self-preservation we must teach our citizens that with civic duty goes military duty, and that both are obligations on which the life of the State depends.

—

LABOR'S ATTITUDE—SAMUEL GOMPERS DECLARES IN FAVOR OF TRAINING FOR DEFENSE OF THE NATION.

Samuel Gompers, president of the American Federation of Labor, in his address before the Sixteenth Annual Meeting of the National Civic Federation, January 18, 1916, said in part:

"The pacifists and those who hold to politics of nonresistance have failed as I had failed to understand and to evaluate that quality in the human race which makes men willing to risk their all for an ideal. Men worthy of the name will fight even for a 'scrap of paper' when that paper represents ideals of human justice and freedom. The man who would not fight for such a scrap of paper is a poor craven who dares not assert his rights against the opposition and the demands of others.

"The majority of our citizens no longer live in the open, and they show in their physical development the effect of the restricted life of the city. They have not the physical strength or endurance that would fit them without further preparation to be called into service in a citizens' army. Since opportunities for physical training are not freely and readily available to all, some definite national policy must be devised for physical training and physical preparedness of all citizens. Such a training could be readily given through our public-school system and other auxiliary agencies. The chief problem is that training of this nature should be in furtherance of broad, general usefulness and ideals and not be specialized or dominated by the purpose of militarism. Physical training must fit citizens for industry, for commerce, for service in the work of the Nation, as well as for service in defense of the Nation. But physical training and preparedness are insufficient.

"There must be a spirit among the people that makes them loyal to country and willing to give themselves to its service and protection. That spirit can not exist unless the citizens feel that the Nation will assure to all equal opportunities and equal justice. They must feel that they are a part of the Nation, with a voice in determining its destinies. This spirit of loyalty depends not only upon political rights but upon justice and right on the industrial field, aye, in all relations of life. * * *

"We must have a preparation that means a comprehensive development of all the powers and resources of all our citizens. In Switzerland every man is a soldier—not necessarily to go to war—but he has the physical and manual training necessary to defend himself, his family, and his country. Under that system the Swiss have developed a manhood, a character, that challenges the admiration of the world. We will be satisfied with nothing less in America.

"We must see to it that the great mass of the farmers and the workers in industry shall be thoroughly trained and organized. We must see to it that the military and naval forces of the country are controlled in the interests of peace, of justice, of democracy, and of humanity.

"There must be industrial, commercial, political, social, moral, as well as military defense. Citizen soldiery must be established and extended. It must be democratically organized, officered, and controlled. We must put an end to the present wasteful and unfair administration of our military affairs."

—

[George A. B. Dewar in the Nineteenth Century Magazine, 1915.]

THE EXPERIENCE OF ENGLAND.

Voluntary recruiting, despite its mettle and its high fervor, is essentially a thing of spurts, very heartening, and inciting us to throw up our hats whilst these spurts last. But spurts are succeeded by reactions, which are deadly and depressing. * * * By not adopting a simple, thorough, and perfectly fair and democratic service scheme, we are laying up for ourselves a world of ill-feeling, envy, and uncharity in the future, a world that may take a generation or more to pass away. Now by an honest act all this ill-feeling, all these hideous comparisons, must instantly disappear. * * * A general obligatory service law to-day in this country (England) must be a democratic law, rightly considered. But why be scared by names at this time? Democracy means the strength of the people, and the strength of the people exerted to its utmost is, after all, the only way by which we can prevail in this war.

—

[Brig. Gen. Thomas M. Anderson, United States Army, in Journal of the Military Service Institution of the United States, July-August, 1908.]

THE SAFEST AND BEST METHOD.

Our military establishment has not the sympathy and approval of the people because it is not republican and representative in character. In discussing this problem I take for my text a statement of the New Orleans Picayune:

"There is," it asserts, "but one way in which this great Republic will be able to maintain a sufficient military strength, viz, by universal military service." * * * Our safest method for an offensive-defensive is universal military instruction and compulsory short-time service. We have billions of wealth to defend and millions of men to defend it, but untrained millions would be simply an untrained mob.

—

[From address of Henry L. Stimson, former Secretary of War, at the National Security Congress, Washington, Jan. 20–22, 1916.]

THE PROBLEM OF DEFENSE—IT WILL NEVER BE SOLVED EXCEPT THROUGH UNIVERSAL MILITARY TRAINING.

Four years ago when it became my official duty to study this question, I hardly dared dream that the time would ever come, within my lifetime, when the American people would seriously consider the institution in this country of any system of universal military training. The searching test of the European war has, however, put its finger squarely upon this weak spot of our American democracy. In our national development thus far we have focused our attention upon the rights, the privileges, the benefits which we have expected to get from free government, and we have paid scant attention to the duties or the obligations or the sacrifices which were correlative to them. But now, for the first time, we are beginning to realize how far we have fallen behind other nations in this respect. For the first time there has been made clear to us the superior strength of patriotism which has been developed in nations which hitherto we have been inclined to regard with little admiration or even respect. For the first time we have had revealed to us in blinding light the fact that men of other nations for years have been willing to give toward the building up of the efficiency of their nation a measure of time and personal effort which we have been unwilling to give.

We are beginning to realize the true meaning of the proposition that manhood suffrage postulates manhood services, and that the man who has a right to participate in the making of his own government is bound by the highest obligation of honor to share in the burden of defending it. And so to-day we find an increasing number of our people who believe, as I believe, that this problem of national defense will never be permanently solved until it is distributed among the whole people by some system of universal liability to military training.

—

THE DUTY OF A TRUE DEMOCRACY—YOUNG MEN SHOULD BE TRAINED TO DEFEND OUR FREE INSTITUTIONS.

JAMES W. WADSWORTH, Jr., United States Senator from New York, in a speech before the Union League Club, of Chicago, on February 22, 1916, had this to say on the subject of universal military service:

"We send our children to school so that they may fit themselves to combat the forces of ignorance and vice, which, if allowed to operate unrestrained within our borders, would destroy the Republic. Is it not likewise the duty of a true democracy to train its young men to combat successfully those forces which may attack its institutions from without? Can there be any more democratic proposal than that every young man should prepare himself to a reasonable degree of efficiency for the defense of his country? Is it not his duty to do that promptly and cheerfully, just as truly as it is his duty to go to school in his younger days or to vote and take an interest in civic affairs when he comes of age?

"If it is not the duty of every young man to perform this service, shall we be so absurd as to say that those who volunteer to do it and those who, possessing less sense of responsibility, refuse to volunteer; shall we be so absurd as to say that those two groups of men entertain equally high ideals in their respective capacity as citizens of a democracy?

"In this question of universal military training there is something more important even than that of military defense of the country, about which we hear so much these days. The touch of the elbow is involved. I would like to see a state of affairs in which the son of the rich man, who does not have to labor with his hands for his living, working alongside of the son of the poor man. When two men work together physically and endure fatigue together at the same task there is created a bond of sympathy and understanding which no other process can establish. Each will come to an inspiring realization that the other, down deep in his heart, is his brother, possessed of the same courage, the same ideals, the same patriotism.

"I can think of no plan better calculated to prevent class feeling than the universal performance of service to the country by our young men. In no other way can we more truly fuse together the widely different elements of our population and instill into them the conviction that this indeed is a Nation. In no other way can we so surely help to perfect our democracy. Let us talk less about our rights and more about our duties. Inspired by such a spirit, we can successfully withstand all upon the American conception of liberty whether they are delivered from within or from without."

—

[Extract from the address of Prof. Henry C. Emery, of Yale University, at the National Security Congress, Washington, January 20–22, 1916.]

UNIVERSAL SERVICE WILL PAY—ONE OF THE MOST PROFITABLE INVESTMENTS THIS COUNTRY CAN MAKE.

One of the most profitable investment this country can make, from the standpoint of universal business, is universal service and training. There can be no question about that.

It has been an old theory of the economists for years that there are two great costs in the maintenance of military establishments, one the money cost year by year paid out of taxes, the other what is supposed to be the great economic loss in the employment of a large number of young men in nonproductive activities. Neither of these is quite justified. Of course, there is the money expense; I do not need consider the question as to how that compares with other expenditures. I only call your attention particularly to the fact that the money spent by Germany before the war in maintaining her great establishment was one-third the amount spent by the Germans for beer.

If the American people were willing to sacrifice, say, two things—chewing gum and going to the movies—we could maintain an army so big that nobody would dare to look at us from across the way. These expenditures, when compared with the real expenditures of living—the things we care for—are very small. But it makes no difference how much the amount is, it does cost money, of course, to maintain a large Military Establishment. But then it takes money to build a Union Pacific Railroad; it costs money to build a Panama Canal; it costs money to build any great constructive enterprise.

The question is, what do you get back for your money and the question of the actual dollars and cents invested is of no importance. It makes no difference whether you spend $100,000,000 or $500,000,000, from the economic point of view; the question is, are you getting a fair return on your money? My argument is simply that for every man that you educate in the military training for a short period sufficient to give him the efficiency necessary for the industrial life, you get back more than the expense.

—

[C. E. Calkins in Cyclopedia of American Government, vol. 2, p. 438.]

ADVANTAGES ARE NUMEROUS.

The military advantages of an automatic system which makes every class of the population bear a part in national defense are incontestable. Not only does it provide for an ample standing army during peace and perpetuate the military tradition but it provides a practically unlimited reserve of trained soldiers in the prime of life. Thus all the extravagance and disorder of hurried recruiting, the bounties for volunteering, and the irritating enforcement of conscription are avoided. The army is mobilized for war by filling the ranks of the existing organization, without sending improvised regiments or companies to the front; and no command is trusted to an untrained officer.

—

[From address of Capt. Granville Fortescue, National Security Congress, Washington, Jan. 20–22, 1916.]

THE ONLY EFFECTIVE MEASURE OF DEFENSE.

The only effective measure of defense is universal service. That is so obvious that it needs no repetition. I can tell you from what I have seen in England. There is an example for us—a pitiful example. * * * Any man who is worthy of being a citizen of the United States has with that worth, intrinsically, the duty of fighting for the United States.

—

[From address of Eric Fisher Wood, author of The Note-Book of An Attaché and The Writing on the Wall.]

THE SWISS SYSTEM—IT TRAINS THE YOUNG MEN FOR DEFENSE AND NOT FOR AGGRESSION.

It is manifestly undesirable that we should ever attempt to maintain a standing army of 2,500,000 men. The objections which Americans have to great standing armies like those of Germany and Russia are well founded. How, then, can we ever be prepared to mobilize the needed number of trained and disciplined troops in so short a time? In answer to this question our military experts unanimously advocate the adoption of a system of universal compulsory military service based upon and largely copied from the Swiss system and its counterpart in Australia.

These offer us for adoption not an experiment, but a thoroughly tested and eminently successful method of national defense.

The underlying ideas of the German standing army and of the Swiss military system are diametrically opposed.

Militarism in the extreme type is overbearing, aggressive, and brutal. The patriotism it fosters is two-faced, for it inculcates hatred of neighboring nations quite as much as love of one's own country. In extreme cases it develops a patriotism gone mad, while it makes aggression easy and even inevitable.

By contrast, the Swiss and Australian systems make no preparation for aggressive warfare, and therefore do not hold up before the minds of the young any ambition for conflict beyond their own borders or for the conquest of their neighbors. Adequate preparation for self-defense curtails aggression and brings nearer and nearer the possibility of combined international action to curb truculent nations and to civilize barbaric races.

In the Australian system, military science taught by competent official instructors form a compulsory part of the education of every boy between the ages of 12 and 18; during those years he undergoes military instruction coincidently with his other studies, so that he reaches the age of 19 a trained soldier. His military education is imparted to him at the most acquisitive age, and does not interfere with his later productive industrial occupations. When he reaches the age of 19 he is enrolled as a soldier in the battalion of the region in which he lives. From that time he is in active service for two weeks of every year for practice which is intended to keep fresh in mind his military knowledge. He remains a member of the battalion for eight years, until he reaches the age of 27, and throughout that period he is at all times liable for service in defense of his country. After reaching the age of 19 he thereafter undergoes only about 112 days' training. He can not, however, be sent out of Australia unless he expressly volunteers for foreign service. The Australian Army unit is a battalion of 1,000 men. The country is therefore divided into units of population each of which contains approximately 1,000 young men between the ages of 19 and 27.

In Switzerland the young men after having had preliminary training in school join their regiments in their twentieth year, and during the summer of that year undergo two months of continuous intensive military instruction. For 12 years thereafter they are at all times liable for immediate service in defense of their country. During each of these years they perform two weeks' training in the field. After the age of 20, only about 30 weeks of military service are required, except in case of war.

The system recommended by American experts for adoption by this country would begin with the training of all boys between the ages of 12 and 18 in gymnastics, hygiene, the manual of arms, rifle practice, and platoon and company formations. In the summer of his nineteenth year every boy would be assigned to his regiment and begin active service with two months of intensive training in his battalion, regimental, and brigade maneuvers, and afterwards he would be enrolled for service for four years, or until he is 23—his service in time of peace being limited to two weeks spent in camp each summer. At 23 years of age the young man would be mustered out of his regiment and placed in the reserve, from which he could be called to active service only in case of dire need. This system would eventually furnish the United States with an active Army of 2,500,000 men under 24 years of age, and with a reserve of nearly 8,000,000 trained soldiers between the ages of 24 and 45 who could be called upon in case of a long war. Thus, after his eighteenth year a total of only 14 weeks' military training would be required of each normal male citizen.

No member of the citizen forces would be required either to serve outside the territory of the United States or to aid in suppressing local civil disorders such as strikes.

Each year in the United States a million men reach the age of 20, of whom about 65 per cent are fit for military service.

Military training and service would, under peace conditions, be completely finished by all men before they reached their twenty-fourth birthday, thus interfering as little as possible with their productive life. In the event that war were thrust upon us, the casualties would be borne by a class of men who, for the most part, had not yet acquired families or reached positions of great responsibility.

It should not be forgotten that the adoption of a system of preparedness in no way increases the liability of the individual to serve as a soldier in the event of war. If we should have a big war in the near future, the draft would, of necessity, be instituted and enforced and our citizens would all have to fight whether they liked it or not. Preparedness renders such an eventuality less likely, and makes it improbable that if we do fight, our dead would have to die in vain.

—

[From address by Hon. William H. Hughes, prime minister of the Commonwealth of Australia, at Ottawa, Feb. 19, 1916.]

THE AUSTRALIAN SYSTEM—THE PRIME MINISTER TELLS WHAT A GREAT ORGANIZATION HAS DONE FOR THE COMMONWEALTH.

It had been very well for us and very well for mankind if Britain had prepared as well by land as by sea. If she had done that, there would have been no war to-day. And this I say—and it is all that I shall say on this point—that Australia has been able to do what she has done because we have adopted as the corner stone of our democratic edifice the system of compulsory military training. We believe that there is but one way by which a nation, being free, can remain so, and that is that every man shall not only be willing to defend his country, but be able to do so. And we think that if it is right—as it surely is—that a democracy should educate its citizens so that the franchise shall be wisely exercised—for government by the many if the many are not educated is a doubtful good—so we think that the State should train the citizen so that he may be able to defend his country, his home, and his liberties.

The defense of one's country is the primary duty of citizenship. It is the first duty of free men. Two years before the outbreak of war we had established in Australia a system of universal military training. To this we owe the complex and widespread organization for training officers, noncommissioned officers, manufacturing small arms, ammunition, clothing, and so on, without which we should have been almost helpless in this great struggle. A small community of under five millions of people, yet we have been able to train, to equip from head to foot, a great army of men. It is a great thing and one which we may mention with pride and satisfaction that Canada and Australia have together put into the field nearly twice the number of the original British expeditionary force. We have put close on 300,000 men between us of first-class fighting men in the field. Australia could not have done her part unless we had a great organization created to prepare for danger. This one lesson must be learned from this great war. Some day the wings of the dove of peace may beat a soft lullaby throughout the land. But that day is not yet. Until that day dawns it is the duty of free men to be able as well as to be willing to defend their country.

Neither liberty nor our national rights can ever be safe when we neglect the defense of our country. This is a primary duty of citizenship of a free country. Nor can it be safe if we intrust it to volunteers. It can not be ignored nor left to volunteers. For as it concerns all, so must it apply to all. Liberty, the very basis upon which our national edifice rests; liberty, the very breath of our being; liberty, without which the more material side of civilization is as a dry husk, must be defended by all. With that I leave it.

## Explanation of the Rural-Credits Bill.

### EXTENSION OF REMARKS

OF

### HON. EDWIN Y. WEBB,

OF NORTH CAROLINA,

IN THE HOUSE OF REPRESENTATIVES,

*Friday, August 18, 1916.*

Mr. WEBB. Mr. Speaker, every Member of Congress who has sincerely the interests of the farmer at heart rejoices that we have passed the rural-credits bill, which will soon be organized and operated generally for the farmers' benefit.

Clarence Poe, Esq., one of the ablest writers of the South and now editor of the Progressive Farmer, published at Raleigh, N. C., says of this great piece of legislation:

> It is probably the most important piece of agricultural legislation in our generation, and every farmer ought to know its provisions.

I heartily agree with Mr. Poe, and am anxious that every farmer in the ninth congressional district shall understand thoroughly the provisions of this great measure, and I therefore present for publication in the CONGRESSIONAL RECORD an

explanation of this measure prepared by the Department of Agriculture, which is as follows:

NEW RURAL-CREDITS LAW—OFFICIAL EXPLANATION OF NEW MEASURES WHICH EVERY FARMER WANTS TO UNDERSTAND.

The primary purpose of this act is to promote agricultural prosperity by enabling farmers to borrow money on farm-mortgage security at a reasonable rate of interest and for relatively long periods of time. To attain this object, two farm-mortgage systems are provided: (1) A system operating through regional land banks, and (2) a system operating through joint-stock land banks.

To attract money to the farm-loan field, the act provides a method whereby those who have money to lend can find safe investments in the form of debentures or bonds of small and large denominations, issued by the banks and based on the security of mortgages on farm lands.

These two systems are to be under the general supervision of a Federal Farm Loan Board in the Treasury Department, composed of the Secretary of the Treasury, as chairman ex officio, and four members appointed by the President. This board has authority to appoint appraisers, examiners, and registrars, who will be public officials.

FEDERAL LAND-BANK SYSTEM.

Under the Federal land-bank system the act provides for Federal land banks which make loans, for the first 12 months, exclusively through local national farm-loan associations composed of borrowers. These associations shall be shareholders in the banks, and in that way the members, who are the borrowers, will share in the profits of the bank. The money for the loans is to come partly from the capital of the banks and partly from the sale by the banks of bonds secured by first mortgages on farm lands.

The United States shall be divided into 12 farm-loan districts, and a Federal land bank with a subscribed capital stock of not less than $750,000, each share $5, shall be established in each district. Each Federal land bank may establish branches in its district.

Within 30 days after the capital stock is offered for sale it may be purchased at par by anyone. Thereafter, the stock remaining unsold shall be bought by the Secretary of the Treasury for the United States. It is provided, however, that the Government shall not receive any dividends on its stock. Ultimately, it is intended that all the stock in the banks shall be owned by the associations of borrowers, and provision therefore is made in the law for transferring the original stock at par to these associations.

WHAT "NATIONAL FARM-LOAN ASSOCIATIONS" ARE.

The act provides for the creation of local "national farm-loan associations" through which it is contemplated that the Federal land banks shall make their loans. Ten or more persons who own and cultivate farm land qualified as security for mortgage loan under the act, or who are about to own and cultivate such land, may form such an association, provided the aggregate of the loans desired by the membership is not less than $20,000. Each member must take $5 stock in his association for each $100 he wishes to borrow, selling this stock when he pays his debt. The association in turn, when applying for money from the bank, must subscribe for stock in the bank to an amount equivalent to 5 per cent of the sum it wants to obtain for its members. If a prospective borrower has no money with which to pay for his association stock, he may borrow the price of that stock as part of the loan on his farm land.

In the event that a local loan association is not formed in any locality within a year, the Federal Farm Land Board may authorize a Federal land bank to make loans on farm land through approved agents.

HOW LAND OWNER MAY GET A LOAN.

A member of a "national farm-loan association," before obtaining a loan, must first fill out an application blank supplied to the loan association by the Federal Farm Loan Board. This application blank and othe. necessary papers will then be referred to a loan committee of the association which must appraise the property offered as security. Such application as is approved by the loan committee is then forwarded to the Federal land bank and must be investigated and reported on by a salaried appraiser of this Government bank before the loan is granted. This appraiser is required to investigate the solvency and character of the prospective borrower as well as the value of his land. When a loan is granted the amount is forwarded to the borrower through the loan association.

RULES FOR MAKING LOANS.

The act specifically defines the purpose for which loans may be obtained. These are:

"(a) To provide for the purchase of land for agricultural use.

"(b) To provide for the purchase of equipment, fertilizers, and live stock necessary for the proper and reasonable operation of the mortgaged farm; the term 'equipment' to be defined by the Federal Farm Loan Board.

"(c) To provide buildings and for the improvement of farm lands; the term 'improvement' to be defined by the Federal Farm Loan Board.

"(d) To liquidate indebtedness of the owner of the land mortgaged existing at the time of the organization of the first national farm loan association established in or for the county in which the land mortgaged is situated, or indebtedness subsequently incurred for one of the purposes mentioned in this section."

FOLLOWING ADDITIONAL FACTS SHOULD BE BORNE IN MIND.

1. Loans may be made on first mortgages on farm land.
2. Only those who own and cultivate farm land, or are about to own and cultivate such land, are entitled to borrow.
3. No one can borrow save for the purposes stated in the act, and those who after borrowing do not use the money for the purposes specified in the mortgage are liable to have their loans reduced or recalled. The secretary-treasurer of each association is required to report any diversion of borrowed money from the purposes stated in the mortgages.
4. No individual can borrow more than $10,000 or less than $100.
5. No loan may be made for more than 50 per cent of the value of the land mortgaged and 20 per cent of the value of the permanent insured improvements upon it.
6. The loan must run for not less than 5 and not more than 40 years.
7. Every mortgage must provide for the repayment of the loan under an "amortization" plan by means of a fixed number of annual or semiannual installments sufficient to meet all interest and pay off the debt by the end of the term of the loan. The installments required will be those published in amortization tables, to be prepared by the Farm Loan Board.

INTEREST RATES CAN NOT BE OVER 6 PER CENT AND MAY BE LESS.

No Federal land bank is permitted to charge more than 6 per cent per annum on its farm mortgage loans, and in no case shall the interest charged on farm mortgages exceed by more than 1 per cent the rate paid on the last issue of bonds.

For example, if the bank pays only 4 per cent on an issue of bonds, it can not charge more than 5 per cent for the next farm loans it makes.

The Democratic Party during the last four years has passed more helpful, useful, important legislation to the people of the United States than any dozen previous Congresses ever passed. The currency bill is one of the chief pieces of our legislation and its handmaid now is the rural-credits law, which we have just passed.

It is needless to say that I have been insistent upon the passage of such legislation for a number of years. I have urged it in season and out, because I believe it will bring about the emancipation of the farmer and will bring about conditions financially which will enable every energetic tiller of the soil to become prosperous and happy, and I am happy to have had an humble part in the passage of this epoch-making measure.

## Navy Appropriation Bill.

### EXTENSION OF REMARKS

OF

### HON. SEWARD H. WILLIAMS,

OF OHIO,

IN THE HOUSE OF REPRESENTATIVES,

*Tuesday, August 15, 1916.*

Mr. WILLIAMS of Ohio. Mr. Speaker, I supported the original Navy bill and the amendments sought to be made to it in the House providing an increase in the number of vessels. I shall support the conference report now before us. There are many reasons why this Nation should adopt a substantial policy of strengthening the Navy. For years we have rested in the belief that a world struggle, such as exists to-day, could not happen. But the fighting spirit of humanity is aroused. The air seems to be saturated with a war temperature. Commercial jealousies have engendered hatred among nations, which will not die with the termination of the European war. Mexican troubles will bring home to us the grave responsibilities of the Monroe doctrine after the close of the war. The Paris agree-

ment, of June of this year, as to national European combinations relative to international trade will bring us face to face with a new world power in this respect. We must be prepared to meet this power and be in a position to command the respect of combinations of powers in Europe regarding our rights on the seas if we would maintain our over-sea trade. Had we to-day a navy commensurate with the needs of a nation of 100,000,000 people, it is safe to say that our legitimate trade and our mail service would not be as openly interfered with. It is necessary, in view of the alliances of European powers, for our country to have a navy of sufficient power to repel any possible invader. An adequate navy is the best instrument to insure the peace of our country. Its moral effect will be most beneficial in times of threatened disturbances.

Not only must we be prepared to resist invasion of our States, but we must also be prepared to protect our possessions which are located within the circle of influence of other powerful nations, and the cost of adequate preparation will not approach the cost in life and money necessary to repel invasion. All our responsibilities do not lie wholly within our own borders. There is bound to be a great struggle for the extension of commerce. Already national combinations are being formed to capture the trade over the seas. If we fail to place ourselves in a position to follow our legitimate trade with an adequate naval force, we will be brushed aside with a ruthless hand in the same manner by which we are now suffering from gross violations of international law in the illegal interference with the transmission of our mails to and from foreign countries.

As it is our duty to fortify the Panama Canal, so it is our duty to provide and maintain a Navy sufficiently strong to enable us to reach the canal at any time and under any conditions. We have expended $400,000,000 in constructing the waterway across the Isthmus in order to establish a shorter route between the Atlantic and Pacific. This canal is our property. It will be of immense value to us in time of war, but our ability to use it will depend entirely upon the ability of our Navy to keep the waters clear of belligerent vessels at either terminus.

Through the Monroe doctrine we have maintained the position that the American Continent is for Americans, and that European powers must keep hands off. At the same time we have acquired insular possessions in the Old World. Our ability to protect the islands and to enforce the Monroe doctrine and to assume the responsibilities of the Monroe doctrine will depend upon an adequate naval force. As to the question of what constitutes an adequate naval force for the United States, I know of no better answer than that of Admiral Knight, who said:

> The answer will depend, of course, upon the purpose for which we assume that the Navy is to be used. We are all agreed, I presume, that it is not to be used for aggression. Is it, then, to be used solely for defense? If we answer yes, we ought to do so with a full recognition of what we are to defend, and also of the elementary maxim that the best defense is a vigorous offense. In other words, no matter how resolute we may be to use our Navy only for repelling aggression, it does not follow that we should plan for meeting the aggressor only at our gates. Even if we had no interest outside our borders and no responsibilities for the defense of our outlying possessions and dependencies, we should still, as reasonable beings not wholly ignorant of history, prepare to project our battle line toward the enemy's coasts and to assume a course which would throw upon him the burden of replying to our initiative. In this sense, then, we need a Navy for offense; that is to say, for offensive action with a defensive purpose. In shaping our plans along these lines we should not overlook the fact that the policy which dictates the measure of our defense must take full note of the larger national policy which it is to enforce, in relation, for example, to the Monroe doctrine, the Panama Canal, the Philippines, and other matters which are at once of national and of international significance.

The provisions of the pending amendments tend toward the establishment of a strong foundation for an adequate naval force. It assures the people of our country, who are not too proud to fight should it become necessary, that there is some material at hand with which to defend and protect our territory and our rights.

While we must prepare to protect our territory and our rights on the seas, we should not overlook the necessity of proper preparation for the protection of our commercial interests, which will be threatened after the European war. For when that war terminates there will come a commercial struggle among the powers of the world which may, unless a protective policy is adopted, prove as disastrous to our country as shot and shell.

Our importations are greater now than at any other time in the history of our country, while our exports have been tremendously augmented by arms, munitions, and war supplies. In the future these latter exports will cease. We can not expect to sell so much arms and munitions of war to the nations of Europe when the war is ended. When peace is restored those nations of the world will go on selling us their products, as they are now doing, and in addition the nations that can not now sell will be free to dump their products into our country as they did before the outbreak of the war. The belligerent nations will be more heavily taxed than ever before and will seek to flood our markets with their cheaper-made goods. Our immense stacks of gold will be most attractive.

To-day statistics show that foreign imports are being received at a rate in excess of two and one-half billions of dollars a year with some of the largest trading countries of Europe shut out of the market. As long as these imports are exchanged for war material we will not suffer financially, but when the war ceases and we are not making war supplies, then our wage earners must find employment in our industries of peace; but if those industries are closed because of the importation of the cheaper-made products of Europe admitted under the free-trade act, then will our industries be crippled. Economic disaster can not be avoided unless we check the flood of foreign-made goods into our country, when our immense exports of war supplies have ceased, by adopting a protective tariff which has always brought substantial prosperity to American workmen and American industries alike.

In the readjustment of affairs following the close of the war our country may be materially affected, and if trouble does come it may be shortly after the close of the war. It is therefore necessary that the building of vessels be speeded along as rapidly as possible. If the facilities at the disposal of the Government are not ample to accommodate the building of vessels authorized by Congress, within the prescribed time, private shipyards should be given an opportunity to assist in the construction under such governmental supervision as would insure a proper return for each dollar expended. It is charged that a policy of economy has not been exercised in the matter of expenditures authorized for the building of our Navy and navy yards. It is reported that during the first 15 years of the present century we have spent $1,600,000,000 on our Navy, while Germany has spent $1,100,000,000. In other words, Germany spent 30 per cent less on her navy than we did on ours, and had a more powerful navy than we had. The difference of half a billion of dollars would have built two superdreadnaughts a year for a period of 15 years, at a cost of $15,000,000 each, with $50,000,000 still remaining for destroyers, submarines, or battle cruisers. This construction would have doubled the war strength of our Navy.

May speed, economy, and efficiency characterize the future construction of our Navy.

## The Washington Primary Law.

### EXTENSION OF REMARKS
OF
### HON. WILLIAM E. HUMPHREY,
OF WASHINGTON,

IN THE HOUSE OF REPRESENTATIVES,

*Friday, August 18, 1916.*

Mr. HUMPHREY of Washington. Mr. Speaker, there is an interesting article in the American Economist under date of August 16, 1916. While I can not say that I agree entirely with all opinions and conclusions drawn in that article, it does, I believe, correctly state the facts, and it will be read with interest by every voter in my State, for each one of them desires to understand the second-choice provision of our primary law and how to correctly vote when it is invoked. The article referred to is as follows:

"A FREAK PRIMARY LAW.

"We have given considerable attention to the direct primary laws. Some of them are good and some of them are bad. The primary system has doubtless come to stay, but all of these laws in the various States ought to be made uniform and fair, with special reference to securing the honest judgment of voters of all parties for nominations to public office.

"In the State of Washington they have a freak primary law, which provides that if four or more candidates 'file' for the same office the voter must vote his first and second choice. The second-choice law provides:

"(1) If the voter votes for one candidate only, the ballot is not counted.

"(2) If the voter votes for the same candidate for both first and second choice, the ballot is not counted.

"(3) The voter must vote for two different candidates or the vote is lost.

"This law virtually takes away the right of the voter to vote as he desires, and often compels him to help nominate a candidate he does not want, in order to cast his ballot for one he does want. Unless some candidate receives 40 per cent or more of the first choice votes, then the first and second choice votes

of each candidate are added together, and the one having a plurality of first and second choice votes combined becomes the nominee.

"This system of voting leads to many mistakes and much confusion. The strong candidate always suffers most. In one primary contest, Congressman HUMPHREY lost between four and five thousand votes, where the ballots were marked for him for both first and second choice. In view of the great importance, not only to that State, but to the whole country, of the senatorial contest in Washington, it is hoped that the voters will study well this law and make as few mistakes as possible.

"The weak man wants the second choice. It may happen under this reform system that a candidate may be nominated by the second choice provision who a small minority of the voters desire. It is used by designing politicians for this very purpose.

"Two strong men may be candidates. The weaker third man decides that, if he can get the contest thrown to second choice, he may be nominated on account of the mistakes and confusion which will arise by getting second choice votes from both of the strong men. It is an easy matter to persuade some "dummy" to file so as to invoke the second choice provision. This very situation exists in the present Washington senatorial contest.

"Senator POINDEXTER and Congressman HUMPHREY are the strong candidates. A majority of the Republicans want one or the other of these men nominated. Apparently there is but one way that the people can work their will, at least, in the coming senatorial contest to defeat the effects of this freak law, and nominate the candidate they wish. That is, the friends of the strong candidates should scatter their second choice votes among the weak and unknown candidates upon the ticket.

"The majority of the people of the State of Washington of all parties condemn this law. The last Republican State convention declared unanimously in favor of its repeal." (From the American Economist, August 16, 1916.)

---

**The Real Issue Before the Country.**

---

## EXTENSION OF REMARKS

OF

## HON. S. D. FESS,

OF OHIO,

IN THE HOUSE OF REPRESENTATIVES,

*Monday, August 21, 1916.*

Mr. FESS. Mr. Speaker, there are two well-defined policies which have sharply distinguished two schools of political thought in this country. The one school led by Washington and Hamilton at the outset believed in establishing and maintaining an American standard of living in contrast with that of Europe, by aid of a protective law. Later, this American policy was styled by Henry Clay the "American system." While Calhoun favored it in 1816, he bitterly opposed it in 1828, and denominated similar legislation the "bill of abominations." Up to the thirties it was not in sharp dispute. But with the growth of cotton as the controlling staple of all the southern section of the country the question of protection which looked to a diversification of industry here at home was attacked as inimical to the southern cotton grower. He wished to sell his cotton in Europe and in turn buy his goods he did not produce in the European market instead of American, simply because it was a cheaper market. His theory was tariff for revenue, but no other purpose. The only "revenue only" bill enacted before the war was introduced by Walker, of Mississippi, and passed into law in 1846. It well expressed the southern theory.

During the Civil War the northern protection idea was enacted into law by the Morrill Act. Morrill was from Vermont. It was solidly opposed by all the cotton States. It well expressed the protection or northern theory.

In 1887 Roger Q. Mills, of Texas, introduced his famous Mills bill, which failed of passage notwithstanding a solid support from the cotton States. It was in line with the cotton States men's theory.

The protective measure of 1890 was carried through the Congress under the leadership of McKinley, opposed by all the cotton States. It again expressed the northern or industrial idea of the country.

In 1894 the famous Wilson bill became a law, the second "revenue only" law in our history. It was carried through Congress by Wilson, of West Virginia, with a solid support of all the cotton States. It was drafted over the southern plan.

In 1897 this bill was repealed and the famous protective measure, known as the Dingley law, was carried through Congress by Dingley, of Maine, against the solid opposition of the cotton States. It best expressed the northern idea.

In 1913 the Underwood law, the third "revenue only" bill of our history, was carried through the Congress by the solid vote of the cotton States, aided by Democrats of the North. It is a good expression of the southern idea on sugar and many other items.

It will be noted that the three "revenue only" bills which have been placed upon our books were southern measures, introduced by southern men, and carried into legislation by southern votes, while all the protective measures which cover all our periods since the Civil War save the three years 1894 to 1897, and the present period 1913 to 1916, have been introduced by northern men and carried into legislation by their votes against the solid opposition of the South. I mention this fact of history to call attention to its reasons. The South is the source of Democratic legislation on the revenue laws.

Unfortunately the South has persistently confined its productive activities to one staple product, in the main. While in recent years it has entered upon a more diversified production, yet it looks to cotton as the chief item of its production. Unfortunately it persists in sending its raw cotton to Europe to be manufactured into the finished article which it buys back, paying not only European labor for such work, but the transportation across the ocean of the raw cotton and again in return in the shape of a fabric. While it is true under northern stimulus many cotton mills have been erected in the South, yet three-fourths of the product to-day is exported in a raw state. This should not be. Here is the source of the free-trade propaganda. These southern statesmen insistently demand the right to purchase the needed articles of consumption in the European market because of lower prices due to cheaper labor in Europe. This is the Democratic theory as the party now is dominated. On the other hand, the Republican theory is the reverse—establish manufactures here by assisting capital here. Employ labor here, maintain an American standard of living here—diversify our industries by stimulating the producer to make possible the consumer, and vice versa. Produce everything here that is possible to our energy.

The Republican idea is to build up and maintain the home market. That means to bring the agriculturist, the manufacturer, the miner, and the exchange man all into close cooperation. It proceeds upon the theory that what will aid the one will not hurt the other. It means to make possible the producer by making possible the consumer. It invests capital in order to employ labor. In this way what helps the consumer will not hurt the producer.

If a policy looking to the upbuilding of American enterprise should be favored by anyone, it is the man who toils. What he wants is steady employment at American wages, which can not be realized by a revenue-only policy, simply because it is impossible if he is not protected from the low standards of Europe. The only protection is in the law. We have been able to secure this protection when we maintained protective legislation. This American legislation has been uninterrupted since the days of Lincoln save a bare half dozen years, the two periods marked by the Wilson bill and the Underwood bill—both periods notorious for the universal distress among our people. The Republican contention, backed by our own history, is that it is a national duty to insure our standards against the lower standards of Europe.

We have an object lesson of the result of open competition between this country and Europe in our own merchant marine. Upon the sea our law is not supreme as it is within our national boundaries. The practices of Europe on the sea are not within our control. Hence Europe's cheap labor, with no regulatory management such as we exercise on behalf of the American worker, has literally driven from the sea the American merchant marine—simply and only because American enterprise upholding American standards can not compete on the open sea with European enterprise with lower standards. This concrete object lesson is but an illustration of what will occur within our own domain when we remove our protective legislation and make our markets as open to European competition as is now the ocean. This is what Republicans refuse to do. This is what Democrats are trying to do. The President's pet phrase is to compel Americans to whet their wits; his Secretary of Commerce says he wants Americans to reach the efficiency of their European competitors.

If this theory, born in the cotton fields of the South, is to prevail, there is but one of two alternatives—either our business

will be transferred to Europe as in the case of the merchant marine or else our labor conditions will be made to compete with those of Europe.

Free trade presupposes equality of conditions. We can easily enter upon free-trade schedules with Europe if we are ready to lower our standards of expenditures to meet theirs. In that case we will retain our business at frightful cost to the American toiler. If we refuse to meet the competition, then we will lose the trade just as we have upon the sea.

Mr. Speaker, when the Underwood bill was under discussion I addressed the House on the 25th of April on the caption, "The Underwood Act, a bill which ought to be entitled 'An act in the interest of foreign countries as against the United States.'" I stated then that I would be willing to open our gates when Europe lifted her labor to our plane, but I would not vote to lower our labor to her plane. Any man who makes the effort to connect effect back to a cause could not be mistaken as to the inevitable effects of such legislation, even though he had not taken the time to refresh his memory upon the effects of similar legislation 20 years before.

Mr. Speaker, having been a student of the tariff question I had paid some attention to the Wilson bill of 1894. It did not escape my mind that while the southern Democrats exempt from the serious effects of the smashing of the industries of the country so long as they can sell their cotton to Europe were loudly declaiming the virtues of their "revenue-only" law of 1894–1897, the country's business struck its lowest ebb. Capital refused to invest; labor dependent upon capital went upon the streets to feed in soup houses and in the bread line. Imports from Europe increased while exports decreased, balance of trade against us, gold going to Europe to settle the balance, Treasury embarrassed, and an issue of bonds. A period of suffering relieved only by repudiation of the party guilty of such disastrous legislation, and a revival of protective policy at once in the Dingley bill.

With these facts fresh in mind the Democratic leaders were warned of the inevitable effects of their proposed legislation, the Underwood bill, which was still lower in rates of duty than its fatal predecessor of 20 years before.

The law went on the books October 4, 1913, 10 months before the European war opened. What followed? Note the deadly parallel.

Capital in hiding, enterprise paralyzed, business bankrupt, and labor on the streets seeking employment, charitable organizations, as well as municipalities taxed to their limit to provide relief. Soup houses and bread lines resorted to even to a greater extent than the disastrous period of 20 years before, imports from Europe increased, exports decreased the magnificent balance of trade of over one-half billion dollars in our favor, now for the first time in 20 years turned against us, gold leaving the country to settle the balances, a pool proposed to control the export of gold, Treasury embarrassed, Democratic deficiency, stamp tax levied.

Can there be any marks more distinguishing of Democratic legislation than these 1894–1897 and 1913–1916? These are the plague spots of recent years. President Wilson had assured the country he did not intend and would not cripple any legitimate industry. When told his proposed legislation would paralyze industry and displace labor, UNDERWOOD declared from the floor of the House that the Bureau of Foreign and Domestic Commerce would punish any employer who would dare slow down upon business to the hurt of labor. What followed?

Mr. Speaker, one of the best business barometers of the country is the railroads; they are so intimately connected with the business life of the Nation that injury to them will be felt quite generally. This is because of the tremendous importance of this branch of public and private business. Note these figures: Twenty million people, or one-fifth of our population, either directly or indirectly interested in the railroad business; 2,000,000 wage earners directly employed, to whom are paid $1,500,000,000 in wages; 1,000,000 workers in plants supplying the material for the roads, representing 5,000,000 more dependent upon them; 1,500,000 stockholders representing at least 6,000,000 persons. The roads paid in expenses in 1913, $2,165,000,000—$23.50 per capita of our entire population—including men, women, and children.

The effect of the Underwood bill upon this enterprise is shown by comparing the earnings of the fiscal year of 1914, the first year of the law, with those of the year of 1913. The gross earnings decreased $44,000,000, expenses and taxes increased $76,000,000, the net operating income decreased $120,000,000. Taxes increased $12,600,000, a total of $252,600,000 of loss to this branch of industry in one year, which marks the railroads' contribution to Democratic legislation.

DECREASE OF OPERATING REVENUES.

The total operating revenues during the fiscal year 1914 amounted to $2,991,398,735, or an average of $13,266 per mile of line; operating expenses amounted to $2,155,072,345, or an average of $9,557 per mile of line; the residue, net operating revenue, amounted to $836,326,390, or an average of $3,709 per mile of line. Compared with the fiscal year ending June 30, 1913, the fiscal year 1914 shows a decrease in total operating revenues per mile of $471, or 3.4 per cent; an increase in operating expenses per mile of $38, or 0.4 per cent; a resultant decrease in net operating revenue per mile of $510, or 12.1 per cent. Taxes per mile increased $53, or 9.6 per cent, while operating income decreased $577 per mile, or 15.7 per cent.

To meet this critical situation the roads inaugurated a campaign of retrenchment on expenses. Trains which had been a part of regular schedules for years were taken off. Great forces of labor were reduced. In the month of July, 1914, just before the war in Europe opened, the number of cars passing daily Lewistown junction on the main line of the Pennsylvania Road was 680 less than in July of 1913. For the month this would amount to 20,400 cars less than the year preceding on but one line of but one system among a great many railway lines in the country. By May 31, 1914, just two months before the war and seven months after the Underwood bill took effect, the Pennsylvania Co. laid off 24,124 men. In March of 1914, five months after the bill went into effect, 34 roads, representing one-half the railroad mileage of the country, had reduced their force 119,537 men, or over 10 per cent.

The disastrous effect of this law is best shown by comparing the number of idle cars on the tracks in 1914 with 1913. Here is the statement by months that tells its own story:

| | 1914 | 1913 |
|---|---|---|
| Jan. 15 | 214,883 | 28,433 |
| Feb. 1 | 200,678 | 37,260 |
| Feb. 14 | 197,052 | 22,182 |
| Mar. 1 | 153,907 | 31,381 |
| Mar. 14 | 124,865 | 37,775 |
| Apr. 11 | 139,512 | 57,988 |
| Apr. 15 | 212,860 | 57,498 |
| May 1 | 228,874 | 33,760 |
| May 15 | 238,642 | 59,294 |
| May 31 | 241,803 | 50,908 |
| June 15 | 232,334 | 64,927 |
| July 1 | 219,545 | 63,704 |

According to the latest report on April 1, 1915, the total surplus of cars was 313,421, the total shortage 348, and a net surplus of 313,073. On March 1, 1915, the corresponding surplus was 321,787, and on April 1, 1914, it was 139,512.

There is no more conclusive evidence of the prostrating effect of legislation than the above figures. They are in sharp contrast with the bombastic boast of our Democratic stump orators, who first denied the situation and then its causes.

The building program of the roads is another business index which impresses the country in the same way. Here is the statement from the New York Evening Post, a prominent free-trade sheet:

| | Locomotives. | Freight cars. |
|---|---|---|
| 1914 | 926 | 78,660 |
| 1913 | 5,332 | 207,684 |
| 1912 | 4,915 | 152,429 |
| 1911 | 3,530 | 72,161 |
| 1910 | 4,755 | 183,905 |
| 1909 | 2,887 | 93,570 |
| 1908 | 2,342 | 75,555 |
| 1907 | 7,352 | 284,188 |
| 1906 | 6,952 | 240,503 |
| 1905 | 5,491 | 195,155 |
| 1904 | 3,441 | 60,806 |
| 1903 | 5,152 | 153,195 |
| 1902 | 4,070 | 152,599 |

In 1914 orders for 926 locomotives were given, while in 1913 under protective tariff the number was 5,332, nearly six times as many. In 1914 orders for 78,660 freight cars were given, while in 1913, 207,684, or nearly three times the number.

It will be noted that the orders for locomotives the first year of the Underwood bill was the lowest in 20 years.

Closely identified with the railroad industry is that of steel, which is one of the best business barometers of the Nation. This is one story of the iron and steel industry, according to investigations made by the Daily Iron Trade:

Eighty-seven days of the "new freedom" and "free trade":
More than one-third of all the steel mills in the United States closed.
More than 1,000,000 men idle.
More than $2,000,000 in wages per day gone.

More than $125,000,000 invested in closed mills.
An annual pay roll of more than $746,000,000 wiped out.

But this is not all, for connected with the iron, steel, and metal trades are 28,000 separate and distinct establishments employing 2,000,000 men, 1,000,000 of whom are idle. So we have altogether 2,000,000 idle men in the iron and steel business.

Other industries felt the same shock. The Waltham Watch Co. in 1914, before the war opened, placed 3,000 men on short time.

The most serious effect of this sort of legislation is always felt among the toilers. In the railroad business alone 242,500 men were laid off in 1914 up to July, just nine months after the Underwood bill took effect and the month before the war broke out in Europe. It was estimated that the unemployment throughout the United States would reach the enormous figure of 4,000,000, either totally out of work or on short time. Here are the estimates of trade journals:

New York, March, 1914, 350,000 workers out of work; Boston, March, 1914, 20,000 workers out of work; Chicago, March, 1914, 50,000 workers out of work; Los Angeles, January, 1914, 35,000 workers out of work; San Francisco, August, 1914, 25,000 workers out of work; Pittsburgh, August, 1914, 50,000 workers out of work.

On January 10, 1914, three months after the bill went into effect, there were 1,000,000 men in the metal trades idle, with a loss of wages of $50,000,000 per month. There were 270,000 men in the mines, with a loss in wages of twelve million per month. There were at the same time 19,300 men idle in the Baldwin Locomotive Works. On March 1, 1914, five months after the law went into effect, there were 100,000 men idle on the Pacific coast. This stagnation of business extended to every line of industrial activity. The New York Herald, a supporter at the time of the Underwood Act, printed on December 15, 1913, two months after the law took effect, a statement of business conditions, as follows:

The north Atlantic group of States, embracing the great industrial centers found in New York, New Jersey, Pennsylvania, and Delaware was reported to be "at a standstill." The great States of the Middle West—Ohio, Indiana, West Virginia, Illinois, Michigan, Wisconsin, Kentucky, Tennessee, and Missouri—were reported unfavorable.

Col. George Pope, of Connecticut, sent out an inquiry June, 1914, upon the business situation. This inquiry went to the heads of business firms, representing every shade of political opinion. The answers were substantially the same:

Business is unsatisfactory.
Our sales are below normal.
We can not make collections.
The outlook is discouraging.
We must have relief from lawmaking.

On May 29, 1914, a deputation representing manufacturing interests in Ohio and Illinois to the amount of at least three-quarters of a billion dollars, employing an army of workers, called upon the President at the White House to make a frank statement of the business situation of the country as it then existed, and to memorialize him for relief. The spokesman was from my own district, and is a distinguished Democrat. The President's answer to their prayer was the now famous assurance that business was all right, and the situation was merely psychological. Imagine the sensation of these seasoned business leaders, upon whose shoulders were the heavy burdens of keeping their business organizations intact, both for their own benefit and that of their employees, when told they must not be disturbed because the situation was a mere state of mind. They had not been conducting their business on such lines.

On the 25th of June the President, speaking to the country through the Virginia Press Association, which he addressed, assured the public that there were symptoms of a revival of business. The very papers that carried this surprising assurance detailed the Claflin failure of $34,000,000, the largest industrial failure in the history of business. The papers on the same day announced that 3,000,000 wage earners were on the streets of our cities looking for work throughout the country. This was the beginning of a riot of bankruptcies which before the year ended had scheduled more industrial failures than any similar period since the Wilson tariff law of 20 years ago.

At the very moment Democratic leaders were denying the state of affairs Mayor Mitchel, of New York, demanded that the municipal budget be cut from ten to six millions, because the city was in a state of "great business depression."

The spring of 1914 witnessed the greatest test in our history of various charitable associations to care for the unfortunate victims of bad legislation. Many cities issued bonds in order to find employment on public works for the suffering idle, who up to that time had been well employed. Every altruistic association in the great cities, including the churches, was strained to find public lodging houses, to establish municipal soup houses, to lodge and feed the unfortunates. The bread lines had never been so long and persistent as at this time. In his famous address at Indianapolis, January 8, 1915, the President recommended an employment bureau as a part of the Government activities. The country then, as now, believed the best possible employment bureau is an administration that will make possible the employment of labor in the thousands of industries, where self-respecting men can find work and wages and not be compelled to ask for charity. Here is where the country will indict this administration. It is foreign in its policy, its legislation, its effect. It is inimical to labor and inefficient from every point of view.

Its bald extravagance, which is simply appalling, together with its inefficiency of administration, will surely lead to its expulsion from power at the next election. It is amusing to note the various explanations of the administration. At first the leaders closed their eyes and refused to acknowledge the actual results. Democratic orators denied the fact of distress. However, the President admitted the situation, but explained it upon the basis of psychology. After this admission the leaders declared the situation was due to an overabundance of crops, a glutted market. But when that failed of satisfaction to explain the real situation they put the blame upon the Interstate Commerce Commission in its failure to give to the railroads an increase of rates. The demagogue loudly declared that it was the result of a conspiracy of business men to repudiate the administration. However, now and then a Democrat of independent mind was bold enough to admit the facts, as did Congressman METZ, of New York, when he declared on the floor of the House that "hundreds of businesses are running at a dead loss to keep their organizations together."

This was the situation July 31, 1914, just 10 months after the enactment of this southern "revenue-only" law took effect. Then the war in Europe came. Within a month the nations which contained half the world's people were in arms. In due time it encompassed three-fourths of the world's population. The European producer, who under the Underwood bill was rapidly seizing our trade and thus displacing our capital and labor, suddenly ceased to be our competitor and became our greatest consumer. On the 21st of last month I pointed out the figures which tell the story of the war-order prosperity. With all Europe looking to us for supplies our productive capacity has been taxed to its limit. This is expressed in our fabulous exports. The Democratic leaders immediately seized upon the war as an explanation of all the woes brought upon us by their legislation. At the time it was asserted on the floor of the House by Republican leaders that any man with a thimbleful of brains must know that the war can have but one effect upon our trade—a wonderfully stimulating result. In the face of this most apparent fact our Democratic leaders, without the slightest compunction, are daily making the absurd claim that these exports and the present stage of prosperity are due to Democratic legislation. In distress it was war, in prosperity it is Democratic legislation. It would appear that sheer respectability for opinion's sake would be a deterrent to such a claim; but not so in this Congress. This sort of twaddle will not get far. The American electorate are not to be deceived. They have already given evidence of that fact. They spoke in no uncertain tones in November of 1914, when the friends of protection were still in divided camps.

To-day, when these friends are under the same banner, the country can expect but one result—a complete repudiation both of this vicious legislation and the cheap demagogic claim for such legislation. This result will be reached in the repudiation of a policy conceived in the interest of foreign rather than American enterprise. It will be made also a decisive rebuke for the hardihood of the claim that the present blood-soaked European prosperity is due to legislation. If we wish to know what to expect in the future, we need but look to the past. The industrial situation in 1914, before the war opened, is sufficient evidence of what we may expect when the war closes. The people of this country will never risk the readjustment that must come at the close of the war to legislators now in control of the Government. When 30,000,000 soldiers return from the fields and trench to resume their industrial pursuits, they will find many places filled by women doing well the work they formerly did. Then will come that competition for place which will compel a reduction of wages from the already low standard of Europe. This lowering standard will be augmented by the staggering debt under which Europe is now groaning. They will cease to buy from us, and thus avoid an increase of debt, but they will sell to us to reduce it. Europe's goods, made by the cheapest-paid labor, will flood our markets and will expel our goods, made by the highest-paid labor. What we experienced prior to the war will be but an incident to what we must suffer after it ends, unless remedial legislation interposes. In

such a crisis this country will never risk the Democratic remedy in the form of tariff for "revenue only" legislation. It will naturally turn to a protective system, which has now been embraced by every country of Europe. It will naturally appeal to the Republican Party, under the leadership of the country's most distinguished jurist, and will place in his hands and in the keeping of those who believe in an American system the constructive work of readjustment, inevitable on the cessation of hostilities, and upon which the welfare of a hundred million people will be dependent. Whatever other issues may differentiate the dominant parties of the country, the paramount issue in this campaign must be whether the free-trade party of the country, dominated by the cotton States men, which under their latest legislation, styled the Underwood Act, precipitated the country, which up to that time was in the acme of prosperity, into the most disastrous prostration experienced since the last Democratic legislation of 20 years before—whether that party shall be intrusted to power to meet the problems of readjustment. A party that strangled the business of the country in 1913 will not be trusted in 1916 to rebuild from its own ruins.

## Invisible Government and the Consequence of It.

### EXTENSION OF REMARKS

OF

### HON. CHARLES A. LINDBERGH,

OF MINNESOTA,

IN THE HOUSE OF REPRESENTATIVES,

*Wednesday, July 5, 1916.*

Mr. LINDBERGH. Mr. Speaker, I extend these remarks in the hope that they may be of interest to the country, for I know that the facts that I present are important and should be understood by everyone. No matter what individual professions and party claims may be to the contrary, it is apparent to anyone who has been more than four years a Member of Congress, that the will of the people in regard to legislation is seldom consulted. The price of leadership here is exactly the opposite of carrying out, in good faith, the will of those whom we are elected to serve. Wholesale deception of the electorate has been, and is now, the means most successfully used to secure office and remain in public life. Committees that meet in secret and party caucuses held behind closed doors restrict legislation strictly to such measures as are desired by "special privilege," or to manipulate and emasculate legislation made to conform to popular demand in the title clause only. The bosses know how, and they use their knowledge, when all other means fail, to so manipulate a disagreement between this body and the Senate as to completely avoid in conference such a compliance with the popular will as would in any degree benefit those who send us here and pay our public salaries. There is the rub. We are not, many of us, earning the salaries that the Government pays us, but rather receive the benefit of the campaign funds supplied by "big business."

Everyone here knows that these things are true. Go back, Mr. Speaker, in your own recollection, to those stormy days on this floor when your predecessor occupied that chair and you were the leader of the minority. Recall how a few of us on this side of the House lead in a fight, refusing to bow to the party lash. We were joined by you and your followers in a demand which was backed and applauded by a vast majority of the American people, that this should in fact and deed become a representative body with rules that would make it responsive to the will of a majority of its own Members. Does it not often recur to you in your meditations concerning your long service here, how the reforms then demanded were made innocuous and practically defeated by the defection of 23 Members of your own party who were here—and who can doubt it—for the express purpose of serving the selfish interests of the "invisible government"? I can not but believe that your mind has speculated upon what different and more beneficial lines the course of legislation might have followed had those 23 Members been true to the interests of good government at that time. Mr. Speaker, I feel sure that you will recognize that I am not at all exceeding the limitations of the probable when I say that if the outcome of that fight had been different than it was, and if we had secured the rules that would properly govern our deliberations, instead of limiting our action within the control of bosses, there would not have been in the White House to-day the leader of a disorganized and turbulent minority of the electorate, and you Mr. Speaker, instead would be occupying that high position—President of the United States.

And what of the 23 Members who, at that time refused to join us in battle for proper rules, and who deserted your leadership, and by their acts fastened upon this House rules under which it does not govern itself? It all proved to the country, that in its extremity, "special privilege" is no respecter of party lines, and that whatever it demands in this House and elsewhere, the "invisible government" is above party and country. What sinister influence controlled the 23? They were of unquestioned intelligence and knew the effect of their vote. No satisfactory explanation was ever made. If this is a Government by party, and party defection is treason, why have not these members of your party been punished? There is a reason, Mr. Speaker, and during the time that I have spent here, I have made it a part of my business to find out some of these things.

There is a sinister influence at work in our country, which, if it is not checked, intends to completely undermine the institutions of our Government and change it from a representative form of government to a monarchial and plutocratic system where it will be the privilege of a few to rule in splendor, and the fate of the many to spend their lives in unrequited toil and that hopeless condition of servitude which they came here to escape from. Already word has gone forth to lands across the sea, to those aspiring souls who search for liberty of person and freedom of conscience, that America no longer is in a position to offer to the world an asylum and refuge for the oppressed. That class of emigrants which was once our glory and our boast, has ceased to look for freedom here. It is a different class that now makes up the bulk of emigrants to our shores. It is a situation that deserves the careful consideration of all thoughtful persons. Amidst all this talk of "preparedness" we need to stop to inquire if, while we have been preparing for the foe who may possibly lurk without, we have entirely neglected to prepare for an infinitely more dangerous foe which, with the certainty of fate, exists within.

It is not my purpose to make a partisan political statement. I could not if I would, for I am not a partisan. I believe in looking the cold facts in the face and stating them as they are. After I have gone out from this body and return to private life it will be my proudest recollection that I have never allowed the dictates of party to influence my course. Nor will it ever be charged against me that "invisible government" in any of its forms has ever controlled my voice or vote. During my service as a Member of this House I have been a close observer of events during three different presidential administrations. I have seen the progressive tendencies of legislation under a Roosevelt, inspired by the logic, eloquence, and candor of LA FOLLETTE, strangled by the stand-pat proclivities of a Taft, and the power of a great party, which had controlled the country for 16 years, dwindle until it was able to carry only the electoral votes of two of the smallest States in the Union. I have seen another great party ride into power on the strength of roseate promises to the people, and I expect to see it go out of power, because it has been abundantly proved that those promises were merely statements to catch votes. The plain truth is that neither of these great parties, as at present led and manipulated by an invisible government, is fit to manage the destinies of a great people, and this fact is well understood by all who have had the time and have used it to investigate.

The most that anyone can at the present time, who has the good of his country at heart, dare to hope is that a new administration, not unlikely to be substituted for the one that now exists, will be to some extent better than the existing one. The attitude of many people at the present time is simply this, that a new administration without pledge of past performance or promise of future fulfillment is to be preferred to one that has been trusted on promises which it has broken in nearly every particular. It is in plain terms a contest between two men, one of whom has not been tried in the balancing of national and international problems and the other of whom has been tried and found wanting in some of the most important essentials. So far as the parties are concerned, the people may truly say, "For here we have no continuing city, but we seek one to come."

During the continuance of my service as a Member of this House and in the study of economic conditions which my conception of my duty to my constituents impelled me to make I have observed many abuses of government which I believed might be corrected if known to the public, and the correction of which could not fail to bring about infinitely better conditions of living among the plain people, which, after all is said, constitutes the very foundation of government itself. Imagine if you can—and you can, because sooner or later you will be forced to—the political situation in a representative government based upon the principle of government by, for, and of the people, wherein the representatives persistently refuse to consider ways and means of bettering the conditions surrounding those

who by right should be their masters, the great common people of this country. That is the political situation that I have encountered during the entire 10 years of my service as a Member of this body. From time to time, as I have observed abuses which certainly ought to be corrected if representative government is not to perish from the earth, I have introduced resolutions calling for investigation and better understanding of those abuses. I know that if such investigations were made in good faith and the facts established were given to the public there would not fail to be a correction of those evils. Before a wrong can be made right it must be known by what way the wrong exists. There exists among the Members of the House smaller bodies within the main body, and one of these is the Committee on Rules, to which is referred all resolutions calling for investigation of any subject that may be desired by a Member, and to it is committed by the rules of the House almost unlimited power over such resolutions. If the committee does not see fit to report out the resolution, it dies without ever being called to the particular attention of the House in any official way.

Now, some important resolutions that I have introduced have never been reported from the committee, and I can only conclude that a majority of the Committee on Rules either do not agree with me that the evils that I have pointed out are evils and a menace to the continuance of popular representative government, or else that a majority of the committee favor the continuance of the evils regardless of their effect upon the welfare of the people. It makes little difference to me personally which of these two views of the nonaction of the committee is correct, and I am content to abide by the decision of history to determine, but in the course of my present remarks I shall take the opportunity to refer to some of the resolutions.

Quite early in my service here I observed that there was some power outside the Government itself which was insidiously, but none the less effectively, dictating the course of legislation in reference to finance, currency, and the creation and control of credit throughout the country; that it was in a position to dictate, and did dictate to an extent almost unlimited, to whom credit should be extended and from whom it should be withheld; and that it largely controlled the political action and the influence of most of the banking and other corporations of the entire country. Knowing that the exercise of such power was inimical to the welfare of the Republic, I introduced a resolution in this House setting forth the facts, naming this insidious and well-nigh invincible power, the Money Trust, source of all the trusts, and calling for a committee to investigate its activities. The press, which is largely under the domination of "big business," ridiculed the resolution and especially ridiculed the idea that there could be a Money Trust; but they made the mistake, from their standpoint, of ridiculing it too openly. This gave it wide publicity, and, to their great amazement and chagrin, the people, who knew more about these things than the trusts supposed, took it seriously. So great became the demand for the proposed investigation that the House for once, in spite of the reluctance of the bosses here, was compelled to act. The Committee on Rules reported out my resolution under a different name, and, in order to prevent my being a member of the committee, as well as making it as harmless as possible to the Money Trust, provided that the investigation be made by the Committee on Banking and Currency, which was composed almost entirely of bankers and the former attorneys of banks.

The committee, nevertheless, reported that there was a Money Trust and that its activities were as I had stated them to be, and that its existence and the power it wielded were a menace to the institutions of this country, but for some reason it took no action to deprive it of that power. Woodrow Wilson, however, took notice of its existence during his campaign for the Presidency, and promised to exercise his influence, if elected, to curb its power and influence. I have no hesitation in saying that this promise, like many others, has not been kept, but, on the contrary, the principal result of the financial legislation during this administration has been to legalize and more firmly intrench the Money Trust in its control of business, credit, and politics of this vast country than ever before, and in order to screen that fact the Money Trust has bought the services of many prominent writers for the purpose of running articles in the press praising the system, which in less than six years the people will rise in rebellion against because of its intolerable and unjust burden.

One result of the Money Trust resolution, however, which I will notice here has been that never since has the controlled press seen fit to ridicule any resolution of mine. One lesson was enough. They have not dared to. In fact, they never state the facts as I have presented them, but prefer to misrepresent.

Profiting from my observation of the investigation of the Money Trust by a committee of this House, nearly all the members of which were interested parties and therefore desirous of limiting its activities as much as possible, I introduced a resolution declaring it should be the policy of the House membership that no banker or one who was financially interested in a bank should be a member of the Banking and Currency Committee. Also a resolution calling on members to declare the extent of their affiliations with banks, if any. Neither of these resolutions ever came out of the Committee on Rules, so we must take it for granted that a majority of the members of that committee believe that it is right for bankers to legislate for their personal benefit, as all financial legislation shows that they have.

I also introduced a resolution for the appointment of a committee of the House on industrial relations. So far as I know, this was the first suggestion for the appointment of such a committee; and while my resolution was permitted to sleep in the Committee on Rules, it nevertheless suggested the subsequent passing of a law for the appointment by the President of a commission which made an exhaustive investigation and report, finding that exactly the conditions outlined by me in the preamble of my resolution and a speech upon it actually existed. Its report is destined to be long considered as classic in its delineation of the deplorable conditions which surround the industrial masses of our time. Some one in the management for "special privilege" blundered. For once, at least, a few persons were appointed on a commission who had not been educated to believe as "special privilege" demands for all such appointments. There was Frank P. Walsh, the chairman, whom the "special interest" press tried to ridicule after they saw his honest and fearless work. This man, with a majority of the commission of which he was chairman, have done a service to the world and no doubt have brought nearer the day when the people in their right will rise to claim their own. Every home should have a copy of the report of the Commission on Industrial Relations.

January, 1915, I introduced a resolution calling attention to the manner in which the Federal reserve law had legalized the Money Trust and placed it in absolute control of the finances of this country; how it could, and would, under the law make use of Government credit to finance a world-wide monopoly, and use the funds belonging to the people deposited in banks to loan to foreign countries at war, extend credit to expand foreign trade at the expense of our own people, control prices by the manipulation of its control of credit, and extend its influence to control the politics of this country. My Democratic friends, you are entering into a political campaign with the vain hope that special privilege, having obtained enormous benefits at your hands, is going to be grateful for the past favors that you have showered upon it and assist you in retaining control of the Government. They will furnish you campaign funds, as they do to both the dominant parties, but that is as far as they will go toward helping. You are due to a rude awakening. You are to learn that gratitude forms no portion of the make-up of this monster. You are to learn that you, having done all you could for it, are no longer necessary to its business, except that now that you have passed the laws that it wanted, you are estopped from complaining through your portion of the press and on the stump or from entering any protest whatever when the time comes that your eyes are open to the oppression the common people are surely destined to endure because of your falsely, so-called beneficial, legislation.

If in the future some party shall be needed to undo the things that you have done, you are not going to be in a position to enter a claim to be that party. In the hands of your opponents will lie the power that you have placed there, and all its evil effects will be laid to you. You have missed an opportunity that comes but once in a lifetime; one that will never come to you as a party again. The time will come when no Democrat who boasts of the achievements in legislation of this present Wilson administration will be considered worthy to hold any public office. You have gone "crossroads" with some of the most vital principles laid down by the great Thomas Jefferson. You may boast of him as a great Democrat, but not any one of you should boast who has been active in fastening some of the hardships of this administration upon the people.

During all this time I have been conscious that the Money Trust and its correlated trusts were not working alone; that there was ever present in our politics an element or elements that were wholly at its disposal and in every election formed a strong nucleus around which they could gather the forces subject to mercenary manipulation and thus always control in the matters of most vital concern to the people. I knew it must be so. The great mass of the voters of this country, while not as well informed upon these subjects as they should be, are

nevertheless too intelligent for a majority of them to vote in election after election directly contrary to their own interests unless they are made to believe that there is some issue whose paramount importance transcends their own material welfare and the greatest good to the greatest number.

Such political elements exist in all great cities of every section where large numbers of voters are absolutely controlled and delivered in every election by interests supported by vice of every kind, and especially the liquor traffic of those localities. And, while this element is most powerful in cities, it is not confined to them alone, but ramifies throughout the States in which the great cities are. In nearly every hamlet are to be found voters whose suffrages are at the disposal of these powers that prey without any other consideration whatever.

Such a political element exists in many localities where any large number of voters, or their parents, are of some foreign nationality and are misled on that account to give their support to unworthy candidates for no other reason than that they are of alien origin.

Such a deleterious element also exists in any community where any considerable number of voters stake everything upon a single issue without taking into consideration the general balance of things. It also exists where votes are cast in blocks according to the interests of high dignitaries, whether in church, lodge, or other organization, and even in the political parties. The fathers of our country wisely determined that there should be here absolute dissociation of church and state, and "church" is not a narrow or limited term, as used in the Constitution, but includes every organization separated from the functions of government itself in which all people by right should take part. The fathers of our country contemplated that every person was to be left free to worship God according to the dictates of his own conscience, and that this might be assured it was intended that no church should ever control the state.

Whether or not the high dignitaries in the Roman Catholic Church has been such an element generally in our politics is not the prime purpose of my statement to discuss. I am dealing with the effect of human conduct upon our economic operations, with the purpose of showing that it is wise for people to understand their material welfare if they would secure the full advantages of intelligence in dealing with material, moral, and religious matters. They can not stake everything upon a single issue and make this world go right, because there are too many issues in which high-minded people take interest, and when everything is centered by those respectively taking interest in their particular issue, and all else thrown to the winds, it leaves the selfish interests where they can draw the balance in their favor, and that is exactly what has been done. Because of that the toilers who do the work of the world secure only about one-fifth of what their work would return to them if we had a general consistency in government and business. It is to secure this consistency that I make this statement, and I have worked for it all the time without prejudice of party, nationality, church, or anything else, because I realize full well that prejudice is the enemy of good government and defeats the exercise of the rights of the people.

The Free Press Defense League, and several other associations, have been organized as a protest against some of the activities in Government affairs of the high dignitaries of the Roman Catholic Church. These associations have a very large following. The membership of the church itself also is large. The two followings can not help having appreciable effect upon political conditions, and consequently upon economic results in business. If we are to get anything like fair economic adjustment to be worked out in the interest of all the people, there must be an understanding on the part of people generally of the facts and the claims regarding the controversy between the Roman Catholic Church and these organizations. The charges that have been made, and that are being made, against the political activities of this great organization, and the following of those making the charges, are such that they can not be ignored if we are to remain a people free and independent of outside influences. For that reason I served notice upon the associations making charges against the high dignitaries in the Roman Catholic Church of their selfish interference with government, that I would introduce a resolution for an investigation of the charges, so that the issue might be determined. The resolution that I shall introduce is in words as follows:

Whereas there are many economic problems that require the action of Congress and the concerted action of all the patriotic people with Congress for their solution favorable to the public which, to the great loss of the people, have remained in a state of uncertainty because of disputes among the people upon other matters; and

Whereas one of the most important of the collateral matters that diverts the people from sufficiently considering the economic needs is the claim of the Free Press League, a Kansas organization, with affiliations in all parts of the country, involving a large following; and

Whereas the Free Press Defense League and similar organizations and their following represent that:

First. The Pope of Rome is a foreign sovereign, claiming allegiance in temporal as well as in spiritual matters throughout the world.

Second. The papal system of which the pope is the head is opposed to and seeks to destroy our free institutions, to wit:

(a) Our public schools.
(b) The free press.
(c) The right of free speech and public assembly.
(d) The right of freedom of thought in matters of conscience.
(e) The principle of separation of church and state.

Third. The papal system of America, which consists of the Roman Catholics, cardinals, bishops, priests, Jesuits, Knights of Columbus, Federation of Catholic Societies, and other Catholic societies, together with the Roman Catholic press, seek to substitute for our democratic system of government the monarchical or papal system.

Fourth. The Roman Catholic laity in the United States of America are taught, influenced, and commanded by those in authority to yield implicit obedience to the teaching of the Popes of Rome and to blindly obey their orders and decrees, even though said orders and decrees conflict with the Constitution of the United States of America.

Fifth. The Roman Catholic organization of America is perniciously active in politics, and, although having but few votes as compared with the whole body of electors, it manages, by threats, intimidations, blackmail, and by coercion of the press, to secure an undue proportion of the elective, and especially the appointive offices throughout the country, and these offices, when filled with Roman Catholics, are used to further the plan of making America dominantly Catholic.

Sixth. In carrying out the conspiracy to bring the United States of America under the complete domination of the Pope of Rome the Roman Catholic hierarchy, aided by the Roman Catholic politicians and the Roman Catholic press, has inspired a portion of the Roman Catholic laity to resort to threats, to intimidation, to boycott, to assault, and to riot.

Seventh. The Roman Catholic hierarchy is now and has been for more than a year last past actively engaged within the territory of the United States of America in fomenting and inciting revolution in the Republic of Mexico and attempting to bring about a state of war between the Republic of Mexico and the United States; and

Whereas the said claims on the part of the so-called Free Press Defense League and similar organizations have been and are now being broadcasted over the country and both sides to the controversy are causing to be sent to Members of Congress great numbers of allegations and assertions and counterallegations and denials upon the said various claims and others, which controversy injures the interests of both Catholics and Protestants; and

Whereas the said controversy foments troubles and interferes with the unprejudiced action of millions of electors in the United States, and thereby interferes with the natural, consistent, and impartial administration of the Government in the interests of all of the people; and

Whereas a true and impartial investigation and report thereon by a properly constituted public committee would take these controversies out of politics and stop the attempts to improperly influence the acts of public officials: Now, therefore be it

*Resolved, etc.*, That a joint committee of the Senate and House be appointed to make inquiry into the representations hereinbefore referred to.

SEC. 2. That the said committee shall have power to employ clerks and stenographers and to compel the attendance of persons and the production of papers, books, documents, and records, and to examine witnesses under oath; that said committee shall have power to sit anywhere that it may deem necessary to secure all the facts to complete the inquiry and shall report the testimony to Congress.

The introductory and the closing of the resolution is drafted by myself, but the charges are taken verbatim from those made by the Free Press Defense League. The charges made by the league should not be ignored by the church organization itself. Either the high dignitaries in the Roman Catholic Church are using the church and operating it as a political machine, as well as a church, or they are not. I have seen the effect upon government of the charges and countercharges, denials, and so forth, for some time. I am sure that it is for the interest of everybody, including Catholics, who believe in keeping church and state separate to have the facts, whatever they are, cleared up so the people may not be misled.

We have been accustomed here year after year, session after session, to hear charges, backed up by proof and circumstances that should not be ignored, that the Money Trust of this country was gathering to itself the influence and power which it is exerting to the detriment of the people to whom the Government rightfully belongs. Yet we have grown fully accustomed to having those charges, those proofs, and those circumstances ignored, and the Money Trust has gone on gathering to itself more power and more influence as the years have gone by to the extent that now it is well nigh supreme. Under the false exaggerated plea of "preparedness," of the kind it wanted, it could wrest from the people through their chosen representatives almost anything it may choose to ask. It dictates the choice of Presidents, Senators, Representatives, governors, and judges, and controls their action too often when chosen. It comes to the President and Congress and, under a threat of panic on the one hand and the promise of campaign funds on the other, secures such legislation as it desires. It demands and secures from the sworn

representatives of a great sovereign people absolute monopolistic control of Government credit, and uses its control for the maintenance of wars abroad and in a preparation for war which it intends we shall wage for its exclusive benefit at home and abroad. Its business politically is to oppress the people of this and all lands and lay upon them burdens too grievous to be born, and it coins the sweat and tears of hundreds of millions of people into riotous living for the few. The Money Trust does all that.

Read history and observe the signs of the times. You will find that everywhere, in all lands and at all times, the high dignitaries in the Church of Rome have been the ally of oppression, whether that oppression has been exercised under the exploited doctrine of the divine rights of kings, or whether it is exercised under the groveling greed of plutocracy. Claiming to hold in its hands the keys of the kingdom of heaven, it is, in all climes and in all lands, the active assistant of those who bring hell upon earth. That is not a fault of the church as such, but a fault of men in whom it trusts. Men are men, and wherever they are placed they are subject to the evil temptations, and it would be a miracle if there were any great body of men with such power as is exercised by those described if they did not exercise that power in many cases selfishly, and that is the reason why we in America demand that this shall be a government by and for the people. The same reason applies to political parties when they are dominated by leaders instead of by the rank and file of the membership. Nothing has ever been permanently successful that has depended upon individual boss direction instead of popular control. If these things are not true; if this organization is one that is exclusively the medium for promulgation of divine truth and righteousness, no opportunity would be avoided to let the people know the minutest details of its activities. Men love darkness rather than light because their deeds are evil. Righteousness loves light. The rank and file are righteous upon these matters, and of whatever party, denomination, or creed, will ask for light. The Free Press Defense League, and others making like claims, stand charged with statements which if untrue and so established would take from such association the following they have.

Is there any force or organization of persons in this land of free speech and free men interested and busy in preventing the free expression of any thing that should be spoken, written, or printed by the people? Bills have been introduced in this House designed to prevent the distribution through the mails of newspapers containing any information relative to the political activities of high church dignitaries. It is claimed that mobs have been organized in many communities, and in some have proceeded to the limit of murder and all forms of violence in an attempt to suppress free speech, and justice itself has been perverted to the same ends. Does any one claim that these acts are being done to prevent an abuse of the right of free speech or to silence slander and falsehood? Then, in fairness to all honest people, bring the proof, so that none may be unjustly charged.

Let there be a fair and impartial determination of all these things, so that all may know and understand the right. If these people and these papers are disseminating lies and the investigation asked for in the resolution that I shall introduce should show that to be a fact, then the bills pending here in Congress for refusing such publications the use of the mails will have just cause for enactment into law. The people are spending millions of postage stamps upon this subject which can by an investigation be saved to them.

If, on the other hand, the contention of the Free Press Defense League is true, that the Pope of Rome is a foreign sovereign, claiming allegiance in temporal as well as spiritual matters throughout the world, and that the Roman Catholic hierarchy has been engaged within the territory of the United States in fomenting and inciting revolution in the Republic of Mexico and attempting to bring about a state of war between the Republic of Mexico and the United States, then there is just cause for, and it is high time that there should be, legislation of a different sort.

If it is true, as definitely and particularly charged by the Free Press Defense League, that the Roman Catholic Church and its subsidiary societies, secret and other, are engaged in the political conspiracies charged, a proper respect for our free institutions demands of us a complete and fearless exposure of the facts, to the end that our institutions may be preserved and transmitted to our children.

Mr. Speaker, as things are now staged, the man who would be true to himself, to his fellow man, to his country, and his God faces a hard problem. He has not only himself to control, which is difficult at the outset, but he has strange men and women, a strange world, and strange gods to consider. To the average individual it seems too big an undertaking. Therefore each of us take up our separate schemes and know but little about the others. Instead of having a common consistency about the purposes of life and working to it, there is general inconsistency. We are working against each other—even seeking to take advantage one of the other.

If we were to live for three or four years, and then it was all over, possibly we could afford to go ahead with things as they are now staged. Perhaps, too, if we all died before we get old and left no children to take up life's problems where we quit them, we could run along without much further responsibility than we are taking, because the trusts, in order to keep us, as the farmer keeps his team, would be willing to give us enough of what our labor produced to feed and shelter us as long as we can produce for the trusts more than they give us. It would be poor business for them, however, to support us when we get old, for then we can no longer serve them. Therefore most old people live poorly.

WE MUST NOT DECEIVE OURSELVES.

We are here to live our lives out, and to do so in the right way. We must respect ourselves if we wish to be respected, but thus far the preparedness propaganda has not been presented in a way to stand the test of time nor to build the Nation to a real power. "Big business" has marshaled its subsidized press to build up a fear in the people for some unknown enemy—possible to be; probable if "big business" shall have its way. But to true Americans patriotism does not consist merely in defending the flag and the land of America against foreign foe. The value of Americanism is in the institutions of the people of America giving to Americans true government, promoting intelligent business and industrial development of the natural resources to suit the people's needs, thus forming the basis for prosperity and happiness, as well as a ripe patriotism instead of patriotism based upon fetish notions. A mere navy and army, however large, will not strengthen us, except for temporary military emergency. Unless we also prepare economically, a large navy and army will ruin us. The present preparedness propaganda is for a navy and army only. Every suggestion for economic preparedness has been slapped by the subsidized press. A large Army and a large Navy, with the economic conditions remaining as they are, would ruin us.

A PROBLEM PRESENTED FOR YOU TO THINK ON.

Is business done simply to afford the speculators a chance to exploit the people or should it be to supply us with conveniences? Surely it should be for the latter. Then, how stupid it is to waste the natural resources by exporting the raw material or the finished goods merely for speculation, and how senseless it is for our people to boast of exports exceeding imports. How ridiculous it is for any nation to attempt to force its material substances upon the people of other nations. Commerce should be, and would be if it were entered into to supply conveniences, as natural as the flow of the waters. There would be no friction. On the contrary, it would invite perfect harmony.

Last year's exports and imports is an example of the absolute absurdity of a commerce carried on for speculation, and it seems monstrous that our people should tolerate such injustice to themselves. We exported $4,334,000,000 in value of our products and got back $2,198,000,000 only of foreign products, and of this return $48,000,000 was diamonds and precious stones, exclusively for the rich. Let us understand the effect of such absurdity.

America is the real and only substantial market for American products. American consumers use every year many times more of its products than are exported. The exports this last year were for speculation principally and was made the excuse for the raising of prices to American consumers; so, all told, we paid in excess of the regular price more than the $4,334,000,000, the entire value of the exports.

American consumers of petroleum, for example, just before Europe took our export, paid 75 cents a barrel for crude Kansas-Oklahoma grade and $1.54 per barrel for Pennsylvania grade. The home consumption for 1915 was 211,933,000 barrels and export was 55,466,086 barrels. The price was raised from 75 cents a barrel to $1.55 on the western product and from $1.54 a barrel to $2.60 on the eastern. Assuming that the quantity used of the western and eastern product was equal, the American consumers had to pay in increased price on the one $84,000,000, and on the other $111,000,000, a total of $195,000,000 for a single year, and all merely for the benefit of speculators. That was the American consumers' extra burden because of the export of 55,466,086 barrels of American petroleum. The American supply is lessened and the American consumers will forever be forced to pay more for petroleum than if no petroleum had been exported. In the end it will amount to billions of dollars on petroleum alone.

214 were opposed to the system. Of the protestants, 113, or 52.8 per cent, were nonunion, and 101, or 47.2 per cent, were union.

All these men were asked to answer the following question: "Do you think the agitation is brought about through union labor or similar sources?"

They replied as follows: Noes, 137; yeas, 28; not answering, 70.

SYSTEM IN POST OFFICE DEPARTMENT.

Your committee found that the "stop-watch" system was being introduced in the Post Office Department in a most pernicious form. The pending legislation if enacted would, of course, end the evil at once.

In this connection your committee desires to call the attention of the House to the clear and convincing statement submitted to your committee by Mr. Edward Cantwell, secretary of the National Association of Letter Carriers, and which is as follows:

"Mr. CANTWELL. Mr. Chairman and members of the Committee on Labor, I come before you to-day to enter my protest against the stop-watch or time-measuring device system in vogue in the Postal Service and to urge the committee to carefully weigh all the evidence that will be submitted to them in the hope that they will make a favorable report to the House of Representatives on a bill that will stop this practice in the future.

"For the information of the committee, I submit herewith a memorandum of the speed standard and the result of a test made in the Cincinnati post office.

"On October 14, 1915, a test was made of 210 carriers in the Cincinnati post office, divided as follows:

"Forty-six six-trip carriers; 10 five-trip carriers; 30 four-trip carriers; 31 three-trip carriers; and 93 two-trip carriers. Out of a total of 210 men, 130 fell below the standard in this test. Of the six-trip carriers, 23 measured up to the standard and 22 fell below it. Five trippers, 2 carriers made the standard and 8 fell below; of the four trippers, 4 men made the standard and 26 fell below; of the three trippers, 8 measured up to the standard and 23 fell below; of the two trippers, 43 made the standard and 50 fell below; of the total number, 80 carriers measured up to the speed test of the department and 130 fell below.

"Of the test taken on Friday, October 15, 1915, out of a total of 206 men but 72 measured up to the standard and 134 fell below the standard.

"In the speed tests an allowance of one minute is made for answering communications. It hardly seems reasonable to suppose that any man could answer a communication from his superior officer in one minute. In answering an official communication it must be drawn up intelligently and contain the information sought by the official and couched in respectful language. I will leave for the committee to judge whether there is one among us who could pick up an official document requesting a reply, read it, and make an intelligent answer in writing in the space of one minute. For example, the superintendent of a post office hands an official communication to a letter carrier reading as follows:

"'Complaint is made by Mr. EDWARD KEATING, formerly of Congress Hall, that his mail is being left at that address, although he filed an order to forward his mail to the Continental Hotel.'

"On receipt of this communication the carrier must first ascertain if the accusation be true. He knows that for the past several days he has forwarded Mr. KEATING'S mail to the Continental Hotel, and he further knows that the order to forward is only three days old, so he calls at Congress Hall and inquires if he, by any chance, left a letter for Mr. KEATING at any time, and is told by the clerk that a letter was left for Mr. KEATING on the morning of the day that he left the hotel, and that he had sent one of the employees to the Continental Hotel the next day with the letter. Mr. KEATING had not filed a removal notice until the day following his removal from Congress Hall, hence at the time the letter was delivered at Congress Hall no order was on file to forward his mail. This must be made clear to the superintendent, so the carrier writes him as follows:

"MARCH 30, 1916.

"W. H. HAYCOCK,
"*Superintendent of Mails, Washington, D. C.*

"SIR: Replying to the attached communication, I beg to advise that I have forwarded all mail addressed to Mr. KEATING to the Continental Hotel as per order since the order was received by me, but prior to the filing of the order and after he left Congress Hall a letter was delivered there for Mr. KEATING, which was later taken by an employee and delivered to the Continental Hotel.

"Respectfully submitted.

"JAMES P. MAHER, *Carrier 96.*

"This answer is intended to make it clear to Mr. KEATING that his mail is receiving the proper attention, and explains the reason the delivery of the letter to him by the employee of the Congress Hall Hotel was due to his failure to file a removal notice until they day after he had left. Now, anything less than this would not answer the purpose, and no man living could write the above in one minute. What I mean by that is that he could not take that official communication, read it, and find out what the assistant superintendent wanted to know, and then compose a letter and answer it in one minute's time.

"One-half minute is allowed for change of address, which is not sufficient for the purpose, unless a letter carrier can make all the changes of address from memory and not be compelled to consult his removal book. Should a letter carrier make a change of address from memory and forward a letter to the wrong address the letter is delayed, and the carrier is disciplined by having demerits charged against his record. To mark up and forward seven pieces of mail per minute depends entirely on the character of the marking up. If it is simply to mark the number of the district on which the letter is to be delivered, seven pieces of mail could be readily marked up in one minute. If, however, one or more pieces of mail requires looking up in an order or removal book, it would be a physical impossibility to mark up seven pieces of mail in one minute.

"The pace set in these tests is beyond the physical and mental endurance of an ordinary man, and if lived up to would result in the breaking down under the strain of any human being. The tests could possibly be made by a man of extraordinary ability and training for a period of one hour when a man is at his best. No ordinary man could stand the pace and maintain all the requirements set out in the rules and regulations covering these speed tests.

"The system has a tendency to make mere machines of men and to destroy all initiative and to have them lose personal interest in their work.

"This system destroys harmony of effort and cooperation between the officials and the working forces and with resultant harm to the public service. It seems to me to be poor policy on the part of the Government to institute a system among its employees that takes away from them the incentive to take pride in their work. It is carrying the policy of economy to extremes and has the tendency to foster discontent and unrest among the men who do the real hard work.

OBNOXIOUS SECRET TESTS.

"I will now cite a condition that prevails in the Postal Service that to my mind is without justification or excuse. I have presented to the committee copies of the department's speed standard, which in themselves are worthy of the serious thought and consideration of the members of the committee. The strain incident to keeping up with this so-called standard of efficiency is heartbreaking in the extreme, but the condition of the employees is aggravated by what is termed 'the secret tests.' Each carrier is subjected to this so-called speed test on one day of each month, the day and date being unknown to the carrier, and the testing being secretly made. The purpose of these secret speed tests is to keep all the men working at top speed mentally and physically every minute each day, as the carriers do not know what day they are being tested.

"On the day a carrier is subjected to the test, I have been informed, inspectors secretly count the pieces of mail of all classes that the employee handles that day, before the carrier receives his mail for routing. Several weeks after these secret tests are made the employee receives a letter to the effect that he is not 'working up to a standard satisfactory to the office.' A concise statement is embodied in the letter, showing the number of pieces of mail the carrier handled and how far he fell below the required standard. The communication contains a statement to the effect that 'it is hoped you will take such steps in the future to bring your work up to a standard as not to make it necessary to write you again concerning it.'

"I will leave to the judgment of the committee the class of man and kind of mind that could conceive putting these secret tests into force and effect, in order to keep men working under a constant mental and physical strain. I also leave to your consideration the sort of mental and physical condition a man of nervous temperament will be in at the end of his day's work. When employees who are honest and upright and conscientious are subjected to this constant suspicion and continual driving, they can not do good work. They are required to keep up the tests regardless of whether the conditions are favorable or unfavorable. Inclement weather, snow, rain, or icy sidewalks, poor or irregular car service or freezing cold cuts no figure when the secret tests are being made. Such a system can only result in breaking down the health of the employees who are required to keep up with it or will result in making mental wrecks of employees of a high-strung and nervous disposition.

"I have placed before you a statement of the facts gathered together from the complaints of the letter carriers in all parts of the country, and I appeal to you in their behalf to make a favorable report on the Van Dyke or Tavenner bills, with a recommendation to the Congress that it be enacted into law."

CONCLUSION.

In conclusion your committee would suggest:

The system so persistently urged by Gen. Crozier involves a fundamental, not to say revolutionary, change (a) in determining what is a reasonable day's work for an employee in the national arsenals and workshops and (b) in the method of compensating the workers, to wit, the substitution of the "bonus" or "premium" system for the age-old "day's-pay" system.

The workers affected seem to be almost unanimous in their opposition to the change. They insist it will be oppressive to them and will be without benefit to the Government.

So intense is this feeling that an attempt to install the system in all the Government workshops would, in the judgment of your committee, lead to very serious consequences.

In view of these well-established facts, it seems to your committee it would be the height of folly to permit Gen. Crozier to persist in his plan. Apparently, the only way to restrain him is to enact the bill under discussion, and your committee trusts the House will take prompt and favorable action.

EVERY COMMITTEE OF CONGRESS THAT EVER INVESTIGATED TAYLOR SYSTEM REPORTED ADVERSELY.

The Taylor system was also investigated by a special committee of the House during the Sixty-second Congress. Two of the three members of that committee are now members of President Wilson's Cabinet—William B. Wilson, the Secretary of Labor, and William C. Redfield, Secretary of Commerce. I will now quote from the report of that committee:

Government in a mill should be like government in a State.

It appears to your committee that no one can seriously object, and as a matter of fact no one has objected, to any system which so standardizes and systematizes the work to be performed that a greater amount of production is secured with the same expenditure of labor. Employer and employee alike and the public generally are interested in securing the largest amount and the best quality of production that can possibly be secured by the amount of labor expended. All men have a mutual interest in the accomplishment of that end. It is only when it comes to a division of that which has been produced that their interests diverge. It therefore follows that any system of management which has a tendency to destroy the power of employees, individually or collectively, to secure the equivalent of the production which properly belongs to them must be looked upon as being dangerous to the welfare of the community at large.

Efficiency must not be had at the cost of the men, women, and children who labor and who should be the primary beneficiaries from efficiency. We should study how to produce the best results in output while also producing conditions to make the most efficient men and women to produce that output, and this must be done by conserving in every way not only their health and physical and nervous vigor, but by creating such conditions as will permit them to work out their own happiness and contentment, secure wages which will enable them to live in such a manner as to maintain their own self-respect and sufficient leisure to enjoy the refreshing influence of mental and moral recreation.

The Taylor system of shop management may be divided into three general heads: Standardization, systematization, and stimulation. Efficiency may be gained in whole or in part by any of these ways, by any two of them, or by all three combined. Any or all of these devices may

be carried to an extreme. In the first two devices, namely, standardization and systematization, the expense which would be created by carrying them to an extreme would act as a check against the continuance of such a condition, but that check would not exist in that portion of stimulation which is applied to the workman.

The expenses of standardization and systematization are borne by the management, while the expense of stimulation in the form of increased energy is borne by the workmen. Any system of shop management which creates a burden charge through standardization or systematization which is too heavy for the shop to bear or which imposes burden charges through stimulation which are too heavy for the workman to bear should be discontinued.

That there is some loafing or soldiering amongst workmen has been shown by the testimony before your committee, but it is not general, nor does it occur in numerous instances compared with the total number employed.

Ordinary intelligent management under any system could eliminate it entirely or at least reduce it to the point where it would not be a serious hindrance to production. Because there are some loafers is no reason why the remainder of the workmen should either be compelled or induced to work up to the very edge of the breaking strain. There is need for production at the lowest cost, but no economic necessity can justify requiring workmen to speed up to the highest point which they can continue from day to day and from year to year, even without injury to their health and strength. To place workmen in a position of that kind is to put them in the position of a beast of burden which is required to go on from day to day performing a given task.

There is a margin between the work performed by the loafer and the maximum task for a man, and in that margin lies a proper day's work. What constitutes a reasonable day's work can only be determined by practical experience and intelligent observation. It can not be wholly determined by a stop watch or any other time-measuring instrument used only for a brief period of time.

*By the stop watch you may be able to determine the time in which a piece of work can be done, but you do not thereby alone determine the length of time in which it ought to be done.*

The time study of the operations of any machine can be made with a reasonable degree of accuracy, because all of the elements can be taken into consideration in making the computation. A machine is an inanimate thing—it has no life, no brain, no sentiment, and no place in the social order. With a workman it is different. He is a living, moving, sentient, social being; he is entitled to all the rights, privileges, opportunities, and respectful consideration given to other men.

*He would be less than a man if he did not resent the introduction of any system which deals with him in the same way as a beast of burden or an inanimate machine.*

In making a time study of the operations of a workman, all of the elements can not be taken into consideration, and consequently the computation can not be made with mathematical accuracy. There is no work that can be performed, or that is performed, that is not preceded by a mental process on the part of the workman. The more skill needed in the work, the greater the mental process which precedes the expression of it. So far as your committee has been able to learn, there is no method known to scientific management by which a time study can be made of the mental process preceding the physical act.

SENATOR BORAH'S COMMITTEE MADE REPORT CONDEMNING STOP WATCH.

Senator BORAH, chairman of the Senate Committee on Education and Labor, made a very exhaustive report of the Taylor system, following an investigation of the subject by his committee. This report condemns the speeding-up features of the Taylor system, reports they are wholly unnecessary, and recommends the passage of legislation prohibiting the use of the stop watch, and so forth, in Government establishments. This report is Senate Document, report No. 930, second session, Sixty-second Congress.

THE WORK OF N. P. ALIFAS, OF THE INTERNATIONAL ASSOCIATION OF MACHINISTS, IN THE FIGHT AGAINST THE TAYLOR SYSTEM.

Any recital purporting to describe the five-year fight that has been waged in Washington against the Taylor system would be incomplete without mention of N. P. Alifas, president of District No. 44, International Association of Machinists.

If there is anything that is inspiring to me, it is the sight of a workingman trying to improve the condition of his brother workers. I have had excellent opportunity to come to know Mr. Alifas, coming in contact with him almost daily for considerable periods, seeing him when the prospects for success in the thing he was laboring for seemed bright and when they seemed hopeless, and it is my great pleasure to testify that he has been faithful in the extreme to those he represents. Throughout the long fight he was, to my personal knowledge, patient, painstaking, and gentlemanly persistent in his effort to represent in Washington the views of his people. Being intimately acquainted with Mr. Alifas, I have no hesitancy in stating, and do state with the greatest of pleasure, that he is both an able and conscientious representative of labor.

He has made it his work to keep the Members of Congress informed of the status of the anti-Taylor-system measure, when it would come up for a vote, and as to the attitude of the arsenal and navy-yard employees toward this legislation.

Mr. Alifas appeared frequently before the committees of Congress in behalf of legislation abolishing the Taylor system in Government establishments. He testified at considerable length before the famous Commission on Industrial Relations on April 15, 1914, when the commission had under consideration the subject of "scientific management." His testimony was considered by those who heard it as especially clear-cut and to the point. Being himself a machinist and having been employed at the Rock Island Arsenal at the time the Ordnance Department began the installation there of a portion of the Taylor system, he was able to speak from first-hand knowledge, and at the conclusion of his testimony was congratulated by members of the commission upon the ability with which he handled the subject.

THE LA FOLLETTE SEAMAN'S LAW.

Another law which I supported and am deeply interested in is the La Follette seaman's law. As my position on this measure is fully outlined in a letter addressed to Mr. O. F. Hildebrandt, secretary of the Greater Moline Committee, Moline, Ill., I will include this letter in my remarks:

HOUSE OF REPRESENTATIVES,
*Washington, D. C., January 4, 1916.*

Mr. O. F. HILDEBRANDT,
*Secretary, The Greater Moline Committee (Inc.),*
*Moline, Ill.*

MY DEAR MR. HILDEBRANDT: I am in receipt of your letter of December 27, advising me of the action of the Greater Moline Committee, asking that I assist in bringing about amendments to the present seaman's law, so as to render it more favorable toward encouraging American capital to invest in the construction or purchase of ships, to be operated under the American flag.

In reply I have to say that under separate cover I am sending you a copy of the seamen's law, with the request that you point out in that law what provisions, if any, are working to the discouragement of the investment of capital in the construction or purchase of ships, and wherein the law needs amendment to bring about the results asked for in your letter and in the action of the Greater Moline Committee.

In this connection I want to submit these facts for your consideration: First, that the seaman's law was passed by the United States Senate October 23, 1913; that it passed the House of Representatives substantially in its present form upon August 27, 1914; that it became a law upon March 4, 1915; that long prior to the opening of the present war, August, 1914, every shipowner, every ship builder, every man who kept in touch with the situation throughout this whole country knew that legislation of the character embodied in the seamen's act would be enacted into law. Notwithstanding this fact, since August, 1914, there have been purchased from foreign owners and are now under the American flag ships which were formerly under the flags of other nations to the number of 170 of a capacity of over 570,000 tons. The addition of this tonnage since August, 1914, is the greatest acquisition that has ever been made to the tonnage of the American merchant marine in any year. Second, that at the present time there is building in the American shipyards for the merchant marine of the United States new vessels which will add 761,000 tonnage to the vessel capacity of this country; that this activity in ship building at this time represents the greatest activity that has ever existed in ship building at any one time from the foundation of this Government.

These two outstanding facts seem to me to demonstrate that there is nothing in the provisions of the seaman's law to discourage the purchase or the construction of ships for the merchant marine of the United States.

Within my experience with legislative matters here in Washington, I have never known of a piece of legislation which has been so misrepresented as the seaman's law. Prior to its enactment, and since it became a law, big shipowners of this country have misrepresented its provisions and their effects to business men and to business organizations. They have, through the public press, conducted a propaganda against this law and have misled those who have failed to study the provisions of the law, into believing that the act was designed and is a blow at American shipping. At the same time that they have been making this campaign of misrepresentation and have been tricking organizations composed of men with good intentions but with little or no information with respect to the act, to take action in opposition to it, they have been chasing over the world buying ships wherever they could and bringing them under the American flag. They have flooded the shipyards of our own country with orders and crowded them to work day and night to build new ships, at the same time that they have been representing to organizations such as ours that the law meant financial disaster and ruin to them.

The fact of the matter is that the seaman's act does two things. It provides greater safety for passengers on boats at sea than was formerly provided under the law and the regulations. I regret to say that the safety provisions of this law are not as adequate as they should be. I regret that this law does not provide lifeboat space for every passenger on board. I regret that it does not provide an adequate number of efficient seamen to man every lifeboat. Such protection was contained in the

original act as it passed the Senate, but unfortunately under the pressure of the shipowners was removed by the committee in the House, and the amended bill had to be accepted or no legislation could be secured. Does it not appear reasonable to you and to your committee that the men who undertake the transportation of passengers at sea should provide adequate and efficient safeguards against the dangers of the sea? Second, there is the provision of the seaman's act which has to do with the conditions of employment of seamen. You may not know, but until the enactment of this law the seamen employed on American ships and upon the ships of all countries coming into the ports of the United States were subjected to the provisions of a law almost identical with the fugitive-slave law; that these men were virtual slaves of sea masters; that they could not leave their employement at will; that if they would leave their employment the process of the United States courts was used to arrest, detain, and put them back on board ship and compel them to submit to involuntary servitude.

There may be, but I do not know him, an employer in the city of Moline who desires a mastery such as this over his employees; but if there be such, I unhesitatingly say that such a man is without understanding of the fundamental reasons for the Government which we have and which we honor. His opinion is not entitled to consideration, and I assure you that any man who advocates the repeal of the provisions of the seamen's act which abrogates slave conditions in the American merchant marine and in the ports of the United States will get no consideration by me of any such views upon this subject.

I am for men; I am for freedom. The provision of the seamen's act abrogating slaves was enacted for men. It was enacted for freedom.

I have submitted to you facts with respect to the shipbuilding and ship purchasing of this country, which demonstrate that the seamen's act has not interfered with the shipbuilding and shipowning interests of this country. I want to submit one more fact, and that is that the seamen's act has not increased unduly or unreasonably the cost of operation of American ships. Recently there has been a great amount of talk in the newspapers with respect to the conditions upon the Pacific Ocean. One of the men doing this talking is Robert Dollar, who operates a few small ships. A computation was made as to the increased cost of operation of one of the Dollar ships, and it shows that the increase in the cost of the operation of that ship under the provisions of the seamen's law would be about $6,000 per year, while the earning capacity of the ship is upward of $200,000 per year, which is an excess of its valuation. I will not stand, and I do not believe that the Greater Moline Committee will stand, for the patriotism (?) of the Robert Dollars, who, with an earning capacity of upward of 100 per cent on the value of their property, because of a trivial increase in the cost of operation, would have the American Congress restore slave conditions to American ships as a condition precedent to the maintenance of the American flag upon the sea. If that is the condition under which the American flag must be maintained upon the sea, better that it never floats from the masthead of a ship than that it cover and protect slavery.

Very truly, yours,

CLYDE H. TAVENNER.

## Universal Military Training and Service.

### EXTENSION OF REMARKS

OF

### HON. WILLIAM S. BENNET,

OF NEW YORK,

IN THE HOUSE OF REPRESENTATIVES,

*Friday, August 18, 1916.*

Mr. **BENNET**. Mr. Speaker, I find in the American Defense Magazine for September an article on universal military training and service, which may well form a part of the consideration of the naval bill.

This article, which was written by Henry Litchfield West, a former Commissioner of the District of Columbia and a well-known writer, sets forth that inasmuch as the United States will never possess a navy large enough to thoroughly protect our entire Atlantic and Pacific coast lines the defense of this country must ultimately rest upon a land force of citizen soldiery created under a system of universal military training and service.

This article is the first comprehensive review of this subject which I have seen and is a valuable contribution to the cause of preparedness for national defense. It is as follows:

UNIVERSAL MILITARY TRAINING AND SERVICE.

The National Security League, through its executive committee, recently issued a declaration of principles in which compulsory military training and service wholly under Federal control for all physically fit male citizens, was set forth as the first of the cardinal requirements for adequate preparedness. This action of the league, taken after many largely attended conferences and congresses held under its auspices had formally declared in favor of compulsory military training and service, marks another step forward in the presentation of the most vital issue which can engage the attention of the American people.

The assertion that the United States must ultimately adopt universal military training and service as the basis of national preparedness rests upon a logical and incontrovertible foundation. Two facts must be admitted, as follows:

First. That the United States will never possess a navy sufficiently large to thoroughly patrol and defend its extensive coast line.

Second. That American tradition and sentiment will prevent the creation and support of a permanent Regular Army large enough to combat successfully the enemy forces which could be landed upon our shores.

Granting that these two things are true, the defense of our country must inevitably depend upon an adequate force of citizen soldiery pursuing peaceful vocations under normal conditions, but thoroughly trained and equipped to meet immediately an emergency of threatened danger.

The Navy is only the first line of defense. If we should have a Navy of sufficient strength to overcome an opposing fleet or fleets at one or more points between Portland and Galveston or between Seattle and San Diego, the people of the United States could rest in certain security from attack. A Navy of this size is, however, beyond our fondest hopes. It has taken England centuries to build up the Navy which she now possesses, and the construction of a fleet equal to the British would not only require many years but would entail an enormous cost upon our resources.

Even now, when the United States stands fourth in naval strength, there are other nations which could overcome our ships at sea, thus insuring a clear highway for the landing of transports bringing literally hundreds of thousands of men.

A large standing army is equally impossible. As a matter of fact, this ought to be the case. To create and maintain a Regular Army of 500,000 men would be an enormous tax upon the American people, besides which it would be entirely out of harmony with all our traditions and ideals. Even should such an Army be authorized, it is doubtful if it could be recruited. While the United States pays more per capita for its Army than any other nation, it is extremely difficult to get men to surrender the opportunities of earning a livelihood in order to receive the meager compensation which the Regular Army affords. The effort to increase the Regular Army under the stress of the excitement on the Mexican border has not been successful.

Recent events have also demonstrated that a volunteer army is not to be depended upon. After much delay several regiments of the National Guard have been sent to the Mexican border, but a very large number of men in the ranks wore the uniform for the first time, and were absolutely untrained and unfit for the work assigned them. It is not fair, moreover, that the force thus summoned for service should be composed wholly of men who regard devotion to their country as a duty, while thousands of other men even better fit physically and financially for the sacrifice remain at home.

If we had had in this country a system of universal military training and service such as the Swiss have had for many years, the men sent to the border would have been taken from all ranks of life; there would have been equality in the matter of enlistment and, more important than all, there would have been preliminary training which would have gone far toward making the organization effective in the military sense.

We speak of universal military training as if it were something new and at variance with the principles of our Government. Nothing could be further from the truth. The bitter experiences of the Revolutionary War, when Washington secured an army with great difficulty, demonstrated to that great commander the fact that if our Republic were to exist in the future it must rely for its defense upon a trained citizen soldiery. He unquestionably had much to do with the constitutional declaration that "well-regulated militia is necessary to the security of a free State," and he went further in the statement that "a free people ought not only to be armed but disciplined."

He emphasized his belief that the safety of the Nation depended upon "an adequate stock of military knowledge for emergencies," and he advocated the spread of this knowledge among the entire American people. He saw very clearly that if the United States should become a Nation so pacific as to be unable to defend itself, it would unquestionably become a prey to the greed and aggression of some more powerful nation. "If we desire to avoid insult," he said, "we must be able to repel it; if we desire to secure peace, one of the most powerful instruments of our rising prosperity, it must be known that we are at all times ready for war."

Universal military training and service is the only system which is purely democratic. Thomas Jefferson, recognized as the founder and patron saint of the Democratic Party, emphasized this point of view. "We must train and classify the whole of our male citizens," he wrote to Monroe in 1813, after he had learned the lesson of unpreparedness in the War of 1812, "and make military instruction a regular part of collegiate education. We can never be safe till this is done." In 1814 he went still further and declared that it was an obvious truth "that we can not be defended, but by making every citizen a soldier, and that in doing this all must be marshaled, called by their ages, and every service ascribed to its competent class."

James Madison, a follower of Jefferson, urged, in his message to Congress on December 3, 1816, the organization of a militia which would include practically every physically fit male in the Republic, while James Monroe, in a message to Congress in 1822, urged the American people as a special duty "to be at all times prepared to defend the rights with which they are blessed, and to surpass all others in sustaining the necessary burdens and in submitting to sacrifices to make such preparations."

Any unprejudiced reader of American history must realize that if the counsel of the fathers of our country had been followed a century ago we would have been saved unnecessary sacrifice of lives and money. In all of our wars the flower of our citizenship has paid the

penalty of inexperience and unfitness. We have been victorious, but at tremendous cost.

In the Revolutionary War, when our forces numbered 395,000 as against 150,000 of the enemy; in the War of 1812, when we had 350,000 men enrolled, with only 57,000 against us; and when in the War with Mexico we had twice as many men in the field as the Mexicans, we were taught an experience which did not profit us. Even though we have never fought a first-class power throwing its full resources into the opposing balance, we have never been able to win except by putting armies into the field greatly in excess of the other side.

It is not necessary, however, to rest our case for universal military training and service upon our own history. Switzerland at the present day affords an object lesson which we would do well to heed. The question came before the Swiss people in the form of a referendum upon the occasion of the adoption of the federal constitution in 1848, and by a popular vote of 170,000 to 70,000 the Swiss people decided that "every Swiss is open to do military service." It is safe to say that to-day not one vote would be cast in Switzerland against the system which has been in vogue there nearly 70 years. Everyone knows that if it had not been for the demonstration of the instant ability of the Swiss people to defend their territorial integrity the German Army would have sought entrance into France through Switzerland. The Swiss Army is enrolled for defense, not for offense; and every student of the Swiss Army agrees that the Swiss system is the living refutation of the charge that military training hurts good citizenship. The Swiss is, above all things, a free man, and there is no taint of militarism in his nation. The trouble is, however, as was pointed out 16 years ago in a report submitted by Lieut. Col. William Cary Sanger, that "universal military service still remains a theory with us, but in Switzerland it is real and actual."

Side by side with Switzerland in the adoption of compulsory military training stands Australia. Emphatic evidence of the success of the system in that country is found in the address of Hon. William H. Hughes, prime minister of the Commonwealth of Australia, at Ottawa, February 19, 1916, in which he said:

"It had been very well for us and very well for mankind if Britain had prepared as well by land as by sea. If she had done that there would have been no war to-day. And this I say—and it is all that I shall say on this point—that Australia has been able to do what she has done because we have adopted as the corner stone of our democratic edifice the system of compulsory military training. We believe that there is but one way by which a nation, being free, can remain so, and that is that every man shall not only be willing to defend his country, but be able to do so. And we think that if it is right, as it surely is, that a democracy should educate its citizens so that the franchise shall be wisely exercised, for government by the many, if the many are not educated, is a doubtful good. So we think that the State should train the citizen so that he may be able to defend his country, his home, and his liberties."

On the other hand, England, having failed to adopt a system whereby its people would be ready to meet danger, has paid a terrible penalty. For more than a decade farsighted men in England have been pointing out that no provision was being made to train English citizenry so as to be available for defense. Possibly the futility of these appeals was largely due to the belief that the island was protected from invasion by the strength of the navy and that no conflict was possible which would involve English people. Events have proven, however, that this point of view was entirely false. It is now a matter of history that when universal war was declared on the Continent, England was able to send only a very few soldiers, comparatively speaking, to oppose the onward march of the German Army through Belgium into France. It called upon its colonial dependencies for help and then, after the war had begun, undertook to train and equip 4,000,000 of its citizens.

It was nine months or a year before Lord Kitchener felt that his men were in condition to be sent against the trained veterans of the enemy, and the result was that all attempts to check the onward advances of the German forces were at first futile. The United States would undergo a similar experience if to-day a hostile army should land upon its coast or cross its borders. The men who would instantly volunteer to save their country would be utterly unprepared, not only physically but in the essential of necessary training and equipment. Untrained millions are nothing but an untrained mob. It is a matter of education to bring the American people to a realization of this fact.

There is no doubt that the men who have labored successfully to make the National Security League a great organization have been aided in their diligent efforts to secure universal military training and service by the fact that the European war has demonstrated the necessity of providing this system as the basis of national defense. Like the founders of our Government, they are placing the lesson of experience before their fellow citizens and the outlook is that their efforts will be attended by a larger measure of success. In other words, evidences of an awakening in the American mind are happily apparent—an awakening which has unquestionably been largely stimulated by the effective work of the league.

The Chamber of Commerce of the United States of America, an organization composed of more than a thousand commercial bodies, at its recent annual convention recommended a resolution in the following language:

VII. The committee, recognizing the military obligation equally with the civic obligation as a fundamental duty of democratic citizenship in a republic and to establish a system which will affect every man alike, recommends that universal military training be adopted as a fundamental democratic principle of our military policy, and be enforced by law to furnish adequate land, sea, and industrial forces in peace and war.

This resolution was submitted to the constituent bodies and was adopted, after thorough discussion, by the surprisingly large vote of 889 to 56.

In addition to this, several newspapers have been conducting polls on the question of universal military training, and the Chicago Tribune reported on June 6, 1916, that out of 6,255 votes reported, 6,180 were in favor and 75 against. The Baltimore Sun reported a vote of 8,186 to 1,055 against, and similar appreciation of the necessity of universal training was recorded in Los Angeles and Philadelphia.

The National Educational Association, at a convention in New York City last July, attended by more than 25,000 teachers, adopted a resolution recognizing "the right of the community or the State to introduce such elements of military training as may seem wise and prudent," although it registered the belief that such training should be strictly educational in its aim and work, and that military ends should not be permitted to pervert the educational purposes and practice of the school. This recognition of military training in the schools, which is the underlying feature in universal military training, is gratifying evidence that the great mass of the educators of this country realize that such training is the foundation upon which national security must rest.

Another indication of the growth of public sentiment was evidenced at the banquet of the Merchants' Association of New York City, when tremendous applause followed the statement of Senator O'GORMAN, of New York, that compulsory training is the one indispensable thing we should have in this country.

It is noteworthy that many magazines which admittedly reflect the intelligence of the country are advocating universal military training. This is particularly true of Everybody's Magazine, while the Century Magazine says that it is the only purely democratic system of national defense and the ideal goal at which a self-respecting democracy must aim. The Ladies' Home Journal, which goes into 2,000,000 homes, editorially admits the futility of the volunteer service and urges military training for every boy in the land as the real essence of preparedness. Physicians also recognize the physical value of military training, as shown by the fact that the American Medico-Psychological Association, in convention in New Orleans on April 16, 1916, strongly recommended universal military training and urged legislation enforcing it because it "promotes in the individual strength of muscular and bony tissues, improves organic functions, quickens perception, furnishes discipline in self-control, inculcates obedience, and creates respect for authority."

As for individual indorsements, pages might be filled with utterances of men recognized as leaders. Space allows only the following:

Theodore Roosevelt: "I believe in universal service based upon universal training. I believe in this because I think it would be not only of incalculable benefit to the Nation in the event of war, but of incalculable benefit to the individuals undergoing it, and therefore to the Nation as a whole as regards the work of peace. The military tent where boys sleep side by side will rank next to the public school among the great agents of democracy."

Robert Bacon, former Secretary of State (after his recent visit to the Mexican border): "I am more than ever convinced that there is but one satisfactory solution for military preparedness of the Nation, in fact, for the maintenance and endurance of the Nation itself in a high place in the affairs of the world, and that is universal service—the spirit of service and sacrifice for the Nation. Unless we learn to speak in terms of a nation, and subordinate our local and material ambitions; unless the Nation, in claiming its international rights, learns to appreciate its duties and international obligations, the Nation can not endure as one of the respected members of the society of nations.

"There has been a great change in sentiment and opinion about universal service. Everywhere that I have been—in New England, the Middle States, the Mississippi Valley, the South, and the great Southwest, as far as Arizona—I have found but one opinion: That universal service for the Nation, whether it be enrollment for the military or for broader work of industrial efficiency for national purpose, is the only democratic principle of national life, and only by such service can we obtain justice and equality for all citizens of the great community. These are the undoubted facts, which have been emphasized by the lessons of this great world war, and which are proved beyond a question to the mind of anyone who is brought in close contact with the army now encamped along our border, both Regulars and Militia."

John Grier Hibben, president of Princeton University: "As citizens of this great Republic we must realize that patriotism has come to have deeper meaning, namely, recognition of personal obligation to one's country and readiness for sacrifice."

Newton D. Baker, Secretary of War: "I can not believe that I have the right to expect another man to defend my home and my family, if I am unwilling to defend them myself. It is essentially a democratic principle that every citizen should be willing to contribute his personal service to the common defense."

Gen. Leonard Wood: "The volunteer system has never succeeded and never will. The only true ideal is obligatory military service. Manhood suffrage and manhood service must go together."

Hon. JAMES W. WADSWORTH, United States Senator from New York: "We send our children to school so that they may fit themselves to combat forces of ignorance and vice, which, if allowed unrestrained within our borders, would soon destroy the Republic. Is it not likewise the duty of a true democracy to train its young men to combat successfully those forces which may attack its institutions from without?"

Cardinal Gibbons: "I believe in preparedness and in compulsory military service for all men of the Nation. Compulsory service is the best means to preparedness."

Samuel Gompers, president American Federation of Labor: "We must have a preparation that means a comprehensive development of all the powers and resources of all our citizens. In Switzerland every man is a soldier—not necessarily to go to war, but he has the physical and manual training necessary to defend himself, his family, and his country. Under that system the Swiss have developed a manhood, a character, that challenges the admiration of the world. We will be satisfied with nothing less in America."

John Purroy Mitchel, mayor of New York City: "I believe in universal male military training after the plan of Switzerland or Australia. I believe that the American people must and will come to this sooner or later. I pray that they may adopt it before national disaster and not after."

Henry L. Stimson, former Secretary of War: "This problem of national defense will never be permanently solved until it is distributed among the whole people by some system of universal liability to military training."

These expressions of thoughtful, experienced, and patriotic men should carry conviction to every mind. It is the definite purpose of the National Security League to give the widest possible publicity to these and other affirmative views, and a pamphlet issued by the league, dealing solely with universal military training, has already been given a large circulation. The campaign of education will be thorough and extensive because, in a Republic like ours, nothing can be accomplished except through legislation and laws can not be enacted until public sentiment approves. The first step toward legislation has already been taken through the introduction of a bill proposing a system of universal military training and service by Senator CHAMBERLAIN, of Oregon, chairman of the Senate Committee on Military Affairs. It is not necessary to present the details of this measure beyond stating that they provide for three classes, to be known as the "Citizens' Cadet Corps," between 12 and 17 years of age, inclusive; the "Citizens' Army," between 18 and 23 years of age, inclusive; and the "Citizens' Army Reserve," of persons 24 years of age and over, and that the training for

the members of the citizen army is to be not less than 120 hours, or 20 whole days, for six years, and not less than 10 whole days in camp of continuous training. The bill has not been pressed for passage because the necessity for its enactment is not yet fully appreciated.

The American people must, however, eventually realize that in universal military training and service lies the only safeguard for the Nation. In the meantime the National Security League is working earnestly, with hope and confidence, to hasten the day when a law fully realizing the ideal of universal military training and service shall be placed upon our statute books and the American people, proud of their Nation and determined to preserve its greatness, its liberty, its privileges, and above all, its honor, will be ready to defend it against all foes.

## APPENDIX.

### RESOLUTIONS INDORSING UNIVERSAL OBLIGATORY MILITARY TRAINING AND SERVICE.

[Adopted in referendum of Chamber of Commerce of United States of America.]

VII. The committee, recoginzing the military obligation equally with the civic obligation as a fundamental duty of democratic citizenship in a republic and to establish a system which will affect every man alike, recommends that universal military training be adopted as a fundamental democratic principle of our military policy and be enforced by law to furnish adequate land, sea, and industrial forces in peace and war.

—

[Adopted by the National Security Congress, Washington, Jan. 22, 1916.]

*Be it resolved by the National Security League*, That the defense of the United States must depend upon an adequate Navy and a National Army founded upon a system of universal obligatory military training and service. This system must be wholly under the discipline and control of the national authorities. We deprecate all steps which tend to obstruct or postpone the adoption of such a universal system.

—

[Adopted by the national defense conference of mayors and mayors' representatives. St. Louis, Mo., Mar. 4, 1916.]

*Resolved*, That recognizing the military obligation equally with the civic obligation as a fundamental duty of democratic citizenship in a republic and to establish a system which will affect alike every man in the republic, we approve and recommend the adoption of universal military training under Federal control throughout the United States.

—

[From the Century Magazine, July, 1916.]

### THE DEMOCRACY OF UNIVERSAL MILITARY TRAINING.

In the May issue of the Century, in an article entitled "Military training for our youth," the writer puts a pertinent question: "Is patriotism a duty that must be discharged by all, or a favor to be bestowed at will?" Obviously that means Are those of us who have not yet had the vision of the preciousness of our national existence content to accept it at the hands of charity? Is America going to be, without a protest, the one pauper among the nations? The question is not to be answered lightly. "Let George do it" must not be our national watchword when the very life of the Nation may be at stake.

It ought to be unnecessary even to ask the question; but there is a fact that we forget all too easily—democracy can exist only through education. Our average citizen knows little and cares less about the business of government. In matters that he understands he is the last person to be satisfied with inferiority of performance. Can you imagine the American public tolerating less than the highest aristocracy of skill in the one national affair that is thoroughly understood—baseball? Clearly, if the Nation were as solidly grounded in the rudiments of national business as in the requirements of the national game, it would never submit to the disgraceful clumsiness of our usual amateur performance.

There is one State that has already seen the source of our weakness in ignorance. Last spring a nonpartisan commission, composed of a college president, a journalist, a representative of organized labor, attorneys, and business men, was appointed by Gov. Walsh, of Massachusetts to study the question of "the practicability of providing military education for boys between the ages of 14 and 21" for the purpose of disciplining the youth of the Commonwealth and of "improving their physical, moral, and mental qualities," and to report the result of its investigations to the legislature with recommendations for legislation.

Through the summer that commission collected and analyzed public opinion and expert advice and submitted its report at the end of 1915. There were three recommendations—an enabling act permitting the State militia to cooperate with any scheme of Federal action that may be adopted; the institution of compulsory physical training in the high schools; a complete recasting of the militia law of the State in case the militia should be compelled by national neglect to remain a State force.

Those commissioners worked with a full realization of the essentially national character of the question of defense. They recognized the futility of recommending anything beyond the probabilities of immediate action, or anything based on the present feverish interest, that might fail to weather the test of the popular temper in normal times. They curbed the enthusiastic impulse to bespeak for the country general and compulsory military service, because they saw the absurdity in such a proposal from any single State. In the same way they stopped short of the ideal in asking for physical training in the high schools only, knowing well that less than a third of the boys would get the benefit, since the compulsory character of schooling ends with the grade schools.

Plainly the sum of their endeavor was to show the State that the quality of citizenship most sorely lacking in us is a sense of community duty; that this sense can be created by the habit of discipline only if the attempt is made early; that national strength, either for defense against aggression or for the business of good living, can be won only through education. We are notoriously lawless in America, but the remedy can be applied through the schools to the parents in our families. In our hysterical urge toward the development of the individual person we have lost sight of the chief value of education—discipline. Through discipline comes community consciousness, teamplay, and that is the beginning and the strength of civilization.

Last March there was a convention of mayors in St. Louis. The most important 75 cities in the country were represented, an imposing body of opinion from the whole breadth of America. They discussed the subject of defense, and the only proposal which met with unanimous indorsement was for universal compulsory military service. They knew that it is the only purely democratic system of national defense, that it is the ideal goal at which a self-respecting democracy must aim.

Massachusetts has been studying history and drawing conclusions. Understanding fully at last the pitiful failure of the voluntary principal in national service, as ridiculous in the military aspect as it would be in the payment of taxes or in education, and as unjust, the State is urged to train and discipline its citizens for the good of the common cause. It is a hopeful sign. After all, our country may really be learning. We may have reaped one tangible benefit from the great war, an awakening political conscience.

New York State has recently followed the example of Massachusetts.

If two States can make a forward step, so can other States, until we have in America a Nation united in support of ideals cherished in fact as well as in oratory.

—

[From the Ladies' Home Journal.]

### THE QUESTION FOR PARENTS, "SHALL THE MEN WHO WILL DEFEND THE COUNTRY BE UNTRAINED?"

Now, all recent wars have demonstrated the futility of the volunteer service, and certainly the methods of modern warfare have proved its absolute inadequacy. * * *

The question, therefore, for parents of boys is not "Do we believe in war?" or "Do we believe in preparedness?" but "Are we willing that our boys shall be drafted for service in case of war absolutely unfitted and untrained?" That is the question that stares you and me, as the fathers of boys, in the face. I am not advocating the military training of our boys; I am not favoring or opposing preparedness here. That is not the function of this magazine. But I am a father of two boys, and I am asking myself the same question I am asking you: Whatever may be my personal view of war, am I willing to let my boys be drafted and go into war untrained, inefficient, for a foreign soldier, trained and efficient, to shoot at, and my boys unable to take care of themselves? There is no time for proper training once the boys are drafted. Military experts claim that a boy can be trained in six months' service with a week or 10 days each following year for "brushing up," so that a preliminary military training is not impossible for a boy earning his livelihood.

The question is ahead of us, and we can not dodge it: How are we going to let our boys face the possibility of being drafted for military service? As inefficient and unable to take care of himself, or, at least, as trained to the rudimentary knowledge of war? That is the real essence of "preparedness" for every parent of an American boy in good health to answer.

—

[From the New York Evening Sun, August 1, 1916.]

### FOR AMERICA!

Reasonable Americans comprehend that the safety of the United States demands at all times a force, ready for emergency work, larger than the one now mobilized on the Mexican border and a force which, at the same time, can be maintained under arms without the personal hardship and financial loss now being endured by our National Guardsmen. A large regular army might solve the problem. But to pay an army of such size would be extremely costly; besides which it has been found impossible to secure enough men to keep our present handful of Regulars recruited to maximum strength.

Senator CHAMBERLAIN'S bill, now buried in committee, to provide universal compulsory military training for male citizens of the United States would provide a way. This patriotic measure has evoked a howl of opposition from the hyphenated press, which interprets every such move as directed solely at Germany, and from that portion of the unhyphenated press which should be but is not able to distinguish between Prussianization and preparedness.

Criticism may be justly directed against this bill, but not against the fundamental principle of universal obligation in return for universal liberty on which it is based. The detail in which Mr. CHAMBERLAIN has erred most unfortunately is in stipulating that the six months of military service specified shall be performed during each citizen's eighteenth year.

Such a system would take the youths of the country when their minds were in the most acquisitive stage and their bodies not yet fully developed. It would interrupt the educational lives of those who would go normally in this year from preparatory school to college and who should be permitted to do so without interruption. It would be much better to require the service in the early twenties, just when the college men would be graduated into professions and the apprentices into journeymen in the trades. Not the least valuable feature of such a system would be the democratic postgraduate course in which men from every phase of American life would mingle on the same terms of equality on which Frenchmen meet in the French army during their period of military training.

The Chamberlain bill is the most thoroughly American defense measure that has been proposed to Congress. The cry of "conscription!" can be raised only by those who are blind to the fact that citizens of the United States are subject to-day to the most sinister form of conscription conceivable. Their Government gives them no instruction whatever in the most technical of arts, that of the soldier, yet it may draft them into military service in emergencies and send them inadequately trained into battle to fall victims more to their own ignorance than to the superior valor of the enemy. Americans need not be reminded that this draft power is not theoretical; it has been exercised already in the Civil War.

Such are the facts. If the American people will not awaken to the necessity for a system of universal training which will enable them to defend themselves with the least sacrifice of American manhood when they are compelled to go to war, the American people will pay for their refusal to understand. And the experience of Europe is that war will come not because but even though nations like France and England arm for their own protection.

—

[From the New York Sun, May 24, 1916.]

### SECRETARY OF WAR BAKER FAVORS TRAINING ENTIRE NATION.

WASHINGTON, *May 23*.

Secretary Baker, in an interview, came out squarely this afternoon for universal military training in the United States.

Secretary Baker said in his interview:

"As there exists a universal obligation resting on all male citizens of this country to defend the country in time of war, so there should be a universal willingness to train in times of peace against the day

of such emergency. So long as it might be possible to have universal training through volunteer service I should be in favor of limiting it to a voluntary service, but if adequate preparation for the national defense can not be reached through such a system I would favor a compulsory system.

"My belief is that educational institutions of our country should see to it that every boy in school has it instilled into him that one of the cardinal duties, if not the paramount duty, he will assume with citizenship is the obligation to defend his country in time of war, and if this is a duty, as I believe it is, then certainly the boy should be trained to perform that duty when the time comes for him to do so.

"I can not believe that I have the right to expect another man to defend my home and my family if I am unwilling to defend them myself. It is essentially a democratic principle that every citizen should be willing to contribute his personal service to the common defense."

—

[From an address by John Purroy Mitchel, mayor of New York City, at the National Security Congress, Washington, Jan. 20–22, 1916.]

A FUNDAMENTAL OBLIGATION—WITH CIVIC DUTY GOES MILITARY DUTY AND UPON BOTH OUR EXISTENCE DEPENDS.

I believe in universal male military training after the plan of Switzerland or Australia. I believe that the American people must and will come to this sooner or later. I pray that they may adopt it before national disaster and not after. I am as much opposed to militarism, as Europe knows it, as the most ardent pacifist, but I do believe that citizenship in a democracy carries with it a fundamental obligation; that mild and brief citizen training for a few weeks each year during adolescence and early manhood is the minimum necessary to realize the condition of a trained citizenship in arms. Anything less than this must be a makeshift, a mere temporary expedient, a perilous temporizing in the face of danger. The time to solve this question is now, when the attention of the Nation is focused upon it and its solicitude is acute.

We are passing to-day through a great crisis in our national life. The issue is more than national; it is as broad as the human race itself. Into our hands here has been committed the heritage of democratic government. It is our trust to perpetuate it, to develop it, to transmit it to posterity, a serviceable agent for the advancement of civilization and for the happiness of mankind. Here in this Nation and country of ours the efficiency of democracy is on trial to-day. Here under our free institutions through 130 years of effort and of progress we have developed governmental and civic efficiency. We teach our citizens the sense of individual civic responsibility, and they respond to it. During the greater part of the time, due to geographical location and the absence of hostile motives abroad, we have enjoyed peace. Now that science has obliterated distance and our prosperity and commerce supply the motive, we can no longer count upon an effective peace. Democracy, therefore, must meet the new conditions. But through its elementary sufficiency for self-preservation we must teach our citizens that with civic duty goes military duty, and that both are obligations on which the life of the State depends.

—

LABOR'S ATTITUDE—SAMUEL GOMPERS DECLARES IN FAVOR OF TRAINING FOR DEFENSE OF THE NATION.

Samuel Gompers, president of the American Federation of Labor, in his address before the Sixteenth Annual Meeting of the National Civic Federation, January 18, 1916, said in part:

"The pacifists and those who hold to politics of nonresistance have failed as I had failed to understand and to evaluate that quality in the human race which makes men willing to risk their all for an ideal. Men worthy of the name will fight even for a 'scrap of paper' when that paper represents ideals of human justice and freedom. The man who would not fight for such a scrap of paper is a poor craven who dares not assert his rights against the opposition and the demands of others.

"The majority of our citizens no longer live in the open, and they show in their physical development the effect of the restricted life of the city. They have not the physical strength or endurance that would fit them without further preparation to be called into service in a citizens' army. Since opportunities for physical training are not freely and readily available to all, some definite national policy must be devised for physical training and physical preparedness of all citizens. Such a training could be readily given through our public-school system and other auxiliary agencies. The chief problem is that training of this nature should be in furtherance of broad, general usefulness and ideals and not be specialized or dominated by the purpose of militarism. Physical training must fit citizens for industry, for commerce, for service in the work of the Nation, as well as for service in defense of the Nation. But physical training and preparedness are insufficient.

"There must be a spirit among the people that makes them loyal to country and willing to give themselves to its service and protection. That spirit can not exist unless the citizens feel that the Nation will assure to all equal opportunities and equal justice. They must feel that they are a part of the Nation, with a voice in determining its destinies. This spirit of loyalty depends not only upon political rights but upon justice and right on the industrial field, aye, in all relations of life. * * *

"We must have a preparation that means a comprehensive development of all the powers and resources of all our citizens. In Switzerland every man is a soldier—not necessarily to go to war—but he has the physical and manual training necessary to defend himself, his family, and his country. Under that system the Swiss have developed a manhood, a character, that challenges the admiration of the world. We will be satisfied with nothing less in America.

"We must see to it that the great mass of the farmers and the workers in industry shall be thoroughly trained and organized. We must see to it that the military and naval forces of the country are controlled in the interests of peace, of justice, of democracy, and of humanity.

"There must be industrial, commercial, political, social, moral, as well as military defense. Citizen soldiery must be established and extended. It must be democratically organized, officered, and controlled. We must put an end to the present wasteful and unfair administration of our military affairs."

—

[George A. B. Dewar in the Nineteenth Century Magazine, 1915.]

THE EXPERIENCE OF ENGLAND.

Voluntary recruiting, despite its mettle and its high fervor, is essentially a thing of spurts, very heartening, and inciting us to throw up our hats whilst these spurts last. But spurts are succeeded by reactions, which are deadly and depressing. * * * By not adopting a simple, thorough, and perfectly fair and democratic service scheme, we are laying up for ourselves a world of ill-feeling, envy, and uncharity in the future, a world that may take a generation or more to pass away. Now by an honest act all this ill-feeling, all these hideous comparisons, must instantly disappear. * * * A general obligatory service law to-day in this country (England) must be a democratic law, rightly considered. But why be scared by names at this time? Democracy means the strength of the people, and the strength of the people exerted to its utmost is, after all, the only way by which we can prevail in this war.

—

[Brig. Gen. Thomas M. Anderson, United States Army, in Journal of the Military Service Institution of the United States, July-August, 1908.]

THE SAFEST AND BEST METHOD.

Our military establishment has not the sympathy and approval of the people because it is not republican and representative in character. In discussing this problem I take for my text a statement of the New Orleans Picayune:

"There is," it asserts, "but one way in which this great Republic will be able to maintain a sufficient military strength, viz, by universal military service." * * * Our safest method for an offensive-defensive is universal military instruction and compulsory short-time service. We have billions of wealth to defend and millions of men to defend it, but untrained millions would be simply an untrained mob.

—

[From address of Henry L. Stimson, former Secretary of War, at the National Security Congress, Washington, Jan. 20–22, 1916.]

THE PROBLEM OF DEFENSE—IT WILL NEVER BE SOLVED EXCEPT THROUGH UNIVERSAL MILITARY TRAINING.

Four years ago when it became my official duty to study this question, I hardly dared dream that the time would ever come, within my lifetime, when the American people would seriously consider the institution in this country of any system of universal military training. The searching test of the European war has, however, put its finger squarely upon this weak spot of our American democracy. In our national development thus far we have focused our attention upon the rights, the privileges, the benefits which we have expected to get from free government, and we have paid scant attention to the duties or the obligations or the sacrifices which were correlative to them. But now, for the first time, we are beginning to realize how far we have fallen behind other nations in this respect. For the first time there has been made clear to us the superior strength of patriotism which has been developed in nations which hitherto we have been inclined to regard with little admiration or even respect. For the first time we have had revealed to us in blinding light the fact that men of other nations for years have been willing to give toward the building up of the efficiency of their nation a measure of time and personal effort which we have been unwilling to give.

We are beginning to realize the true meaning of the proposition that manhood suffrage postulates manhood services, and that the man who has a right to participate in the making of his own government is bound by the highest obligation of honor to share in the burden of defending it. And so to-day we find an increasing number of our people who believe, as I believe, that this problem of national defense will never be permanently solved until it is distributed among the whole people by some system of universal liability to military training.

—

THE DUTY OF A TRUE DEMOCRACY—YOUNG MEN SHOULD BE TRAINED TO DEFEND OUR FREE INSTITUTIONS.

JAMES W. WADSWORTH, Jr., United States Senator from New York, in a speech before the Union League Club, of Chicago, on February 22, 1916, had this to say on the subject of universal military service:

"We send our children to school so that they may fit themselves to combat the forces of ignorance and vice, which, if allowed to operate unrestrained within our borders, would destroy the Republic. Is it not likewise the duty of a true democracy to train its young men to combat successfully those forces which may attack its institutions from without? Can there be any more democratic proposal than that every young man should prepare himself to a reasonable degree of efficiency for the defense of his country? Is it not his duty to do that promptly and cheerfully, just as truly as it is his duty to go to school in his younger days or to vote and take an interest in civic affairs when he comes of age?

"If it is not the duty of every young man to perform this service, shall we be so absurd as to say that those who volunteer to do it and those who, possessing less sense of responsibility, refuse to volunteer; shall we be so absurd as to say that those two groups of men entertain equally high ideals in their respective capacity as citizens of a democracy?

"In this question of universal military training there is something more important even than that of military defense of the country, about which we hear so much these days. The touch of the elbow is involved. I would like to see a state of affairs in which the son of the rich man, who does not have to labor with his hands for his living, working alongside of the son of the poor man. When two men work together physically and endure fatigue together at the same task there is created a bond of sympathy and understanding which no other process can establish. Each will come to an inspiring realization that the other, down deep in his heart, is his brother, possessed of the same courage, the same ideals, the same patriotism.

"I can think of no plan better calculated to prevent class feeling than the universal performance of service to the country by our young men. In no other way can we more truly fuse together the widely different elements of our population and instill into them the conviction that this indeed is a Nation. In no other way can we so surely help to perfect our democracy. Let us talk less about our rights and more about our duties. Inspired by such a spirit, we can successfully withstand all upon the American conception of liberty whether they are delivered from within or from without."

—

[Extract from the address of Prof. Henry C. Emery, of Yale University, at the National Security Congress, Washington, January 20–22, 1916.]

UNIVERSAL SERVICE WILL PAY—ONE OF THE MOST PROFITABLE INVESTMENTS THIS COUNTRY CAN MAKE.

One of the most profitable investment this country can make, from the standpoint of universal business, is universal service and training. There can be no question about that.

It has been an old theory of the economists for years that there are two great costs in the maintenance of military establishments, one the money cost year by year paid out of taxes, the other what is supposed to be the great economic loss in the employment of a large number of young men in nonproductive activities. Neither of these is quite justified. Of course, there is the money expense; I do not need consider the question as to how that compares with other expenditures. I only call your attention particularly to the fact that the money spent by Germany before the war in maintaining her great establishment was one-third the amount spent by the Germans for beer.

If the American people were willing to sacrifice, say, two things—chewing gum and going to the movies—we could maintain an army so big that nobody would dare to look at us from across the way. These expenditures, when compared with the real expenditures of living—the things we care for—are very small. But it makes no difference how much the amount is, it does cost money, of course, to maintain a large Military Establishment. But then it takes money to build a Union Pacific Railroad; it costs money to build a Panama Canal; it costs money to build any great constructive enterprise.

The question is, what do you get back for your money and the question of the actual dollars and cents invested is of no importance. It makes no difference whether you spend $100,000,000 or $500,000,000, from the economic point of view; the question is, are you getting a fair return on your money? My argument is simply that for every man that you educate in the military training for a short period sufficient to give him the efficiency necessary for the industrial life, you get back more than the expense.

—

[C. E. Calkins in Cyclopedia of American Government, vol. 2, p. 438.]

ADVANTAGES ARE NUMEROUS.

The military advantages of an automatic system which makes every class of the population bear a part in national defense are incontestable. Not only does it provide for an ample standing army during peace and perpetuate the military tradition but it provides a practically unlimited reserve of trained soldiers in the prime of life. Thus all the extravagance and disorder of hurried recruiting, the bounties for volunteering, and the irritating enforcement of conscription are avoided. The army is mobilized for war by filling the ranks of the existing organization, without sending improvised regiments or companies to the front; and no command is trusted to an untrained officer.

—

[From address of Capt. Granville Fortescue, National Security Congress, Washington, Jan. 20–22, 1916.]

THE ONLY EFFECTIVE MEASURE OF DEFENSE.

The only effective measure of defense is universal service. That is so obvious that it needs no repetition. I can tell you from what I have seen in England. There is an example for us—a pitiful example. * * * Any man who is worthy of being a citizen of the United States has with that worth, intrinsically, the duty of fighting for the United States.

—

[From address of Eric Fisher Wood, author of The Note-Book of An Attaché and The Writing on the Wall.]

THE SWISS SYSTEM—IT TRAINS THE YOUNG MEN FOR DEFENSE AND NOT FOR AGGRESSION.

It is manifestly undesirable that we should ever attempt to maintain a standing army of 2,500,000 men. The objections which Americans have to great standing armies like those of Germany and Russia are well founded. How, then, can we ever be prepared to mobilize the needed number of trained and disciplined troops in so short a time? In answer to this question our military experts unanimously advocate the adoption of a system of universal compulsory military service based upon and largely copied from the Swiss system and its counterpart in Australia.

These offer us for adoption not an experiment, but a thoroughly tested and eminently successful method of national defense.

The underlying ideas of the German standing army and of the Swiss military system are diametrically opposed.

Militarism in the extreme type is overbearing, aggressive, and brutal. The patriotism it fosters is two-faced, for it inculcates hatred of neighboring nations quite as much as love of one's own country. In extreme cases it develops a patriotism gone mad, while it makes aggression easy and even inevitable.

By contrast, the Swiss and Australian systems make no preparation for aggressive warfare, and therefore do not hold up before the minds of the young any ambition for conflict beyond their own borders or for the conquest of their neighbors. Adequate preparation for self-defense curtails aggression and brings nearer and nearer the possibility of combined international action to curb truculent nations and to civilize barbaric races.

In the Australian system, military science taught by competent official instructors form a compulsory part of the education of every boy between the ages of 12 and 18; during those years he undergoes military instruction coincidently with his other studies, so that he reaches the age of 19 a trained soldier. His military education is imparted to him at the most acquisitive age, and does not interfere with his later productive industrial occupations. When he reaches the age of 19 he is enrolled as a soldier in the battalion of the region in which he lives. From that time he is in active service for two weeks of every year for practice which is intended to keep fresh in mind his military knowledge. He remains a member of the battalion for eight years, until he reaches the age of 27, and throughout that period he is at all times liable for service in defense of his country. After reaching the age of 19 he thereafter undergoes only about 112 days' training. He can not, however, be sent out of Australia unless he expressly volunteers for foreign service. The Australian Army unit is a battalion of 1,000 men. The country is therefore divided into units of population each of which contains approximately 1,000 young men between the ages of 19 and 27.

In Switzerland the young men after having had preliminary training in school join their regiments in their twentieth year, and during the summer of that year undergo two months of continuous intensive military instruction. For 12 years thereafter they are at all times liable for immediate service in defense of their country. During each of these years they perform two weeks' training in the field. After the age of 20, only about 30 weeks of military service are required, except in case of war.

The system recommended by American experts for adoption by this country would begin with the training of all boys between the ages of 12 and 18 in gymnastics, hygiene, the manual of arms, rifle practice, and platoon and company formations. In the summer of his nineteenth year every boy would be assigned to his regiment and begin active service with two months of intensive training in his battalion, regimental, and brigade maneuvers, and afterwards he would be enrolled for service for four years, or until he is 23—his service in time of peace being limited to two weeks spent in camp each summer. At 23 years of age the young man would be mustered out of his regiment and placed in the reserve, from which he could be called to active service only in case of dire need. This system would eventually furnish the United States with an active Army of 2,500,000 men under 24 years of age, and with a reserve of nearly 8,000,000 trained soldiers between the ages of 24 and 43 who could be called upon in case of a long war. Thus, after his eighteenth year a total of only 14 weeks' military training would be required of each normal male citizen.

No member of the citizen forces would be required either to serve outside the territory of the United States or to aid in suppressing local civil disorders such as strikes.

Each year in the United States a million men reach the age of 20, of whom about 65 per cent are fit for military service.

Military training and service would, under peace conditions, be completely finished by all men before they reached their twenty-fourth birthday, thus interfering as little as possible with their productive life. In the event that war were thrust upon us, the casualties would be borne by a class of men who, for the most part, had not yet acquired families or reached positions of great responsibility.

It should not be forgotten that the adoption of a system of preparedness in no way increases the liability of the individual to serve as a soldier in the event of war. If we should have a big war in the near future, the draft would, of necessity, be instituted and enforced and our citizens would all have to fight whether they liked it or not. Preparedness renders such an eventuality less likely, and makes it improbable that if we do fight, our dead would have to die in vain.

—

[From address by Hon. William H. Hughes, prime minister of the Commonwealth of Australia, at Ottawa, Feb. 19, 1916.]

THE AUSTRALIAN SYSTEM—THE PRIME MINISTER TELLS WHAT A GREAT ORGANIZATION HAS DONE FOR THE COMMONWEALTH.

It had been very well for us and very well for mankind if Britain had prepared as well by land as by sea. If she had done that, there would have been no war to-day. And this I say—and it is all that I shall say on this point—that Australia has been able to do what she has done because we have adopted as the corner stone of our democratic edifice the system of compulsory military training. We believe that there is but one way by which a nation, being free, can remain so, and that is that every man shall not only be willing to defend his country, but be able to do so. And we think that if it is right—as it surely is—that a democracy should educate its citizens so that the franchise shall be wisely exercised—for government by the many if the many are not educated is a doubtful good—so we think that the State should train the citizen so that he may be able to defend his country, his home, and his liberties.

The defense of one's country is the primary duty of citizenship. It is the first duty of free men. Two years before the outbreak of war we had established in Australia a system of universal military training. To this we owe the complex and widespread organization for training officers, noncommissioned officers, manufacturing small arms, ammunition, clothing, and so on, without which we should have been almost helpless in this great struggle. A small community of under five millions of people, yet we have been able to train, to equip from head to foot, a great army of men. It is a great thing and one which we may mention with pride and satisfaction that Canada and Australia have together put into the field nearly twice the number of the original British expeditionary force. We have put close on 300,000 men between us of first-class fighting men in the field. Australia could not have done her part unless we had a great organization created to prepare for danger. This one lesson must be learned from this great war. Some day the wings of the dove of peace may beat a soft lullaby throughout the land. But that day is not yet. Until that day dawns it is the duty of free men to be able as well as to be willing to defend their country.

Neither liberty nor our national rights can ever be safe when we neglect the defense of our country. This is a primary duty of citizenship of a free country. Nor can it be safe if we intrust it to volunteers. It can not be ignored nor left to volunteers. For as it concerns all, so must it apply to all. Liberty, the very basis upon which our national edifice rests; liberty, the very breath of our being; liberty, without which the more material side of civilization is as a dry husk, must be defended by all. With that I leave it.

## Explanation of the Rural-Credits Bill.

### EXTENSION OF REMARKS

OF

### HON. EDWIN Y. WEBB,

OF NORTH CAROLINA,

IN THE HOUSE OF REPRESENTATIVES,

*Friday, August 18, 1916.*

Mr. WEBB. Mr. Speaker, every Member of Congress who has sincerely the interests of the farmer at heart rejoices that we have passed the rural-credits bill, which will soon be organized and operated generally for the farmers' benefit.

Clarence Poe, Esq., one of the ablest writers of the South and now editor of the Progressive Farmer, published at Raleigh, N. C., says of this great piece of legislation:

> It is probably the most important piece of agricultural legislation in our generation, and every farmer ought to know its provisions.

I heartily agree with Mr. Poe, and am anxious that every farmer in the ninth congressional district shall understand thoroughly the provisions of this great measure, and I therefore present for publication in the CONGRESSIONAL RECORD an

explanation of this measure prepared by the Department of Agriculture, which is as follows:

NEW RURAL-CREDITS LAW—OFFICIAL EXPLANATION OF NEW MEASURES WHICH EVERY FARMER WANTS TO UNDERSTAND.

The primary purpose of this act is to promote agricultural prosperity by enabling farmers to borrow money on farm-mortgage security at a reasonable rate of interest and for relatively long periods of time. To attain this object, two farm-mortgage systems are provided: (1) A system operating through regional land banks, and (2) a system operating through joint-stock land banks.

To attract money to the farm-loan field, the act provides a method whereby those who have money to lend can find safe investments in the form of debentures or bonds of small and large denominations, issued by the banks and based on the security of mortgages on farm lands.

These two systems are to be under the general supervision of a Federal Farm Loan Board in the Treasury Department, composed of the Secretary of the Treasury, as chairman ex officio, and four members appointed by the President. This board has authority to appoint appraisers, examiners, and registrars, who will be public officials.

FEDERAL LAND-BANK SYSTEM.

Under the Federal land-bank system the act provides for Federal land banks which make loans, for the first 12 months, exclusively through local national farm-loan associations composed of borrowers. These associations shall be shareholders in the banks, and in that way the members, who are the borrowers, will share in the profits of the bank. The money for the loans is to come partly from the capital of the banks and partly from the sale by the banks of bonds secured by first mortgages on farm lands.

The United States shall be divided into 12 farm-loan districts, and a Federal land bank with a subscribed capital stock of not less than $750,000, each share $5, shall be established in each district. Each Federal land bank may establish branches in its district.

Within 30 days after the capital stock is offered for sale it may be purchased at par by anyone. Thereafter, the stock remaining unsold shall be bought by the Secretary of the Treasury for the United States. It is provided, however, that the Government shall not receive any dividends on its stock. Ultimately, it is intended that all the stock in the banks shall be owned by the associations of borrowers, and provision therefore is made in the law for transferring the original stock at par to these associations.

WHAT "NATIONAL FARM-LOAN ASSOCIATIONS" ARE.

The act provides for the creation of local "national farm-loan associations" through which it is contemplated that the Federal land banks shall make their loans. Ten or more persons who own and cultivate farm land qualified as security for mortgage loan under the act, or who are about to own and cultivate such land, may form such an association, provided the aggregate of the loans desired by the membership is not less than $20,000. Each member must take $5 stock in his association for each $100 he wishes to borrow, selling this stock when he pays his debt. The association in turn, when applying for money from the bank, must subscribe for stock in the bank to an amount equivalent to 5 per cent of the sum it wants to obtain for its members. If a prospective borrower has no money with which to pay for his association stock, he may borrow the price of that stock as part of the loan on his farm land.

In the event that a local loan association is not formed in any locality within a year, the Federal Farm Land Board may authorize a Federal land bank to make loans on farm land through approved agents.

HOW LAND OWNER MAY GET A LOAN.

A member of a "national farm-loan association," before obtaining a loan, must first fill out an application blank supplied to the loan association by the Federal Farm Loan Board. This application blank and other necessary papers will then be referred to a loan committee of the association which must appraise the property offered as security. Such application as is approved by the loan committee is then forwarded to the Federal land bank and must be investigated and reported on by a salaried appraiser of this Government bank before the loan is granted. This appraiser is required to investigate the solvency and character of the prospective borrower as well as the value of his land. When a loan is granted the amount is forwarded to the borrower through the loan association.

RULES FOR MAKING LOANS.

The act specifically defines the purpose for which loans may be obtained. These are:

"(a) To provide for the purchase of land for agricultural use.

"(b) To provide for the purchase of equipment, fertilizers, and live stock necessary for the proper and reasonable operation of the mortgaged farm; the term 'equipment' to be defined by the Federal Farm Loan Board.

"(c) To provide buildings and for the improvement of farm lands; the term 'improvement' to be defined by the Federal Farm Loan Board.

"(d) To liquidate indebtedness of the owner of the land mortgaged existing at the time of the organization of the first national farm loan association established in or for the county in which the land mortgaged is situated, or indebtedness subsequently incurred for one of the purposes mentioned in this section."

FOLLOWING ADDITIONAL FACTS SHOULD BE BORNE IN MIND.

1. Loans may be made on first mortgages on farm land.

2. Only those who own and cultivate farm land, or are about to own and cultivate such land, are entitled to borrow.

3. No one can borrow save for the purposes stated in the act, and those who after borrowing do not use the money for the purposes specified in the mortgage are liable to have their loans reduced or recalled. The secretary-treasurer of each association is required to report any diversion of borrowed money from the purposes stated in the mortgages.

4. No individual can borrow more than $10,000 or less than $100.

5. No loan may be made for more than 50 per cent of the value of the land mortgaged and 20 per cent of the value of the permanent insured improvements upon it.

6. The loan must run for not less than 5 and not more than 40 years.

7. Every mortgage must provide for the repayment of the loan under an "amortization" plan by means of a fixed number of annual or semiannual installments sufficient to meet all interest and pay off the debt by the end of the term of the loan. The installments required will be those published in amortization tables, to be prepared by the Farm Loan Board.

INTEREST RATES CAN NOT BE OVER 6 PER CENT AND MAY BE LESS.

No Federal land bank is permitted to charge more than 6 per cent per annum on its farm mortgage loans, and in no case shall the interest charged on farm mortgages exceed by more than 1 per cent the rate paid on the last issue of bonds.

For example, if the bank pays only 4 per cent on an issue of bonds, it can not charge more than 5 per cent for the next farm loans it makes.

The Democratic Party during the last four years has passed more helpful, useful, important legislation to the people of the United States than any dozen previous Congresses ever passed. The currency bill is one of the chief pieces of our legislation and its handmaid now is the rural-credits law, which we have just passed.

It is needless to say that I have been insistent upon the passage of such legislation for a number of years. I have urged it in season and out, because I believe it will bring about the emancipation of the farmer and will bring about conditions financially which will enable every energetic tiller of the soil to become prosperous and happy, and I am happy to have had an humble part in the passage of this epoch-making measure.

## Navy Appropriation Bill.

### EXTENSION OF REMARKS

OF

### HON. SEWARD H. WILLIAMS,

OF OHIO,

IN THE HOUSE OF REPRESENTATIVES,

*Tuesday, August 15, 1916.*

Mr. WILLIAMS of Ohio. Mr. Speaker, I supported the original Navy bill and the amendments sought to be made to it in the House providing an increase in the number of vessels. I shall support the conference report now before us. There are many reasons why this Nation should adopt a substantial policy of strengthening the Navy. For years we have rested in the belief that a world struggle, such as exists to-day, could not happen. But the fighting spirit of humanity is aroused. The air seems to be saturated with a war temperature. Commercial jealousies have engendered hatred among nations, which will not die with the termination of the European war. Mexican troubles will bring home to us the grave responsibilities of the Monroe doctrine after the close of the war. The Paris agree-

ment, of June of this year, as to national European combinations relative to international trade will bring us face to face with a new world power in this respect. We must be prepared to meet this power and be in a postiion to command the respect of combinations of powers in Europe regarding our rights on the seas if we would maintain our over-sea trade. Had we to-day a navy commensurate with the needs of a nation of 100,000,000 people, it is safe to say that our legitimate trade and our mail service would not be as openly interfered with. It is necessary, in view of the alliances of European powers, for our country to have a navy of sufficient power to repel any possible invader. An adequate navy is the best instrument to insure the peace of our country. Its moral effect will be most beneficial in times of threatened disturbances.

Not only must we be prepared to resist invasion of our States, but we must also be prepared to protect our possessions which are located within the circle of influence of other powerful nations, and the cost of adequate preparation will not approach the cost in life and money necessary to repel invasion. All our responsibilities do not lie wholly within our own borders. There is bound to be a great struggle for the extension of commerce. Already national combinations are being formed to capture the trade over the seas. If we fail to place ourselves in a position to follow our legitimate trade with an adequate naval force, we will be brushed aside with a ruthless hand in the same manner by which we are now suffering from gross violations of international law in the illegal interference with the transmission of our mails to and from foreign countries.

As it is our duty to fortify the Panama Canal, so it is our duty to provide and maintain a Navy sufficiently strong to enable us to reach the canal at any time and under any conditions. We have expended $400,000,000 in constructing the waterway across the Isthmus in order to establish a shorter route between the Atlantic and Pacific. This canal is our property. It will be of immense value to us in time of war, but our ability to use it will depend entirely upon the ability of our Navy to keep the waters clear of belligerent vessels at either terminus.

Through the Monroe doctrine we have maintained the position that the American Continent is for Americans, and that European powers must keep hands off. At the same time we have acquired insular possessions in the Old World. Our ability to protect the islands and to enforce the Monroe doctrine and to assume the responsibilities of the Monroe doctrine will depend upon an adequate naval force. As to the question of what constitutes an adequate naval force for the United States, I know of no better answer than that of Admiral Knight, who said:

> The answer will depend, of course, upon the purpose for which we assume that the Navy is to be used. We are all agreed, I presume, that it is not to be used for aggression. Is it, then, to be used solely for defense? If we answer yes, we ought to do so with a full recognition of what we are to defend, and also of the elementary maxim that the best defense is a vigorous offense. In other words, no matter how resolute we may be to use our Navy only for repelling aggression, it does not follow that we should plan for meeting the aggressor only at our gates. Even if we had no interest outside our borders and no responsibilities for the defense of our outlying possessions and dependencies, we should still, as reasonable beings not wholly ignorant of history, prepare to project our battle line toward the enemy's coasts and to assume a course which would throw upon him the burden of replying to our initiative. In this sense, then, we need a Navy for offense; that is to say, for offensive action with a defensive purpose. In shaping our plans along these lines we should not overlook the fact that the policy which dictates the measure of our defense must take full note of the larger national policy which it is to enforce, in relation, for example, to the Monroe doctrine, the Panama Canal, the Philippines, and other matters which are at once of national and of international significance.

The provisions of the pending amendments tend toward the establishment of a strong foundation for an adequate naval force. It assures the people of our country, who are not too proud to fight should it become necessary, that there is some material at hand with which to defend and protect our territory and our rights.

While we must prepare to protect our territory and our rights on the seas, we should not overlook the necessity of proper preparation for the protection of our commercial interests, which will be threatened after the European war. For when that war terminates there will come a commercial struggle among the powers of the world which may, unless a protective policy is adopted, prove as disastrous to our country as shot and shell.

Our importations are greater now than at any other time in the history of our country, while our exports have been tremendously augmented by arms, munitions, and war supplies. In the future these latter exports will cease. We can not expect to sell so much arms and munitions of war to the nations of Europe when the war is ended. When peace is restored those nations of the world will go on selling us their products, as they are now doing, and in addition the nations that can not now sell will be free to dump their products into our country as they did before the outbreak of the war. The belligerent nations will be more heavily taxed than ever before and will seek to flood our markets with their cheaper-made goods. Our immense stocks of gold will be most attractive.

To-day statistics show that foreign imports are being received at a rate in excess of two and one-half billions of dollars a year with some of the largest trading countries of Europe shut out of the market. As long as these imports are exchanged for war material we will not suffer financially, but when the war ceases and we are not making war supplies, then our wage earners must find employment in our industries of peace; but if those industries are closed because of the importation of the cheaper-made products of Europe admitted under the free-trade act, then will our industries be crippled. Economic disaster can not be avoided unless we check the flood of foreign-made goods into our country, when our immense exports of war supplies have ceased, by adopting a protective tariff which has always brought substantial prosperity to American workmen and American industries alike.

In the readjustment of affairs following the close of the war our country may be materially affected, and if trouble does come it may be shortly after the close of the war. It is therefore necessary that the building of vessels be speeded along as rapidly as possible. If the facilities at the disposal of the Government are not ample to accommodate the building of vessels authorized by Congress, within the prescribed time, private shipyards should be given an opportunity to assist in the construction under such governmental supervision as would insure a proper return for each dollar expended. It is charged that a policy of economy has not been exercised in the matter o. expenditures authorized for the building of our Navy and navy yards. It is reported that during the first 15 years of the present century we have spent $1,600,000,000 on our Navy, while Germany has spent $1,100,000,000. In other words, Germany spent 30 per cent less on her navy than we did on ours, and had a more powerful navy than we had. The difference of half a billion of dollars would have built two superdreadnaughts a year for a period of 15 years, at a cost of $15,000,000 each, with $50,000,000 still remaining for destroyers, submarines, or battle cruisers. This construction would have doubled the war strength of our Navy.

May speed, economy, and efficiency characterize the future construction of our Navy.

## The Washington Primary Law.

### EXTENSION OF REMARKS
OF
### HON. WILLIAM E. HUMPHREY,
OF WASHINGTON,

IN THE HOUSE OF REPRESENTATIVES,

*Friday, August 18, 1916.*

Mr. HUMPHREY of Washington. Mr. Speaker, there is an interesting article in the American Economist under date of August 16, 1916. While I can not say that I agree entirely with all opinions and conclusions drawn in that article, it does, I believe, correctly state the facts, and it will be read with interest by every voter in my State, for each one of them desires to understand the second-choice provision of our primary law and how to correctly vote when it is invoked. The article referred to is as follows:

"A FREAK PRIMARY LAW.

"We have given considerable attention to the direct primary laws. Some of them are good and some of them are bad. The primary system has doubtless come to stay, but all of these laws in the various States ought to be made uniform and fair, with special reference to securing the honest judgment of voters of all parties for nominations to public office.

"In the State of Washington they have a freak primary law, which provides that if four or more candidates 'file' for the same office the voter must vote his first and second choice. The second-choice law provides:

"(1) If the voter votes for one candidate only, the ballot is not counted.

"(2) If the voter votes for the same candidate for both first and second choice, the ballot is not counted.

"(3) The voter must vote for two different candidates or the vote is lost.

"This law virtually takes away the right of the voter to vote as he desires, and often compels him to help nominate a candidate he does not want, in order to cast his ballot for one he does want. Unless some candidate receives 40 per cent or more of the first choice votes, then the first and second choice votes

of each candidate are added together, and the one having a plurality of first and second choice votes combined becomes the nominee.

"This system of voting leads to many mistakes and much confusion. The strong candidate always suffers most. In one primary contest, Congressman HUMPHREY lost between four and five thousand votes, where the ballots were marked for him for both first and second choice. In view of the great importance, not only to that State, but to the whole country, of the senatorial contest in Washington, it is hoped that the voters will study well this law and make as few mistakes as possible.

"The weak man wants the second choice. It may happen under this reform system that a candidate may be nominated by the second choice provision who a small minority of the voters desire. It is used by designing politicians for this very purpose.

"Two strong men may be candidates. The weaker third man decides that, if he can get the contest thrown to second choice, he may be nominated on account of the mistakes and confusion which will arise by getting second choice votes from both of the strong men. It is an easy matter to persuade some "dummy" to file so as to invoke the second choice provision. This very situation exists in the present Washington senatorial contest.

"Senator POINDEXTER and Congressman HUMPHREY are the strong candidates. A majority of the Republicans want one or the other of these men nominated. Apparently there is but one way that the people can work their will, at least, in the coming senatorial contest to defeat the effects of this freak law, and nominate the candidate they wish. That is, the friends of the strong candidates should scatter their second choice votes among the weak and unknown candidates upon the ticket.

"The majority of the people of the State of Washington of all parties condemn this law. The last Republican State convention declared unanimously in favor of its repeal." (From the American Economist, August 16, 1916.)

---

**The Real Issue Before the Country.**

---

## EXTENSION OF REMARKS

OF

## HON. S. D. FESS,

OF OHIO,

IN THE HOUSE OF REPRESENTATIVES,

*Monday, August 21, 1916.*

Mr. FESS. Mr. Speaker, there are two well-defined policies which have sharply distinguished two schools of political thought in this country. The one school led by Washington and Hamilton at the outset believed in establishing and maintaining an American standard of living in contrast with that of Europe, by aid of a protective law. Later, this American policy was styled by Henry Clay the "American system." While Calhoun favored it in 1816, he bitterly opposed it in 1828, and denominated similar legislation the "bill of abominations." Up to the thirties it was not in sharp dispute. But with the growth of cotton as the controlling staple of all the southern section of the country the question of protection which looked to a diversification of industry here at home was attacked as inimical to the southern cotton grower. He wished to sell his cotton in Europe and in turn buy his goods he did not produce in the European market instead of American, simply because it was a cheaper market. His theory was tariff for revenue, but no other purpose. The only "revenue only" bill enacted before the war was introduced by Walker, of Mississippi, and passed into law in 1846. It well expressed the southern theory.

During the Civil War the northern protection idea was enacted into law by the Morrill Act. Morrill was from Vermont. It was solidly opposed by all the cotton States. It well expressed the protection or northern theory.

In 1887 Roger Q. Mills, of Texas, introduced his famous Mills bill, which failed of passage notwithstanding a solid support from the cotton States. It was in line with the cotton States men's theory.

The protective measure of 1890 was carried through the Congress under the leadership of McKinley, opposed by all the cotton States. It again expressed the northern or industrial idea of the country.

In 1894 the famous Wilson bill became a law, the second "revenue only" law in our history. It was carried through Congress by Wilson, of West Virginia, with a solid support of all the cotton States. It was drafted over the southern plan.

In 1897 this bill was repealed and the famous protective measure, known as the Dingley law, was carried through Congress by Dingley, of Maine, against the solid opposition of the cotton States. It best expressed the northern idea.

In 1913 the Underwood law, the third "revenue only" bill of our history, was carried through the Congress by the solid vote of the cotton States, aided by Democrats of the North. It is a good expression of the southern idea on sugar and many other items.

It will be noted that the three "revenue only" bills which have been placed upon our books were southern measures, introduced by southern men, and carried into legislation by southern votes, while all the protective measures which cover all our periods since the Civil War save the three years 1894 to 1897, and the present period 1913 to 1916, have been introduced by northern men and carried into legislation by their votes against the solid opposition of the South. I mention this fact of history to call attention to its reasons. The South is the source of Democratic legislation on the revenue laws.

Unfortunately the South has persistently confined its productive activities to one staple product, in the main. While in recent years it has entered upon a more diversified production, yet it looks to cotton as the chief item of its production. Unfortunately it persists in sending its raw cotton to Europe to be manufactured into the finished article which it buys back, paying not only European labor for such work, but the transportation across the ocean of the raw cotton and again in return in the shape of a fabric. While it is true under northern stimulus many cotton mills have been erected in the South, yet three-fourths of the product to-day is exported in a raw state. This should not be. Here is the source of the free-trade propaganda. These southern statesmen insistently demand the right to purchase the needed articles of consumption in the European market because of lower prices due to cheaper labor in Europe. This is the Democratic theory as the party now is dominated. On the other hand, the Republican theory is the reverse—establish manufactures here by assisting capital here. Employ labor here, maintain an American standard of living here—diversify our industries by stimulating the producer to make possible the consumer, and vice versa. Produce everything here that is possible to our energy.

The Republican idea is to build up and maintain the home market. That means to bring the agriculturist, the manufacturer, the miner, and the exchange man all into close cooperation. It proceeds upon the theory that what will aid the one will not hurt the other. It means to make possible the producer by making possible the consumer. It invests capital in order to employ labor. In this way what helps the consumer will not hurt the producer.

If a policy looking to the upbuilding of American enterprise should be favored by anyone, it is the man who toils. What he wants is steady employment at American wages, which can not be realized by a revenue-only policy, simply because it is impossible if he is not protected from the low standards of Europe. The only protection is in the law. We have been able to secure this protection when we maintained protective legislation. This American legislation has been uninterrupted since the days of Lincoln save a bare half dozen years, the two periods marked by the Wilson bill and the Underwood bill—both periods notorious for the universal distress among our people. The Republican contention, backed by our own history, is that it is a national duty to insure our standards against the lower standards of Europe.

We have an object lesson of the result of open competition between this country and Europe in our own merchant marine. Upon the sea our law is not supreme as it is within our national boundaries. The practices of Europe on the sea are not within our control. Hence Europe's cheap labor, with no regulatory management such as we exercise on behalf of the American worker, has literally driven from the sea the American merchant marine—simply and only because American enterprise upholding American standards can not compete on the open sea with European enterprise with lower standards. This concrete object lesson is but an illustration of what will occur within our own domain when we remove our protective legislation and make our markets as open to European competition as is now the ocean. This is what Republicans refuse to do. This is what Democrats are trying to do. The President's pet phrase is to compel Americans to whet their wits; his Secretary of Commerce says he wants Americans to reach the efficiency of their European competitors.

If this theory, born in the cotton fields of the South, is to prevail, there is but one of two alternatives—either our business

will be transferred to Europe as in the case of the merchant marine or else our labor conditions will be made to compete with those of Europe.

Free trade presupposes equality of conditions. We can easily enter upon free-trade schedules with Europe if we are ready to lower our standards of expenditures to meet theirs. In that case we will retain our business at frightful cost to the American toiler. If we refuse to meet the competition, then we will lose the trade just as we have upon the sea.

Mr. Speaker, when the Underwood bill was under discussion I addressed the House on the 25th of April on the caption, "The Underwood Act, a bill which ought to be entitled 'An act in the interest of foreign countries as against the United States.'" I stated then that I would be willing to open our gates when Europe lifted her labor to our plane, but I would not vote to lower our labor to her plane. Any man who makes the effort to connect effect back to a cause could not be mistaken as to the inevitable effects of such legislation, even though he had not taken the time to refresh his memory upon the effects of similar legislation 20 years before.

Mr. Speaker, having been a student of the tariff question I had paid some attention to the Wilson bill of 1894. It did not escape my mind that while the southern Democrats exempt from the serious effects of the smashing of the industries of the country so long as they can sell their cotton to Europe were loudly declaiming the virtues of their "revenue-only" law of 1894–1897, the country's business struck its lowest ebb. Capital refused to invest; labor dependent upon capital went upon the streets to feed in soup houses and in the bread line. Imports from Europe increased while exports decreased, balance of trade against us, gold going to Europe to settle the balance, Treasury embarrassed, and an issue of bonds. A period of suffering relieved only by repudiation of the party guilty of such disastrous legislation, and a revival of protective policy at once in the Dingley bill.

With these facts fresh in mind the Democratic leaders were warned of the inevitable effects of their proposed legislation, the Underwood bill, which was still lower in rates of duty than its fatal predecessor of 20 years before.

The law went on the books October 4, 1913, 10 months before the European war opened. What followed? Note the deadly parallel.

Capital in hiding, enterprise paralyzed, business bankrupt, and labor on the streets seeking employment, charitable organizations, as well as municipalities taxed to their limit to provide relief. Soup houses and bread lines resorted to even to a greater extent than the disastrous period of 20 years before, imports from Europe increased, exports decreased the magnificent balance of trade of over one-half billion dollars in our favor, now for the first time in 20 years turned against us, gold leaving the country to settle the balances, a pool proposed to control the export of gold, Treasury embarrassed, Democratic deficiency, stamp tax levied.

Can there be any marks more distinguishing of Democratic legislation than these 1894–1897 and 1913–1916? These are the plague spots of recent years. President Wilson had assured the country he did not intend and would not cripple any legitimate industry. When told his proposed legislation would paralyze industry and displace labor, UNDERWOOD declared from the floor of the House that the Bureau of Foreign and Domestic Commerce would punish any employer who would dare slow down upon business to the hurt of labor. What followed?

Mr. Speaker, one of the best business barometers of the country is the railroads; they are so intimately connected with the business life of the Nation that injury to them will be felt quite generally. This is because of the tremendous importance of this branch of public and private business. Note these figures: Twenty million people, or one-fifth of our population, either directly or indirectly interested in the railroad business; 2,000,000 wage earners directly employed, to whom are paid $1,500,000,000 in wages; 1,000,000 workers in plants supplying the material for the roads, representing 5,000,000 more dependent upon them; 1,500,000 stockholders representing at least 6,000,000 persons. The roads paid in expenses in 1913, $2,165,000,000—$23.50 per capita of our entire population—including men, women, and children.

The effect of the Underwood bill upon this enterprise is shown by comparing the earnings of the fiscal year of 1914, the first year of the law, with those of the year of 1913. The gross earnings decreased $44,000,000, expenses and taxes increased $76,000,000, the net operating income decreased $120,000,000. Taxes increased $12,600,000, a total of $252,600,000 of loss to this branch of industry in one year, which marks the railroads' contribution to Democratic legislation.

DECREASE OF OPERATING REVENUES.

The total operating revenues during the fiscal year 1914 amounted to $2,991,398,735, or an average of $13,266 per mile of line; operating expenses amounted to $2,455,072,345, or an average of $9,557 per mile of line; the residue, net operating revenue, amounted to $536,326,390, or an average of $3,709 per mile of line. Compared with the fiscal year ending June 30, 1913, the fiscal year 1914 shows a decrease in total operating revenues per mile of $471, or 3.4 per cent; an increase in operating expenses per mile of $38, or 0.4 per cent; a resultant decrease in net operating revenue per mile of $510, or 12.1 per cent. Taxes per mile increased $53, or 9.6 per cent, while operating income decreased $577 per mile, or 15.7 per cent.

To meet this critical situation the roads inaugurated a campaign of retrenchment on expenses. Trains which had been a part of regular schedules for years were taken off. Great forces of labor were reduced. In the month of July, 1914, just before the war in Europe opened, the number of cars passing daily Lewistown junction on the main line of the Pennsylvania Road was 680 less than in July of 1913. For the month this would amount to 20,400 cars less than the year preceding on but one line of but one system among a great many railway lines in the country. By May 31, 1914, just two months before the war and seven months after the Underwood bill took effect, the Pennsylvania Co. laid off 24,124 men. In March of 1914, five months after the bill went into effect, 34 roads, representing one-half the railroad mileage of the country, had reduced their force 119,537 men, or over 10 per cent.

The disastrous effect of this law is best shown by comparing the number of idle cars on the tracks in 1914 with 1913. Here is the statement by months that tells its own story:

| | 1914 | 1913 |
|---|---|---|
| Jan. 15 | 214,889 | 28,433 |
| Feb. 1 | 204,678 | 37,263 |
| Feb. 14 | 197,052 | 22,183 |
| Mar. 1 | 153,907 | 31,381 |
| Mar. 14 | 124,895 | 37,775 |
| Apr. 11 | 139,512 | 57,988 |
| Apr. 15 | 212,869 | 57,408 |
| May 1 | 228,879 | 39,799 |
| May 15 | 238,642 | 59,204 |
| May 31 | 241,802 | 50,908 |
| June 15 | 232,334 | 63,927 |
| July 1 | 219,545 | 63,704 |

According to the latest report on April 1, 1915, the total surplus of cars was 313,421, the total shortage 348, and a net surplus of 313,073. On March 1, 1915, the corresponding surplus was 321,787, and on April 1, 1914, it was 139,512.

There is no more conclusive evidence of the prostrating effect of legislation than the above figures. They are in sharp contrast with the bombastic boast of our Democratic stump orators, who first denied the situation and then its causes.

The building program of the roads is another business index which impresses the country in the same way. Here is the statement from the New York Evening Post, a prominent free-trade sheet:

| | Locomotives. | Freight cars. |
|---|---|---|
| 1914 | 926 | 78,604 |
| 1913 | 5,332 | 207,684 |
| 1912 | 4,915 | 152,429 |
| 1911 | 3,530 | 72,161 |
| 1910 | 4,755 | 180,905 |
| 1909 | 2,887 | 93,570 |
| 1908 | 2,342 | 76,555 |
| 1907 | 7,352 | 284,188 |
| 1906 | 6,952 | 240,503 |
| 1905 | 5,491 | 165,155 |
| 1904 | 3,441 | 60,935 |
| 1903 | 5,152 | 153,195 |
| 1902 | 4,070 | 152,590 |

In 1914 orders for 926 locomotives were given, while in 1913 under protective tariff the number was 5,332, nearly six times as many. In 1914 orders for 78,660 freight cars were given, while in 1913, 207,684, or nearly three times the number.

It will be noted that the orders for locomotives the first year of the Underwood bill was the lowest in 20 years.

Closely identified with the railroad industry is that of steel, which is one of the best business barometers of the Nation. This is one story of the iron and steel industry, according to investigations made by the Daily Iron Trade:

Eighty-seven days of the "new freedom" and "free trade":
More than one-third of all the steel mills in the United States closed.
More than 1,000,000 men idle.
More than $2,000,000 in wages per day gone.

More than $125,000,000 invested in closed mills.
An annual pay roll of more than $746,000,000 wiped out.
But this is not all, for connected with the iron, steel, and metal trades are 28,000 separate and distinct establishments employing 2,000,000 men, 1,000,000 of whom are idle. So we have altogether 2,000,000 idle men in the iron and steel business.

Other industries felt the same shock. The Waltham Watch Co. in 1914, before the war opened, placed 3,000 men on short time.

The most serious effect of this sort of legislation is always felt among the toilers. In the railroad business alone 242,500 men were laid off in 1914 up to July, just nine months after the Underwood bill took effect and the month before the war broke out in Europe. It was estimated that the unemployment throughout the United States would reach the enormous figure of 4,000,000, either totally out of work or on short time. Here are the estimates of trade journals:

New York, March, 1914, 350,000 workers out of work; Boston, March, 1914, 20,000 workers out of work; Chicago, March, 1914, 50,000 workers out of work; Los Angeles, January, 1914, 35,000 workers out of work; San Francisco, August, 1914, 25,000 workers out of work; Pittsburgh, August, 1914, 50,000 workers out of work.

On January 10, 1914, three months after the bill went into effect, there were 1,000,000 men in the metal trades idle, with a loss of wages of $50,000,000 per month. There were 270,000 men in the mines, with a loss in wages of twelve million per month. There were at the same time 19,300 men idle in the Baldwin Locomotive Works. On March 1, 1914, five months after the law went into effect, there were 100,000 men idle on the Pacific coast. This stagnation of business extended to every line of industrial activity. The New York Herald, a supporter at the time of the Underwood Act, printed on December 15, 1913, two months after the law took effect, a statement of business conditions, as follows:

The north Atlantic group of States, embracing the great industrial centers found in New York, New Jersey, Pennsylvania, and Delaware was reported to be "at a standstill." The great States of the Middle West—Ohio, Indiana, West Virginia, Illinois, Michigan, Wisconsin, Kentucky, Tennessee, and Missouri—were reported unfavorable.

Col. George Pope, of Connecticut, sent out an inquiry June, 1914, upon the business situation. This inquiry went to the heads of business firms, representing every shade of political opinion. The answers were substantially the same:

Business is unsatisfactory.
Our sales are below normal.
We can not make collections.
The outlook is discouraging.
We must have relief from lawmaking.

On May 29, 1914, a deputation representing manufacturing interests in Ohio and Illinois to the amount of at least three-quarters of a billion dollars, employing an army of workers, called upon the President at the White House to make a frank statement of the business situation of the country as it then existed, and to memorialize him for relief. The spokesman was from my own district, and is a distinguished Democrat. The President's answer to their prayer was the now famous assurance that business was all right, and the situation was merely psychological. Imagine the sensation of these seasoned business leaders, upon whose shoulders were the heavy burdens of keeping their business organizations intact, both for their own benefit and that of their employees, when told they must not be disturbed because the situation was a mere state of mind. They had not been conducting their business on such lines.

On the 25th of June the President, speaking to the country through the Virginia Press Association, which he addressed, assured the public that there were symptoms of a revival of business. The very papers that carried this surprising assurance detailed the Claflin failure of $34,000,000, the largest industrial failure in the history of business. The papers on the same day announced that 3,000,000 wage earners were on the streets of our cities looking for work throughout the country. This was the beginning of a riot of bankruptcies which before the year ended had scheduled more industrial failures than any similar period since the Wilson tariff law of 20 years ago.

At the very moment Democratic leaders were denying the state of affairs Mayor Mitchel, of New York, demanded that the municipal budget be cut from ten to six millions, because the city was in a state of "great business depression."

The spring of 1914 witnessed the greatest test in our history of various charitable associations to care for the unfortunate victims of bad legislation. Many cities issued bonds in order to find employment on public works for the suffering idle, who up to that time had been well employed. Every altruistic association in the great cities, including the churches, was strained to find public lodging houses, to establish municipal soup houses, to lodge and feed the unfortunates. The bread lines had never been so long and persistent as at this time. In his famous address at Indianapolis, January 8, 1915, the President recommended an employment bureau as a part of the Government activities. The country then, as now, believed the best possible employment bureau is an administration that will make possible the employment of labor in the thousands of industries, where self-respecting men can find work and wages and not be compelled to ask for charity. Here is where the country will indict this administration. It is foreign in its policy, its legislation, its effect. It is inimical to labor and inefficient from every point of view.

Its bald extravagance, which is simply appalling, together with its inefficiency of administration, will surely lead to its expulsion from power at the next election. It is amusing to note the various explanations of the administration. At first the leaders closed their eyes and refused to acknowledge the actual results. Democratic orators denied the fact of distress. However, the President admitted the situation, but explained it upon the basis of psychology. After this admission the leaders declared the situation was due to an overabundance of crops, a glutted market. But when that failed of satisfaction to explain the real situation they put the blame upon the Interstate Commerce Commission in its failure to give to the railroads an increase of rates. The demagogue loudly declared that it was the result of a conspiracy of business men to repudiate the administration. However, now and then a Democrat of independent mind was bold enough to admit the facts, as did Congressman METZ, of New York, when he declared on the floor of the House that "hundreds of businesses are running at a dead loss to keep their organizations together."

This was the situation July 31, 1914, just 10 months after the enactment of this southern "revenue-only" law took effect. Then the war in Europe came. Within a month the nations which contained half the world's people were in arms. In due time it encompassed three-fourths of the world's population. The European producer, who under the Underwood bill was rapidly seizing our trade and thus displacing our capital and labor, suddenly ceased to be our competitor and became our greatest consumer. On the 21st of last month I pointed out the figures which tell the story of the war-order prosperity. With all Europe looking to us for supplies our productive capacity has been taxed to its limit. This is expressed in our fabulous exports. The Democratic leaders immediately seized upon the war as an explanation of all the woes brought upon us by their legislation. At the time it was asserted on the floor of the House by Republican leaders that any man with a thimbleful of brains must know that the war can have but one effect upon our trade—a wonderfully stimulating result. In the face of this most apparent fact our Democratic leaders, without the slightest compunction, are daily making the absurd claim that these exports and the present stage of prosperity are due to Democratic legislation. In distress it was war, in prosperity it is Democratic legislation. It would appear that sheer respectability for opinion's sake would be a deterrent to such a claim; but not so in this Congress. This sort of twaddle will not get far. The American electorate are not to be deceived. They have already given evidence of that fact. They spoke in no uncertain tones in November of 1914, when the friends of protection were still in divided camps.

To-day, when these friends are under the same banner, the country can expect but one result—a complete repudiation both of this vicious legislation and the cheap demagogic claim for such legislation. This result will be reached in the repudiation of a policy conceived in the interest of foreign rather than American enterprise. It will be made also a decisive rebuke for the hardihood of the claim that the present blood-soaked European prosperity is due to legislation. If we wish to know what to expect in the future, we need but look to the past. The industrial situation in 1914, before the war opened, is sufficient evidence of what we may expect when the war closes. The people of this country will never risk the readjustment that must come at the close of the war to legislators now in control of the Government. When 30,000,000 soldiers return from the fields and trench to resume their industrial pursuits, they will find many places filled by women doing well the work they formerly did. Then will come that competition for place which will compel a reduction of wages from the already low standard of Europe. This lowering standard will be augmented by the staggering debt under which Europe is now groaning. They will cease to buy from us, and thus avoid an increase of debt, but they will sell to us to reduce it. Europe's goods, made by the cheapest-paid labor, will flood our markets and will expel our goods, made by the highest-paid labor. What we experienced prior to the war will be but an incident to what we must suffer after it ends, unless remedial legislation interposes. In

such a crisis this country will never risk the Democratic remedy in the form of tariff for "revenue only" legislation. It will naturally turn to a protective system, which has now been embraced by every country of Europe. It will naturally appeal to the Republican Party, under the leadership of the country's most distinguished jurist, and will place in his hands and in the keeping of those who believe in an American system the constructive work of readjustment, inevitable on the cessation of hostilities, and upon which the welfare of a hundred million people will be dependent. Whatever other issues may differentiate the dominant parties of the country, the paramount issue in this campaign must be whether the free-trade party of the country, dominated by the cotton States men, which under their latest legislation, styled the Underwood Act, precipitated the country, which up to that time was in the acme of prosperity, into the most disastrous prostration experienced since the last Democratic legislation of 20 years before—whether that party shall be intrusted to power to meet the problems of readjustment. A party that strangled the business of the country in 1913 will not be trusted in 1916 to rebuild from its own ruins.

## Invisible Government and the Consequence of It.

### EXTENSION OF REMARKS

OF

### HON. CHARLES A. LINDBERGH,

OF MINNESOTA,

IN THE HOUSE OF REPRESENTATIVES,

*Wednesday, July 5, 1916.*

Mr. LINDBERGH. Mr. Speaker, I extend these remarks in the hope that they may be of interest to the country, for I know that the facts that I present are important and should be understood by everyone. No matter what individual professions and party claims may be to the contrary, it is apparent to anyone who has been more than four years a Member of Congress, that the will of the people in regard to legislation is seldom consulted. The price of leadership here is exactly the opposite of carrying out, in good faith, the will of those whom we are elected to serve. Wholesale deception of the electorate has been, and is now, the means most successfully used to secure office and remain in public life. Committees that meet in secret and party caucuses held behind closed doors restrict legislation strictly to such measures as are desired by "special privilege," or to manipulate and emasculate legislation made to conform to popular demand in the title clause only. The bosses know how, and they use their knowledge, when all other means fail, to so manipulate a disagreement between this body and the Senate as to completely avoid in conference such a compliance with the popular will as would in any degree benefit those who send us here and pay our public salaries. There is the rub. We are not, many of us, earning the salaries that the Government pays us, but rather receive the benefit of the campaign funds supplied by "big business."

Everyone here knows that these things are true. Go back, Mr. Speaker, in your own recollection, to those stormy days on this floor when your predecessor occupied that chair and you were the leader of the minority. Recall how a few of us on this side of the House lead in a fight, refusing to bow to the party lash. We were joined by you and your followers in a demand which was backed and applauded by a vast majority of the American people, that this should in fact and deed become a representative body with rules that would make it responsive to the will of a majority of its own Members. Does it not often recur to you in your meditations concerning your long service here, how the reforms then demanded were made innocuous and practically defeated by the defection of 23 Members of your own party who were here—and who can doubt it—for the express purpose of serving the selfish interests of the "invisible government"? I can not but believe that your mind has speculated upon what different and more beneficial lines the course of legislation might have followed had those 23 Members been true to the interests of good government at that time. Mr. Speaker, I feel sure that you will recognize that I am not at all exceeding the limitations of the probable when I say that if the outcome of that fight had been different than it was, and if we had secured the rules that would properly govern our deliberations, instead of limiting our action within the control of bosses, there would not have been in the White House to-day the leader of a disorganized and turbulent minority of the electorate, and you Mr. Speaker, instead would be occupying that high position—President of the United States.

And what of the 23 Members who, at that time refused to join us in battle for proper rules, and who deserted your leadership, and by their acts fastened upon this House rules under which it does not govern itself? It all proved to the country, that in its extremity, "special privilege" is no respecter of party lines, and that whatever it demands in this House and elsewhere, the "invisible government" is above party and country. What sinister influence controlled the 23? They were of unquestioned intelligence and knew the effect of their vote. No satisfactory explanation was ever made. If this is a Government by party, and party defection is treason, why have not these members of your party been punished? There is a reason, Mr. Speaker, and during the time that I have spent here, I have made it a part of my business to find out some of these things.

There is a sinister influence at work in our country, which, if it is not checked, intends to completely undermine the institutions of our Government and change it from a representative form of government to a monarchial and plutocratic system where it will be the privilege of a few to rule in splendor, and the fate of the many to spend their lives in unrequited toil and that hopeless condition of servitude which they came here to escape from. Already word has gone forth to lands across the sea, to those aspiring souls who search for liberty of person and freedom of conscience, that America no longer is in a position to offer to the world an asylum and refuge for the oppressed. That class of emigrants which was once our glory and our boast, has ceased to look for freedom here. It is a different class that now makes up the bulk of emigrants to our shores. It is a situation that deserves the careful consideration of all thoughtful persons. Amidst all this talk of "preparedness" we need to stop to inquire if, while we have been preparing for the foe who may possibly lurk without, we have entirely neglected to prepare for an infinitely more dangerous foe which, with the certainty of fate, exists within.

It is not my purpose to make a partisan political statement. I could not if I would, for I am not a partisan. I believe in looking the cold facts in the face and stating them as they are. After I have gone out from this body and return to private life it will be my proudest recollection that I have never allowed the dictates of party to influence my course. Nor will it ever be charged against me that "invisible government" in any of its forms has ever controlled my voice or vote. During my service as a Member of this House I have been a close observer of events during three different presidential administrations. I have seen the progressive tendencies of legislation under a Roosevelt, inspired by the logic, eloquence, and candor of LA FOLLETTE, strangled by the stand-pat proclivities of a Taft, and the power of a great party, which had controlled the country for 16 years, dwindle until it was able to carry only the electoral votes of two of the smallest States in the Union. I have seen another great party ride into power on the strength of roseate promises to the people, and I expect to see it go out of power, because it has been abundantly proved that those promises were merely statements to catch votes. The plain truth is that neither of these great parties, as at present led and manipulated by an invisible government, is fit to manage the destinies of a great people, and this fact is well understood by all who have had the time and have used it to investigate.

The most that anyone can at the present time, who has the good of his country at heart, dare to hope is that a new administration, not unlikely to be substituted for the one that now exists, will be to some extent better than the existing one. The attitude of many people at the present time is simply this, that a new administration without pledge of past performance or promise of future fulfillment is to be preferred to one that has been trusted on promises which it has broken in nearly every particular. It is in plain terms a contest between two men, one of whom has not been tried in the balancing of national and international problems and the other of whom has been tried and found wanting in some of the most important essentials. So far as the parties are concerned, the people may truly say, "For here we have no continuing city, but we seek one to come."

During the continuance of my service as a Member of this House and in the study of economic conditions which my conception of my duty to my constituents impelled me to make I have observed many abuses of government which I believed might be corrected if known to the public, and the correction of which could not fail to bring about infinitely better conditions of living among the plain people, which, after all is said, constitutes the very foundation of government itself. Imagine if you can—and you can, because sooner or later you will be forced to—the political situation in a representative government based upon the principle of government by, for, and of the people, wherein the representatives persistently refuse to consider ways and means of bettering the conditions surrounding those

who by right should be their masters, the great common people of this country. That is the political situation that I have encountered during the entire 10 years of my service as a Member of this body. From time to time, as I have observed abuses which certainly ought to be corrected if representative government is not to perish from the earth, I have introduced resolutions calling for investigation and better understanding of those abuses. I know that if such investigations were made in good faith and the facts established were given to the public there would not fail to be a correction of those evils. Before a wrong can be made right it must be known by what way the wrong exists. There exists among the Members of the House smaller bodies within the main body, and one of these is the Committee on Rules, to which is referred all resolutions calling for investigation of any subject that may be desired by a Member, and to it is committed by the rules of the House almost unlimited power over such resolutions. If the committee does not see fit to report out the resolution, it dies without ever being called to the particular attention of the House in any official way.

Now, some important resolutions that I have introduced have never been reported from the committee, and I can only conclude that a majority of the Committee on Rules either do not agree with me that the evils that I have pointed out are evils and a menace to the continuance of popular representative government, or else that a majority of the committee favor the continuance of the evils regardless of their effect upon the welfare of the people. It makes little difference to me personally which of these two views of the nonaction of the committee is correct, and I am content to abide by the decision of history to determine, but in the course of my present remarks I shall take the opportunity to refer to some of the resolutions.

Quite early in my service here I observed that there was some power outside the Government itself which was insidiously, but none the less effectively, dictating the course of legislation in reference to finance, currency, and the creation and control of credit throughout the country; that it was in a position to dictate, and did dictate to an extent almost unlimited, to whom credit should be extended and from whom it should be withheld; and that it largely controlled the political action and the influence of most of the banking and other corporations of the entire country. Knowing that the exercise of such power was inimical to the welfare of the Republic, I introduced a resolution in this House setting forth the facts, naming this insidious and well-nigh invincible power, the Money Trust, source of all the trusts, and calling for a committee to investigate its activities. The press, which is largely under the domination of "big business," ridiculed the resolution and especially ridiculed the idea that there could be a Money Trust; but they made the mistake, from their standpoint, of ridiculing it too openly. This gave it wide publicity, and, to their great amazement and chagrin, the people, who knew more about these things than the trusts supposed, took it seriously. So great became the demand for the proposed investigation that the House for once, in spite of the reluctance of the bosses here, was compelled to act. The Committee on Rules reported out my resolution under a different name, and, in order to prevent my being a member of the committee, as well as making it as harmless as possible to the Money Trust, provided that the investigation be made by the Committee on Banking and Currency, which was composed almost entirely of bankers and the former attorneys of banks.

The committee, nevertheless, reported that there was a Money Trust and that its activities were as I had stated them to be, and that its existence and the power it weilded were a menace to the institutions of this country, but for some reason it took no action to deprive it of that power. Woodrow Wilson, however, took notice of its existence during his campaign for the Presidency, and promised to exercise his influence, if elected, to curb its power and influence. I have no hesitation in saying that this promise, like many others, has not been kept, but, on the contrary, the principal result of the financial legislation during this administration has been to legalize and more firmly intrench the Money Trust in its control of business, credit, and politics of this vast country than ever before, and in order to screen that fact the Money Trust has bought the services of many prominent writers for the purpose of running articles in the press praising the system, which in less than six years the people will rise in rebellion against because of its intolerable and unjust burden.

One result of the Money Trust resolution, however, which I will notice here has been that never since has the controlled press seen fit to ridicule any resolution of mine. One lesson was enough. They have not dared to. In fact, they never state the facts as I have presented them, but prefer to misrepresent.

Profiting from my observation of the investigation of the Money Trust by a committee of this House, nearly all the members of which were interested parties and therefore desirous of limiting its activities as much as possible, I introduced a resolution declaring it should be the policy of the House membership that no banker or one who was financially interested in a bank should be a member of the Banking and Currency Committee. Also a resolution calling on members to declare the extent of their affiliations with banks, if any. Neither of these resolutions ever came out of the Committee on Rules, so we must take it for granted that a majority of the members of that committee believe that it is right for bankers to legislate for their personal benefit, as all financial legislation shows that they have.

I also introduced a resolution for the appointment of a committee of the House on industrial relations. So far as I know, this was the first suggestion for the appointment of such a committee; and while my resolution was permitted to sleep in the Committee on Rules, it nevertheless suggested the subsequent passing of a law for the appointment by the President of a commission which made an exhaustive investigation and report, finding that exactly the conditions outlined by me in the preamble of my resolution and a speech upon it actually existed. Its report is destined to be long considered as classic in its delineation of the deplorable conditions which surround the industrial masses of our time. Some one in the management for "special privilege" blundered. For once, at least, a few persons were appointed on a commission who had not been educated to believe as "special privilege" demands for all such appointments. There was Frank P. Walsh, the chairman, whom the "special interest" press tried to ridicule after they saw his honest and fearless work. This man, with a majority of the commission of which he was chairman, have done a service to the world and no doubt have brought nearer the day when the people in their right will rise to claim their own. Every home should have a copy of the report of the Commission on Industrial Relations.

January, 1915, I introduced a resolution calling attention to the manner in which the Federal reserve law had legalized the Money Trust and placed it in absolute control of the finances of this country; how it could, and would, under the law make use of Government credit to finance a world-wide monopoly, and use the funds belonging to the people deposited in banks to loan to foreign countries at war, extend credit to expand foreign trade at the expense of our own people, control prices by the manipulation of its control of credit, and extend its influence to control the politics of this country. My Democratic friends, you are entering into a political campaign with the vain hope that special privilege, having obtained enormous benefits at your hands, is going to be grateful for the past favors that you have showered upon it and assist you in retaining control of the Government. They will furnish you campaign funds, as they do to both the deminant parties, but that is as far as they will go toward helping. You are due to a rude awakening. You are to learn that gratitude forms no portion of the make-up of this monster. You are to learn that you, having done all you could for it, are no longer necessary to its business, except that now that you have passed the laws that it wanted, you are estopped from complaining through your portion of the press and on the stump or from entering any protest whatever when the time comes that your eyes are open to the oppression the common people are surely destined to endure because of your falsely so-called beneficial, legislation.

If in the future some party shall be needed to undo the things that you have done, you are not going to be in a position to enter a claim to be that party. In the hands of your opponents will lie the power that you have placed there, and all its evil effects will be laid to you. You have missed an opportunity that comes but once in a lifetime; one that will never come to you as a party again. The time will come when no Democrat who boasts of the achievements in legislation of this present Wilson administration will be considered worthy to hold any public office. You have gone "crossroads" with some of the most vital principles laid down by the great Thomas Jefferson. You may boast of him as a great Democrat, but not any one of you should boast who has been active in fastening some of the hardships of this administration upon the people.

During all this time I have been conscious that the Money Trust and its correlated trusts were not working alone; that there was ever present in our politics an element or elements that were wholly at its disposal and in every election formed a strong nucleus around which they could gather the forces subject to mercenary manipulation and thus always control in the matters of most vital concern to the people. I knew it must be so. The great mass of the voters of this country, while not as well informed upon these subjects as they should be, are

nevertheless too intelligent for a majority of them to vote in election after election directly contrary to their own interests unless they are made to believe that there is some issue whose paramount importance transcends their own material welfare and the greatest good to the greatest number.

Such political elements exist in all great cities of every section where large numbers of voters are absolutely controlled and delivered in every election by interests supported by vice of every kind, and especially the liquor traffic of those localities. And, while this element is most powerful in cities, it is not confined to them alone, but ramifies throughout the States in which the great cities are. In nearly every hamlet are to be found voters whose suffrages are at the disposal of these powers that prey without any other consideration whatever.

Such a political element exists in many localities where any large number of voters, or their parents, are of some foreign nationality and are misled on that account to give their support to unworthy candidates for no other reason than that they are of alien origin.

Such a deleterious element also exists in any community where any considerable number of voters stake everything upon a single issue without taking into consideration the general balance of things. It also exists where votes are cast in blocks according to the interests of high dignitaries, whether in church, lodge, or other organization, and even in the political parties. The fathers of our country wisely determined that there should be here absolute dissociation of church and state, and "church" is not a narrow or limited term, as used in the Constitution, but includes every organization separated from the functions of government itself in which all people by right should take part. The fathers of our country contemplated that every person was to be left free to worship God according to the dictates of his own conscience, and that this might be assured it was intended that no church should ever control the state.

Whether or not the high dignitaries in the Roman Catholic Church has been such an element generally in our politics is not the prime purpose of my statement to discuss. I am dealing with the effect of human conduct upon our economic operations, with the purpose of showing that it is wise for people to understand their material welfare if they would secure the full advantages of intelligence in dealing with material, moral, and religious matters. They can not stake everything upon a single issue and make this world go right, because there are too many issues in which high-minded people take interest, and when everything is centered by those respectively taking interest in their particular issue, and all else thrown to the winds, it leaves the selfish interests where they can draw the balance in their favor, and that is exactly what has been done. Because of that the toilers who do the work of the world secure only about one-fifth of what their work would return to them if we had a general consistency in government and business. It is to secure this consistency that I make this statement, and I have worked for it all the time without prejudice of party, nationality, church, or anything else, because I realize full well that prejudice is the enemy of good government and defeats the exercise of the rights of the people.

The Free Press Defense League, and several other associations, have been organized as a protest against some of the activities in Government affairs of the high dignitaries of the Roman Catholic Church. These associations have a very large following. The membership of the church itself also is large. The two followings can not help having appreciable effect upon political conditions, and consequently upon economic results in business. If we are to get anything like fair economic adjustment to be worked out in the interest of all the people, there must be an understanding on the part of people generally of the facts and the claims regarding the controversy between the Roman Catholic Church and these organizations. The charges that have been made, and that are being made, against the political activities of this great organization, and the following of those making the charges, are such that they can not be ignored if we are to remain a people free and independent of outside influences. For that reason I served notice upon the associations making charges against the high dignitaries in the Roman Catholic Church of their selfish interference with government, that I would introduce a resolution for an investigation of the charges, so that the issue might be determined. The resolution that I shall introduce is in words as follows:

Whereas there are many economic problems that require the action of Congress and the concerted action of all the patriotic people with Congress for their solution favorable to the public which, to the great loss of the people, have remained in a state of uncertainty because of disputes among the people upon other matters; and

Whereas one of the most important of the collateral matters that diverts the people from sufficiently considering the economic needs is the claim of the Free Press League, a Kansas organization, with affiliations in all parts of the country, involving a large following; and

Whereas the Free Press Defense League and similar organizations and their following represent that:

First. The Pope of Rome is a foreign sovereign, claiming allegiance in temporal as well as in spiritual matters throughout the world.

Second. The papal system of which the pope is the head is opposed to and seeks to destroy our free institutions, to wit:

(a) Our public schools.
(b) The free press.
(c) The right of free speech and public assembly.
(d) The right of freedom of thought in matters of conscience.
(e) The principle of separation of church and state.

Third. The papal system of America, which consists of the Roman Catholics, cardinals, bishops, priests, Jesuits, Knights of Columbus, Federation of Catholic Societies, and other Catholic societies, together with the Roman Catholic press, seek to substitute for our democratic system of government the monarchical or papal system.

Fourth. The Roman Catholic laity in the United States of America are taught, influenced, and commanded by those in authority to yield implicit obedience to the teaching of the Popes of Rome and to blindly obey their orders and decrees, even though said orders and decrees conflict with the Constitution of the United States of America.

Fifth. The Roman Catholic organization of America is perniciously active in politics, and, although having but few votes as compared with the whole body of electors, it manages, by threats, intimidations, blackmail, and by coercion of the press, to secure an undue proportion of the elective, and especially the appointive offices throughout the country, and these offices, when filled with Roman Catholics, are used to further the plan of making America dominantly Catholic.

Sixth. In carrying out the conspiracy to bring the United States of America under the complete domination of the Pope of Rome the Roman Catholic hierarchy, aided by the Roman Catholic politicians and the Roman Catholic press, has inspired a portion of the Roman Catholic laity to resort to threats, to intimidation, to boycott, to assault, and to riot.

Seventh. The Roman Catholic hierarchy is now and has been for more than a year last past actively engaged within the territory of the United States of America in fomenting and inciting revolution in the Republic of Mexico and attempting to bring about a state of war between the Republic of Mexico and the United States; and

Whereas the said claims on the part of the so-called Free Press Defense League and similar organizations have been and are now being broadcasted over the country and both sides to the controversy are causing to be sent to Members of Congress great numbers of allegations and assertions and counterallegations and denials upon the said various claims and others, which controversy injures the interests of both Catholics and Protestants; and

Whereas the said controversy foments troubles and interferes with the unprejudiced action of millions of electors in the United States, and thereby interferes with the natural, consistent, and impartial administration of the Government in the interests of all of the people; and

Whereas a true and impartial investigation and report thereon by a properly constituted public committee would take these controversies out of politics and stop the attempts to improperly influence the acts of public officials: Now, therefore be it

*Resolved, etc.*, That a joint committee of the Senate and House be appointed to make inquiry into the representations hereinbefore referred to.

SEC. 2. That the said committee shall have power to employ clerks and stenographers and to compel the attendance of persons and the production of papers, books, documents, and records, and to examine witnesses under oath; that said committee shall have power to sit anywhere that it may deem necessary to secure all the facts to complete the inquiry and shall report the testimony to Congress.

The introductory and the closing of the resolution is drafted by myself, but the charges are taken verbatim from those made by the Free Press Defense League. The charges made by the league should not be ignored by the church organization itself. Either the high dignitaries in the Roman Catholic Church are using the church and operating it as a political machine, as well as a church, or they are not. I have seen the effect upon government of the charges and countercharges, denials, and so forth, for some time. I am sure that it is for the interest of everybody, including Catholics, who believe in keeping church and state separate to have the facts, whatever they are, cleared up so the people may not be misled.

We have been accustomed here year after year, session after session, to hear charges, backed up by proof and circumstances that should not be ignored, that the Money Trust of this country was gathering to itself the influence and power which it is exerting to the detriment of the people to whom the Government rightfully belongs. Yet we have grown fully accustomed to having those charges, those proofs, and those circumstances ignored, and the Money Trust has gone on gathering to itself more power and more influence as the years have gone by to the extent that now it is well nigh supreme. Under the false exaggerated plea of "preparedness," of the kind it wanted, it could wrest from the people through their chosen representatives almost anything it may choose to ask. It dictates the choice of Presidents, Senators, Representatives, governors, and judges, and controls their action too often when chosen. It comes to the President and Congress and, under a threat of panic on the one hand and the promise of campaign funds on the other, secures such legislation as it desires. It demands and secures from the sworn

representatives of a great sovereign people absolute monopolistic control of Government credit, and uses its control for the maintenance of wars abroad and in a preparation for war which it intends we shall wage for its exclusive benefit at home and abroad. Its business politically is to oppress the people of this and all lands and lay upon them burdens too grievous to be born, and it coins the sweat and tears of hundreds of millions of people into riotous living for the few. The Money Trust does all that.

Read history and observe the signs of the times. You will find that everywhere, in all lands and at all times, the high dignitaries in the Church of Rome have been the ally of oppression, whether that oppression has been exercised under the exploited doctrine of the divine rights of kings, or whether it is exercised under the groveling greed of plutocracy. Claiming to hold in its hands the keys of the kingdom of heaven, it is, in all climes and in all lands, the active assistant of those who bring hell upon earth. That is not a fault of the church as such, but a fault of men in whom it trusts. Men are men, and wherever they are placed they are subject to the evil temptations, and it would be a miracle if there were any great body of men with such power as is exercised by those described if they did not exercise that power in many cases selfishly, and that is the reason why we in America demand that this shall be a government by and for the people. The same reason applies to political parties when they are dominated by leaders instead of by the rank and file of the membership. Nothing has ever been permanently successful that has depended upon individual boss direction instead of popular control. If these things are not true; if this organization is one that is exclusively the medium for promulgation of divine truth and righteousness, no opportunity would be avoided to let the people know the minutest details of its activities. Men love darkness rather than light because their deeds are evil. Righteousness loves light. The rank and file are righteous upon these matters, and of whatever party, denomination, or creed, will ask for light. The Free Press Defense League, and others making like claims, stand charged with statements which if untrue and so established would take from such association the following they have.

Is there any force or organization of persons in this land of free speech and free men interested and busy in preventing the free expression of any thing that should be spoken, written, or printed by the people? Bills have been introduced in this House designed to prevent the distribution through the mails of newspapers containing any information relative to the political activities of high church dignitaries. It is claimed that mobs have been organized in many communities, and in some have proceeded to the limit of murder and all forms of violence in an attempt to suppress free speech, and justice itself has been perverted to the same ends. Does any one claim that these acts are being done to prevent an abuse of the right of free speech or to silence slander and falsehood? Then, in fairness to all honest people, bring the proof, so that none may be unjustly charged.

Let there be a fair and impartial determination of all these things, so that all may know and understand the right. If these people and these papers are disseminating lies and the investigation asked for in the resolution that I shall introduce should show that to be a fact, then the bills pending here in Congress for refusing such publications the use of the mails will have just cause for enactment into law. The people are spending millions of postage stamps upon this subject which can by an investigation be saved to them.

If, on the other hand, the contention of the Free Press Defense League is true, that the Pope of Rome is a foreign sovereign, claiming allegiance in temporal as well as spiritual matters throughout the world, and that the Roman Catholic hierarchy has been engaged within the territory of the United States in fomenting and inciting revolution in the Republic of Mexico and attempting to bring about a state of war between the Republic of Mexico and the United States, then there is just cause for, and it is high time that there should be, legislation of a different sort.

If it is true, as definitely and particularly charged by the Free Press Defense League, that the Roman Catholic Church and its subsidiary societies, secret and other, are engaged in the political conspiracies charged, a proper respect for our free institutions demands of us a complete and fearless exposure of the facts, to the end that our institutions may be preserved and transmitted to our children.

Mr. Speaker, as things are now staged, the man who would be true to himself, to his fellow man, to his country, and his God faces a hard problem. He has not only himself to control, which is difficult at the outset, but he has strange men and women, a strange world, and strange gods to consider. To the average individual it seems too big an undertaking. Therefore each of us take up our separate schemes and know but little about the others. Instead of having a common consistency about the purposes of life and working to it, there is general inconsistency. We are working against each other—even seeking to take advantage one of the other.

If we were to live for three or four years, and then it was all over, possibly we could afford to go ahead with things as they are now staged. Perhaps, too, if we all died before we get old and left no children to take up life's problems where we quit them, we could run along without much further responsibility than we are taking, because the trusts, in order to keep us, as the farmer keeps his team, would be willing to give us enough of what our labor produced to feed and shelter us as long as we can produce for the trusts more than they give us. It would be poor business for them, however, to support us when we get old, for then we can no longer serve them. Therefore most old people live poorly.

WE MUST NOT DECEIVE OURSELVES.

We are here to live our lives out, and to do so in the right way. We must respect ourselves if we wish to be respected, but thus far the preparedness propaganda has not been presented in a way to stand the test of time nor to build the Nation to a real power. "Big business" has marshaled its subsidized press to build up a fear in the people for some unknown enemy—possible to be; probable if "big business" shall have its way. But to true Americans patriotism does not consist merely in defending the flag and the land of America against foreign foe. The value of Americanism is in the institutions of the people of America giving to Americans true government, promoting intelligent business and industrial development of the natural resources to suit the people's needs, thus forming the basis for prosperity and happiness, as well as a ripe patriotism instead of patriotism based upon fetish notions. A mere navy and army, however large, will not strengthen us, except for temporary military emergency. Unless we also prepare economically, a large navy and army will ruin us. The present preparedness propaganda is for a navy and army only. Every suggestion for economic preparedness has been slapped by the subsidized press. A large Army and a large Navy, with the economic conditions remaining as they are, would ruin us.

A PROBLEM PRESENTED FOR YOU TO THINK ON.

Is business done simply to afford the speculators a chance to exploit the people or should it be to supply us with conveniences? Surely it should be for the latter. Then, how stupid it is to waste the natural resources by exporting the raw material or the finished goods merely for speculation, and how senseless it is for our people to boast of exports exceeding imports. How ridiculous it is for any nation to attempt to force its material substances upon the people of other nations. Commerce should be, and would be if it were entered into to supply conveniences, as natural as the flow of the waters. There would be no friction. On the contrary, it would invite perfect harmony.

Last year's exports and imports is an example of the absolute absurdity of a commerce carried on for speculation, and it seems monstrous that our people should tolerate such injustice to themselves. We exported $4,334,000,000 in value of our products and got back $2,198,000,000 only of foreign products, and of this return $48,000,000 was diamonds and precious stones, exclusively for the rich. Let us understand the effect of such absurdity.

America is the real and only substantial market for American products. American consumers use every year many times more of its products than are exported. The exports this last year were for speculation principally and was made the excuse for the raising of prices to American consumers; so, all told, we paid in excess of the regular price more than the $4,334,000,000, the entire value of the exports.

American consumers of petroleum, for example, just before Europe took our export, paid 75 cents a barrel for crude Kansas-Oklahoma grade and $1.54 per barrel for Pennsylvania grade. The home consumption for 1915 was 211,933,000 barrels and export was 55,466,086 barrels. The price was raised from 75 cents a barrel to $1.55 on the western product and from $1.54 a barrel to $2.60 on the eastern. Assuming that the quantity used of the western and eastern product was equal, the American consumers had to pay in increased price on the one $84,000,000, and on the other $111,000,000, a total of $195,000,000 for a single year, and all merely for the benefit of speculators. That was the American consumers' extra burden because of the export of 55,466,086 barrels of American petroleum. The American supply is lessened and the American consumers will forever be forced to pay more for petroleum than if no petroleum had been exported. In the end it will amount to billions of dollars on petroleum alone.

Consider copper, another natural product. On August 3, 1914, before the export affected the price, copper was 12¾ cents per pound. May 3, 1916, copper had risen to 29½ and 30 cents a pound. The loss to the American consumers in one year on the item of copper alone amounts to over $120,000,000. We shall need all our copper, as well as our other mineral resources, but still the speculators export it and make the foreign demand their excuse to raise the price from 12¾ cents a pound to 29½ and 30 cents a pound.

On gasoline the speculators scalped approximately $88,000,000 excess; on shoes about $100,000,000; on steel several times that amount.

I could run the entire list of trust-controlled products and prove to a certainty that the export has served the speculators as an excuse to raise the price to American consumers more than $4,334,000,000, the entire receipts from foreign exports, this last year.

The few examples I have given are alone sufficient to show how the people are looted by a commerce run for speculation. Temporarily it gave employment to some of the idle, but that will not last long if we follow the absurdity. We need not be discouraged, however. On the contrary, there is reason for being encouraged, for when we can exist in any sort of way on the practice of such absurdities as those which are practiced, surely by sane and intelligent employment of ourselves and a use of the natural resources we shall become intensely prosperous.

American consumers, and especially the toilers who bear the main burden, should not be satisfied to let the products of our country be exported without receiving something equal in return. It should not be permitted for speculation. It is only desirable to export valuable goods when we can receive in return goods that we have greater need of than we have of what we export. Then and then only is the exchange desirable.

THE MONEY TRUST.

The Government itself has created a Money Trust in the banks by giving to the banks the financial control of the country. The Government loans its credit exclusively to the banks, which are private, and the owners as selfish as the rest of us are taking advantage of every opportunity to scalp profits. In addition to the advantage of having the exclusive privilege of borrowing from the Government, the banks hold approximately $25,000,000,000 of deposits made by the people and use that practically as they please to scalp profits off the very people who deposit it, as well as others. Having discussed this before, I shall not now do so, except to add that the credit extended by the Government to the banks and the deposits made by the people in the banks is being used by the speculators to exploit foreign markets. Foreign speculation keeps the rates of interest up. Europe, however, will soon administer a lesson to us that will not be forgotten. Europe is on its last legs so far as this fake financial system is concerned and in the near future will repudiate and cancel by the decree of the people there through their governments over $100,000,000,000 debts. Europe is bankrupt already, and all that remains is for the nations at war to recognize the inevitable.

FOREIGN SPECULATION MEANS WAR FOR AMERICA.

Last year, at the time of proposing the foreign loans by the speculators in Wall Street, and those acting with them, I showed that speculation, and loans made to carry on speculation with the warring nations, might get us mixed into the war. The trust-supported press refused to publish my statement made at the time, though one of its reporters asked for it, but since it was against the wishes of the trusts to have it published, it was refused publicity through their press. In December I published it myself. The following lines are taken from the statement:

> Speculation and loans in the foreign fields, especially with the nations at war, is not unlikely to bring us into the war. They form a powerful incentive on the part of the speculators to get us into the war, but even if it results that way, they will never be stated as the cause. The trust-supported press will be used to trump up some other thing as the pretended cause, or things will be staged to force some country to declare war on us, which would amount to the same thing.

Certainly no careful observer could fail to draw that conclusion, but most persons who did so failed to state it, because they knew they would be attacked by the press referred to, as I was. But now comes that same press that eulogized the American speculators for making the loans on the credit of the people and for stocking the foreign markets with our products in order to make American consumers pay more than the sales to foreign buyers will ever amount to, and prints in the Washington Herald, July 9, 1916, the following:

EUROPEAN FINANCES.

In retiring from the editorship of the London Economist, Francis W. Hirst, a prominent English financial authority and pacifist writes:

"In my view the financial balance of western Europe is in imminent peril, and in a few months it will no longer be possible to disguise the bankrupt condition of several great nations. Civilization, as we have known it, and representative institutions are doomed unless, through the exertions of individuals, the rights, without which all Englishmen, at any rate, will hardly care to live, are speedily restored. To this end freedom and independence must somehow be won back for Parliament and the press."

While it apparently was the purpose of this writer to present arguments in support of his advocacy of a peace movement his suggestion of the impending bankruptcy of several great nations of Europe is likely to create a keen interest in our own financial world, and a desire for an opportunity to study his views more in detail. It might be surmised that Mr. Hirst is not at all confident that the financial fate which he sees in store can be averted and certainly no one will expect that the allies at this juncture will pause in their war operations for any consideration of money. They have poured out too much blood and treasure for them to stop short of victory or annihilation so long as their resources in any form hold out. A great and decisive victory would do more to secure the economic future of these nations than anything else that is open to them. Beyond a doubt they will utterly bankrupt themselves fighting if that should be necessary.

And though we may try to deceive ourselves our own material interests are now very closely allied with those of the allies, for they are enormously in our debt. We are vitally interested in the successes of their armies. Also we may as well recognize that if it should come to a question of success for them or failure for the want of a few hundred millions more of credit in this country, ordinary business sense would dictate that we give them that credit quickly.

Therefore, if Mr. Hirst's dire predictions concern the allies, our financiers will be interested in the prospect that soon they may have to arrange further credit for them, for the purpose of safeguarding the heavy investments they have made already in their chances of a victorious war.

At the same time the Herald printed the above, similar articles appeared in the press generally. It is plain to see from the statement the reason why vast sums have been paid by the special interests to secure the publication of false articles to excite a fear in the public and a demand for "preparedness" of the kind the trusts want—that is, a big Army and Navy without any modification of economic practices. The trusts would seek, when the time comes, to use the Army and Navy to enforce the claims of the trusts against the bankrupt nations of Europe.

Yes; that is it. "Big business" absorbs the deposits the people make in the banks, as well as to use the credit of the Government, and with them bolster up not only their speculations in America but in Europe also. The rates of interest to American borrowers have already been increased and will be still further increased. On an indebtedness of approximately $80,000,000,000 in our own country, an increase of 2 per cent will be equal to $16 per annum for every man, woman, and child. That, too, like the foreign export of American goods, will increase the price to American users of credit more than the whole collections for interest will amount to on the European loans. Those are the "privileges" that are called the "rights of Americans," for the maintenance of which we are asked to patriotically support with our treasure and our lives, if demanded, and raise armies and navies in huge proportions to be ready when the occasion arises.

No true American will question the support of American rights everywhere when based upon well-founded principles, but those who would sacrifice the toilers of America to bolster up practices that are not only unnecessary, but absurd, ridiculous, and injurious to the rights of American citizens generally, are not entitled to the privileges they demand, and the country should not be called upon to support them. In fact, such practices should be prohibited.

THE "SYSTEM" EXPOSING ITSELF.

Take for example the dispute between the railway employees and the railways, pending. The railway toilers desire better hours and no person who understands the conditions doubts that they are right. Farmers, shopmen, railway men, and other toilers are all entitled to advantages that they do not now have, but the "system" now practiced will not give it to them. The pending dispute exemplifies as well as anything can, the fallacy of accepting any longer the existing "capitalistic system." The railways claim that to grant the demand of the employees will entail an additional expense in operating the roads, of $100,000,000. Assuming that that is true, which I do not believe, let us see how these trusts are intrenched to handle it.

Watchfulness on the part of the trusts, and adroit manipulation at opportune times, and a neglect of the people to be equally guarded in protecting their own interests, the trusts have gotten men suited to their way of thinking, appointed to the offices that regulate matters referred to them. It all depends on regulation. The "cards have been stacked." The public officials, before they were appointed, had been educated to believe in the kind of business that make billions of dollars for the trusts. So now the railways propose to submit the dispute between themselves and their employees to the Interstate

Commerce Commission. The railways know that a majority of the members of that commission resolves everything into figures measured by a rule that builds up wealth for a few to be taken out of the sweat of toilers, the rule, to-wit:

"That dead property—capital or credit—in the beginning the product of labor or supported by it—is entitled to an earning status independent of what the toilers who support it get, and which rule has no relation to what the laborers should receive. It is a rule which makes property superior to the well-being of men, women, and children."

With such a rule as the guide of the Interstate Commerce Commission, certainly the railway employees can not be criticized for refusing to consent to arbitration. It may be, a great deal of inconvenience will result, if a strike takes place. In fact, there can be no doubt of it. But are we to be so weak in asserting our common rights, as not to be willing to submit to inconvenience in order to establish a principle that is far more important to Americans than the privilege of speculation in foreign markets, and yet for the latter privilege to be guaranteed to citizen speculators, we are asked to not only tax ourselves to the limit to maintain a great Navy and Army, but we must call upon patriotic citizens to enlist, give their time and their lives if need be, in support of that privilege.

The railways have posted in their depots and published broadcast the following statement:

FEDERAL INQUIRY OR RAILROAD STRIKE?

Faced by demands from the conductors, engineers, firemen, and brakemen that would impose on the country an additional burden in transportation costs of $100,000,000 a year, the railroads propose that this wage problem be settled by reference to an impartial Federal tribunal.

With these employees, whose efficient service is acknowledged, the railroads have no differences that could not be considered fairly and decided justly by such a public body.

RAILROADS URGE PUBLIC INQUIRY AND ARBITRATION.

The formal proposal of the railroads to the employees for the settlement of the controversy is as follows:

"Our conferences have demonstrated that we can not harmonize our differences of opinion and that eventually the matters in controversy must be passed upon by other and disinterested agencies. Therefore, we propose that your proposals and the proposition of the railways be disposed of by one or the other of the following methods:

"1. Preferably by submission to the Interstate Commerce Commission, the only tribunal which, by reason of its accumulated information bearing on railway conditions and its control of the revenue of the railways is in a position to consider and protect the rights and equities of all the interests affected and to provide additional revenue necessary to meet the added cost of operation in case your proposals are found by the commission to be just and reasonable; or, in the event the Interstate Commerce Commission can not under existing laws act in the premises, that we jointly request Congress to take such action as may be necessary to enable the commission to consider and promptly dispose of the questions involved; or

"2. By arbitration in accordance with the provisions of the Federal law—the Newlands Act."

LEADERS REFUSE OFFER AND TAKE STRIKE VOTE.

Leaders of the train-service brotherhoods at the joint conference held in New York June 1–15 refused the offer of the railroads to submit the issue to arbitration or Federal review, and the employees are now voting on the question whether authority shall be given these leaders to declare a Nation-wide strike.

The Interstate Commerce Commission is proposed by the railroads as the public body to which this issue ought to be referred for these reasons:

No other body with such an intimate knowledge of railroad conditions has such an unquestioned position in the public confidence.

The rates the railroads may charge the public for transportation are now largely fixed by this Government board.

Out of every dollar received by the railroads from the public nearly one-half is paid directly to the employees as wages; and the money to pay increased wages can come from no other source than the rates paid by the public.

The Interstate Commerce Commission, with its control over rates, is in a position to make a complete investigation and render such decision as would protect the interests of the railroad employees, the owners of the railroads, and the public.

A QUESTION FOR THE PUBLIC TO DECIDE.

The railroads feel that they have no right to grant a wage preferment of $100,000,000 a year to these employees, now highly paid and constituting only one-fifth of all the employees, without a clear mandate from a public tribunal that shall determine the merits of the case after a review of all the facts.

The single issue before the country is whether this controversy is to be settled by an impartial Government inquiry or by industrial warfare.

NATIONAL CONFERENCE COMMITTEE OF THE RAILWAYS.

It is the joint statement of 19 railway systems. It seeks to put the employees in bad light if they refuse to accept the Interstate Commerce Commission as arbiter. They know that the Interstate Commerce Commission is not an impartial body, even though the members of that body may be ever so honest in their intentions. A majority of them believe in the "system"—a system which gives capital a so-called "reasonable profit"—but a profit which bears no relation to the rights of persons, and the term "reasonable profit" as applied is a misnomer.

The railways suggest the so-called "impartial Federal tribunal," the Interstate Commerce Commission, as the arbiter, who have already laid down the rule for their government, and one which, if followed, will continually increase the cost of living, and defeat the purpose of the toilers to improve their condition. Such concession as might be granted to the men, the commission would levy the expense of it upon the service, and those served would charge it to the consumers of what the service was applied to. All told, everything measured by that rule would become a final charge against the men, plus the added interest or dividend. They, together with the toilers in other fields of endeavor, who in their respective fields had secured like concessions, would pay with added expenses.

INCREASED RAILWAY TARIFFS.

For a long time the public sought to reduce railway tariffs. Eight years ago I made a speech in the House showing that railway rates would not be reduced under the existing system. My statement was ridiculed then, the same as my statement later that a money trust existed, was ridiculed. Both of my statements have, the ridicule notwithstanding, proven true. Railway rates should be reduced, but on the contrary, they will be still further increased if we follow the existing system. In fact they will have to be increased from time to time to meet the increasing cost of living, until a common-sense rule shall be established that will coordinate all business and practices.

SHIFTING OF WEALTH FROM THE TOILERS TO THE SPECULATORS.

When the Civil War began more than 95 per cent of the wealth was controlled by the plain people individually and by Government title. Now more than 60 per cent of the wealth is owned by 2 per cent of the population—leaving 98 per cent of the people less than 40 per cent of the wealth. One man, John D. Rockefeller, increased his wealth from nothing in 1865, to a sum which is stated to be now so great that the so-called "reasonable income" upon it is $60,000,000 per annum, or equal to the average wages of nearly 100,000 toilers. He is one of the 2 per centers.

In 1861 land could be had for farming or for mining by mere entry. The forests, minerals, and water powers had scarcely been touched. The machinery and mechanical devices were becoming important even then in their influence on production, but did not then control occupations. The transportation, information, and finance agencies, supremely important to the control of commerce, attracted little public attention because of that fact, but were considered merely as expedients for anyone to grab up, control, and charge what they pleased for service, and in addition from time to time be rewarded for their greed by vast land grants or by express special privilege from Congress. It was then so easy for persons to be free and still have security of home, property, and occupation that the value of the natural resources and the control of the commercial agencies did not impress the rank and file of humanity with the value they would have later. Speculators, however, foresaw, so when the Civil War began, the call to the colors was met on the part of the rank and file with a patriotism never surpassed in the world's annals, but the selfish speculators kept clear of the firing line, and began their manipulation to control politics in secret and business in open defiance of the plain people's rights. The American plan was made practically the same as the European plan, which creates of the toilers industrial slaves and is a natural breeder of wars, and forces the maintenance of large armies and navies.

Now that 2 per cent of the population controls the financial system, the transportation systems, the telegraph and telephone systems, the news agencies, and 60 per cent of the wealth, and other advantages and privileges, they are in a position, if the public does not protect itself, to take all that remains, except what is necessary to the toilers for a mere subsistence. That is the condition that has grown out of existing practices. As long as we follow them we will become more and more dependent for our subsistence upon "big business." The system that has got us in bad will not bring us out good.

A FIGHT FOR REFORM.

I did not become a candidate for Congress for any other purpose than to do all I could to present for consideration the real economic problems. I did not object to "big business," but only to its predatory practices of first strangling small business and then, when its monopoly was complete, robbing the people. I did not realize that the constituted authorities in the administration of the Government, State and Federal, through the political machines, would join the trusts to fight me. They did, however, and the fight against me so fully illustrates the "system" of the "invisible government" that directs the affairs, business and political, that its importance justifies me in casting aside modesty to describe it, even if I were modest with regard to it.

When "big business" found that it was my purpose to expose its methods and work for a proper constructive reform, it used the political machines and the paid press to work plots

to discredit me. At every primary and election, when they had the remotest hope to win, they called upon their portion of the press to further attack me and put their supporters into the field working to deceive as many of the voters as they could. This is their practice in all such cases. If, however, an official does not expose their methods, but merely votes as he believes right, the interests do not always oppose him, because ordinarily if a Member does not fight the interests there are enough others who will follow the machine to put across what they want.

New Members often break down and yield when the machine in control withholds patronage from them. A high department official called me into his office soon after I came to Congress. It was when ship subsidy was before Congress to be voted upon. He said he had been asked by a Senator from my State to see me. "I see," he said, "that you oppose ship subsidy." I said yes. Then he asked me why I did not work in harmony with the "organization." If I would he said I could have the political patronage in my district to dispose of as I pleased.

That is one of the "keys." It is the political patronage, for which the people are taxed to pay the salaries, the machine uses to get Members to vote for measures that are against the people's interests and to vote against measures that are unfavorable to "big business" and favorable to the people. In that way the machine gets its power to make the rules of the Senate and House for complete machine rule.

In my district, for instance, I wished to secure appointees who were opposed to "machine rule." The Federal machine, however, was on the job from the beginning in most cases to prevent a removal of the old machine-ruled postmasters. Big officials informed my friends that they would be appointed to office if I would recommend them. Then these big officials would clandestinely go to the appointing officers and give them the "tip" not to do it unless these officials should first approve. That is their method for punishing those whom they can not control.

BIG BUSINESS ON THE JOB.

Enormously important problems will arise as a result of the wars. The trusts are determined to control these problems in their own favor, and use every adroit method to parade the machine office holders as the only "true Americans" in office. The Senate, being the smaller body, and practically having a veto on many problems that are presented that are of foreign concern, it is the body most sought by "big business." The Senate has become the seat of the most vicious political practices that politics makes possible. It is not, however, so much to get new laws and further special privileges that big business now so desperately seeks to control the Senate for an additional period. "Big business" needs no more laws, but it wants to control in order to prevent any laws from being passed in the interest of the people which would destroy the special privileges it already has. It frequently spends hundreds of thousands of dollars to elect to the Senate men whom it can control. It is important to know how it is done.

I think there was a conflict in my own State over the office of Senator between two of the candidates, either of which in the absence of the other's candidacy would have been acceptable to "big business." One of these had been governor for a long time, and the special interests knew by his record that he would do nothing to disturb big business even if it were gathering in most of the profits from the work of the toilers. He had certainly done nothing to disturb them while he was governor. The other of the candidates that would be satisfactory was a trained and special attorney for many of the trusts. I am informed that strenuous efforts were made to get the first to stay out of the race and leave the field clear for big business to support unitedly its more favored candidate. But there was more at stake than a senatorship. The liquor interests had been in control for many years. They had been backed up by the Steel Trust and the railway interests and had run things about as they pleased. Gradually, however, the Steel Trust had been building up a machine in opposition to that of the liquor interests. In some respects the Steel Trust machine poses as progressive. It was quick to attach itself as a tail to the Roosevelt kite. It was for "preparedness," of course, of the kind the trusts want. Why should it not be? It was in the munitions and armor plate business.

The Steel Trust, ever watchful of its own selfish interests, had observed that the use of intoxicating liquors made its employees less efficient, and that it must line up with the popular wave for temperance reform or it could not hope to wrest political power from the brewery-controlled interests which held it. So failing to sidetrack the candidate supported by the rival machine, there was at least a semblance of a fight for supremacy between these rival special interests. But it was only a sham battle after all. The brewery interests had long before seen the handwriting of popular disapproval and knew that their day of greatest triumph was over. They would still stand for a special-interest candidate, however.

A somewhat similar condition to that which existed in Minnesota exists in California, but the special interests there may be successful in withdrawing one of the rival candidates most favored by them there, as they have time yet to do so.

Comparatively few voters and not all of the press have the means for learning facts about candidates, and often support in good faith candidates not in sympathy with the cause of the people. The ordinary methods used by the trusts, such as boom articles published in the paid press for their candidates and falsehoods about the other candidates, sending out paid workers, and all that sort of thing, have become so common that everybody understands them. The trusts have other methods, however, not so well understood and that are more dangerous.

Immense sums of money were spent for two of the candidates in the recent Minnesota primary on the senatorship contest. The law limiting the expenses of candidates had no force whatever, and in the 1916 primary money flowed like the floods of the Mississippi in this same year. They illustrate the system.

BAITING THE LEADERS.

Old organizations exist and new ones are formed from time to time. They are all formed for good—with that purpose in view by the rank and file of the members—but whatever good is undertaken, there are always selfish persons who seek to take advantage of it. The selfish know that there is no place where the object sought is to secure good results, but what advantage for selfish purposes may be taken if they can in some way become leaders. Often the worst of scoundrels will themselves be instrumental in organizing new associations for good purposes or manage to become leaders in existing ones for the very purpose of taking advantage of the membership for the individual selfish gain of the leaders. But it more often occurs that the beginning is with perfectly good intentions, and that when a person has developed to a point where as a leader he gets a strong following the temptation is then first presented either for him to secure political power or material consideration, and experience shows that he yields in a majority of cases.

EXAMPLES OF THE PRACTICE STATED.

Take the Minnesota Anti-Saloon League, the Catholic organizations, and the organizations opposed to political power being exercised by the church. Take these merely as examples, and then apply the principles involved to all similar conditions, and it will be found how the leadership of any of them may result in defeating the very objects of their existence. These organizations became correlated in the recent Minnesota primary, and what happened exemplifies how the selfishness of individual leaders becomes instruments in the hands of the trusts to defeat the very objects of organizations intended for the good of mankind.

The Minnesota Anti-Saloon League was formed to curb and destroy the political power and influence of the liquor interests and to promote temperance. It is not an old organization, and had not attracted the watchful eye of the trusts until about two years ago, when it was discovered that the Anti-Saloon League had an influential and strong citizenship in the State supporting its work. It had demonstrated its strength. The officers in charge had high motives and meant to accomplish the results the supporters of the organization sought, and worked energetically to that end.

The secretary of the Anti-Saloon League, in cooperation with other workers, made splendid headway with the work of the league, but the Steel Trust, ever watchful of its selfish interests, had discovered that the use of liquor made its employees less efficient, and made its bow to the temperance forces. So far, so good; even though it did so for selfish reasons. It however, recognized the influence of the leaders in the league to promote other than temperance matters. They could, if they would, help promote the most selfish purposes of the Steel Trust. It therefore employed the secretary of the Anti-Saloon League, who, as we have seen, had become an important factor in the league work, and paid him splendidly. He was sent to Washington to lobby, first on temperance work and then to work up evidence to defeat the confirmation by the Senate of Louis D. Brandeis to the Supreme Court of the United States.

Brandeis had fought the power of the trusts and they did not want him on the bench. But there were adroit things yet in store. The greatest of the trusts wanted a certain man to become Senator, for great problems of vital importance to the trusts will be presented. They had worked to line things up in their favor, and now the "invisible government" went to work

to get this former Anti-Saloon League secretary back into the offices of the Minnesota Anti-Saloon League, and they did so at the opportune time—shortly before the primaries.

The Catholic Church is the strongest single influence, perhaps, on earth. It reaches everywhere in every land. For that reason big business seeks the Pope, bishops, priests, and influential lay members. They influence, in a large measure, the church members. That influence is immensely valuable for "big business" to have in its favor. Therefore big business favors in various ways the leaders individually and contributes liberally to their undertakings, as well as to their enterprises of whatever kind. Though selfish on the part of the trusts, it gets advertised as charity or as gifts and endowments and the church leaders are looked up to with pride because they can get rich gifts from the wealthy. These high church dignitaries get busy securing jobs, political and other, for the influential of the lay members, and because of the power they have in influencing the church members, the trusts support it, resulting, it is claimed, in more political and other patronage going to the membership of the church than is justified.

In Minneapolis, for instance, it is claimed that the Catholic population is less than one-tenth of the whole, but that members of the church, because of political interference on the part of high dignitaries, hold 65 per cent of the income from political jobs. Similar conditions, it is claimed, exist in other parts of the country. It causes "anti" Catholic organizations to be formed to free the administration of government, whether municipal, State, or national, from sectional or sectarian domination, church or other, and place all government in control of the people unprejudiced by such. No one doubts that the rank and file of the members of these "anti" organizations are influenced by a desire to get a true and impartial administration of government by the people and for the people, uninfluenced by leaders in religious or other organizations for selfish ends. These "anti" organizations also have influential leaders, to whom the members look for information, and since the membership is large and has a great power, the trusts use adroit methods to ingratiate themselves with these leaders.

Thus the stage was set. In addition to all the other advantages wealth could secure, there were these three great forces—the Minnesota Anti-Saloon League, the Catholic organizations, and the organizations opposed to the Catholic influence. The high church dignitaries had always favored the trusts and the wealth, for the reasons before stated, in Minnesota, particularly the Great Northern, the Northern Pacific, Steel Trust, and other big business; then there were the anti-Catholic organizations, in one of which the leaders did not want to let one unit know what the others were doing or where they were, for fear the influence of their leadership would be weakened. That was the Tammany Hall system in New York. Then came the Minnesota Anti-Saloon League, with the old secretary temporarily back from the Steel Trust employment. Under the influence of the trusts these three sources of controlling votes were united in an attempt to put the man in the United States Senate that the trusts most wanted to have there.

Everything was now set for action; the primaries immediately at hand, enormous sums of money supplied by the Money Trust, Steel Trust, and other big business, to be tapped, to make it go the way the trusts wished. The typewriters, telegraph, the telephone, and all the other agencies were put to work simultaneously, and now no time was left for the people to learn other than from those who had become interested through the channels described. The leadership of each organization, including the church, had different purposes in supporting the same man, and each expected to be satisfied, but the rank and file of the people who are the members will find that by following blindly the leadership, they have again placed their necks in the yoke of the influences that have created a Government by and for the trusts instead of by and for the people.

To the intelligent, which includes practically everybody, no further detail is necessary to describe popular government as now practiced. Most of the organizations, and the political parties as well, have worked along the lines that I have described. Their object is for good, but leaders in them all have been tempted and have used their influence for selfish purposes. The trusts understand human nature, bait the leaders, and a majority of them yield to temptation. It would seem that after so much experience and observation the plain people would also understand human nature, but so far it has not proven a practical knowledge on their part, for they still are playing the game for the trusts. There will always be leaders, but the public should not be too trustful of them. The public must know what it wants, and see that the leaders stand for it, and especially be not fooled by the last word before election that comes by telephone, wire, mail, or otherwise, when everything could have been told before.

NO CONFLICT OF INTEREST AMONG THE PLAIN PEOPLE.

The interests of the plain people are all alike. It is no advantage, for instance, to the rank and file of Catholics to have an undue proportion of their number hold offices or positions that may be secured for them through the influence of the church dignitaries, for it is bound in the end to result in a prejudice which will deprive them of their proper influences. So, when the leaders in any organization undertake to get more than belongs to them, in the end it will defeat the purposes of the organization, and become the prey to special interests that know how to take advantage. The rank and file of the people, whether in organization or not, are honest and intend to do right by everybody, and only fail because they trust too much to leaders instead of judging for themselves, and because of that fact we find ourselves with a breaking down civilization on our hands as is evidenced by wars and other horrors.

Out of the kind of politics that controls us we have developed business practices that do not stand the test of common sense. We follow systems that destroy economy and efficiency. We have built up a false sort of patriotism, demanding things that are to our own eternal disadvantage, and the rest of the world apes the same kind of practices, thus producing a world chaos. The few examples I have given, though somewhat prolix, are sufficient to demonstrate the folly of doing business for speculation, because the profits all go to the ones least entitled to them and the rest of us become mere industrial slaves.

WHAT SHALL WE DO ABOUT IT?

To effect a remedy for all the existing evils is impossible, but to follow absurdities and deliberately bring on difficulties is a folly. We can become many times more prosperous than we are by the exercise of common-sense judgment. Every business which becomes or is by the nature of things a monopoly should be operated by the Government. The railways and other transportation systems should be operated by the Government just as certainly and necessarily as the mail carrying. Likewise the telephone and the telegraph, as well as the financial systems, should be operated by the Government, and all these natural monopolies separated from the rule laid down that these monopolies may levy a tribute upon the people to pile up the huge fortunes.

NONPOLITICAL ORGANIZATIONS.

Capital is organized completely through the Money Trust control, and, in the manner I previously described, controls the Government machinery. The latter it can not maintain when the public takes to itself the power which it has, if it will exercise it. When the public takes over the transportation companies, the telephone, telegraph, and financial systems there will be no more Money Trust and no other trusts. Then there will be a chance for the toiler to get his dues, whether he is a farmer, a shopman, merchant, or other. The Government may not be able at first to operate the several systems as cheaply as the trusts can; but what of it, if it can not, for there is a great margin? The rich now own over 60 per cent of the wealth, and they got it out of the people because of the monopoly practice. That 60 per cent would be saved to the people, and there would be no more piling up of hundreds of millions for single individuals to collect interest and dividends upon.

TIME REQUIRED—ORGANIZATIONS FORMED.

It will take some time before the Government will own the agencies that create the monopolies, and the question is, What shall be done in the meantime to protect the people while they are taking to themselves the control of politics and Government? The railway employees are giving us an example at this very time of what organization of individuals can do, even independent of Government regulation. The farmers are also forming effective organizations. The wageworkers can by pooling their forces with the farmers control the economic situation. This is one of the great steps to be taken, and the work has begun in a practical way and must be carried forward with all possible speed to prevent the monopolies from getting any further hold upon the resources of the country. I shall discuss the details of this nonpolitical organization at another time, but when I say "nonpolitical," I do not mean that the organization of the wageworkers and the farmers should neglect the Government agencies. The special interests have controlled these, and now it is time to wrest from them that control.

RIGHTS OF AMERICANS IN AMERICA.

We have heard a great deal of late about the rights of Americans in foreign lands. I have not fooled myself by any false notions of these, nor do I hold the rights of Americans, wherever they are, as of light importance. Respect them I do as of the

highest importance, but if any distinction in regard to their maintenance were to be made between Americans at home and Americans abroad, I should resolve that in favor of maintaining the rights of Americans at home, for when that is done we can depend upon the patriotism of those at home to protect those abroad who may be acting within their proper province. There are over a hundred millions at home all the time, while there are but a few thousand abroad at any time. I am not in favor of indifference to the rights of the hundred millions of Americans in the pursuits of their industries at home and the strictest vigilance at whatever cost for those abroad. I am in favor of fixing the rules for government of all their rights and then maintain them with the power of the Nation. If it takes mighty armies and navies to do that, then we should have them, but if we fix the rule of government as it should be but little militarism will be required.

I recently read a poem displaying by word, and by picture to illustrate, how the social conditions had seared the soul of a young girl. She had seen an old man on a bench in a park:

And the wind cut his feeble wrists,
Seared his collarless, pinched neck
Till his eyes blinked smarting * * *
Am I a coward that I do not go to him,
Lift him instantly from his wretchedness?
Am I afraid, dreading the great hoard of unanswered
And unanswerable problems (unsettled)
Before which governments and religions quail?
What have I done to you, old man,
What have all of us done to you,
Or what have we failed to do
That you should sit thus gaunt and lacking
While we have fires and homes in plenty?

"While we have fires and homes in plenty" referred to the 2 per cent who own 60 per cent of all the wealth.

The whole social system has seared my soul. I see life from its varied angles. I see, in many cases, thoughtless, glad faces, made so by the possession of riches wrested from the toil of others, magnify the sad faces of those put in distress by the "system." It is not alone—

The old man looking at me from a bench in the park. * * *

Nor was it the old man alone who seared the soul of the girl in the poem. It was the numberless victims of a false system. The world is filled with the victims of—

What have I done to you, old man,
Or what have we failed to do,
That you should sit thus gaunt and lacking?

What have we failed to do? Some one failed to protect childhood—the years that ripened into manhood and womanhood—and left them the victims of a false administration of government. They failed, as well as we have failed, to observe the very laws God created for self-preservation, and permitted a coterie of greedy speculators to dictate the whole social system and to educate us to their way of thinking and dealing, thus enabling them to dictate our elections, control our legislators, executives, tribunals, and courts; and, as a consequence, we are governed by practices and laws that permit them to appropriate the products of our toil and thus force us to walk through the world not only in sight of the feeble old man lacking the conveniences of life, but in sight of numberless, needless miseries that have opened the gates in my mind, where the wrongs of the world come trooping in.

I go into the fields and talk with the farmers; they take me to dine with them and their wives and children; I visit the mines, the factories, the shops, and the other industries, to see the toilers there, and then visit the back streets, alleys, and other places where they live, and they too dine me, that I may know more about them. I have gone to the homes of the wealthy, and there too, have dined and seen the waste and extravagance, supremely vulgar when one knows how the system which supplies the cost forces it from the earnings of the toilers, and leaves these toilers without the necessaries of life. I have also seen the places where some of the rich waste their wealth in revelry and debauchery, where in a single night in a single place its cost would have supported 50 families for an entire year. There are numberless such running every night. These are some of the offsprings from the wasteful "system" which I have briefly described, and is supported by the levy on those made poor for the support of special privilege.

I know how careful, how frugal the families of the farmers, the wage workers, of the smaller business operators, and of numerous others who depend upon the earnings of their own industry for a living, must be to enable them to barely subsist, or any of them to save for emergencies. I know that from the earnings of their toil is extracted the means for carrying on the excesses, the revelry, and all the other hell that takes place.

Yes; I have examined the conduct of the people so far as I have had the means and time to do so. I did so in the hope that I might be able to interpret our kind of civilization. What I have seen proves that it is leading us rapidly toward ruin. But I also see in it elements that I know can and will be forceful in bringing the mad race to a close, because the very absurdity which is now presented by the acts of civilized nations, by their very operation, will wake sane minds and bring into action sane judgment of the people instead of accepting the dictation and following the selfish speculators, as we do now.

The system, however, will never be corrected by simply following leaders, for, as I have explained, leaders are very valuable to big business, and are quickly discovered by big business. Big business can afford to and does buy them. It knows that the world has always been moved by selfishness, and since big business has extorted from the people the means, and through its use has obtained unnatural and improper power, it uses a part of the means and the improper power to buy or control the leaders as rapidly as they develop.

There were never enough honest leaders at one time who remained true long enough to win complete success for the plain people. Success will never come until the people themselves act through their own intelligence. The people must know enough about facts and conditions to make it impossible for leaders to deceive them. When we do, the field will be clear for peace and harmony and will be followed by a permanent general prosperity.

God has created the natural resources and man has invented and learned how to apply mechanical and other devices to aid nature in securing a bountiful production. A proper application on the part of the people of their intelligence will immensely increase the annual earnings of the toilers, prevent the operation of special privileges, reduce the cost of living, and increase manyfold the people's advantages, and produce a safe and sane civilization, thus leading the world out from and relieve it from the chaos now so general. The people have acquired the knowledge, and it remains now for them to use that knowledge in a safe and sane common-sense practical way. We can and should all be alive to the truth, and make America the light of the world by giving expression through its institutions to a coordination of the affairs of mankind, instead of allowing adventuresome speculators to fix the rules of action, that by their very nature invite jealousy and hatred of the world and consequent strife.

I have made this statement with the idea that it may be distributed with the aid of friends of good government. It covers only a few of the principles involved in bringing to the people the advantages that belong to them, and the power that is theirs for the mere fact of action. I have other statements in the records regarding work of making a people's government, and refer to them as related to this statement. To merely think about these problems will lead to nothing. Action is necessary. If any work in this life is worth doing well to make it pay, it is good government. The people who toil for a living, whether for wages or for themselves by ownership of what they work with, they can increase their advantages several fold by establishing good government. But it can never be done by blindly following leaders.

---

## Laws Passed by the Democratic Congress During the Wilson Administration.

### EXTENSION OF REMARKS

OF

### HON. DENVER S. CHURCH,

OF CALIFORNIA,

IN THE HOUSE OF REPRESENTATIVES,

*Tuesday, August 15, 1916.*

Mr. CHURCH. Mr. Speaker, Jesus of Nazareth declared in His Sermon on the Mount more than 1,800 years ago:

A good tree can not bring forth evil fruit, neither can a corrupt tree bring forth good fruit. * * * Wherefore by their fruits ye shall know them.

The human race will seek in vain for a better plan than this to test the virtue of any cause.

We are just beginning a national campaign, and it is proposed by some that the governmental tree, which has supplied protection and nourishment for this country during the past four years, shall be uprooted, and in its place be planted the Republican tree. It is up to the voters of this Republic to decide on election day whether the results of the Democratic administration have been good or bad. If the fruits have been good both wisdom and patriotism cries out to save the

tree, but if it has been bad it should be rooted up. Let us stand under the Democratic tree for a short time and examine and test its fruits.

Let us consider the laws passed by the Democratic Congress during the Wilson administration, and inspect them as fruits produced by the Democratic tree.

I present to you as a specimen the income-tax law which was approved October 3, 1913, during the special session of the Sixty-third Congress. It provides that a tax shall be levied upon the annual income of a single person which exceed $3,000 per year and upon a married person which exceeds $4,000, the tax rate increasing at a ratio directly proportionate to the amount of income.

Let me call your attention to the fact that this law, during the first 32 months of its operation, yielded $137,257,185.44, up to July 1 of this year. Thus a burden of more than $4,000,000 a month has been lifted from the bowed shoulders of the poor and placed upon the broad shoulders of the prosperous and rich; taken from the weak and placed upon the strong; lifted from the blacksmith who works at the forge, the carpenter who toils on the roof, the man who swings the sledge, and the man who holds the drill; lifted from the backs of the laborer and farmer whose wages are but $25 per month, and from the seamstress who receives but $1.50 per day, and from the girl in the store and the waitress who works at starvation wages, and paid by those whose annual income range from $3,000 to millions of dollars per annum. How do you like this fruit? Is it sweet or sour to you?

Governments are established for the protection of individuals and societies, to protect them in their personal rights and in their property rights. In reference to personal rights one person receives as much protection as another. It is murder just the same if the victim is a beggar as if he were the governor of a Commonwealth, but the amount of property protection depends upon the amount of property one possesses. The man with a million dollars worth of property receives a million times as much property protection from this Government as the man who has but $1. The income-tax law requires a person to pay property tax in proportion to the amount of protection he receives from the Government. It is laid deep in the fundamental principles of justice. It adds no extra hours of toil. It causes no self-denial or sleepless night. It adds no wrinkles to the face of the weary, and when its demands are met no one but the miser sighs. Is this fruit good or bad?

Well, here is another law. Let us see how you like it. The Federal reserve act signed by President Wilson December 23, 1913. A person who has not studied this banking system will never know its true merits. An elastic currency that expands and contracts according to the country's needs. A currency not based upon the bonded indebtedness of the United States, but based on assets. Not based on debts but on credits. Under the old system bank notes were issued according to the amount of Government bonds owned, and the circulating medium could be controlled to an extent by anyone who cared to invest in Government bonds. Under the old system all reserve and credits had a tendency to move to New York where the money powers manipulated and controlled debts and credits at their will, even to the bringing on of a panic, if they felt inclined, but under the new system we have 12 regional banks in 12 regions of the United States. Twelve Wall Streets, if you please, all under Government control. In these regional banks member banks may have proper credits discounted, and based on the assets of the farm, they can have issued Federal notes which are returned when the hypothecated property is redeemed. So under this system a panic can never visit the land again unless the winter rains shall cease and we be denied the reoccurring seasons of the year.

We have been having panics in this country ever since the old financial régime has been in operation, not the result of famine or drought, but because of our inadequate system of banking. Everybody admits this who has given the subject careful consideration.

Go back to the panic of 1873 when the New York banks, in order to avoid a complete destruction of their financial system, were obliged to issue clearing-house loan certificates to the value of $26,563. During that year there were 5,183 commercial failures in this country with an aggregate liability of $228,499,900. This panic was not caused by any natural reasons. The winter rains had not failed to fall, seed time and harvest had not been denied this goodly land. The grain and corn fields of the North had not ceased to fill the cribs and warehouses with their golden sheaves; the great wheels and belts of the factories in the far East were performing their usual service; the cotton fields of the South were still nodding with their heavy crop in Dixieland, and the gold mines, vineyards, and fruit trees of the West were still yielding their annual supply. It was a money panic heralded by the failure of Jay Cooke & Co.

Again, in 1893, the country found itself in the clutches of a money panic the like of which up to that time had not been known. In order to avoid its terrible consequence the New York banks were obliged to issue clearing-house loan certificates again to the value of $38,380,000. In this year there were 15,242 commercial failures in the country, with an aggregate liability of $346,779,889. This panic, like all the others which had preceded it, was not caused by any phenomena of nature, but came on in the very hour of plenty by the breaking down of our banking system, first heralded by the failure of Mitchell's Bank and the Erie Railroad.

Again, in 1907, a terrible money panic came upon us without a moment's warning. During this eventful year there were 11,725 commercial failures, with an aggregate liability of $197,385,225. The banks again resorted, two fold stronger than ever, to the clearing-house loan certificates, and in order to prevent thousands of other commercial failures placed in circulation these certificates to the value of $100,000,000. At the beginning of this panic unusual prosperity prevailed everywhere until the failure of the Knickerbocker Trust Co., which started the general spread of consternation throughout the country.

It is quite generally admitted that all these disasters were the legitimate fruits of an evil financial system. This Democratic Federal reserve law is a complete solution of the whole matter. It will in the future prevent more heartaches and tears than any law passed by the American Congress in 50 years. It will be the cause of more prosperity than any law ever passed by the Congress of the United States. It will grow in importance and popularity with the years, and I predict in 50 years from now the people looking backward a hundred years and observing, as they will, the dreadful misfortunes that periodically beset the people during the 50 years preceding the passage of this law, and observing since its passage no panic has occurred, will build a monument to the author of this splendid law.

I call your attention now to the law establishing a Federal Trade Commission, signed by President Wilson September 26, 1914. During the four years of the Taft administration and the seven years of the Roosevelt administration we could hear everywhere of great trusts that were oppressing the people. The newspapers were crying out against them; orators were denouncing them from platforms and ministers from the pulpits. The Attorney General was arresting people here and there, charging them with the violation of the antitrust law.

The present administration, as soon as it came into power, established a commission composed of five men whose duty it was to be continually on the watch, looking for violations of the antitrust law. This commission was clothed with sufficient power to make thorough investigation in its offices at Washington in regard to the operations of corporations or individuals who were charged, or in any way suspected, of being combined in restraint of trade. As a result of this commission we hear scarcely nothing in regard to oppressive trusts, and, as a matter of fact, those who originally violated the law have, since the creation of this commission, adjusted their business in such a way as to be within the demands of the law. As long as this Federal Trade Commission is in existence and composed of such loyal, faithful public servants as it is now the era of trust oppression will never again return to strangle the legitimate business interests of this country. Is the tree that produced this fruit good or bad?

Another piece of legislation, which is in many respects the most important that has been proposed in many decades, is the Federal tariff board, which recently passed the House and is now pending in the Senate. This bill is in keeping with the other great achievements of the present administration and will in a very strong way remove from politics the tariff considerations for the future. Almost since the establishment of this Government the business interests of this country have been subjected every four years to the experiments of the successful political administration. At the commencement of the national political campaign the business interests of the country are completely upset and hold their breath, as it were, until after election, not knowing which political policy is to be in vogue. Under the proposed plan duties will be levied not simply to meet the platform requirements but for the purpose of meeting the necessity of business conditions throughout the United States. I filed a bill, both in the Sixty-third and Sixty-fourth Congresses, asking for the creation of a nonpolitical tariff board. In each of these bills section 6 provides:

That when a verified complaint is filed with said commission, signed by the president and secretary of any chamber of commerce duly operating under the laws of any State in the Union, setting forth that a legitimate industry located within the region wherein said chamber of commerce is in operation is being injured by reason of excessive im-

portation of goods into the United States, caused by too low a tariff rate, or should said facts appear to said commission without said complaint, or when it shall appear to said commission that there is reason to believe any business interest in the United States is making unusual profits to the detriment of the users and consumers of its products, caused by a lack of importations into the United States resulting from too high a tariff duty, or when it shall appear to said commission that unlawful trusts and combines in restraint of trade are in existence in this country, resulting from a lack of imports caused by too high a tariff duty, said commission shall investigate said matter, and, if necessary, hold public hearings in reference thereto in order to determine whether or not said conditions exist, and shall, if considered advisable, visit the sections in which said business interests are located, and in case said commission finds that any such conditions do exist it shall, in its annual report, call attention to the same and make such recommendation to Congress as it considers wise for the purpose of remedying said evils, and in said report it shall set forth and give all evidence received by it upon which said opinions and recommendations are based.

Let me call your attention to another bill which was signed by President Wilson July 17, 1916—the rural-credits bill. This bill provides more money for the farmers and long-time loans with a minimum rate of interest. No bill ever passed by the American Congress is going to bring as much light to the farmers' face and so much joy to the heart of his wife and child as this bill. There are, as shown by the census report of 1910, 2,354,676 tenant farmers in this country, farming 226,512,843 acres of land, valued at $10,977,233,427. Besides this, there are 3,948,722 farmers who own or have some kind of an interest in the land they work. I can not tell you the hundreds of millions of dollars secured by mortgage on these lands. This bill will help the mortgagees of this country, the farm owners and those having equities in farms, and it will help nearly two and a half million men, tenant farmers, who toil on land they do not own. I see this mighty horde, the tillers of the soil, some in faraway New England States, others working in the northern fields, myriads from the South, and the pioneers and their sons from the States along the western coast, looking to Washington and saying at last there comes relief. Filled with courage and hope, against unequal odds, the farmers have bravely worked on from year to year, but the usurer has ever been standing at their gates, and the exaction accompanying the pound of flesh has taken courage from the farmers' heart. How do you like this fruit? Do you think the tree is good or bad?

Let me call your attention to the fact that it is almost impossible to estimate the wonderful developments that have taken place in reference to parcel-post matters under Mr. Burleson's management during the Wilson administration. I will only endeavor to mention a few:

On July 1, 1913, a system was inaugurated whereby parcels could be sent collect on delivery.

July 1, 1913. Insurance fee decreased from 10 to 5 cents on parcels having a value of $25 or less.

August 15, 1913. Increase in the limit of weight from 11 to 20 pounds and a material reduction in the rates of postage in the first and second zones.

January 1, 1914. A material reduction in the rates of postage in the third, fourth, fifth, and sixth zones.

March 16, 1914. Classification of parcel post extended to include books.

April 24, 1914. Seeds, cuttings, bulbs, roots, scions, and plants admitted to the fourth class and transported at parcel-post rates.

July 10, 1915. Limit of size increased from 72 to 84 inches.

At the beginning of this administration, March 4, 1913, the volume of parcel-post business handled was approximately 3,000,000 parcels annually, while for the fiscal year ending June 30, 1916, 1,001,021,616 parcels were handled, each having an average weight of more than a pound. Taking into consideration this wonderful improvement and development of this marvelous system, I venture to say that the millions of farmers who have been accommodated by this improved system are eagerly declaring in favor of the fruit of this Democratic tree.

From what has already been said it is obvious that this administration has done much to develop the legitimate business industry of this country, but when we take into consideration the wonderful natural resources of the United States we can not fail to see the importance of opening up the ports of the world as a market for our products and goods. This has been sadly neglected during the past. Our country, bounded, as it is, by the two great oceans of the world, with half a dozen transcontinental railroads ever ready to bear our products to the sea, it is imperative that our trade interest should be stimulated with countries on the other side of the great waters. You will be surprised when I call your attention to the fact that during the year ending July 31, 1914, there were 3,325 vessels engaged in the foreign trade of the United States, and but 452 of these were vessels bearing the American flag, and of the remainder England alone had 1,733. In other words, the net tonnage of the American ships engaged in the foreign trade of the United States during the year in question amounted to but 7.63 of the net tonnage of all the ships engaged in that business. I am please to state that this percentage, through the foresight and adequate laws passed by the present administration, has been increased to 680 American ships engaged in our foreign trade during the year ending July 31, 1915, and that the per cent of net tonnage increased to 11.99. This has come about by the passage of S. 6357, known as the war-risk insurance law, which provides for the insurance on the part of the Government of ships engaged in American trade against possible loss occasioned by war, also by an act signed by President Wilson August 18, 1914, which added to our merchant marine 132 ships with 308,113 net tonnage.

It being thus apparent that the number of American ships have been greatly increased during this administration, but by no means to the extent that it will be under the ship-purchase bill which passed the House of Representatives May 20 of this year. The object of this law is to enlarge our merchant marine, so that in the event of war our Navy will be supplied with all of the auxiliary ships necessary; also that practically all the foreign commerce of the United States shall be conducted under the American flag. Can anyone find any objection to this law? Why was it not thought of before? Why were its good provisions, like many others that I have called your attention to, not enacted into law until the Wilson administration?

As a humanitarian measure, let me ask you how you like the child-labor bill which passed the Senate August 5, which provides that the product of no mine or quarry shall be sold in interstate commerce wherein children under the age of 16 years are employed, and also that children under the age of 14 years shall not be employed in mills and manufacturing establishments.

According to the United States census report there were in 1910 nearly 2,000,000 children under 16 years of age engaged in different industrial occupations—about 5 per cent of all the laborers in the United States. Nearly 50 per cent of this vast army of little workers were under the age of 14 years and many little fellows of only 10; 637,000 were little girls; 41,076 under the age of 16 were employed in the cotton mills; 11,811 were mere babies between the ages of 10 and 13 years, 5,500 of whom were little girls.

These statistics are sufficient justification for the passage of this bill. Who can imagine a man who is the father of a tender little child who would be opposed to it? Who can imagine a man who ever had a little brother or sister who would or could oppose it? Who can imagine a person whose memory bears him back to his own springtime of life who would not favor this bill? We hear a great deal in these times about conservation. We appropriate vast sums to conserve the forests and to conserve the oil and other industries. We make great appropriations in the interest of agriculture, in the interest of animal and plant industry. We spend large sums of money to conserve the fish and game of this country. But what about the fatherless, motherless, and friendless children?

I was in favor of this bill, because it conserved the childhood of our country. It conserves their strength and gives them time to grow. It conserves their intellect and gives them time to go to school. It conserves their health by removing them from the poisonous gases and filthy air. It conserves their lives by taking them away from vicious wheels and belts and revolving drums, and it conserves their childhood days by permitting them to have time to sleep and play, wander and wonder, grow big of soul, and sweet and kind of heart.

I do not like a robber and I despise with all my heart a person who forces away the property of his fellow man. He is a heartless robber, indeed, who steals the charm of childhood lives, that takes the sparkle from childhood's eye and the color from childhood's cheek, and causes the hearthstone and the threshold to become only places of refuge for tired feet.

Hark! I hear a musical voice. It sounds from far-away Judea hills. The multitude look and listen. It is the carpenter's son who speaks, "A good tree can not bring forth evil fruit." He who spoke these words was of lowly birth. His earthly parents on the night that He was born had not money enough to buy a bed, and the eastern star marked His birthplace to be a manger down in Bethlehem. About the time He spoke these words He boldly proclaimed Himself to be the Son of God. Soon we hear Him in Pontius Pilate's court accused, condemned, and finally rejected and dishonored dies upon a wooden cross. They adjudge the tree was bad and cut it down, but they did not test it by its fruits. In after years wise men reviewed their work, and now that both the fruit and tree were good is acknowledged by the world.

"A good tree can not bring forth evil fruit." Mr. Speaker, I have mentioned some of the achievements of this administra-

tion. Time will not permit me to mention many other victories that it has won for the American people, but I must call your attention to two conditions that prevail in this country at the present time. One, the result of progressive legislation enacted by the Congress; the other the result of wise leadership on behalf of the President of the United States.

Peace and prosperity, twin sisters, angels from on high, blessed be that home or land above which they spread their wings and bow. Neither famine or panic can approach its outer wall and war clouds can never drift across its blue and peaceful sky.

We have at this goodly hour the most prosperous time in the history of the country. In addition to the evidence which is continually before us, I will give you a few facts taken from the brilliant speech delivered in this House a short time ago by Hon. SCOTT FERRIS, of Oklahoma:

*Wages of railroad employees (all classes).*

| | |
|---|---|
| Average for the 7 years under Roosevelt, per day | $2.98 |
| Average for the four years under Taft, per day | 3.27 |
| Latest available figures (1914) under Wilson, per day | 3.68 |

WAGES OF FARM LABORERS.

| | |
|---|---|
| Average for 4 years under Taft: | |
| With board, per month | 20.05 |
| Without board, per month | 28.32 |
| Average for 3 years under Wilson: | |
| With board, per month | 21.23 |
| Without board, per month | 30.11 |
| Total number of people engaged in manufacturing industries in 1912 | 6,900,000 |
| Total wages paid in manufacturing industries in 1912 | $3,427,000,000 |
| Total number of people engaged in manufacturing industries in 1916 | 8,500,000 |
| Total wages paid in manufacturing industries in 1916 | $5,280,000,000 |
| Total increase in wage earners in manufacturing industries during Wilson administration | 1,600,000 |
| Total increase in wages paid in manufacturing industries during Wilson administration | $1,853,000,000 |

GENERAL PROSPERITY.

| | |
|---|---|
| Railway earnings in 1912 | $2,933,000,000 |
| Railway earnings in 1916 | 3,700,000,000 |
| Total increase in railway earnings in 4 years (26.1%) | 767,000,000 |
| Total wealth in 1912 | 187,000,000,000 |
| Total wealth in 1916 | 228,000,000,000 |
| Total increase in wealth in 4 years (21.8%) | 41,000,000,000 |
| Total manufactured products in 1912 | 20,672,000,000 |
| Total manufactured products in 1916 | 30,900,000,000 |
| Total increase in 4 years (49.4%) | 10,228,000,000 |

Mr. Speaker, the old Democratic tree hangs heavy with the golden fruit of prosperity. The question is, Shall we let it stand?

In conclusion let me call your attention to the fact that our country to-day is enjoying the unspeakable blessing of peace. To-day 14 of the great nations of the earth are engaged in a desperate war, more gigantic, more bloody, and more foolish and wicked than any of the wars that have preceded it. The killed, wounded, and missing in this war are already more than 13,000,000. Four million at least have been killed. If the bodies of all these dead were placed end to end in rows, one could go more than twice the distance across the American Continent, walking on dead bodies every step of the way. Millions of gallons of human blood has been shed in this war, blood shed in vain for a cause unknown; yet President Wilson is being criticized because he did not drive the United States into it in order to help the crowned heads of Europe settle their difficulties. As for me, I can see no honor in getting into a free-for-all fight, but I can see a great deal of honor in staying out.

If a score of men were fighting in front of my house, fighting furiously with knives, clubs, and guns, striking wildly, and all fighting madly for their lives, I would not think of standing around continually prodding the fighters about my rights. If I did, I would expect to get a broken nose or a nasty lick over my eye. Even if they staggered onto my radish patch I would not at once challenge the whole bunch for a fight. No; I would slip away and come back and see them at their homes when the fight was over and they were reasonable and cool, and I would ask them if they did not think they owed me something for tearing up my garden the day they had the scrap, and ten chances to one they would pay me all the damage I asked, and I would go away their friend, with not even a broken nose or a battered eye. It is no time to be exacting when a fight or war is on. I once knew a milch cow to run her master up a tree when he interfered with her fight, and at one time I was bitten through the hand by my own watchdog while I was trying to referee his scrap. That, however, was a long time ago, when I was young and foolish. Since then I have made it a universal practice to do my talking the day after the fight, when the air is no longer filled with dust, hide, hair, and foam.

The fact that our good President has kept us out of war seems to almost break the hearts of some.

Mr. Speaker, gratitude is the most commendable virtue of the human race, and I am proud to say it is one of the chief characteristics of the people of this country. The American idea of a square deal compels us to give credit where credit is due and to be grateful for every good thing received regardless of from whence it came. We do not demand that our blessings shall come to us in a fixed manner, through some preconceived or sanctioned course. It is only sufficient that they come; they are always welcome when they arrive. The vehicle, whatever be its name, that brings to our threshold peace, happiness, and prosperity is good. The generous spirit of our people recognizes it and bids it Godspeed. We live in the western world. Truth to us is good regardless of its brand. As the sunbeams at close of day linger upon our mountain tops as if loath to leave our goodly land, so we yearn and crave for light. We do not demand that we shall make or name its source.

To-day we stand under the great Democratic tree, and as we look among its ample branches we find it heavily laden with fruit.

That a good tree can not bring forth evil fruit was first declared over 1,800 years ago by Jesus of Nazareth. During all the ages that have intervened the lesson has been sinking deep into the human hearts, and on occasions too numerous to mention its truth has been verified in the affairs of man. Our people here have learned this lesson well. For four years they have been watching the growth of the Democratic tree. They have been labeling well its fruits, and on election day from East to West and from North to South will be heard the voice of the great American people shouting as if it were from the voting places of this Republic, "Woodman, spare that tree!"

## Pensions for Injuries to Federal Employees.

### SPEECH

OF

### HON. ADOLPH J. SABATH,

OF ILLINOIS,

IN THE HOUSE OF REPRESENTATIVES,

*Wednesday, July 12, 1916.*

The House in Committee of the Whole House on the state of the Union had under consideration the bill (H. R. 15316) to compensate Government employees sustaining injury while on duty.

Mr. SABATH. Mr. Chairman and gentlemen, I assure you that I have derived a great deal of pleasure and satisfaction this afternoon from seeing a great many gentlemen on both sides of the House rising in favor of this bill.

In the Sixtieth Congress, as well as in the Sixty-first and Sixty-second Congresses, I made every effort to secure recognition from the Committee on the Judiciary for the workingmen's compensation bill which I introduced. It is true that my bill would take care not only of Government employees, but it went further and provided for general workingmen's compensation to all employees over whom the United States Congress could have jurisdiction. For weeks and months I failed to secure recognition from that committee, until in the Sixty-first Congress a commission was created to investigate the principle underlying the bill for which I had so long contended.

I can not do otherwise than to congratulate the committee upon their reporting this bill which we have before us. I am aware of the opposition which has been brought to bear against this effort on my part and on the part of others who feel the same as I do to provide compensation for the injured employee, and therefore, as I said, I appreciate the fact that the Committee on the Judiciary has reported this splendidly drawn bill. I at all times was under the impression that the bills that I have drawn, the bills that I have advocated, the drafts that I have sent out to different legislators and governors and lieutenant governors and labor organizations throughout the United States were properly drawn, but as we grow older and wiser we realize that there might be some omission in a well-drawn bill, as I believe my bills were. Nevertheless, I am pleased that so much of my bills, even though, as has been charged, they have not been perfectly drawn, has been adopted by various States and legislatures, and that so much of them has been placed in the way of enactment by the adoption of this bill.

I am glad to be here to-day and say that this legislation is in the right direction, and I hope and trust that this great committee, which has the courage of its convictions to do what is right by the employees of our Government, will go further and do the same thing by all other employees over whom Congress has jurisdiction, and will report the bill that I introduced,

which provides for a general workingman's compensation to employees engaged in interstate commerce.

I realize that there might be some men who might be under the impression that the compensation fixed here is not quite high enough, but I believe it is a fair compensation. I believe it is a just compensation. Later on, when the principle has been established, we can easily increase the compensation in any case where we believe it should be increased. But for the present I believe this bill amply provides that compensation which for so many years has been denied the unfortunate man who has lost the ability to provide for his family and for himself through no fault of his own.

In view of that fact and the general demand for this legislation, I hope that all who favor just legislation will vote in favor of the bill. [Applause.]

To acquaint the new membership of the House with the provisions of my general workmen's compensation bill, which not only tended to take care of the Government employees but all of the workmen engaged in interstate commerce, over which Congress would have jurisdiction, I shall insert the same as a part of my remarks:

A bill (H. R. 466) to provide a system of compensation for injuries, resulting in disability or death, to employees of common carriers subject to the regulative power of Congress, to civil employees of the United States Government, and for other purposes.

*Be it enacted, etc.*, That the provisions of this act shall apply to every common carrier or employer of labor, both by land or by sea, whose business is affected with a public use and who or which is subject to the regulative power of Congress and to any of the employees of every such common carrier while such employees are engaged in any employment subject to the regulative power of Congress, and to all civil employees of the Government of the United States.

SEC. 2. That any such common carrier or employer (hereinafter designated employer) of labor, both by land or by sea, whose business is affected with a public use and who or which is subject to the provisions of this act may elect to provide and pay compensation for injuries sustained by any of its employees arising out of and in the course of any employment covered by the provisions of section 1, according to the provisions of this act, and thereby such employer shall be relieved from any liability for the recovery of damages, except as herein provided. Every employer subject to the provisions of this act is presumed to have elected to provide and pay compensation as provided in this act unless and until notice in writing by the employer of his election to the contrary is filed with the Interstate Commerce Commission. No such employer, however, shall be entitled to any of the privileges or advantages specified herein until a notice in writing of an election by said employer to provide such compensation shall have been filed with the Interstate Commerce Commission, on blanks furnished by it for that purpose.

SEC. 3. That the filing of notice of an election to provide such compensation as aforesaid shall constitute an acceptance of all the provisions of this act, and such employer shall be bound thereby as to all his employees subject to the provisions of this act for a term of one year, and succeeding terms of one year thereafter until a notice by the employer of his intention to discontinue payment of compensation under the provisions of this act shall have been given to the Interstate Commerce Commission, and to all employees as aforesaid by written notice at least 60 days prior to the expiration of any such annual term: *Provided*, That no compensation shall be allowed for the death or injury of an employee where it is proved that his injury or death was occasioned by his willful, wanton, and premeditated intention to bring about the injury or death of himself or another.

SEC. 4. That when any employer elects to provide and pay compensation as provided in this act, and files notice of such election with the Interstate Commerce Commission, and thereby becomes bound to provide and pay such compensation according to the provisions of this act, then every employee of such employer who enters the employment subject to this act after the acceptance of this act by said employer as aforesaid, shall be deemed to have accepted all the provisions of this act as a part of his contract of hiring, and shall be bound thereby, except as hereinafter provided. Every employee subject to this act whose contract of service is in force at the time his employer elects to pay compensation and who continues to work for such employer, and every such employee who enters the service of such employer after the acceptance of this act by the employer, shall be deemed thereby to have accepted the provisions of this act and shall be bound thereby: *Provided, however*, That any such employee may, within 30 days after the election of the employer to pay compensation as provided by this act, or after such new employee enters the service of such employer, notify such employer in writing that said employee does not desire to receive the benefits or compensation provided for in this act, and from the day of the filing of said notice with said employer this act shall have no force or effect as to such employee, but the liability of the employer and the right to compensation by the employee shall remain the same as though this act had not been enacted: *Provided, however*, That before any such employee shall be so bound by the provisions of this act, his employer shall furnish to such employee personally, at the time of his hiring, a statement in writing of the compensation provisions of this act as herein provided, which statement shall also include a notice to the employee that the employer has accepted the provisions hereof. In the event that any such employee is unable to read the English language, then, in that case, before such employee shall be held to have accepted the provisions of this act, the said employer shall cause the said provisions of said statement and the notice to the employee that the employer has accepted the provisions of this act to be read to the said employee, or interpreted from the said English language into such language as is understood by the said employee, by a competent interpreter, and thereupon the said interpreter shall make a statement in writing, under oath, to the said employer of the fact of such reading or interpretation to said employee.

SEC. 5. That no common-law or statutory right to recover damages for injury or death sustained by any such employee while engaged in any employment subject to the provisions of this act, other than the compensation herein provided, shall be available to any such employee who has accepted the provisions of this act nor to any of such employee's dependents or his legal representative: *Provided*, That where the injury to the employee was caused by the failure of the employer to furnish or maintain any safety appliance for use in said employment, which is now or may hereafter be required by any act of Congress, nothing in this act shall affect the present civil liability of the employer.

SEC. 6. That the amount of compensation which an employer who has elected to adopt the provisions of this act shall pay for injury to an employee which results in death shall be:

(a) If the employee leaves any widow, child, or children, or parents, or other lineal heirs, who were dependent upon him for support, the compensation shall be a sum equal to 10 times the average annual earnings of the employee, but not less in any event than $4,000 and not more in any event than $10,000. Any weekly payments other than necessary medical or surgical fees shall be deducted in ascertaining such amount payable on death.

(b) If the employee leaves collateral heirs who were wholly or partially dependent upon him at the time of his death, the compensation shall be such a percentage of the sum provided in clause (a) as the contributions which deceased made to the support of such dependents bore to his earnings at the time of his death.

(c) If the employee leaves no widow, child, or children, or dependents as aforesaid, the compensation shall be the reasonable expense of his medical attendance and burial, not exceeding $200.

All compensation provided for in this section shall be paid to the personal representative of the deceased employee for the exclusive benefit of the persons entitled thereto, as provided in this section in the proportion provided by law in relation to the distribution of personal property left by persons dying intestate: *Provided, however*, That in case the said decedent shall leave a widow or children entitled to compensation provided for in this section, compensation shall be paid for the first six months after the death of said employee in installments at the same intervals and in the same amounts that the wages or earnings of said employee were paid to him while he was living. After the expiration of the said period of six months the balance of the compensation shall be paid in monthly installments equal to 60 per cent of deceased employee's monthly earnings, but in no case to be more than $75 nor less than $30 per month.

After the monthly payments above provided for have continued for not less than six months either party may, upon due notice to the other party, apply to the probate court or any other court having jurisdiction of the case for an order commuting the future payments to a lump sum. This application shall be considered by the court, and may be granted where it is shown to the satisfaction of the court that the payment of a lump sum in lieu of future monthly payments will be for the best interests of the person or persons receiving or dependent upon such compensation, and that the payment of said lump sum will not be prejudicial to the public welfare. Where such commutation is ordered the court shall fix the lump sum to be paid at an amount which will equal the total sum of probable future payments, capitalized at their present value upon the basis of interest calculated at 5 per cent per annum with annual rests. Upon payment of such lump sum the employer shall be discharged from all further liability on account of the death of the employee, and shall be entitled to a duly executed release, upon filing which or other proof of payment with the Interstate Commerce Commission the liability of such employer shall be discharged of record: *Provided*, That if the said widow or children entitled to compensation shall be residents of any foreign country the compensation due shall be paid in a lump sum at once. If there are other dependents as provided in this section, resident of any foreign country, said other dependents shall be paid compensation in a lump sum in amounts proportionate to the degree of their dependency upon the employee's earnings while living, but in no case shall the whole amount of such compensation exceed the maximum sum named in clause (a) of this section.

SEC. 7. That the amount of compensation which the employer shall pay to the employee for an injury resulting in disability shall be:

(a) Necessary medical and surgical treatment in all cases at the time of the injury, and thereafter until the degree of disability shall have been determined and the monthly or weekly payments due the injured employee shall have been fixed. Said medical and surgical treatment shall include all necessary medicines and apparatus, such as artificial limbs, crutches, and trusses, to aid in the success of the treatment and to diminish the effects of the injury. The employer may designate any duly qualified physician or surgeon to finish the medical and surgical treatment necessary, and to prescribe the necessary medicines and facilities. Should the employee be dissatisfied with the treatment given him by the physician or surgeon designated by the employer, said employee shall have the right to select his own physician or surgeon, but in that event the employer shall be liable only for such expense as he would have been liable for had the physician or surgeon designated by him been retained by the employee.

(b) If the period of disability lasts for more than seven calendar days, and such fact is determined by the physician or physicians as provided in section 9, compensation shall begin from the day the injured employee leaves work as the result of his injury, and shall continue as long as the disability lasts, or until the compensation paid equals the amount payable as a death benefit, payments to be made weekly in an amount equal to 60 per cent of the average weekly earnings of the employee at the time of his injury, but not less than $7 nor more than $18 per week.

(c) If the period of disability does not last more than seven calendar days from the day the injured employee leaves work as the result of his injury, no compensation other than the medical and surgical treatment specified in clause (a) shall be paid.

(d) If any employee shall receive any serious and permanent disfigurement to the hands or face by reason of any injury arising out of and in the course of his employment, but which disfigurement does not actually disable said employee from pursuing his usual and customary employment, such employee, unless he elects to maintain an action at law as provided in sections 4 and 5 herein, shall have the right to resort to the arbitration provisions of this act for the purpose of determining a reasonable amount of compensation to be paid to such employee for said disfigurement, but in no case shall the amount of compensation allowed an employee under this clause exceed one-third the amount of compensation that would be due him in case of his death.

(e) If after the injury has been received it shall appear upon medical examination, as provided in section 9, that the employee has been partially, though permanently, disabled so as to be incapacitated from pursuing his usual and customary employment, he shall receive compensation equal to 60 per cent of the difference between his average earnings at the time of his injury and the average amount which he

is earning or is able to earn in some suitable employment or business after the injury, if such employment is secured, the total of which shall not exceed one-half what would be due him in case of death.

(f) If permanent total disability results from any injury, compensation equal to 60 per cent of his annual earnings at the time of his injury shall be paid to the injured employee during the remainder of his life, payments to be made monthly, and in no case to be less than $30 per month nor more than $75 per month. For the purposes of this section it shall be conclusively presumed that the injury resulted in permanent total disability in the following cases, namely, the total and irrevocable loss of sight in both eyes, the loss of both feet at or above the ankle, the loss of both hands at or above the wrist, the loss of one hand and one foot, an injury to the spine resulting in permanent and complete paralysis of the legs or arms, and an injury to the skull resulting in incurable imbecility or insanity: *Provided*, That the specific cases of total permanent disability enumerated in this section shall not be construed as excluding other cases. In case death occurs before the total of the payments made to an employee who is totally and permanently disabled equals the amount payable as a death benefit, as provided in section 6, then in case the said employee leaves any widow, child or children, or parents, or other lineal heirs entitled to compensation under the provisions of this act, they shall be paid the difference between the compensation provided for death and the sum of such payment, but in no case shall this sum be less than $1,000.

In fixing the amount of the disability payments regard shall be had and deduction made for any payment, allowance, or benefit which the employe may have received from the employer during the period of his incapacity, except the expense of necessary medical and surgical treatment.

SEC. 8. That the basis for computing compensation as provided for in this act shall be as follows:

First. The compensation shall be computed on the basis of the annual earnings which the injured employee received as salary, wages, or earnings in the employment of the same employer during the year next preceding the injury.

Second. Employment by the same employer shall be construed as employment by the same employer in the grade in which the employee was employed at the time of his injury, uninterrupted by absence from work due to illness or any other unavoidable cause.

Third. The annual earnings, if not otherwise determined, shall be regarded as three hundred times the average daily earnings in such computation.

Fourth. If the injured employee has not been engaged in the employment for a full year immediately preceding the injury, the compensation shall be computed according to the annual earnings which employees of the same class in the same employment or employments of the same kind have earned during such period; and if this basis of computation should prove to be impracticable, then three hundred times the amount which the injured employee earned on an average during those days when he was working in the employment during the year next preceding the injury shall be used as a basis for the computation: *Provided*, That in no case shall the yearly earnings of the injured employee be computed at a less amount than 300 times the average daily wage of adult day laborers in the locality where the injury occurred.

Fifth. In computing compensation to be paid to an employee who before an injury was already disabled and drawing compensation, or entitled thereto under this act, additional compensation shall be awarded according to the combined disability, and in computing compensation for such combined disability the employee's earnings prior to his first injury shall be taken as a basis: *Provided*, That if the second injury was received while the employee was working for another employer then the one for whom he was working when he received his first injury, the compensation to be paid for the combined injury shall be apportioned between said two employers according to what each would be liable for in the case of the single injury happening under his employment.

Sixth. If an employee receive an injury which of itself would only cause partial disability, but which combined with a previous injury does in fact cause permanent total disability, such employee shall receive compensation for permanent total disability. If the second injury was received while the employee was employed by an employer other than the one for whom he was working when he received his first injury, then the payment of compensation for permanent total disability shall be borne by the said two employers share and share alike.

SEC. 9. That any employee entitled to receive compensation under this act shall be required, if physically able, to submit himself for examination by a duly qualified physician or surgeon, provided and paid for by the employer, at any time and place reasonably convenient for such employee, at any time within seven calendar days after the injury and at further intervals thereafter not oftener than six weeks, if deemed necessary by the employer, for the purpose of determining the nature, extent, and probable duration of such employee's disability and for the purpose of adjusting the compensation which may be due the employee from time to time. Said examination shall be made in the presence of a duly qualified physician or surgeon provided and paid for by the employee if said employee so desires, and in the event of a disagreement between said physicians or surgeons as to the nature, extent, or probable duration of said injury or disability the Interstate Commerce Commission shall be notified forthwith of said disagreement, and within six days after receiving such notice said commission shall select a third physician or surgeon, and the majority report of said three physicians or surgeons as to the nature, extent, and probable duration of such injury or disability shall be used for the purpose of estimating the amount of compensation payable to such injured employee according to the provisions of this act. Whenever it shall become necessary to select a third physician or surgeon as provided in this section, such third physician or surgeon shall be paid by the Interstate Commerce Commission. If the employee refuses to submit himself to examination as herein provided, or unnecessarily obstructs the same, his right to compensation shall be suspended until such examination shall have been made, and no such employee shall be entitled to receive compensation for any such period of suspension.

SEC. 10. That if any injured employee shall be mentally incompetent at the time any right or privilege accrues to him under this act, a conservator or guardian of such incompetent, appointed pursuant to law, may claim and exercise any such right or privilege, on behalf of said incompetent, with the same force and effect as if the employee himself had claimed or exercised such right or privilege; and no limitation of time herein provided for shall run so long as said incompetent employee has no conservator or guardian.

SEC. 11. That compensation payable under this act may be settled by agreement between the parties. Every such agreement and every award shall be in writing, signed and acknowledged by the parties and by the arbitrator or secretary of the committee hereinafter referred to, and shall specify the amount due and unpaid by the employer to the employee up to the date of the agreement or award, and, if any, the amount of further compensation that shall be paid. Every such agreement or award and every subsequent modification thereof, which modification shall be signed and acknowledged by the parties in the same manner as the original agreement or award, shall be filed with the Interstate Commerce Commission within 10 days after it is made. Upon approval of said agreement or award by said commission the parties shall be duly notified, and thereupon said agreement or award shall become effective from the date it was signed and acknowledged as aforesaid.

SEC. 12. That if compensation be not settled by agreement between the parties, then if any committee representing the employer and the employee has been organized for settling disputes under this act, the compensation shall be settled by such committee, unless either party objects by notice in writing delivered or sent by registered mail to the other party before the committee meets to consider the matter. If either party so objects, or there is no committee as aforesaid, then the compensation shall be settled by the Interstate Commerce Commission through an examiner appointed and paid by said commission for the purpose of settling controversies under this act. Said examiner shall be designated "arbitrator of compensation," and the said commission is hereby authorized and directed to employ as many of said arbitrators of compensation as may be necessary properly to execute and enforce the provisions of this act. Whenever any dispute as aforesaid has been referred to any such arbitrator of compensation the decision of said arbitrator shall be final and conclusive, subject to rehearing and determination by the Interstate Commerce Commission, and to a hearing by the Court of Commerce, subject to the rules and practice of said Court of Commerce.

SEC. 13. That said arbitrator of compensation shall not be bound by technical rules in making his investigation, but shall give the parties full opportunity to be heard, and shall act reasonably and without partiality. The provisions of section 20 of "An act to regulate commerce," approved February 4, 1887, as amended, in respect of the duties, powers, and liabilities of special agents and examiners, etc., shall be deemed to have been reenacted in respect of all the powers of said arbitrators of compensation, so far as applicable.

SEC. 14. That no said arbitrator of compensation shall act in any case in which he is interested, nor where he is related to either party by marriage, or by consanguinity or affinity within the third degree, as determined by the common law, nor who has been in the employment of any railroad as claim agent or attorney within a period of 12 months prior to his original appointment by said Interstate Commerce Commission. Whenever it shall appear to the satisfaction of the Interstate Commerce Commission, upon application of either party, that the arbitrator before whom any case is pending is disqualified, or that he entertains bias or prejudice, so that a fair and impartial hearing of the case can not be had before him, it shall be the duty of said commission to supply another arbitrator to act in the case.

SEC. 15. That any agreement or award as aforesaid may be modified by a subsequent agreement or award, in the same manner and with the same effect as the original agreement or award, at any time after the expiration of six months from the date on which said original agreement or award was approved by said Interstate Commerce Commission; and before the expiration of any period for which payment of compensation has been fixed thereby, but not afterwards, any such agreement or award may be reviewed by an arbitrator of compensation upon application of either party after due notice to the other party, upon the ground that the disability of the injured employee has subsequently ended, increased, or diminished. Upon such review the said arbitrator may increase, diminish, or discontinue the compensation, in accordance with the facts, or may make such other order as the justice of the case may require, but shall order no change in the status existing before the application for review. The findings of the arbitrator upon such review shall be served on the parties, and filed with and approved by the Interstate Commerce Commission, in like manner and subject to like disposition as in the case of the original award.

SEC. 16. That the arbitrator in any case may, on his own motion or upon application of either party, appoint a disinterested and duly qualified physician or surgeon to make all necessary examinations of the employee and testify with respect thereto. The reasonable fee of said physician or surgeon shall be paid by the Interstate Commerce Commission, upon properly executed vouchers filed with said commission in accordance with its rules for the payment of accounts.

SEC. 17. That no proceedings for compensation under this act shall be maintained unless notice of the injury has been given to the employer as soon as practicable after the happening thereof, and during disability caused by such injury, and unless claim has been made within six months from the date of said injury; or in the case of the death of the employee, or in the event of his physical or mental incapacity, within six months after such death or removal of such physical or mental incapacity; or in the event that payments have been made under this act within six months after such payments have ceased. No want, defect, or inaccuracy of said notice shall be a bar to the maintenance of proceedings by the employee, unless the employer proves that he is unduly prejudiced in such proceedings by such want, defect, or inaccuracy, and then only to the extent of such prejudice. Notice of the injury shall in substance apprise the employer of the claim for compensation made by the employee, and shall state the name and address of the injured employee, the approximate time and place of the injury, and in simple language the cause thereof, if known. Such notice may be served personally or by registered letter addressed to the employer at his last-known residence or place of business. Failure on the part of any employee entitled to compensation to give such notice shall not relieve the employer of his liability for such compensation when the facts and circumstances of such injury are known to such employer or his agent.

SEC. 18. That when an injury or death for which compensation is payable under this act is caused under circumstances also creating a legal liability for damages on the part of any carrier subject to the provisions of this act other than the employer, the right of the employee to recover against such other carrier shall be subrogated to the employer, and such employer may bring legal proceedings against such carrier to recover the damages sustained by the injured employee in an amount not exceeding the aggregate amount of compensation payable to the injured employee under this act. When an injury or death for which compensation is payable under this act is caused under circumstances also creating a legal liability for damages on the part of any person other than the employer, such person not being subject to the provisions of this act, legal proceedings may be taken against such other person to recover damages, notwithstanding the payment of or

liability to pay compensation under this act; but if action is brought against such other person by the injured employee, or in case of his death by his dependents, and judgment is obtained and paid, or settlement is made with such other person, either with or without suit, the employer shall be entitled to deduct from the compensation paid or to be paid by him the amount so received by such employee or dependents: *Provided*, That if the injured employee, or in case of his death his dependents, shall agree to receive compensation or institute proceedings to recover the same, or accept from the employer any payment on account of such compensation, such employer shall be subrogated to all the rights of such employee or dependents, and may maintain, or in case an action has already been instituted, may continue, an action either in the name of the employee or dependents or in his own name against such other person for the recovery of damages; but such employer shall nevertheless pay over to the injured employee or dependents all sums collected from such other person by judgment or otherwise in excess of the amount of such compensation paid and to be paid under this act, and costs, attorney's fees, and reasonable expenses incurred by such employer in making such collection or enforcing such liability.

SEC. 19. That notwithstanding any agreement, award, or finding as hereinbefore provided, compensation shall not be paid for any case of disability while the injured employee is at work at wages which equal the established day's earnings he was receiving at the time of his injury. His failure to earn wages equal to what he was receiving at the time of his injury as aforesaid shall entitle him to compensation as provided in clause (e) of section 7.

SEC. 20. That if any employee entitled to compensation under this act shall at the time of his injury be employed and paid jointly by two or more employers subject to this act, such employers shall contribute to the payment of such compensation in the proportion of their several wage liabilities to such employee. If one or more, but not all, of such employers are subject to this act, then the liability of such of them as are so subject shall be to pay the proportion of the entire compensation which their proportionate wage liability bears to the entire wages of the employee: *Provided, however*, That nothing in this section shall prevent any arrangement between such employers for a different distribution as between themselves of the ultimate burden of such compensation.

SEC. 21. That when payment of compensation is made to a widow for the use of herself, or for the use of herself and child or children, her written receipt therefor shall acquit the employer. When payment is made to any infant or other dependent 18 years of age or over, the written receipt therefor of such infant or other dependent shall acquit the employer. When payment is due to any infant under the age of 18 years, the payment shall be made to a duly appointed and qualified guardian of such infant under the laws of the State or Nation or of the District of Columbia or Alaska, wherein such infant may reside, and the duly acknowledged receipt therefor of such guardian shall acquit the employer.

SEC. 22. That when compensation is being paid under this act to any dependent, such compensation shall cease upon the death or marriage of such dependent, or whenever such dependent shall become self-supporting. Upon the remarriage of any widow receiving compensation under this act a sum of money equal to 20 monthly payments, as provided in section 6, but not less than $1,000, shall be paid to such widow, and further payment of compensation to such widow shall cease.

SEC. 23. That no employee subject to the provisions of this act, nor any beneficiary hereunder, shall have power to waive any of its provisions with respect to the amount of compensation which may be payable to such employee or beneficiary hereunder.

SEC. 24. That any contract or agreement made by any employee or dependent within seven calendar days after an injury, with any employer or his agent, or with any attorney, with respect to the prosecution or settlement of any claim for compensation under this act, shall be presumed to be fraudulent.

SEC. 25. That any contract of employment, relief benefit, or insurance, or other device whereby the employee is required to pay any premium or premimums for insurance against the compensation provided for in this act, shall be null and void; and any employer withholding from the wages of any employee any amount for the purposes of paying any such premium shall be guilty of a misdemeanor, punishable by a fine of not less than $500 nor more than $1,000, in the discretion of the court.

SEC. 26. That any employee or dependent who shall become entitled to compensation under the provisions of this act, in the event of his inability to recover such compensation from the employer on account of his insolvency or other cause, shall be subrogated to all the rights of such employer against any insurance company or association which may have insured such employer against loss growing out of the compensation required to be paid by the provisions of this act, and in such case only a payment of the full amount of compensation that has accrued to the person entitled thereto, in accordance with the provisions of this act, shall relieve such insurance company or association from such liability.

SEC. 27. That the assignment of any cause of action arising under this act, or of any payments due or to become due under the provisions of this act, shall be void. Every liability and all payments due or to become due under this act shall be exempt from levy or sale for private debt. Every liability for compensation under this act shall constitute a first lien upon all the property of the employer liable therefor paramount to all other claims or liens, except for wages and taxes, and in case of insolvency shall be enforced by order of the court.

SEC. 28. That the term "dependent" shall include all persons who are entitled to receive compensation under the provisions of section 6, and wherever the context requires it, shall be held to include the personal representative of the deceased and guardians of infants or incompetent persons.

The term "injury" shall be held to include an injury resulting in death.

The term "employee" includes an apprentice. It shall include the singular and the plural of both sexes. Any reference to an employee who has been injured shall, where the employee is dead and the context requires it, include a reference to his dependents or personal representatives.

The term "child or children" shall include posthumous children and all other children entitled by the law of the State where the injury occurred to inherit as children of the deceased employee.

The term "disability" shall mean want of capacity or ability by reason of injury to make full wages and full time in the position where the employee was working at the time of receiving his injury.

The phrase "personal injury arising out of and in the course of his employment" shall be held to cover an employee while engaged in the service of the employer in, on, or about the premises occupied by or under the control of the employer, where the employee's services are being performed, or while such employee is engaged elsewhere in or about his employer's business where his service contracted for or reasonably volunteered or rendered for the protection of his employer's interests requires his presence as a part of such service at the time of the injury and subjects him to dangers incident to that employment. It shall not include an injury caused by the willful act of another directed against the employee for reasons personal to such employee and not against him as an employee or because of his employment.

SEC. 29. That nothing herein contained shall be construed as doing away with or affecting any common-law or statutory right of action or remedy for personal injury or death happening before this act shall take effect.

SEC. 30. That nothing in this act shall interfere with any proceeding by the Government to enforce any act of Congress regulating the appliances or conduct of any common carrier, or affect the liability of any such common carrier to a fine or penalty under any such act.

SEC. 31. That 60 days after the passage of this act every common carrier subject to the regulative power of Congress shall be liable for the following excise taxes for the purpose of paying the administrative expenses of this act, and for paying the compensation herein provided for, namely:

First. There shall be levied, collected, and paid on every engine, car, or motor vehicle used in the transportation of persons or property on the lines of every common carrier subject to this act, whether steam or electric lines, an excise tax of $6 per year.

Second. There is hereby levied, and there shall be payable by every telegraph and telephone company operated along the line of or connected with any telegraph line built, constructed, or maintained along the line of any railroad and telegraph line to which the United States has granted subsidies, or which telegraph line shall have accepted the provisions of title 65 of the Revised Statutes, an excise tax of $50,000 for and in respect of its plant within the District of Columbia.

Third. Every express company subject to this act shall pay an excise tax of $5 per year on every wagon or other vehicle used by it in the collection, distribution, and delivery of express matter, and on every car used exclusively by any express company on any line of railroad for the transportation of express matter a tax of $5 per year shall be levied and paid.

Fourth. Every vessel engaged or enrolled or licensed to act as a common carrier by water shall pay a tonnage surtax of 25 cents per gross register ton on the 1st day of July of each year.

SEC. 32. That every common carrier subject to the taxes named in this act who carries on business without having paid the car or vehicle or telegraph excise tax herein provided for shall, in addition to being liable to the payment of said tax, be fined not less than $1,000 and not more than $5,000, and every distinct violation shall be a separate offense, and in case of a continuing offense each day shall be deemed a separate offense; and unless otherwise limited, all fines, penalties, and forfeitures imposed by this act or by any section of the Revised Statutes may be recovered in any court of competent jurisdiction. All laws relating to the collection, remission, and refund of internal-revenue taxes, or laws for the enforcement or collection of tonnage dues, so far as applicable and not inconsistent with the provisions of this act, are hereby extended and made applicable to the excise taxes or navigation surtaxes hereby imposed, and all penalties, fines, matters of form and procedure, heretofore enacted for the collection of navigation dues or of the internal revenue under an act to provide ways and means to meet war expenditures, and for other purposes, approved June 13, 1898 (30 Stat. L., p. 448), are made applicable to the collection of the revenue and the enforcement of this act as fully as though said act had not been repealed but had continued in full force and effect; and sections 3232, 3233, 3236, 3237, 3238, 3239, 3240, and 3243 of the Revised Statutes of the United States are, so far as applicable, made to extend to and include and apply to the special excises or internal-revenue taxes or navigation surtaxes imposed by this act, and to the persons, natural or corporate, upon whom they are imposed, as fully as though they or any one of them were herein set forth at length: *Provided*, That the provisions of this act in respect of taxation of vehicles on the lines or vessels and of mileage taxation of telegraphic lines shall be, and they are declared to be, suspended in respect of any carrier accepting this act in the manner herein set forth, and after such acceptance abiding by and complying with the provisions of this act.

Whenever the Interstate Commerce Commission shall have certified to the Secretary of the Treasury that any such common carrier has not complied with the orders of said commission in respect of paying any compensation due, it shall be the duty of said Secretary of the Treasury to collect the excise taxes hereby imposed during or for such time or times as said carrier is not complying with any lawful orders of said commission with respect to the matters contained in this act. Said excise taxes under the provisions of this act when collected and paid into the Treasury of the United States shall be, and they are hereby, specifically reappropriated, and shall constitute a permanent appropriation, to be called the "Federal compensation fund," to pay any compensation not paid by any carrier or person subject to this act, pursuant to any lawful order of said commission, and to meet the necessary expenses of administering this act; and all acts heretofore passed in aid of pensioners of the United States in respect of limitation of attorneys' fees, proof of claim, allowance, and payment and audit, are hereby, as far as applicable, extended to any funds exacted, collected, appropriated, and to be disbursed pursuant to this act.

SEC. 33. That it shall be the duty of every employer subject to the provisions of this act to make quarterly returns of accident payments and opertaions under this act to the Interstate Commerce Commission in such detail and form as the said commission may by general regulation require. Such reports shall be compiled by said commission and the results made public in such manner as the said commission may determine.

SEC. 34. That it is hereby declared to be the intent and purpose of this act and the policy of Congress that the financial burden of injury and death to employees in industries subject to the regulative power of Congress arising out of and in the course of the operation of such industries shall be placed upon the industries involved; and the Interstate Commerce Commission is hereby empowered and directed to make all regulations reasonable and necessary not herein provided for to give effect to the provisions of this act and to accomplish its declared intent and purpose. To this end the said commission shall consider the payments authorized herein to be an element of the cost of transportation or the operation of the industries affected by this act, and in any proceedings affecting rates the said commis-

sion is directed to recognize and give effect to the intent and purpose of this act.

SEC. 35. That the scale of compensation herein provided for shall be recognized by the United States Government in all industries operated by it directly or in its behalf, by contract or otherwise, and all said employees of the Government of the United States shall be entitled to all the benefits and privileges of this act, and to that end it is hereby declared that the Government of the United States has elected to accept the provisions of this act with respect to all of its civil employees, however or wherever employed.

SEC. 36. That this act shall take effect on the 1st day of July, 1916, and shall be cited as the Federal compensation act of 1915.

## Thomas W. and Alice N. Keller.

## EXTENSION OF REMARKS
OF
# HON. JOHN E. RAKER,
OF CALIFORNIA,
IN THE HOUSE OF REPRESENTATIVES,

*Tuesday, August 22, 1916.*

Mr. RAKER. Mr. Speaker, under leave granted to me to extend my remarks in the RECORD, I submit herewith a statement respecting the claims of Thomas W. and Alice N. Keller:

DAMAGES AND PAYMENT FOR GROUND ON ACCOUNT OF CONDEMNATION PROCEEDINGS.

On June 13, 1910, under the proceedings of the order from the Commissioners of the District of Columbia, a petition filed in the Supreme Court of the District of Columbia, holding a court in cause No. 880—to establish a building line on the west side of Thirteenth Street, between Park Road and Monroe Street—under the authority of an act of Congress entitled "An act to establish uniform building lines on streets in the District of Columbia less than 90 feet wide," under the law the assessment jury is required to assess benefits equal to the amount of damages including all expenses of the proceedings. The parcels of property taken in square 2838 were part of lot 11 (30 by 25 feet—750 feet), belonging to Thomas W. Keller, part of lot 12 (30 by 25 feet—750 square feet) belonging to Thomas W. and Alice N. Keller, making a total of 1,500 square feet. Also, lot 13, belonging to E. F. Davis, 53 feet 9 inches by 25—1,344 square feet, for which Mr. Davis received $6,000, no benefits assessed. Lots 11 and 12 were assessed $480 and 1,500 square feet of ground taken without any compensation. Thomas W. and Alice N. Keller recognize the right and the power of the Commissioners of the District of Columbia to make an assessment against their property for improvements or benefits, and do not complain of the assessment of $480, which has been paid on the following dates and in the following amounts:

Mar. 9, 1914 (including interest)---------- $129.43
Nov. 12, 1914 (including interest)---------- 395.09

Mr. and Mrs. Keller hold receipts showing the $524.52 to have been paid in full. On one occasion it was stated by a gentleman on the floor of this House that the assessment had not been paid by Mr. and Mrs. Keller. Mr. and Mrs. Keller claim there is no law by which their property to the amount of 1,500 square feet can be taken without compensation satisfactory to them, while lot 13, being on the corner, was paid for by the condemnation proceedings, as these three lots, 11, 12 and 13, were all condemned, but only lot 13 was paid for. Mr. and Mrs. Keller's lots were condemned without any compensation, and they therefore further claim that they should be paid for the land taken. This amendment has had consideration by two committees of the Senate, first by the District of Columbia Committee, second by the Appropriations Committee, both committees recognizing the merits of the claim have placed the said amendment in the District of Columbia appropriation bill for the past three years, so it has stood the crucible test of the Senate committees and of the Senate itself. No Member of this body can say that when tax assessments are paid up to date any property holder's land can be taken without compensation. All Mr. and Mrs. Keller ask is that they shall be considered in the just and right, as was Mr. E. F. Davis for lot 13 in square 2838. I refer you to accompanying letter of E. H. Thomas, corporation counsel at the time of the condemnation proceedings.

Mr. and Mrs. Keller insist that they are entitled to the same amount of free park space as their neighbors on each side of them. The neighbors on each side paid nothing for this ground or parking space in front of their premises. Mr. and Mrs. Keller did pay their hard-earned money for ground or parking space in front of their premises, which is taken from them without compensation. When others enjoy their parking space without additional cost why not accord to Mr. and Mrs. Keller the same privileges as are enjoyed by other citizens of the District of Columbia?

LAW OFFICES OF EDWARD H. THOMAS,
*Washington, D. C., May 25, 1914.*

Hon. JOHN WALTER SMITH,
*United States Senate.*

SIR: On June 13, 1910, the Commissioners of the District of Columbia filed their petition in the Supreme Court of the District of Columbia, holding a district court in cause No. 880 to establish a building line on the west side of Thirteenth Street NW., between Park Road and Monroe Street, under the authority of an act of Congress approved June 21, 1906, entitled "An act providing for the establishment of an uniform building line on streets in the District of Columbia less than 90 feet wide." Under the provisions of this law the assessment jury is required to assess benefits equal to the amount of damages, including all expenses of the proceeding. Among the parcels of property to be taken and which were taken, under this proceeding in square 2838, were part of lot 11, being the east 25 feet by full width of said lot, containing 750 square feet, owner, Thomas W. Keller, and part of lot 12, being the east 25 feet by full width of said lot, containing 750 square feet, owners, Thomas W. and Alice N. Keller.

The building line sought to be established is less than a block in length and appears to be intended as a continuation of a building line established by subdivision on the west side of Thirteenth Street, running about two-thirds of the block. It appears that there were two jury verdicts, and that the cost of the first verdict, which was set aside, was $421.55. The total expenses being $721.55, and this sum was ultimately added to the damages found, making the total damages awarded $7,896.88. The total benefits assessed were also $7,896.88.

As to said part of lots 11 and 12, the jury found damages of $562.50 each, or $1,125, and assessed $750 benefits against lot 11 and $855 benefits against lot 12, being a total of $1,605, creating an obligation on part of the owners after the taking of their property of $480.

The lot immediately north of the Keller property, which fronts about 54 feet on Thirteenth Street and is on the corner of that street and Park Road, was allowed $6,000 as damages for the part taken and assessed no benefits.

While I held the office of corporation counsel, Mr. Keller personally protested to me against the taking of his property and the assessment against it of more than the award as benefits, but I could not help him, being obliged in the performance of my duty to insist upon the verdicts. Assessment of benefits is, I think, merely a matter of opinion, a guess, and this case, I thought, was a hard one. I should be glad to see relief granted Mr. Keller, particularly in view of the fact as shown by the verdict that the taking in said square embraced only the corner lot of his lots.

Very truly, yours, E. H. THOMAS.

| Name of property owners. | Lot No. | Width of lot. | Damages allowed.[1] | Benefits assessed. | | Difference. | Remarks. |
|---|---|---|---|---|---|---|---|
| | | | | Amount. | Per square foot. | | |
| | | *Feet.* | | | | | |
| Minnix | 22 | 57 | ..... | $199.50 | $0.14 | ..... | |
| Calvert | 23 | 17 | ..... | 93.50 | .22 | ..... | |
| Wells | 24 | 17 | ..... | 93.50 | .22 | ..... | |
| Cunningham | 25 | 17 | ..... | 102.00 | .24 | ..... | |
| Taplan | 26 | 17 | ..... | 102.00 | .24 | ..... | |
| Tweedy | 27 | 17 | ..... | 110.50 | .26 | ..... | |
| Breashears | 28 | 17 | ..... | 110.50 | .26 | ..... | |
| Middleton | 29 | 18 | ..... | 117.00 | .26 | ..... | |
| Loeffler | 30 | 18 | ..... | 126.00 | .28 | ..... | |

| Thomas W. Keller. | 11 | 30 | $562.50 | 750.00 | ..... | $187.50 | Number of feet of ground, 750; 32 cents. |
| Thos. W. and Alice N. Keller. | 12 | 30 | 562.50 | 855.00 | ..... | 292.50 | Number of square feet of ground, 750; 32 cents. |
| | | | | | | 480.00 | |
| Davis | 13 | 53 | 6,000.00 | ..... | ..... | ..... | Amount awarded as damages ground and improvements (one-story building)—Number square feet, 1,444.8. |

[1] Lots Nos. 22 to 31, inclusive, have building line, leaving 25 feet of parking—established in deed by John Sherman.

Assessed benefits: Lot No. 31, 18 feet, $131.38; $7.29⅓ per front foot. Lots Nos. 11 and 12, 60 feet, $1,605; $26.75 per front foot.

Lots Nos. 11 to 13, inclusive, Ann Powers subdivision, and had no building line—could build in 8 inches of pavement.

## Naval Appropriation Bill.

## EXTENSION OF REMARKS
OF
# HON. LEMUEL P. PADGETT,
OF TENNESSEE,
IN THE HOUSE OF REPRESENTATIVES,

*Tuesday, August 22, 1916.*

Mr. PADGETT. Mr. Speaker, I shall avail myself of the privilege granted to Members of the House to extend their remarks on the subject of the Navy and the naval appropriation bill and insert an interview from Admiral George Dewey, printed in the New York World of August 20.

In view of the many misrepresentations and unjust criticisms which have been made of the Navy and of naval administration, I think it eminently proper to print in the RECORD this interview from Admiral Dewey.

The interview as published in the New York World is as follows:

ADMIRAL DEWEY VIGOROUSLY DEFENDS THE NAVY.

"Those who make the charge that the Navy is demoralized are guilty of falsehood and misrepresentation. Our ships are as good as any, our officers are as good as any, and I believe our boys the best gunners in the world."

[By George Creel.]

For two years and more the United States Navy has been the subject of discussion as bitter as it is confused. The disputes between pacifists and militarists, between Democrats and Republicans, have resulted in a Babel, and out of it all have come prejudices that do not care to bother with facts.

The people of the United States are entitled to the truth, the whole truth, and nothing but the truth. What is slander and what is fact? Is the Navy, as it stands to-day, an asset or a liability? Is the Navy bill honest and adequate, or a dose of "eyewash"? Has Secretary Daniels "demoralized"? Is he a faithful public servant, worthy of support, or a joke?

One man only has the authority and possesses the exact knowledge to answer dispassionately these questions. That man is Admiral George Dewey. He has been in the United States Navy since 1854, serving through two wars. Since 1903 he has been head of the General Board, passing upon naval defects, naval needs, and naval plans. No administration has power to hurt him. By law he is exempted from the usual retirement provisions, and if he does decide to retire, it will be of his own volition and at full pay. No partisan quarrel has ever had power to drag him from his height.

INDIGNANT OVER SLANDEROUS CRITICISM.

Aside from these qualifications, he is loved of the American people as few men have ever been loved. In a day when there is much talk of Americanism, he stands as one who has risked his life for it, and who has devoted that life to giving richer, finer meanings to the word.

I found him in Atlantic City, in a great, wind-swept room that looked out over the sea. His hair has whitened, but otherwise he is but little changed by the years that have passed since the wonderful day he returned from Manila to hear the shouts of a Nation. The same clear, steadfast eyes, the same tremendous simplicity, the same faith in America.

Speaking slowly, but never hesitatingly, for three long hours, he considered the United States Navy, past, present, and future; world war; world peace; national ideals and national destiny. Only in his first answers, when an evident indignation gripped him, did he depart from the tone of one trying to pick his words in the interest of understanding.

"The attacks that have been made upon the Navy," he said, "are as false as many of them are shameful. It is not a junk heap. There is no demoralization. Both in matériel and personnel we are more efficient to-day than ever before. Our ships are as good as any, our officers are as good as any, and our enlisted men are the finest in the world.

"It is true that we have not enough ships or enough men. But navies are not built in a day. It was between 1906 and 1909 that Germany passed us and that we commenced to lose rank as a naval power. This is in no sense a criticism of administrations. Congress, after all, expresses public sentiment in large degree, and the reason we dropped was because the people wanted the drop. The recommendations of the General Board went unheeded because they were not backed up by public opinion. Until 1914 people were thinking in terms of world peace. It is different to-day, and it is to-day that should concern us."

He walked over to his desk and taking up a copy of the Senate Navy bill spread it out before him. For a moment, as if to measure his words, he tapped it with a big, brown forefinger, and then he said:

"This is the best bill ever passed by either House of any Congress. It takes the five-year program of the General Board and changes it into a three-year program. If passed, it will restore us to second place and enable the United States to meet on equal terms any power in the world, save one."

ANALYSIS OF NEW NAVY BILL.

I asked him then for a consideration of the bill, or, rather, some such analysis as would permit a civilian to do a little thinking for himself. Patiently he went over each item:

"Four battleships at once and six more within three years." Now that he was firmly on his own ground, his words came like bullets. "The great clash at the mouth of the Skagerrack gave a test to every theory. As a result, naval authorities are now agreed that the battleship is still the principal reliance of navies. As never before, it is proved that victory or defeat rests with the dreadnaught.

"Four battle cruisers at once and two more within three years. This will remedy one of our chief weaknesses. The Skagerrack proves conclusively, however, that the battle cruiser can not give and take with dreadnaughts.

"Scout cruisers, four, and six more to come. More eyes for the fleet. Absolutely necessary."

"Like the battle cruiser," he said "the submarine has been permitted to gain a very exaggerated value. It is, of course, a most useful auxiliary, whose importance will no doubt increase, but at present there is no evidence that it will become supreme. The bill provides for 9 fleet submarines, 3 coast submarines, 800-ton type, and 55 submarines, smaller type, provisions that are in line with the recommendations of the General Board.

"A feature of the Skagerrack engagement," he continued, "was the convincing demonstration of the usefulness of the destroyer. These tiny ships, primarily designed to serve the purpose of a screen, to be outriders for the big ships, have been regarded as incapable of attacking first-class ships in the daytime. The German destroyers descended upon the British fleet in broad daylight and the destroyers of both fleets played an important part in the fighting. We feel that the bill's provision for 50 destroyers is amply justified. So!" He turned in the chair and clapped his hands together. "It is a bill that gives us strength, and, best of all, a bill that gives us balance."

WHY WE NEED A GREAT NAVY.

"Granting all that," I said, "but what about the need of it?" As carefully and fairly as possible I presented the feeling of many people in many Western and Middle West States—a feeling that this expenditure of millions on the Navy was a departure from American traditions, a hysterical surrender to the madness that has had hold on kings. His fine head nodded appreciation of every point, but at the end he spread wide his hands in a sweeping gesture of dissent.

"I know that I am not a militarist," he said. "Those who have never seen war or who have only played at war may talk in terms of jingoism, but men who know what war is and what war does are the last in the world to approach it in any swashbuckling fashion. I hope the day will come when peace and justice rule the world, but that day is not yet here. Not all our idealism can brush away facts. If we are to dwell in peace we must be able to protect that peace." He walked to the open window and pointed to the shining stretches of the sea.

"Look at our coast line! From Maine to the canal; from the canal to Alaska! Russia has had to maintain two distinct fleets, one in the Baltic, one in the Black Sea. Our problem is much the same. We can not be said to have met our defensive needs until we are able to maintain a fleet in the Pacific Ocean as well as in the Atlantic. Our geography, the immensity of our coast line, join to make the Senate Navy bill a minimum requirement. No! No!" he exclaimed. "We must accept conditions as we find them, although we are not to give up hope of changing the conditions.

"Given this increase," he declared, "given the ships and men that this bill provides, and the United States, as never before, will be a peace power, able at all times to protect and to advance its standards. Every cent appropriated by this bill is payment on an insurance policy."

"How about men?"

"We now have 55,000, and the bill authorizes 74,500."

"Can you get them?"

"I don't think there is a doubt of it. The Navy to-day offers as fine a chance for the American youth to fit himself for life as any other department of endeavor."

IN DEFENSE OF SECRETARY DANIELS.

"Tell me, Admiral Dewey," and I braced myself for the momentous question: "Has Secretary Daniels demoralized the Navy?"

"Bosh!" The exclamation was one of disgust and indignation. "Facts and figures tell their own story. The Navy was 5,000 short of the number of enlisted men allowed by law; over 6,000 have been added, although more rigid examinations have forced the rejection of five out of every six. Only 52 per cent of honorably discharged seamen were reenlisting. For more than a year about 90 per cent have reenlisted. Desertions have been cut in half and discipline has been improved to an extent that has permitted the restoration of a prison ship and a disciplinary barracks to normal uses. No, sir; the Navy is not demoralized, and those who make the charge are guilty of falsehood and misrepresentation."

"Did Secretary Daniels ever issue an order for officers and men to mess together, only withdrawing the order when informed that it might bring whites and blacks to the same table?"

"Slanderous! No such order was ever heard of."

It had been my purpose to take up with Admiral Dewey every one of the small things alleged against Secretary Daniels—every one of the petty charges that press and magazines have used to prejudice people against the Navy head. It proved impossible. It would have been like talking gutter gossip with St. Paul.

"How about officers?" I asked.

"Officers, like navies, are not made in a day." I could see his relief at getting away from mud. "When the present administration took charge it found that the law providing for the appointment of two midshipmen at Annapolis by each Member of Congress had been permitted to lapse. This law was extended, and the present Congress, upon the recommendation of the Secretary, has provided for three midshipmen to each Congressman. This makes 531 additional appointments immediately available. There is also the law that opens the Naval Academy to 15 enlisted men each year, provided, of course, they measure up to the mental, moral, and physical standards."

"Is that a good idea?"

PROMOTION OPEN TO ENLISTED MEN.

"It is more than a good idea." For a second I saw Admiral Dewey as he must have looked on the bridge in Manila Bay. "It is democracy. Eighteen years ago, when this matter first came up, I took a stand that has never changed. I said then that the Navy could not afford to be the one department of American activity in which a boy could not rise from the bottom to the top. I say it now. This is the United States, not an Old World monarchy.

"The same thing goes for the ship schools," he continued emphatically. "Education is our solid rock. Not only do the schools make better citizens, but they make better sailors. We want our youngsters trained in intelligence as well as in hands, so that if officers go the ship can still be fought. No, sir!" he exclaimed. "Opening the door of promotion to the enlisted man—giving him an elementary, technical, or industrial education, as may be deemed fittest—are American policies."

"What about the famous drinking order?"

"A good thing." His answer was instant. "There was some feeling about it at first, because the papers made fun of it, and there was also an attempt to make it appear that Secretary Daniels was charging officers with intemperance. I think that the feeling has disappeared completely. Every railroad, every great corporation, has long had an ironclad rule forbidding men to drink while on duty. Isn't a ship as important as a locomotive? Practically every European power has copied the order, by the way."

"And marksmanship? Is it true that our gunners can't hit the side of a barn?"

Before answering he pawed over some papers on his desk and pulled out a report of some kind.

PROFESSIONAL CONTROL MADNESS.

"Here are some facts," he smiled. "From 1909 on we did go down, owing to the discontinuance of elementary practice. But we've pulled up. Admiral Fletcher, reporting on the 1915 target practice, says this: 'It is believed that the scores recorded are higher than ever before in the open sea.' The recent practices were held at ranges of 16,000, 17,000, and 18,000 yards, which are even longer than the longest ranges at which firing has occurred in the European war. About 10 out of 20 shots would have hit an enemy ship at 18,000 yards. Do you know," he said, almost confidentially, "I believe our boys are the best gunners in the world?"

"Tell me, Admiral Dewey," I ventured another leading question, "what is all this clamor about the Navy needing a general staff?"

He laughed.

"I don't know," he said. "I've tried to pin them down, but not one has even been able to make clear just what it was that he wanted. Down in their hearts, I suppose, they want a small, select body to have entire charge of the Navy. Well, they'll never get it, and they shouldn't get it."

"You believe, then, that the Secretary of the Navy should be a civilian?"

"Absolutely. He represents the people, and the closer he is to the people the better. Same thing with the powers of Congress. I can conceive of no greater madness than to put the Navy in the power of a naval group or the Army in the hands of soldiers alone. As a matter of course, we would look at things only from our own professional point of view. The whole democratic balance would be destroyed."

"Here!" his eye caught a clipping tucked away under some papers on the desk. "This thing was in the back of my head all the time we were talking about the alleged demoralization of the Navy. Put that in."

What he handed me was an article by Hector Bywater, the famous English naval expert, written for a British journal after a careful study of the American Navy. I glanced it over and saw this paragraph marked:

"It need hardly be said that the political head of the United States Navy possesses infinitely more power than the civilian First Lord in Great Britain. And there is every indication that Mr. Daniels has been using his power to the utmost. His friends say he has accomplished wonders; his enemies, who are very many, declare that his personal fads and prejudices have undermined the morale of the naval personnel and made the service a laughingstock. But this charge is not borne out by the evidence. Those best qualified to speak assert that the last four years have witnessed a remarkable all-around improvement in the quality of the personnel. Thanks to the Secretary's drastic order shortly after he came into office, intemperance has disappeared from the Navy, and although the drink prohibition excited ridicule and bitter opposition at the start, the majority of naval officers now agree that it has had a most beneficial effect on efficiency and discipline."

"Do you stand for that?" I asked, looking up after reading the paragraph aloud.

"I would be dishonest if I didn't," he answered gravely. "As I told you, I have been in the Navy since 1854. Against the slanders that have been heaped upon the service that I love, I want to say again that never in my knowledge has the matériel and personnel been so efficient. The last few years have been very wonderful years for the United States Navy.

"This is more than I have talked for years," he said at last, rising to his feet and holding out his hand. "But I want the people of the United States to know that it is all right with the Navy. There is no demoralization, no lack of discipline, no absence of enthusiasm. The Navy has never failed America. It will not fail."

---

## Public Building for Greenville, Pa.

---

## EXTENSION OF REMARKS

OF

# HON. FRANK CLARK,

OF FLORIDA,

IN THE HOUSE OF REPRESENTATIVES,

*Tuesday, August 22, 1916.*

Mr. CLARK of Florida. Mr. Speaker, under leave to extend my remarks relative to the erection of a public building in the city of Greenville, Pa., I insert the following observations of Hon. S. H. MILLER, a Representative from Pennsylvania:

"Mr. MILLER of Pennsylvania. The Committee on Public Buildings and Grounds have recommended an appropriation of $75,000 for the purchase of land and erection of a public building at Greenville, Pa., to be used for a post office and other necessary purposes.

"The population of Greenville as ascertained in the census of 1910 was 5,909, since then the population has been increasing rapidly and it is estimated that the population now is fully 7,000, while that of the adjacent territory served by the rural carriers is 3,500, making a total population of 10,500.

"The receipts of the post office have increased 50 per cent in five years. The receipts for the past year were $33,750.

"The following is a statement of the business of the office for the past year:

| | |
|---|---|
| Pieces of incoming mail handled | 3,208,904 |
| Pieces of outgoing mail handled | 3,065,000 |
| Money orders issued | 16,765 |
| Value of same | $124,188 |
| Money orders paid | 43,420 |
| Value of same | $84,459 |
| Number of city carriers | 7 |
| Number of rural carriers | 6 |
| Number of clerks | 7 |
| Other employees | 2 |
| Total | 22 |

"INDUSTRIES.

"The following is a list of the industries of the city with the annual pay roll and number of men employed:

| Industries. | Annual pay roll. | Number of men. |
|---|---|---|
| Bessemer & Lake Erie R. R | $1,650,000 | 1,570 |
| G. Steel Car Co | 400,000 | 500 |
| Chicago Bridge & Iron Works | 150,000 | 150 |
| Carnegie Steel | 500,000 | 500 |
| Hodge Manufacturing Co | 60,000 | 70 |
| Small industries | 240,000 | 250 |
| Total | 3,000,000 | 3,040 |

"There are three railroads passing through the city—the Bessemer & Lake Erie, the Pennsylvania, and the Erie. The

main shops and offices of the Bessemer & Lake Erie Railroad are located in the city and the increase and development of its lines has its reflection on its prosperity.

"Its public schools are rated among the highest in the State. The enrollment is 1,553. There is also a parochial school; number of enrollment, 300. St. Paul's Orphanage adjoins the city, occupying a 300-acre farm, a portion of which is used by the State of Pennsylvania for experimental-farm purposes. The valuation of the church buildings in the city is over $300,000. The city is growing rapidly and its future prospects are very promising. The United States Steel Corporation has recently purchased 250 acres of land adjoining the city. A part of this land is to be laid out in lots to enable its employees to build modern homes. The Carnegie Steel Co. has also purchased land adjoining their plant to enable the corporation to increase the capacity of its mills.

"The water plant is valued at $300,000, has a pressure of 60 pounds down town, has a daily capacity of 1,000,000 gallons, and is building a standpipe that will give the town a pressure of 50 pounds at any point in the city.

"The city has provided parks and playground places for the people. Riverside Park, bounded by the river and a boulevard, will extend, when completed, a distance of 2 miles. In addition to this there are three other smaller parks which materially beautify the city. Then, too, Greenville is surrounded by an agricultural population of great development and value. All things considered, it is one of the most prosperous and beautiful cities in western Pennsylvania."

## Hog-Cholera Virus, Serum, and Toxins.

Hogs, the great mortgage lifter to the farmers of Iowa and the Union. Hogs in the United States, 1916, 68,047,000, valued at $571,890,000 annually; Iowa, 8,750,000, 4,500,000 more than any State in the Union, and valued at $73,500,000 annually.

## EXTENSION OF REMARKS
OF
# HON. THOMAS J. STEELE,
OF IOWA,

IN THE HOUSE OF REPRESENTATIVES,

*Tuesday, August 22, 1916.*

Mr. STEELE of Iowa. Mr. Speaker, it is to be regretted that with Congress drawing to a close many worthy bills now upon the calendars, which have been reported by its several committees for passage during this session, will be carried over to the next session for want of time to pass them. I am fully aware that legislation for preparedness has consumed a great portion of the time of this Congress, but it does seem to me that a large portion of the time consumed in political speech making could have been used to better advantage to the taxpayers of this country in passing some of these important bills that really are in the interest of the producers and farmers of this country. The bill to which I particularly desire to call attention, H. R. 15914, entitled "An act to control viruses, serums, and toxins," is one which I introduced, and is now No. 39 on the Speaker's list of bills to come up under suspension of the rules. This bill has the sanction and support of the Animal Industry Bureau of the Agricultural Department and the unanimous support of the Agricultural Committee of the House. After being authorized by the Agricultural Committee I reported this bill on May 23, 1916, and it was given No. 260 on the Union Calendar. Knowing that it could not be reached on this calendar during this session, I had it placed on the Unanimous Consent Calendar. The bill was reached on two different unanimous-consent days, but while Mr. MANN, of Illinois, the minority leader, did not object to its passage, he insisted that it should be passed over without prejudice as it was too important to pass by unanimous consent. I then had the Speaker place it on his list of bills to come up under suspension of the rules, and, as stated before, it now occupies No. 39 on that list.

This bill was introduced to give the animal industry bureaus more specific authority to issue licenses and restrictions to manufacturers of hog-cholera serum and to control the testing of the animals under one uniform method, thereby giving the consumers of hog-cholera serums a real, potent serum. It has been fully demonstrated by Government tests and honest manufacturers of serum that the hog crop each year can be immunized and saved to the farmers of this country by vaccination of the hogs with potent serum. Unscrupulous, dishonest manufacturers of these serums have distributed their impotent serums over the country, causing a spread of the disease and resulting in untold damage and loss to the farmer, and, as a result, the farmers have become skeptical even of the Government's formula and have permitted their hogs to die rather than expend money for the serums fearing their worthlessness; or, finding that their hogs are sick, rush them to the market half grown, thereby destroying to the consuming public the advantages of the increased production of pork.

The hog has always been classed as the mortgage lifter to the farmer of the Middle West, where farming is worth while. To give to Congress some idea of the importance of this pressing legislation I will call to its attention the number of hogs and their value upon the farms of the United States January 1, 1916, as given by the United States Department of Agriculture, amounting to the enormous number of 68,047,000 hogs, and valued at $571,890,000. The Iowa farmer is particularly interested in the protection and health of this great industry and of its real producing wealth. Iowa raised in the year of 1915, 8,750,000 hogs, valued at $73,500,000, which was four and one-half millions more than raised by any other State in the Union. Because of these important reasons, I think that Congress should pass this bill without delay.

My observation of legislation in the short time I have been here is that when the big appropriation bills are before Congress the session is well attended by Members, with gaping mouths, wide open, waiting to share in the benefits of the bills; but when the farmer of the Middle West requests a simple bill passed for his protection and benefit, not asking a dollar out of the Treasury, the "pork-barrel" Congressman has left the city or is consuming the time of Congress in injecting political gas into the CONGRESSIONAL RECORD. This bill, of which the following is a copy, together with committee report thereon, ought to pass before adjournment and without opposition:

[H. Rept. No. 814, 64th Cong., 1st sess.]

THE VIRUS, SERUM, AND TOXIN ACT.

Mr. STEELE of Iowa, from the Committee on Agriculture, submitted the following report, to accompany H. R. 15914:

The Committee on Agriculture, to which was referred the bill (H. R. 15914) to authorize the Secretary of Agriculture to license establishments for and to regulate the preparation of viruses, serums, toxins, and analogous products for use in the treatment of domestic animals, and for other purposes, having considered the same, report it back favorably and recommend that the bill do pass with an amendment.

Amendment: Insert on page 7, in line 17, between the word "product" and the word "and," the words "its date of manufacture."

The present law regulating the manufacture and sale of virus, serum, toxin, and analogous products used in the treatment of domestic animals was passed in 1913 as an amendment to the Agricultural appropriation bill. The principal purpose of the law is to insure, through Government supervision, the manufacture and sale of pure virus and serum used in the treatment of hog cholera. At that time there were in the United States only a few establishments manufacturing these products. Since then, however, the number of these establishments has materially increased, there being at present about 90 regularly licensed manufacturers whose products go into interstate commerce. In addition to these, many States have establishments of their own, and there are a few institutions which do only intrastate business. Some idea of the increase in the manufacture of hog-cholera serum can be had when it is shown that in 1915 there were licensed establishments in 39 States, and their combined output amounted to 208,271,000 cubic centimeters.

The work of the Department of Agriculture during the past three years has fully demonstrated the practicability of controlling the disease of hog cholera by the use of hog-cholera serum, and this has increased enormously the demand for this product. It is believed that the use of this serum will continue to increase at a very rapid rate. It is of the greatest importance to the live-stock industry that all virus, serum, or toxin intended for the treatment of the diseases of domestic animals shall be absolutely pure and free from the germs of any disease. There is no doubt that the second outbreak of the foot-and-mouth disease which occurred last year was caused by infected hog-cholera serum. Particular attention is here called to the fact that recent experiments in the Bureau of Animal Industry, in the Department of Agriculture, have developed a method of treating hog-cholera serum which will free it of any possible infection of foot-and-mouth disease. The following letter from Dr. Melvin is of interest in this connection:

UNITED STATES DEPARTMENT OF AGRICULTURE,
BUREAU OF ANIMAL INDUSTRY,
*Washington, D. C., April 14, 1916.*

Hon. T. L. RUBEY
*House of Representatives.*

DEAR MR. RUBEY: Referring to your telephonic request for information concerning our recent experiments conducted for the purpose of obtaining an improved serum for hog-cholera immunization, I beg to advise you that our latest experiments indicate that the treatment to which this serum is subjected will free it from possible contamination with foot-and-mouth disease virus, but does not interfere with its power to protect hogs against hog cholera. Doses of this serum as small as 3 c. c. per hog have been found effective in giving immunity to hogs inoculated with 2 c. c. of hog-cholera virus.

* * * * * * *

Very truly, yours,

A. D. MELVIN, *Chief of Bureau.*

As has been stated, the act of 1913 was enacted as a part of the Agricultural appropriation bill. Necessarily it was very brief in its provisions, and much was left to the rules and regulations to be promulgated by the Secretary of Agriculture. That it has worked fairly well is admitted by all, but the enormous increase of the use of this serum, together with the dangers which attend such use, if it be impure or contaminated, makes absolutely necessary the legislation proposed in this bill.

For information and in order that a comparison may be made between the present law and the proposed law, both are here inserted and made a part of this report:

"PRESENT LAW, ACT OF 1913.

"That from and after July 1, 1913, it shall be unlawful for any person, firm, or corporation to prepare, sell, barter, or exchange in the District of Columbia, or in the Territories, or in any place under the jurisdiction of the United States, or to ship or deliver for shipment from one State or Territory, or the District of Columbia, to any other State or Territory, or the District of Columbia, any worthless, contaminated, dangerous, or harmful virus, serum, toxin, or analogous product intended for use in the treatment of domestic animals, and no person, firm, or corporation shall prepare, sell, barter, exchange, or ship as aforesaid any virus, serum, toxin, or analogous product manufactured within the United States and intended for use in the treatment of domestic animals, unless and until the said virus, serum, toxin, or analogous product shall have been prepared, under and in compliance with regulations prescribed by the Secretary of Agriculture, at an establishment holding an unsuspended and unrevoked license issued by the Secretary of Agriculture, as hereinafter authorized. That the importation into the United States, without a permit from the Secretary of Agriculture, of any virus, serum, toxin, or analogous product for use in the treatment of domestic animals, and the importation of any worthless, contaminated, dangerous, or harmful virus, serum, toxin, or analogous product for use in the treatment of domestic animals, are hereby prohibited. The Secretary of Agriculture is hereby authorized to cause the Bureau of Animal Industry to examine and inspect all viruses, serums, toxins, and analogous products, for use in the treatment of domestic animals, which are being imported or offered for importation into the United States, to determine whether such viruses, serums, toxins, and analogous products are worthless, contaminated, dangerous, or harmful, and if it shall appear that any such virus, serum, toxin, or analogous product, for use in the treatment of domestic animals, is worthless, contaminated, dangerous, or harmful, the same shall be denied entry and shall be destroyed or returned at the expense of the owner or importer. That the Secretary of Agriculture be, and hereby is, authorized to make and promulgate from time to time such rules and regulations as may be necessary to prevent the preparation, sale, barter, exchange, or shipment as aforesaid of any worthless, contaminated, dangerous, or harmful virus, serum, toxin, or analogous product for use in the treatment of domestic animals, and to issue, suspend, and revoke licenses for the maintenance of establishments for the preparation of viruses, serums, toxins, and analogous products, for use in the treatment of domestic animals, which are not worthless, contaminated, dangerous, or harmful. All licenses issued under authority of this act to establishments where such viruses, serums, toxins, or analogous products are prepared for sale, barter, exchange, or shipment as aforesaid, shall be issued on condition that the licensee shall permit the inspection of such establishments, and of such products and their preparation; and the Secretary of Agriculture may suspend or revoke any permit or license issued under authority of this act, after opportunity for hearing has been granted the licensee or importer, when the Secretary of Agriculture is satisfied that such license or permit is being used to facilitate or effect the preparation, sale, barter, exchange, or shipment as aforesaid, or the importation into the United States of any worthless, contaminated, dangerous, or harmful virus, serum, toxin, or analogous product for use in the treatment of domestic animals. That any officer, agent, or employee of the Department of Agriculture duly authorized by the Secretary of Agriculture for the purpose may, at any hour during the daytime or nighttime, enter and inspect any establishment licensed under this act where any virus, serum, toxin, or analogous product for use in the treatment of domestic animals is prepared for sale, barter, exchange, or shipment as aforesaid. That any person, firm, or corporation who shall violate any of the provisions of this act shall be deemed guilty of a misdemeanor, and shall, upon conviction, be punished by a fine of not exceeding $1,000, or by imprisonment not exceeding one year, or by both such fine and imprisonment, in the discretion of the court. That there is hereby appropriated, out of any moneys in the Treasury not otherwise appropriated, to be expended as the Secretary of Agriculture may direct, for the purposes and objects of this act, the sum of $25,000, which appropriation becomes available on July 1, 1913, and may be expended at any time before July 1, 1914.

PROPOSED LAW.

[Union Calendar No. 260, 64th Cong., 1st sess., Rept. No. 814.]

IN THE HOUSE OF REPRESENTATIVES.

*May 23, 1916.*

Mr. STEELE of Iowa introduced the following bill; which was referred to the Committee on Agriculture and ordered to be printed.

Reported June 9, 1916, with an amendment, committed to the Committee of the Whole House on the state of the Union, and ordered to be printed.

A bill (H. R. 15914) to authorize the Secretary of Agriculture to license establishments for and to regulate the preparation of viruses, serums, toxins, and analogous products for use in the treatment of domestic animals, and for other purposes.

"*Be it enacted, etc.*, That the Secretary of Agriculture is authorized to issue licenses for the maintenance in the District of Columbia, the Territories, or any place under the exclusive jurisdiction of the United States of establishments for the preparation of viruses, serums, toxins, or analogous products for use in the treatment of domestic animals and for the maintenance in any State of establishments for the preparation of such viruses, serums, toxins, or analogous products for shipment from such State to or through any other State, or to or through any Territory or the District of Columbia, or to or through any foreign country.

"SEC. 2. That it is hereby made unlawful for any person, firm, or corporation to prepare, sell, barter, or exchange in the District of Columbia or in the Territories, or in any place under the exclusive jurisdiction of the United States, or to ship or deliver for shipment from one State or Territory or the District of Columbia to or through any other State or Territory or the District of Columbia, or to or through any foreign country, any worthless, contaminated, dangerous, or harmful virus, serum, toxin, or analogous product for use in the treatment of domestic animals. No person, firm, or corporation shall prepare, sell, barter, exchange, or ship or deliver for shipment as aforesaid any virus, serum, toxin, or analogous product manufactured within the United States for use in the treatment of domestic animals unless and until said virus, serum, toxin, or analogous product shall have been prepared under and in compliance with regulations prescribed by the Secretary of Agriculture at an establishment holding an unsuspended and unrevoked license, issued by the Secretary of Agriculture, as hereinafter authorized.

"SEC. 3. That the Secretary of Agriculture is hereby authorized to cause to be inspected and tested, under regulations prescribed by him, all such viruses, serums, toxins, or analogous products for use in the treatment of domestic animals, prepared or intended for sale, barter, exchange, or shipment as aforesaid by any establishment licensed under this act. If, as a result of such examination, inspection, or test, it shall appear that such virus, serum, toxin, or analogous product is worthless, contaminated, dangerous, or harmful, the same shall be destroyed by the owner or manufacturer thereof, or by any other person, firm, or corporation in possession of the same, in accordance with the regulations prescribed by the Secretary of Agriculture. It is hereby made unlawful for any person, firm, or corporation to sell, barter, exchange, or ship or deliver for shipment as aforesaid, or otherwise than in compliance with the regulations prescribed by the Secretary of Agriculture, to remove from any establishment licensed under this act any virus, serum, toxin, or analogous product for use in the treatment of domestic animals which has not been examined, inspected, tested, and passed in compliance with the regulations prescribed by the Secretary of Agriculture.

"SEC. 4. That no license shall be issued under the authority of this act to any establishment where viruses, serums, toxins, or analogous products are prepared for sale, barter, exchange, or shipment as aforesaid, except upon the conditions that the licensee will conduct the establishment and will permit the inspection of such establishment and of such products and their preparation, and the examination and testing of the same, and will furnish all necessary animals, materials, and facilities for making such inspections, examinations, and tests, in compliance with the regulations prescribed by the Secretary of Agriculture.

"SEC. 5. That the Secretary of Agriculture is authorized to issue permits for the importation into the United States of viruses, serums, toxins, or analogous products, for use in the treatment of domestic animals, which are not worthless, contaminated, dangerous, or harmful. The importation into the United States without a permit from the Secretary of Agriculture of any virus, serum, toxin, or analogous product for use in the treatment of domestic animals, and the importation of any worthless, contaminated, dangerous, or harmful virus, serum, toxin, or analogous product, for use in the treatment of domestic animals, are hereby prohibited. The Secretary of Agriculture is authorized to cause to be examined, inspected, and tested any virus, serum, toxin, or analogous product, for use in the treatment of domestic animals, which is being imported, or offered for importation, into the United States to determine whether the same is worthless, contaminated, dangerous, or harmful, and if it shall appear that any such virus, serum, toxin, or analogous product is worthless, contaminated, dangerous, or harmful, the same shall be denied entry and shall be destroyed or returned by the owner or importer, at his own expense, in compliance with the regulations prescribed by the Secretary of Agriculture.

"SEC. 6. That no carrier, or other person, firm, or corporation, shall transport or receive for transportation from one State or Territory or the District of Columbia to or through any other State or Territory or the District of Columbia, or to or through any foreign country, any virus, serum, toxin, or analogous product for use in the treatment of domestic animals, unless and until the shipper or his agent shall make and deliver to such carrier, or other person, firm, or corporation, a written certificate, in form prescribed by the Secretary of Agriculture, signed by the shipper thereof or the agent of such shipper, stating that the same has been prepared under and in compliance with the regulations prescribed by the Secretary of Agriculture at an establishment holding an unsuspended and unrevoked license issued by the Secretary of Agriculture under this act, or has been imported into the United States by an importer holding an unsuspended and unrevoked permit issued by the Secretary of Agriculture under this act, and stating the kind and amount of the product transported or offered for transportation, the license number of the establishment which prepared the same or the permit number of the importer who imported the same, that it is not at the time of shipment or delivery for shipment worthless, contaminated, dangerous, or harmful, and such other facts as the Secretary of Agriculture may require by regulations made pursuant to this act.

"SEC. 7. That the Secretary of Agriculture may suspend or revoke any license or permit issued under the authority of this act, after opportunity for hearing has been afforded to the licensee or permittee, when the Secretary of Agriculture is satisfied that the license or permit is being or has been used to facilitate or effect the preparation, sale, barter, exchange, or shipment as aforesaid, or the importation of any worthless, contaminated, dangerous, or harmful virus, serum, toxin, or analogous product for use in the treatment of domestic animals, or that the licensee or permittee has violated any provision of this act or of the regulations prescribed by the Secretary of Agriculture. The Secretary of Agriculture is also authorized to refuse to issue a new license or permit to any person, firm, or corporation whose license or permit has been theretofore revoked, if the cause for such revocation was, in his judgment, a willful violation of this act or of the regulations prescribed hereunder, on the part of the licensee or permittee; also to refuse to issue a license or permit to any applicant composed in whole or in part of, or with which there is connected any person, who, in the judgment of the Secretary of Agriculture, has been guilty of willful misconduct in the preparation or sale of any such products or a willful violation of this act or of the regulations prescribed hereunder. Pending investigation, a license or permit may be suspended temporarily by the Secretary of Agriculture, without affording the permittee or licensee an opportunity for a hearing.

"SEC. 8. That any officer, agent, or employee of the Department of Agriculture duly authorized by the Secretary of Agriculture for the purpose may, at any time during the daytime or nighttime, enter and inspect any establishment licensed by the Secretary of Agriculture under this act.

"SEC. 9. That containers of viruses, serums, toxins, or analogous products for use in the treatment of domestic animals which are sold, bartered, exchanged, shipped, or delivered for shipment as aforesaid shall bear the name of the product, its date of manufacture, and such devices, marks, or labels for the identification and indication of potency of the same as may be prescribed by the Secretary of Agriculture, in form and manner as required by the regulations made pursuant to this act, and shall not bear, contain, or be accompanied by any statement, design, or representation which is false or misleading in any particular.

"SEC. 10. That it shall be unlawful for any person, firm, or corporation, or officer, agent or employee thereof, to forge, counterfeit, simulate, or falsely represent, or otherwise than in compliance with the provisions of this act and the regulations prescribed hereunder, to use, fail to use, detach, or knowingly or wrongfully to alter, deface, or

destroy, or fail to deface or destroy, any certificate, stamp, label, seal, or other identification device or mark provided for in this act, or in and as directed by the regulations prescribed hereunder by the Secretary of Agriculture, or any virus, serum, toxin, or analogous product for use in the treatment of domestic animals or the containers thereof, subject to the provisions of this act.

"SEC. 11. That specimens or samples of viruses, serums, toxins, or analogous products for use in the treatment of domestic animals which are intended solely for scientific use, experiment, or investigation and not for sale, barter, exchange, distribution, or the usual and ordinary treatment of domestic animals, may be exempted from the operation of the provisions of this act by order of the Secretary of Agriculture on conditions and terms prescribed by regulations made by him.

"SEC. 12. That any person, firm, or corporation who shall violate any of the provisions of this act, or of the regulations prescribed hereunder, shall be deemed guilty of a misdemeanor and shall, upon conviction, be punished by a fine not exceeding $1,000 or by imprisonment not exceeding one year, or by both.

"SEC. 13. That any person, firm, or corporation or any agent or employee thereof, who shall pay or offer, directly or indirectly, to any officer or employee of the Department of Agriculture, or of the United States, authorized to perform any of the duties prescribed by this act, or by the regulations made hereunder, any money or thing of value, with intent to influence such officer or employee in the discharge of any duty herein provided for, or which may be provided for by the regulations prescribed hereunder, shall be deemed guilty of a felony, and upon conviction thereof shall be punished by a fine of not more than $5,000, or by imprisonment for not more than two years, or by both; and any officer or employee of the Department of Agriculture, or of the United States, authorized to perform any of the duties prescribed by this act or the regulations made hereunder, who shall accept any money, gift, or thing of value from any person, firm, or corporation, or any officer, employee, or agent thereof, given with the intent to influence his official action, shall be deemed guilty of a felony, and shall, upon conviction thereof, be summarily discharged from his office or employment and shall be punished by a fine of not more than $5,000, or by imprisonment for not more than two years, or by both.

"SEC. 14. That the Secretary of Agriculture shall make and promulgate, from time to time, such regulations as may be necessary to carry out the provisions of this act, including regulations to prevent the preparation, sale, barter, exchange, shipment, transportation, importation, or exportation, in violation of this act, of any worthless contaminated, dangerous, or harmful virus, serum, toxin, or analogous product for use in the treatment of domestic animals, and regulations prescribing the records to be kept and reports to be made by establishments licensed under this act and by importers holding permits issued under this act. All such regulations shall have the force of law.

"SEC. 15. That so much of this act as authorizes the making of regulations by the Secretary of Agriculture shall be effective immediately; all other parts of this act shall become and be effective on and after January 1, 1917.

"SEC. 16. That so much of an act entitled 'An act making appropriations for the Department of Agriculture for the fiscal year ending June 30, 1914,' approved March 4, 1913 (37 Stat. L., pp. 832, 833), as relates to the preparation, sale, barter, exchange, shipment, or importation of viruses, serums, toxins, or analogous products for use in the treatment of domestic animals is hereby repealed, effective on and after the 1st day of January, 1917.

"SEC. 17. That all moneys appropriated for carrying out the provisions of so much of said act approved March 4, 1913, as relates to the preparation, sale, barter, exchange, shipment, or importation of viruses, serums, toxins, or analogous products for use in the treatment of domestic animals, which shall remain unexpended on the 1st day of January, 1917, are hereby made available for carrying out the provisions of this act.

"SEC. 18. That if any clause, sentence, paragraph, or part of this act shall, for any reason, be adjudged by any court of competent jurisdiction to be invalid, such judgment shall not affect, impair, or invalidate the remainder of this act, but shall be confined in its operation to the clause, sentence, paragraph, or part thereof directly involved in the controversy in which such judgment shall have been rendered."

Special attention is called to the following letter from Hon. David F. Houston, Secretary of Agriculture, in which the purposes of the proposed bill are set forth and reasons are given for its enactment at this time:

DEPARTMENT OF AGRICULTURE,
*Washington, June 7, 1916.*

Hon. T. J. STEELE,
*House of Representatives.*

DEAR MR. STEELE: Reference is made to the conference on June 7, 1916, between yourself and Hon. THOMAS L. RUBEY and officers of this department relative to the bill introduced by you May 23, 1916 (H. R. 15914), dealing with the licensing of establishments for and the regulation of the preparation of viruses, serums, toxins, and analogous products for use in the treatment of domestic animals. Pursuant to your request, the department is glad to furnish you a statement of its views on the subject.

The purpose of the proposed legislation is to control, so far as Federal jurisdiction will permit, the preparation of, traffic in, and importations of viruses, serums, toxins, and analogous products for use in the treatment of domestic animals, so as to close the channels of commerce to, and, so far as possible, prevent the use of, such viruses, serums, toxins, and analogous products, when worthless, contaminated, dangerous, or harmful.

In order to accomplish this end, with respect to domestic articles, the bill provides, among other things, that it shall be unlawful to sell or ship in interstate commerce, or to prepare or sell in the District of Columbia, or the Territories, or any place under the exclusive jurisdiction of the United States, any worthless, contaminated, dangerous, or harmful virus, serum, toxin, or analogous products for use in the treatment of domestic animals, or any such products which have not been prepared in an establishment licensed by the Secretary of Agriculture. The licensee is required to conduct his establishment, to permit its inspection and the examination and testing of its products, and to furnish all necessary facilities and materials for making such examinations and tests, in compliance with regulations prescribed by the Secretary of Agriculture. These requirements are especially designed to enable the Department of Agriculture effectively to control the preparation of the products, and to conduct the tests of the same within the establishments themselves.

The bill also limits importations of viruses, serums, toxins, and analogous products for use in the treatment of domestic animals to persons holding permits from the Secretary of Agriculture, provides for examinations, inspection, and test of all such articles when being imported or offered for importation, and requires exclusion of those ascertained to be worthless, contaminated, dangerous, or harmful.

It is further prescribed in substance that carriers shall not receive for transportation or transport in interstate commerce any virus, serum, toxin, or analogous product for use in the treatment of domestic animals unless accompanied by a certificate signed by the shipper or his agent showing certain facts which will identify the product and convey assurance that it has been properly prepared in this country or imported in accordance with the law.

Formerly the department was of opinion that much more elaborate and drastic restrictions than those contained in the present bill were essential in order to meet the needs of the situation. Now it is convinced that the bill is adequate and that it may be expected to afford sufficient safeguards against the evils at which it is aimed.

In the annual report of the Secretary of Agriculture for 1915, pages 22 to 26, the establishment and maintenance by the Government of test stations for testing hog-cholera serums was suggested. One of the prime objects of having the test stations was to prevent contaminated serums and viruses from being sold by plants doing business under the supervision of the department. It was also intended, through the instrumentality of the stations, to control the potency of the serum.

Since the issuance of that report certain researches, which for some time before had been under way in the Bureau of Animal Industry, have been completed. As a result there has been developed a method of treating hog-cholera serum which, it is believed, will insure its freedom from such infections as foot-and-mouth disease. In consequence, the testing of the serum at Government test stations for infections of foot-and-mouth disease, apparently, will be rendered unnecessary by putting into effect this new method.

In contemplation of the authorization of Government test stations as recommended in the report, the department made careful estimates of the cost of establishing and maintaining a sufficient number of them adequately to carry out the purposes intended to be effected. It was found that the expense would be very large. The initial appropriation needed, it was estimated, would be several hundred thousand dollars, which would have to be supplemented by a considerable annual appropriation.

In view of these circumstances, it is questionable whether the establishment of test stations at this time is advisable. Practically all that would be accomplished by having them, since the new method of treatment has been perfected, would be to insure the potency of the serums against hog cholera. The Bureau of Animal Industry is convinced that the potency of serums and viruses can be sufficiently, and almost equally well, assured by carrying out tests at the establishments of the producing companies themselves if the preparation of the articles by the companies be under strict Government control.

It is believed that the present bill, if enacted, would accomplish what the department believes to be the best and most practicable results so far as concerns both domestic production and importations. It invests the Secretary of Agriculture with sufficient authority to enable him to control the preparation of the output of licensed establishments and to require each establishment to furnish a separate building and necessary space, facilities, and supplies to enable the department to conduct and absolutely to control tests made in the establishments. By following this plan for testing serums for potency and by causing the same to be treated by the new method for the purpose of eliminating foot-and-mouth disease, it is thought that the object which the suggested establishment of Government test stations was intended to effect can be satisfactorily attained with much less expense to the Government. For the foregoing reasons the department withdraws its recommendations for the establishment of a Government test station and favors the plan offered in the bill in its present form. Obviously, it is legally impossible, as well as impracticable, to supervise the manufacture in foreign countries of such articles as are here dealt with. Importations of them are small in quantity. The authority granted to inspect such as are offered at our ports of entry and to exclude those found to be deficient seems to be ample.

Should you desire further report from this department relative to this bill, it will be gladly furnished upon request.

Very truly, yours,

D. F. HOUSTON, *Secretary.*

This Congress has enacted a rural-credits law by which I hope the farmers will be greatly benefited; but its real benefit will come years hence, not now. My bill would be of immediate benefit to the farmers, but of course there would not be much political noise in its passage, and for this reason, perhaps, it will not be reached this session. I have assurances from the Speaker, however, that if it should be crowded out this session it will be taken up and passed at the next session, and it is my intention to work for its early enactment into law, in order that the farmers may profit as soon as possible by the protection which it will afford them and the relief it will bring them.

## How to Secure Farm Loans—Explanation of Rural-Credits Bill.

### EXTENSION OF REMARKS
OF
### HON. ALBERT JOHNSON,
OF WASHINGTON.
IN THE HOUSE OF REPRESENTATIVES,
*Tuesday, August 22, 1916.*

Mr. JOHNSON of Washington. Mr. Speaker, already I am beginning to receive requests from those who desire to make Federal farm loans under the provisions of the recently enacted rural-credits bill, in the preparation and passage of which I

had some part. Further, in the preliminary work which led to the enactment of this measure the State of Washington took a very active part, going so far as to send three commissioners abroad, State Senators Metcalf and Black and Mrs. H. W. Patton, for the purpose of studying rural-credit cooperation and agricultural organization in Europe. Their report is among the most valuable printed contributions to this great subject.

Inasmuch as the Federal Farm Loan Board has but recently been appointed and is not yet organized, I desire to present through the CONGRESSIONAL RECORD a brief digest and statement concerning the rural-credits act, as follows:

NEW RURAL-CREDITS LAW—EXPLANATION OF NEW MEASURES WHICH EVERY FARMER WANTS TO UNDERSTAND.

The primary purpose of this act is to promote agricultural prosperity by enabling farmers to borrow money on farm-mortgage security at a reasonable rate of interest and for relatively long periods of time. To attain this object two farm-mortgage systems are provided:

(1) *A system operating through regional land banks.*

(2) *A system operating through joint-stock land banks.*

To attract money to the farm-loan field the act provides a method whereby those who have money to lend can find safe investments in the form of debentures or bonds of small and large denominations, issued by the banks and based on the security of mortgages on farm lands.

These two systems are to be under the general supervision of a Federal Farm Loan Board in the Treasury Department, composed of the Secretary of the Treasury, as chairman ex officio, and four members appointed by the President. This board has authority to appoint appraisers, examiners, and registrars, who will be public officials.

FEDERAL LAND-BANK SYSTEM.

Under the Federal land-bank system the act provides for Federal land banks which make loans for the first 12 months exclusively through local national farm-loan associations composed of borrowers. These associations shall be shareholders in the banks, and in that way the members, who are the borrowers, will share in the profits of the bank. The money for the loans is to come partly from the capital of the banks and partly from the sale by the banks of bonds secured by first mortgages on farm lands.

The United States shall be divided into 12 farm-loan districts, and a Federal land bank, with a subscribed capital stock of not less than $750,000, each share $5, shall be established in each district. Each Federal land bank may establish branches in its district.

Within 30 days after the capital stock is offered for sale it may be purchased at par by anyone. Thereafter the stock remaining unsold shall be bought by the Secretary of the Treasury for the United States. It is provided, however, that the Government shall not receive any dividends on its stock. Ultimately it is intended that all the stock in the banks shall be owned by the associations of borrowers, and provision therefor is made in the law for transferring the original stock at par to these associations

WHAT "NATIONAL FARM-LOAN ASSOCIATIONS" ARE.

The act provides for the creation of local "national farm-loan associations" through which it is contemplated that the Federal land banks shall make their loans. Ten or more persons who own and cultivate farm land qualified as security for mortgage loan under the act, or who are about to own and cultivate such land, may form such an association, provided the aggregate of the loans desired by the membership is not less than $20,000. Each member must take $5 stock in his association for each $100 he wishes to borrow, selling this stock when he pays his debt. The association in turn, when applying for money from the bank, must subscribe for stock in the bank to an amount equivalent to 5 per cent of the sum it wants to obtain for its members. If a prospective borrower has no money with which to pay for his association stock, he may borrow the price of that stock as part of the loan on his farm land.

In the event that a local loan association is not formed in any locality within a year, the Federal Farm Land Board may authorize a Federal land bank to make loans on farm land through approved agents.

HOW LANDOWNER MAY GET A LOAN.

A member of a "national farm-loan association," before obtaining a loan, must first fill out an application blank supplied to the loan association by the Federal Farm Loan Board. This application blank and other necessary papers will then be referred to a loan committee of the association which must appraise the property offered as security. Such application as is approved by the loan committee is then forwarded to the Federal land bank and must be investigated and reported on by a salaried appraiser of this Government bank before the loan is granted. This appraiser is required to investigate the solvency and character of the prospective borrower as well as the value of his land. When a loan is granted the amount is forwarded to the borrower through the loan association.

SHOULD HELP WASHINGTON'S LOGGED-OFF LAND AREAS.

Mr. Speaker, as the Farm Loan Board proceeds with its organization, and as the time approaches for the making of loans, I beg to say that I shall be pleased to assist all of those in my State who desire to borrow money under either one of the two plans in the bill. I am in great hopes that under the Federal loan system many tracts of rich logged-off land now lying useless in the State of Washington may be brought under the plow. I feel sure that the leading citizens of that great State will cooperate to the fullest extent to bring about this result. I hope that those interested will not hesitate to write to me for details further than outlined in this brief statement:

RULES FOR MAKING LOANS.

The act specifically defines the purpose for which loans may be obtained. These are—

(a) To provide for the purchase of land for agricultural use.

(b) To provide for the purchase of equipment, fertilizers, and live stock necessary for the proper and reasonable operation of the mortgaged farm; the term "equipment" to be defined by the Federal Farm Loan Board.

(c) To provide buildings and for the improvement of farm lands: the term "improvement" to be defined by the Federal Farm Loan Board.

(d) To liquidate indebtedness of the owner of the land mortgaged existing at the time of the organization of the first national farm-loan association established in or for the county in which the land mortgaged is situated, or indebtedness subsequently incurred for one of the purposes mentioned in this section.

FOLLOWING ADDITIONAL FACTS SHOULD BE BORNE IN MIND.

1. Loans may be made on first mortgages on farm land.

2. Only those who own and cultivate farm land, or are about to own and cultivate such land, are entitled to borrow.

3. No one can borrow save for the purposes stated in the act, and those who after borrowing do not use the money for the purposes specified in the mortgage are liable to have their loans reduced or recalled. The secretary-treasurer of each association is required to report any diversion of borrowed money from the purposes stated in the mortgages.

4. No individual can borrow more than $10,000 nor less than $100.

5. No loan may be made for more than 50 per cent of the value of the land mortgaged and 20 per cent of the value of the permanent insured improvements upon it.

6. The loan must run for not less than 5 and not more than 40 years.

7. Every mortgage must provide for the repayment of the loan under an "amortization" plan by means of a fixed number of annual or semiannual installments sufficient to meet all interest and pay off the debt by the end of the term of the loan. The installments required will be those published in amortization tables, to be prepared by the Farm Loan Board.

INTEREST RATES CAN NOT BE OVER 6 PER CENT AND MAY BE LESS.

No Federal land bank is permitted to charge more than 6 per cent per annum on its farm mortgage loans and in no case shall the interest charged on farm mortgages exceed by more than 1 per cent the rate paid on the last issue of bonds.

For example, if the bank pays only 4 per cent on an issue of bonds, it can not charge more than 5 per cent for the next farm loans it makes.

## Flood Sufferers in West Virginia.

## EXTENSION OF REMARKS

OF

# HON. EDWARD COOPER,

OF WEST VIRGINIA,

IN THE HOUSE OF REPRESENTATIVES,

*Tuesday, August 15, 1916.*

Mr. COOPER of West Virginia. Mr. Speaker, after seeing the action of the House of Representatives here to-day in adopting the resolution introduced by my colleague, Mr. LITTLEPAGE, by a unanimous vote for the relief of the West Virginia flood sufferers, I realize more then ever before that in time of distress and suffering we forget politics and all join in attempting to promote the best interests of all the people of this Republic, and we feel that we truly live in a country where the voice of suffering humanity crying out for aid and assistance shall not cry in vain.

The voice of over 8,000 homeless, needy sufferers in the flood district of West Virginia, their condition made known to the National Government through their chosen Representatives, after the telegraphic instrument sent the message of distress signed by the governor of the State over 400 miles away from the seat of government of the people, has been responded to by the immediate and prompt adoption of the resolution which will mean instant relief to the people of that section of the State of West Virginia which was visited by the terrible floods of last week. It is indeed a privilege and an honor to be a citizen of such a country as ours.

Wednesday morning, August 9, the storm which caused death and destruction to so many on the waters of Cabin and Paint Creeks, in Kanawha County, and Coal River, in Boone County, visited that section of West Virginia. The mining towns situated along the banks of the creeks and rivers of Kanawha and Boone Counties were in the zone of what was perhaps the most destructive cloudburst that has ever visited the State. The storm, following a clap of thunder, seemed to open wide the floodgates of the heavens, the water fell with increasing violence on the hilltops and in the valleys and homes of the miners and merchants and others who inhabited the heretofore happy villages. Not in the memory of the oldest citizens of the afflicted district had any such storm ever visited the State.

The people feeling secure in their homes were loath to leave the shelter their roofs afforded and lingered on until death, which was on its way down the narrow mountain defiles, overtook them. The waters rushing down the steep hillsides, the mountains towering thousands of feet above the creek beds, increased in strength and volume as they rushed 50 or more feet in height on their mad dash to the open Kanawha River. Railroad tracks were torn from their foundations; railroad iron twisted in every conceivable form; railroad cars, in many cases loaded with coal

waiting on the sidetracks to be taken to the markets of the world, were washed by the force of the waters far down the streams; mining tipples, bridges, miners' homes, everything in the valleys only added food to the hungry waters. Beautiful valleys, dotted but a short time ago with the homes of the miners and merchants, to-day are swept clean of visible habitation. Homes, furniture, cattle, and human beings are piled high in an inconceivable mass miles below the scene of destruction.

The property destroyed can be replaced, but the lives lost are gone forever. Perhaps dozens will yet be found in the wreckage which is lodged against bridges and other obstructions; the sands of the creeks cover bodies the search for which will be in vain.

As is usual in such cases, the weak suffered the most. Seventy-five bodies already recovered reveal the fact that almost all lost were women and children. The little ones, unable to fight against the currents, were in many cases carried down the creeks and rivers for miles. Babes were snatched from the loving arms of their mothers, and it is reported that several bodies have been found even in the waters of the Ohio River, some as far distant as Cincinnati.

Those saved lost all—home, furniture, clothing, savings accumulated for years, the wages received for digging the black diamonds from the mountains of West Virginia—all gone forever, and with all gone, hope has almost vanished. Many of the miners who risked their lives daily to support their dear ones, and accumulated dollars for rainy days, little thought the rainy day would come so soon and come in such a way and with such force as to take away in an hour that which it had taken years to acquire.

The good people of West Virginia have responded liberally to the call for assistance issued by the governor of the State, Henry D. Hatfield, who immediately took the necessary steps to feed the hungry, take care of the injured and dying, and give such shelter as was possible to those who had found temporary habitation under the cliffs of the overhanging hills.

The business men of the city of Charleston, located but a few miles from the flooded district, called a meeting of the citizens and appealed for aid from the people of that country. Before the meeting adjourned several thousand dollars were pledged, and it is thought the whole State will respond liberally to the call for help.

But much remains to be done. Over 8,000 homeless, and many have lost their all, and many have only the clothes they were wearing at the time of the flood. Everything is lost and hope is at low ebb. The railroads being practically destroyed, it will be weeks, perhaps months, before the mines can again be operated and the miners again given the opportunity to earn an honest dollar by seeking employment in the mines, the only occupation they have. The mining tipples, homes, and mining equipment of all kinds will have to be replaced by the coal companies, all of which is a hardship and a burden upon the operating companies. It will take time and much money to again equip and put in working condition the splendid mining operations which these valleys boasted.

Let us hope that the spirit shown here to-day—a spirit of cooperation and aid, a disposition shown by the House of Representatives to send sympathy in substantial form to those needing aid in time of distress—will revive the spirit of hope in the hearts of the afflicted people and impress the Nation with the fact that while the National Government expects every man in time of danger to the Republic to respond to the call of his country, with his life if necessary, still in time of distress the Government will respond with the same spirit to aid and assist its citizens when some great calamity befalls them.

---

**Benjamin P. Birdsall.**

---

## EXTENSION OF REMARKS
OF
## HON. BURTON E. SWEET,
OF IOWA,

IN THE HOUSE OF REPRESENTATIVES,

*Tuesday, August 22, 1916.*

Mr. SWEET. Mr. Speaker, I crave the attention of the House but for a few minutes, for it is, indeed, fit and proper that we pause long enough in our deliberations to pay a passing tribute to the life, character, and services of Benjamin P. Birdsall, who at one time was a Member of this House and who is now deceased.

It is indeed appropriate at this time that we recount briefly his achievements and successes, that his family and friends may know and realize that we share with them in their sorrow and sympathize with them in their great bereavement.

He was born in the State of Wisconsin in 1858. He moved to Iowa with his parents in the spring of 1871 and settled at Alden, in Hardin County. At that time the Mississippi Valley was comparatively a new country and sparsely settled. His parents took part in that great westward movement on this continent, which is without a parallel in human history, as the mighty tide of emigration rolled westward toward the setting sun, and our Nation swept on to empire and to greatness. The Birdsall family witnessed and took part in that great transition.

He was educated in the public schools of Alden and the State University of Iowa. He was admitted to the bar in 1878. He formed a partnership for the practice of law with C. M. Nagle, of Clarion, Iowa, the firm name being Nagle & Birdsall. It was not long before it was known as one of the strongest law firms in northern Iowa. He was elected to the district bench. His temperament, learning, and training qualified him for that high position. He was a conscientious judge. His decisions were sound in law and logic. Attorneys and litigants submitted their cases to him with the utmost confidence. He resigned from the bench on account of ill health and again took up the practice of law.

When Col. David B. Henderson declined the nomination for Congress he was chosen by the Republicans of the third congressional district of Iowa as their standard bearer. He was triumphantly elected over ex-Gov. Boies, the Democratic nominee. He served in this House in the Fifty-eighth, Fifty-ninth, and Sixtieth Congresses. While a Member of this House he served as a member of the Committees on the Judiciary, Elections, Merchant Marine, and Rivers and Harbors. He voluntarily retired from public life in 1909 and took up the practice of the law with his son. He died at Clarion, Iowa, May 16, 1916.

He was a devoted husband and father, a sincere friend, a painstaking attorney, an upright judge, an able Representative in Congress, a man who looked upon all public service as a public trust, a loyal American citizen, a man who loved his fellow men.

Every grave speaks to us in no uncertain language. It matters not whether it be in the potter's field covered by grass—nature's benediction—with no stone or inscription to mark the spot, or whether it be in the crowded thoroughfares of life, covered by black Egyptian marble, whereon is chiseled in letters of living light the name, the achievements, and the deeds of the departed, the same sentiments animate the breast, the same questions come to the lips that have baffled the sages and wise men of earth since the creation of the world.

From the hour of birth we are condemned to death. The same inexorable fate awaits us all. The decree of death has been enforced since creation's dawn. There is no escape. There is no new trial. We pass this way but once. There is no clemency shown, there is no parole, there is no law's delay. All the science and art and skill of the ages are as nothing in its mighty presence. Saint and sinner, sage and fool, high and low, rich and poor, outcast and king, all are on a common level. We all meet at the tomb. When death beckons us to depart we must go. All are swallowed up in the great ocean of eternity. The waters of oblivion roll over us, and the place thereof shall know it no more.

The earth is a vast cemetery wherein rests the dust of all the millions upon millions dead. It is a mighty sepulcher wherein will ultimately repose the ashes and bones of all the sons of men.

The mighty tomb of man is decorated by snow-capped mountain ranges old in story; by caverns deep; by canyons wild; by rocks and crags and sunlit peaks; by winding streams and billowed plains; by fields; by vine-clad hills; by sunny dales and mountain rills; by solemn forests; by shrub and tree and flower; by placid lakes; by storm-tossed seas; and girt round by old ocean, with its wild and sullen roar, whose billows break forever on the shores of the eternal.

The tomb of man is bathed in the sunlight of heaven, and shadowed by each passing cloud. The tomb of man is beautified by the seasons as they pass in endless review; by the resurrection we call spring; by summer with its luxuriant vegetation. It is burnished by the autumnal frosts; saddened by winter's snowy wastes and blinding storms.

It is held securely in the mighty grasp of unchanged and changeless law. There is no chance, as it sweeps on through the universe, amid the systems and shining worlds with which the Creator has studded the immensity of space.

In short, the tomb of man is created, decorated, beautified, and governed by the hand of the Infinite.

Can finite man ask for a more glorious ending? Can he ask for a grander resting place? Can he ask for a more splendid termination than with the consummation of all things earthly at the throne of God?

Dust thou art, to dust returnest, was not spoken of the soul.

There is consolation in the thought that the dead can not be disturbed. The elemental fires may rage within the bosom of mother earth; the volcanoes may pour forth their red-hot lava, and the gas and steam may stream up to heaven; the earthquake may rend the earth, and its shock may shake cities to their ruin, and cause the land to sink down to the level of the sea; the lightning may shatter the oak, and the deep-toned thunder may roll at a distance; the cyclone may leave devastation and destruction in its path; the hurricane may howl music, and the cataract may fill the air with its constant and solemn roar, but the dead sleep on. The living may be terrorized, but the dead are undisturbed. They have returned to the elements from which they sprang.

Judge Birdsall is at rest.

So live, that when thy summons comes to join
That innumerable caravan, which moves
To that mysterious realm, where each shall take
His chamber in the silent halls of death,
Thou go not, like the quarry slave at night,
Scourged to his dungeon, but sustained and soothed
By an unfaltering trust, approach thy grave,
Like one who wraps the drapery of his couch
About him, and lies down to pleasant dreams.

## Federal Aid in the Construction of Good Roads.

### EXTENSION OF REMARKS
OF
### HON. ADDISON T. SMITH,
OF IDAHO,
IN THE HOUSE OF REPRESENTATIVES,

*Wednesday, June 28, 1916.*

Mr. SMITH of Idaho. Mr. Speaker, in my opinion there is no legislation which could be placed upon the statute books that would be more advantageous to the country or benefit a greater number of people than the measure now under consideration providing for Federal aid in the construction of good roads.

Much has been said in prophecy by those who have discussed this subject as to how such legislation will make farm life more comfortable and profitable and how it will result in a more rapid development of the agricultural resources of the country, all of which is true; but I desire to refer to a concrete example of the benefits derived because of good roads which have heretofore been constructed by the Federal Government.

The subject of national highways was a live question a hundred years ago. From 1801 to 1830 the subject of good roads engaged the attention of the statesmen of that period. Henry Clay, one of the greatest men of his time, was a most ardent advocate of the policy of the Government constructing roads. Finally a law was passed in 1825 providing for the construction of a national road from Cumberland, Md., to St. Louis, Mo., which cost over $7,000,000.

This road opened up the frontier country and was the main thoroughfare from the East to the West until the construction of the Baltimore & Ohio Railroad. This national road, which is one of the finest highways in the country, passes through the county in which I was born, and I have traveled over it many times in the old stage coaches, which mode of travel has long since been abandoned.

Upon this great highway are magnificent farm homes and barns and prosperous villages. The early settlers along this highway were fortunate in securing employment in the construction of the road, and in this way were able to lay the foundation for their later prosperous condition. In addition an immediate and profitable market was created for their hay and grain to supply the great number of horses used in construction work.

These pioneers were thus able to establish themselves more quickly by reason of living on such a splendid road and getting their products to market at much less expense than their neighbors in the back country, which naturally resulted in their greater prosperity.

There is no better way in which to more equitably distribute in the inland States the proportion of the Federal money to which the people are entitled, as they in common with citizens of every other section of the country contribute to the support of the Federal Government. The money which is to be apportioned among the different States will furnish employment to thousands of people and much of the labor will doubtless be performed by those living in the vicinity of the roads to be improved, so that while the farmer is being benefited by the improvement of the roads, by furnishing him with easier and cheaper access to the markets, he will also be benefited by securing work for his teams and the members of his family who may not be constantly occupied on the farm.

While I had hoped that a much larger amount would be appropriated than is contemplated in the proposed bill, I most heartily support the present measure, feeling confident that Congress will recognize the wisdom of entering upon a larger and more extensive plan of improving the roads of the country after the experimental stage has passed.

I hope that within the next few years there will be enacted a law based on the plan proposed in a bill which I have introduced, providing for the issuance of 3 per cent Government bonds, the money thus realized to be advanced to the States for road improvement in proportion to their area and population at 4 per cent interest, secured by bonds issued by the States, the difference of 1 per cent interest between the Federal and State bonds to be placed into a sinking fund, which will, in the course of less than 50 years, be sufficient to pay off the bonds, thus allowing the States to have the use of the money with which to improve their roads at 4 per cent interest. As the principal will be taken care of by the 1 per cent difference in the interest between the State and Government bonds, placed in a sinking fund, the interest only will have to be paid by the States.

There has been appropriated by the Federal Government in public lands, to aid the construction of railroads, $1,000,000,000; for rivers and harbors, $600,000,000; for public buildings, $200,000,000; and for the Panama Canal, $400,000,000.

There is every reason, therefore, why the people of this country should demand that the Government proceed toward the construction of good roads in every section of the Union for the benefit of the people of all the States.

The history regarding the construction of the old National Road, to which I made reference, is of special interest in this connection, and I submit herewith an article by Mr. Maurice O. Eldridge, of the Office of Public Roads, Department of Agriculture, which contains interesting and valuable information regarding this national highway, which should be preserved in the archives of the Government as a historical contribution to the literature on this important subject.

THE OLD CUMBERLAND ROAD.

[By Maurice O. Eldridge, assistant in road management, United States Department of Agriculture.].

"We hear no more the clanging hoof,
And the stagecoach rattling by,
For the steam king rules the traveled world,
And the old pike's left to die."

Not until 1894, when the Hon. T. B. Searight, of Uniontown, Pa., gave us a most interesting account of its construction, growth, and development, did we have any connected history of the old Cumberland Road. Mr. Searight was born and reared on the line of this road, and spent his whole life amid scenes connected with it. He saw it in the "zenith of its glory and with emotions of sadness witnessed its decline." He tells us it was "a highway at once grand and imposing, and an artery largely instrumental in promoting the early growth and development of our country's wonderful resources and most influential in strengthening the bonds of the American Union." We are told by another writer that "it is a monument of a past age, but, like all other monuments, it is interesting as well as venerable. It carried thousands of population and millions of wealth into the West; and more than any other material structure in the land served to harmonize and strengthen, if not save, the Union."

The Cumberland Road, called so because it began at Cumberland, Md., was at one time the most widely known and heavily traveled road in the United States. One evidence of this is shown by the fact that during the year 1838, $50,000 in tolls was collected in the State of Ohio alone, although the road had not at that time been completed west of Springfield. The year 1839, however, seems to have been the banner year for this great highway, as Ohio collected in that year $62,446.10 in tolls. The total amount collected in Ohio from 1831 to 1877 amounted to nearly a million and a quarter of dollars.

It is generally thought that Henry Clay originated the idea of building the Cumberland Road, but speeches delivered in Congress in 1829 gave the credit of its conception to Mr. Gallatin, Secretary of the Treasury from 1801 to 1813, under the Jefferson and Madison administrations. While Mr. Clay may not have been the originator of the scheme for building the road, he was its ablest friend in Congress, leading most of the debates for its construction and preservation. To commemorate his services in behalf of the road a monument was erected near Wheeling, W. Va., * * * which is fast crumbling to decay, having been built out of a poor quality of sandstone. The friends of good roads in the United States ought to raise a fund with which to reproduce this monument in enduring granite, and should erect the same at some appropriate place along the line of the old pike.

Henry Clay was regarded with great admiration and esteem all along the line of the old road. This magnetic man not only made friends of the drivers, but of the tavern keepers and persons in other employments along the road. One Humes, of Claysville, Pa., was given to boasting of the familiarity with which he was greeted by Mr. Clay. On one occasion a coach in which Mr. Clay was traveling to Washington was upset in a pile of limestone in the main street of Uniontown.

Sam Sibley, the driver of the coach, had his nose broken, but Mr. Clay was unhurt, and upon being extricated from the overturned coach facetiously remarked, "This is mixing the Clay of Kentucky with the limestone of Pennsylvania."

Other illustrious statesmen of the early days of the Republic were frequent travelers over the road to and from Washington, among whom may be mentioned Jackson, Harrison, Polk, Houston, Taylor, John C. Crittenden, Breckenridge, John Marshall, and Davy Crockett. Mr. Searight mentions with pleasure having shaken hands with Gen. Jackson as he sat in his carriage in the wagon yard of an old tavern.

The road was greatly renowned for the number and excellence of its taverns. On the mountain division nearly every mile had its tavern. Some of these hostelries were perched on elevations near the roadside, while others were sheltered behind clumps of trees, with inviting seats for idlers and wayfarers, and all with cheerful fronts toward the wayworn traveler. The tavern signs were usually elevated on posts, giving promise of "Good cheer," while the dripping of the overflow water from the "horse troughs" on the growing mint beds below "lent a charm to the scene that was well-nigh enchanting." "Stagehouses," where travelers took their meals and stage horses were kept and exchanged, were located all along the route at intervals of about 12 miles. Most excellent meals were served at these wagon stands, and stagehouses for a "levy" and two drinks of whisky for a "fipponybit." The bill of a wagoner, with a six-horse team, for "putting up" over night did not exceed $1.75, and this included the feed for the horses, as well as meals for the driver, and "all the drinks he saw proper to take."

The taverns and stagehouses often entertained motly crowds—statesmen and teamsters, homeseekers and magicians, fortune hunters, actors and actresses, and others of greater or less prominence. Circuses and minstrels were constantly traveling over the road, giving performances at the principal towns, and roving bands of gypsies and fortune tellers pitched their tents and built their camp fires along the wayside. In fact, between the years 1820 and 1850 nearly everything, whether the necessaries or luxuries of life, or the things intended merely to amuse, found its way into the West by way of the old pike; and it is still common in Ohio, Indiana, and Illinois, when anything is especially novel, remarkable, or peculiar, to speak of it as having "come down the pike." It is for this reason that the officers of the Louisiana Purchase Exposition Co decided to name "The Midway Plaisance" of the St. Louis Exposition, the place where all the freaks and "everything new under the sun" can be seen, "The Pike."

Mr. Searight says that the National Road was "not a turnpike in the literal sense of the word, which means a road upon which pikes were placed to turn travelers thereon through gates to prevent the evasion of toll rates," for tollgates were not needed on the National Road, as it was usually kept in good condition, and travelers paid their toll without complaint. Tollhouses were located about 15 miles apart, and were all supplied with strong iron gates swung to massive iron posts. These gates were placed on the road in 1835 to enforce the payment of tolls when necessary. The tollhouses were of uniform size, and were usually round or octagonal in shape. Only one instance is known of a traveler refusing to pay toll for using the National Road, and this grew out of a misconception of the act of Congress exempting coaches conveying the United States mail. Mr. Stockton, in charge of the National Road Stage Co., refused to pay toll on the ground of having a mail pouch in each coach, while Mr. Searight, the road commissioner, contended that the act of Congress was not made to cover so broad a plane, and notified Mr. Stockton that unless the tolls were paid the gates would be closed against his coaches, which was done. Mr. Searight's contention was sustained in the United States Supreme Court.

The Cumberland Road was built by the United States Government under the supervision of the War Department. It is the longest straight road ever built by any Government in the world, being nearly 800 miles in length. The total cost of its construction was wholly paid out of the United States Treasury, and amounted in all to about $7,000,000. It was planned to run from Cumberland, Md., to St. Louis, Mo., passing through the capitals of Ohio, Indiana, and Illinois. A small part of the western end, however, though graded, was never macadamized. The Cumberland Road was connected with Baltimore, Md., by a road which was built by the bankers of Baltimore, and with the tidewater of the Potomac at Washington by the Chesapeake & Ohio Canal.

The cost of the eastern division of the road was quite excessive, being about $9,745 per mile between Cumberland and Uniontown. The cost of the entire division east of the Ohio River was about $13,000 per mile. This, of course, included the heavy grading and the ponderous stone bridges. The average cost of the road in eastern Ohio was much less than in Maryland and Pennsylvania, being about $3,400 per mile, and this included macadamizing, masonry, bridges, and culverts. This road, projected and partially surveyed in 1806, was not thrown open to the public until 1818. During this year the first line of passenger coaches was put on, and was conducted by James Kinkead, who was a member of the firm which built most of the stone bridges along the road. About 1852 the railroads took from it the bulk of travel and traffic, as well as the mails between the East and the West, thus ushering in the period of its decline.

Mr. Searight fails to give us a definite idea as to the methods used in constructing the road, but we know that the total width of the cleared roadway was 66 feet, the width graded 32 feet, and the width macadamized 20 feet. The writer inspected the road at a number of different places in Maryland, Pennsylvania, and West Virginia during the last few years, and was surprised to find so many varieties of material used and such a lack of uniformity in its construction. In places the road was built with a telford foundation and a macadam surface, and in many such places the top has worn entirely away, leaving the rough telford base exposed. In other places the foundation was built of large stone, varying from 4 to 10 inches in diameter, the surface being composed of small broken stone or gravel; while in other places the road seems to have been partly built out of small broken stone according to Macadam's original method.

From a letter written by Brig. Gen. C. Gratiot to Lieut. J. K. F. Mansfield, of the Corps of Engineers, who had charge of the road, we are able to secure definite information regarding the methods pursued in repairing the road subsequent to 1832. Repairs were made according to the macadam system. All loose stones were removed from the road, the foundation was raked smooth and made nearly flat. The ditches on each side were opened so that the water could not stand at a higher level than 18 inches below the lowest part of the surface. The culverts were so constructed as to allow the free passage of all water under the road. The roadbed having been prepared, the stone was reduced by hand to fragments not exceeding 4 ounces in weight, was spread on with shovels, and raked smooth. Only material of "sufficient hardness" was used, and the use of clay or sand as a binder was prohibited.

The material was placed on the road in 3-inch courses, the travel being admitted for a short interval on each layer for the purpose of consolidation. Obstructions were placed on the road in such a way as to insure an equal travel over every portion during the process of consolidation. Persons were kept in constant attendance raking the uneven surface caused by the action of the wheels of carriages. The materials consisted of limestone, flint, or granite of good quality.

The rivers and creeks were spanned by handsome stone bridges and culverts. Some illustrations of these bridges are reproduced herewith. Mr. Archer B. Hulbert published in 1901 an interesting account of the Old National Road, from which the following paragraph is quoted:

"Nothing is more striking than the ponderous stone bridges which carry the roadbed over the waterways. It is doubtful if there are on this continent such monumental relics of the old stone bridge builders' art. Not only such massive bridges as those at Big Crossings, Smithfield, Pa., will attract the traveler's attention, but many of the less pretentious bridges over brooks and rivulets will, upon examination, be found to be ponderous pieces of workmanship. A pregnant suggestion of the change which has come over the land can be read in certain of these smaller bridges and culverts. When the great road was built the land was covered with forests, and many drains were necessary. With the passing of the forests many large bridges, formerly of much importance, are now of a size out of all proportion to the demand for them, and hundreds of little bridges have fallen into disuse, some of them being quite above the general level of the surrounding fields. The ponderous bridge at Big Crossings was finished and dedicated with great eclat July 4, 1818."

Hundreds of contractors and thousands of laborers were required in building the old pike. They were paid well for their services, and in return did work which still stands as a lasting monument to their skill. Mr. Hulbert tells us that great enthusiasm was awakened among the laboring classes by the building of the great road, and that lively scenes were witnessed along the pike in those busy years. Successful contractors moved West as the work progressed, taking up a number of different contracts as they were offered by the Government. The contractors and the laborers were not alone in reaping a harvest from the construction of the road, for the farmers and their teams were often employed when not busy with the crops. Mr. Hulbert says:

"Thus not only in its heyday did the road prove a benefit to the country through which it passed, but at the very beginning it became such, and a little of the money spent upon it by the Government went into the very pockets from which it came by the sale of the land."

The building of the national road was a great undertaking, but keeping it in repair was greater, owing to the fact that the traffic over the road was exceedingly heavy. As many as 20 four-horse coaches had been counted in line at one time on the road. Large broad-wheeled wagons, covered with white canvas stretched over bows, laden with merchandise, and drawn by 6 powerful horses, were visible all day long, while caravans of horses, mules, cattle, hogs, and sheep could be seen at any time. In 1822 a single house in the town of Wheeling unloaded 1,081 wagons, averaging about 3,500 pounds each, and paid for freight on the same $90,000. At that time there were 5 other commission houses in Wheeling, and, estimating that each of them received two-thirds the amount of goods consigned to the one mentioned above, there must have been nearly 5,000 wagons unloaded and nearly $400,000 paid for transportation. It is further estimated that at least every tenth wagon passed through Wheeling into Ohio and Indiana, which would considerably swell the amount. On their return to the East these freighters carried various articles of the productions and manufactures of the West, including flour, whisky, hemp, tobacco, bacon, and wool. The price for freighting varied, but we are told that teamsters often received $1.25 per hundredweight from Brownsville, Pa., to Cumberland, Md., and $2.25 per hundredweight from Wheeling to Cumberland.

The first wagons used on the road were made with narrow-tired wheels, but the broad-tired wheels soon became popular, as by the use of such vehicles their owners were exempted from paying toll. There were two classes of wagoners, the "regulars" and the "sharpshooters." The former were constantly on the road, while the "sharpshooters" were for the most part farmers who were able to use their teams on the road when the prices for freighting were high and when they could not be employed in agricultural pursuits. The "regular" drove his team about 15 miles a day, but the "sharpshooters" often made 20 or more. Lines of teams were controlled by companies or associations, who arranged for relays of horses every 15 miles. The average load was 6,000 pounds, but loads weighing 10,000 pounds were frequently hauled. Small bells were often attached to a thin arch spring over the top of the teams and their tinkling attracted attention and admiration everywhere. These bells were used as a sort of trophy, and were only worn by the most beautiful and powerful horses; and it often happened that, if such a team became stalled, the team coming to the rescue captured and carried away the bells.

"The old wagoners, as a class, were robust, hardy, honest, and jovial," says the historian of the National Road, "and when at last the Conestoga horse yielded up the palm to the iron horse and it became manifest that the glory of the road was departing, never to return, the old wagoners, many of whom had spent their best days on the road, sang in chorus the following lament:

"Now all ye jolly wagoners who have got good wives,
Go home to your farms and there spend your lives.
When your corn is all cribbed and your small grain is good,
You'll have nothing to do but curse the railroad."

One of the most important functions of the National Road was to provide easy, quick, and safe means of transportation of the United States mail. Contracts were made by the Government with stage-coach companies for carrying the mails quite the same as contracts are made to-day with railway companies. The most important mails carried over the road were those between Washington and St. Louis, which were called the Great Eastern and Great Western mails. A large number of less important mail lines were operated, some of which carried through mail and others local mail and newspapers. The "express mail" lines corresponded with the "fast mail" of to-day. The time made by some of these "express mail" lines was marvelous; for instance, the Post Office Department required in its contract for carrying the Great Western express mail from Washington over the National Road to Columbus and St. Louis that the mail be delivered in Columbus in 54½ hours and in St. Louis in 94 hours. Ten miles an hour was an ordinary rate of speed, and it is said that the stage drivers were censured more quickly for making slow time than for being guilty of intoxication. Some of the mail coaches were allowed

to carry passengers, and the ordinary fare for such passengers was 4 cents a mile. These vehicles were handsomely finished, and some of them were painted tastily and upholstered with silk plush, and would accommodate as many as nine passengers. In fair weather an extra passenger was allowed to ride beside the driver. In addition to the "postillion," which consisted of driver with two horses stationed at the foot of many of the long hills, to assist the four-horse coaches in ascending, relays of fresh horses were placed about 12 miles apart, and these were changed "almost in the twinkling of an eye." As soon as the coach halted the driver threw down the lines and almost instantly the incoming team was unhitched and a fresh one attached, the reins thrown back to the driver, who kept his seat during the operation, the coach rattling off again at full speed.

It was believed by the "pike boys" that the stage line of the National Road had never been equaled for dash and spirit on any road in any age or country. An enthusiastic admirer of the old pike once said:

"The chariots of the Appian Way, drawn by the fastest horses of ancient Rome, were but a dismal cortege in comparison with the sprightly procession of stage coaches on the American highway. The grandeur of the mail coach is riveted forever in the memory of these pike boys. To see it ascending a long hill, increasing in speed when nearing the summit, then moving rapidly over the intervening level to the top of the next hill, and dashing down, the driver wielding the whip and handling the reins, revealed a scene that will never be forgotten."

Quoting again from Mr. Archer B. Hulbert, the author of the book entitled "The Old National Road":

It is impossible to leave the study of the National Road without gathering up into a single chapter a number of threads which have not been woven into the preceding record. And, first, the very appearance of the old road as seen by travelers who pass over it to-day. One can not go a single mile over it without becoming deeply impressed with the evidence of the age and the individuality of the old National Road. There is nothing like it in the United States. Leaping the Ohio at Wheeling, the National Road rolls itself across Ohio and Indiana, straight as an arrow, like an ancient elevated pathway of the gods, chopping hills in twain at a blow, traversing lowlands on high grades like a railroad bed, vaulting river and stream on massive bridges of unparalleled size. The farther one travels upon it the more impressed one must become, for there is in the long grades and stretches and ponderous bridges that "masterful suggestion of a serious purpose, speeding you along with a strange uplifting of the heart," of which Kenneth Grahame speaks: "And even in its shedding off of bank and hedgerow as it marched straight and full for the open down it seems to declare its contempt for adventitious trapping to catch the shallow-pated." For long distances this road "of the sterner sort" will be, so far as its immediate surface is concerned, what the tender mercies of the counties through which it passes will allow, but at certain points the traveler comes out unexpectedly upon the ancient roadbed, for in many places the old macadamized bed is still doing noble duty.

AMERICAN CRISIS BIOGRAPHIES—HENRY CLAY.

[By his grandson, Thomas Hart Clay; completed by Ellis Paxson Oberholtzer, Ph. D.]

Few at this day can comprehend how valuable a boon the Cumberland Road was to the Ohio and Mississippi Valleys at the time it was built. Clay struggled year after year to extend and complete it. In 1820 a monument was placed upon this highway near Wheeling in commemoration of his efforts in its behalf. The front of the base bears this inscription:

"This monument was erected by Moses and Lydia Sheperd as a testimony of respect to Henry Clay, the eloquent defender of national rights and national independence."

On another side of the stone these words were inscribed:

"Time brings every amelioration and refinement most gratifying to rational man, and the humblest flower freely plucked under the tree of liberty is more to be desired than all the trappings of royalty.

"Anno Domini 1820."

Mr. Clay died June 29, 1852, 11.17 a. m.

## A Correction.

## EXTENSION OF REMARKS

OF

# HON. JAMES R. MANN,

OF ILLINOIS,

IN THE HOUSE OF REPRESENTATIVES,

*Tuesday, August 22, 1916.*

Mr. MANN. Mr. Speaker, no one in public life escapes more or less misrepresentation. As a general thing I pay no attention to misrepresentations of what I do or say. But a Mr. Boynton, who is a candidate for the Republican nomination for Congress against me, has published a lot of statements so utterly devoid of the truth that I am constrained to refer to at least one of them.

Mr. Boynton, in an advertisement in various papers, says that I made the following statement, putting it in quotation marks as coming from me:

The people are not competent to decide what laws shall be passed at Washington * * *. I am too busy to be burdened with appeals and requests and am compelled, owing to press of business, to assign the great majority of these appeals to the wastebasket.

Mr. Boynton's statement that I ever made this statement quoted above is a simple, pure falsehood.

Mr. Speaker, it is not necessary to say to those here who know my method of work that I read all suggestions concerning legislation which are made to me and read them carefully. The thousands of people who write to me from home know that I attend to their letters and requests with great care. I not only read, but I derive great benefit and much information from the many suggestions which are made to me by letter and otherwise in regard to legislation, though I make it a general rule not to express decided opinions in regard to proposed legislation until I have had an opportunity to hear both sides and get all the information possible; and I rarely express a definite opinion on a matter until it comes before the House for action.

The advertisements and statements of Mr. Boynton about me and my action on various public matters are filled with false statements concerning what I have said and done in the House and in regard to legislation. I shall not take the trouble to answer these false statements. I believe the people of the congressional district which I represent know that I have been faithful to their local interests as well as true to the general good and welfare of the country.

In view of the possibilities which may grow out of the European war, as well as danger from other sources, one of the most important things now is for this country to make proper preparation for its own defense. I have taken an active part in that movement in the House of Representatives. Mr. Boynton, the candidate against me, is opposed to national preparedness as shown by a letter from him, reading as follows:

["Lexy-Byte," summer camp of Melbourne P. Boynton, Shelby, Mich., R. F. D. No. 3.]

JULY 5, 1915.

DEAR SIRS: With all Europe covered by the dead and drenched in human blood it is madness of the most wicked sort to drive our own country into the same devilish business of so-called "preparedness."

I marvel that you can and do list such noted and honorable names on your committees. Did I not know how easy it is to secure such names, I would worry the more about it. In my judgment there is just as much sense in arming our State lines as in arming our coasts against the world. Quotations from Washington of over a hundred years ago are silly. Why don't you go back to the oxcarts, too?

Yours,

M. P. BOYNTON.

## An Interview with Admiral Dewey.

## EXTENSION OF REMARKS

OF

# HON. CHARLES O. LOBECK,

OF NEBRASKA.

IN THE HOUSE OF REPRESENTATIVES,

*Tuesday, August 22, 1916.*

Mr. LOBECK. Mr. Speaker, I ask unanimous consent to extend my remarks by printing in the RECORD an interview with Admiral Dewey published in the Baltimore Sun, August 20, 1916, in relation to the United States Navy—its personnel, its equipment, and its present condition—also taking into consideration the building program adopted by Congress. This statement is one of the clearest and most comprehensive that I have had the pleasure to read or hear, and I think the people of the United States and Members of Congress should have the benefit of Admiral Dewey's opinions, and therefore ask that this interview with Admiral Dewey, the hero of two great wars and beloved by all American people, may be inserted in the RECORD.

DEWEY UPHOLDS DANIELS AND SAYS NAVY IS IN FINE SHAPE.

[By George Creel.]

For two years and more the United States Navy has been the subject of discussion as bitter as it is confused. The disputes between pacifists and militarists, between Democrats and Republicans, have resulted in a Babel, and out of it all have come prejudices that do not care to bother with facts.

It is a situation packed with menace. Not only is it the case that national confidence and national self-respect are being undermined, but ignorance and hate make it impossible for wise decisions to be rendered. Nothing is more imperative than that such a situation be ended.

The people of the United States are entitled to the truth, the whole truth, and nothing but the truth. What is slander and what is fact? Is the Navy as it stands to-day an asset or a liability? Is the Navy bill honest and adequate or a dose of "eye wash"? Has Secretary Daniels "demoralized"? Is he a faithful public servant, worthy of support, or a joke?

These questions may not be answered by any member of the Wilson administration or any Member of Congress, or by any officeseeker, or any "magazine experts" writing to suit editorial preconceptions. Not only is absolute and exact knowledge required, but he who speaks authoritatively must be free from the slightest suspicion of political bias or personal prejudice.

One man only measures up to these specifications. That man is Admiral Dewey. He has been in the Navy of the United States since 1854, serving through two wars. Since 1903 he has been head of the

General Board, passing upon naval defects, naval needs, and naval plans. No administration has power to hurt him. By law he is exempted from the usual retirement provisions, and if he does decide to retire it will be of his own volition and at full pay. No partisan quarrel has ever had power to drag him from his height.

Aside from these qualifications he is loved by the American people as few men have ever been loved. In a day when there is much talk of Americanism he stands as one who has risked his life for it and who has devoted that life to giving richer, finer meanings to the word.

I found him in Atlantic City in a great, wind-swept room that looked over the sea. His hair has whitened, but otherwise he is but little changed from the years that have passed since the wonderful day he returned from Manila to hear the shouts of a Nation. The same clear, steadfast eyes, the same tremendous simplicity, the same faith in America!

Speaking slowly, but never hesitantly, for three long hours he considered the United States Navy, past, present, and future; world war, world peace, national ideals, and national destiny. Only in his first answers, when an evident indignation gripped him, did he depart from the tone of one trying to pick his words in the interest of understanding.

"The attacks that have been made upon the Navy," he said, "are as false as many of them are shameful. It is not a junk heap. There is no demoralization. Both in material and personnel we are more efficient to-day than ever before. Our ships are as good as any, our officers are as good as any, and our enlisted men are the finest in the world.

"It is true that we have not enough ships or enough men. But navies are not built in a day. It was between 1906 and 1909 that Germany passed us and that we commenced to lose rank as a naval power. This is in no sense a criticism of administrations. Congress, after all, expresses public sentiment in large degree, and the reason we dropped was because the people wanted the drop. The recommendations of the general board went unheeded because they were not backed by public opinion. Until 1914 people were thinking in terms of world peace. It is different to-day, and it is to-day that should concern us."

He walked over to his desk and, taking up a copy of the Senate navy bill, spread it before him. For a moment, as if to measure his words, he tapped it with a big brown forefinger, and then he said:

"This is the best bill ever passed by either House of any Congress. It takes the five-year program of the General Board and changes it into a three-year program. It will restore us to second place and enable the United States to meet on equal terms any power in the world, save one.

"It is my hope," he said slowly, after another pause, "just as it ought to be the hope of every American, that this bill will be enacted into law without party division. I want to see America behind it! I want to see this vital question of the national defense lifted above the parties and partisanship."

I asked him then for a consideration of the bill, or, rather, some such analysis as would permit a civilian to do a little thinking for himself. Patiently enough he went over each item.

"Four battleships at once, and six more within three years." Now he was firmly on his own ground, his words came like bullets. "The great clash at the mouth of the Skagerrack gave a test of every theory. As a result, naval authorities are now agreed that the battleship is still the principal reliance of navies. As never before, it is proved that victory or defeat rests with the dreadnaught.

"Four battle cruisers at once, and two more within three years. This will remedy one of our chief weaknesses. Nothing is more necessary than an adequate information service to provide early and continuous intelligence of an enemy's movements. This is the function of the battle cruiser. Also, in addition to speed and endurance, she has great offensive power, so that, if called upon, she can fight for information and break through a hostile screen. Aside from offering security and information to the main body of battleships, the battle cruiser can be used to protect sea routes, both military and commercial, and can aid the battleships in general action by taking up a favorable torpedo position where her speed and heavy guns will be effective. The Skagerrack proves conclusively, however, that the battle cruiser can not give and take with dreadnaughts.

"Scout cruisers four, and six more to come. More eyes for the fleet. Absolutely necessary."

After placing a matter-of-fact "O. K." on the three fuel ships, the two ammunition ships, the hospital ship, a repair ship, and a transport, also the two gunboats and various tenders, he moved to the submarines.

"Like the battle cruiser," he said, "the submarine has been permitted to gain a very exaggerated value. It is, of course, a most useful auxiliary, whose importance will no doubt increase, but at present there is no evidence that it will become supreme. The bill provides for 9 fleet submarines, 3 coast submarines, 800 tons type, and 55 submarines, smaller type, provisions that are in line with the recommendations of the General Board.

"A feature of the Skagerrack engagement," he continued, "was the convincing demonstration of the usefulness of the destroyer. These tiny ships, primarily designed to serve the purpose of a screen, to be outriders for the big ships, have been regarded as incapable of attacking first-class ships in the daytime. Under cover of darkness or fog the destroyers were intended to creep in on the dreadnaughts, fire their torpedoes, and then dash for safety. The German destroyers descended upon the British fleet in broad daylight, and the destroyers of both fleets played an important part in the fighting. We feel that the bill's provision for 50 destroyers is amply justified. So!" He turned in the chair and clapped his hands together. "It is a bill that gives us strength, and best of all, a bill that gives us balance. A great navy and truly proportioned!"

"Granting all that," I said, "but what about the need of it?" As carefully and fairly as possible, I presented the feeling of many people in many Western and Middle West States—a feeling that this expenditure of millions on the Navy was a departure from American traditions, a hysterical surrender to the madness that has had hold of kings. His fine head nodded appreciation of every point, but at the end he spread wide his hands in a sweeping gesture of dissent.

"I know I am not a militarist," he said. "Those who have never seen war, or who have only played at war, may talk in terms of jingoism, but men who know what war is and what war does are the last in the world to approach it in any swashbuckling fashion. I hope the day will come when peace and justice rule the world, but that day is not yet here. Not all our idealism can brush away the facts. If we are to dwell in peace, we must be able to protect that peace."

He walked to the open window and pointed to the shining stretches of the sea. "Look at our coast line. From Maine to the canal; from the canal to Alaska. Russia has had to maintain two distinct fleets, one in the Baltic and one in the Black Sea. Our problem is much the same. We can not be said to have met our defensive needs until we are able to maintain a fleet in the Pacific Ocean as well as in the Atlantic. Our geography, the immensity of our coast line, join to make the Senate Navy bill a minimum requirement. No, no!" he exclaimed, "we must accept conditions as we find them, although this does not mean that we are to give up hope of changing the conditions.

"Given this increase," he declared, "given the ships and men that this bill provides, and the United States, as never before, will be a peaceful power, able at all times to protect and to advance its standards. Every cent appropriated by this bill is payment on an insurance policy."

"How about men?"

"We now have 55,000 and the bill authorizes 74,500."

"Can you get them?"

"I don't think there is a doubt of it. The Navy to-day offers as fine a chance for the American youth to fit himself for life as any other department of endeavor."

"Tell me, Admiral Dewey," and I braced myself for the momentous question, "has Secretary Daniels demoralized the Navy?"

"Bosh!" The exclamation was one of disgust and indignation. "Facts and figures tell their own story. The Navy was 5,000 short of the number of enlisted men allowed by law; over 6,000 have been added, although more rigid examinations have forced the rejection of five out of every six. Only 52 per cent of honorably discharged seamen were reenlisting. For more than a year about 90 per cent have reenlisted. Desertions have been cut in half and discipline has been improved to an extent that has permitted the restoration of a prison ship and a disciplinary barracks to normal uses. No, sir; the Navy is not demoralized, and those who make the charge are guilty of falsehood and misrepresentations."

"Did Secretary Daniels ever issue an order for officers and men to mess together, only withdrawing the order when informed that it might bring whites and blacks to the same table?"

"Slanderous. No such order was ever heard of."

It had been my purpose to take up with Admiral Dewey every one of the small things alleged against Secretary Daniels—every one of the petty charges that press and magazines have used to prejudice people against the Navy head. It proved impossible. It would have been like talking gutter gossip with St. Paul.

"How about officers?" I asked.

"Officers, like navies, are not made in a day." I could see his relief at getting away from mud. "When the present administration took charge it found that the law providing for the appointment of two midshipmen at Annapolis by each Member of Congress had been permitted to lapse. This law was extended, and the present Congress, upon the recommendation of the Secretary, has provided for three additional midshipmen to each Congressman. This makes 531 additional appointments immediately available. There is also the law that opens the Naval Academy to 15 enlisted men each year, provided, of course, they measure up to the mental, moral, and physical standards."

"Is that a good idea?"

"It is more than a good idea." For a second I saw Admiral Dewey as he must have looked on the bridge at Manila Bay. "It is democracy. Eighteen years ago, when this matter first came up, I took a stand that has never changed. I said then that the Navy could not afford to be the one department of American activity in which a boy could not rise from the bottom to the top. I say it now. This is the United States, not an Old World monarchy."

"The same thing goes for the ship schools," he continued emphatically. "Education is our solid rock. Not only do the schools make better citizens, but they make better sailors. We want our youngsters trained in intelligence as well as in hands, so that if officers go the ship can still be fought. No, sir," he exclaimed. "Opening the door of promotion to the enlisted man—giving him an elementary, technical, or industrial education, as may be deemed fittest—are American policies."

"What about the famous drinking order?"

"A good thing." His answer was instant. "There was some feeling about it at first, because the papers made fun of it; and there was also an attempt to make it appear that Secretary Daniels was charging officers with intemperance. I think that the feeling has disappeared completely. Every railroad, every great corporation, has long had an ironclad rule forbidding men to drink while on duty. Isn't a ship as important as a locomotive? Practically every European power has copied the order, by the way."

"And marksmanship? Is it true that our gunners can't hit the side of a barn?"

Before answering he pawed over some papers on his desk and pulled out a report of some kind.

"Here are some facts," he smiled. "From 1909 on we did go down, owing to the discontinuance of elementary practice. But we've pulled up. Admiral Fletcher, reporting on the 1915 target practice, says this: 'It is believed that the scores recorded are higher than ever before in the open sea.' The recent practices were held at ranges of 16,000, 17,000, and 18,000 yards, which are even longer than the longest ranges at which firing has occurred in the European war. About 10 out of 20 shots would have hit an enemy ship at 18,000 yards. Do you know," he said almost confidently, "I believe our boys are the best gunners in the world."

"Tell me, Admiral Dewey, what is all this clamor about the Navy needing a General Staff?"

He laughed.

"I don't know," he said. "I've tried to pin them down, but not one has ever been able to make clear just what it was that he wanted. Down in their hearts, I suppose, they want a small, select body to have entire charge of the Navy. Well, they'll never get it and they shouldn't get it."

"You believe, then, that the Secretary of the Navy should be a civilian?"

"Absolutely. He represents the people, and the closer he is to the people the better. Same thing with the powers of Congress. I can conceive of no greater madness than to put the Navy in the power of a naval group or the Army in the hands of soldiers alone. As a matter of course, we would look at things only from our own professional point of view. The whole democratic balance would be destroyed."

"How would you have the professionals figure?"

"Just as now—the General Board. It is made up of 12 picked men. Their duties are entirely advisory, but they have the widest possible sweep. We pass on Navy needs, recommend types and number of vessels, suggest increases in personnel—in a word, we are the expert advisers of the Secretary and Congress. The admiralty war staff of Great Britain, organized in 1912, is a copy of the American plan. So is the admirals' staff, sometimes called the general staff, of the German Navy. If anything, neither body has duties so comprehensive as our General Board.

"Here!" His eye caught a clipping tucked away under some papers on the desk. "This thing was in the back of my head all the time we were talking about the alleged demoralization of the Navy. Put that in."

What he handed me was an article by Hector Bywater, the famous English naval expert, written for a British journal after a careful study of the American Navy. I glanced it over and saw this paragraph marked:

"It need hardly be said that the political head of the United States Navy possesses infinitely more power than the civilian First Lord in Great Britain. And there is every indication that Mr. Daniels has been using his power to the utmost. His friends say he has accomplished wonders; his enemies, who are very many, declare that his personal fads and prejudices have undermined the morale of the naval personnel and made the service a laughingstock. But this charge is not borne out by the evidence. Those best qualified to speak assert that the last four years have witnessed a remarkable all-around improvement in the quality of the personnel. Thanks to the Secretary's drastic order shortly after he came into office, intemperance has disappeared from the Navy, and, although the drink prohibition excited ridicule and bitter opposition at the start, the majority of naval officers now agree that it has had a most beneficial effect on efficiency and discipline. The American bluejacket of the present day is a most admirable type and a positive revelation to anyone who knew the old-timer of 10 or 15 years ago. He is fed, berthed, and cared for in a way that astonishes those who are acquainted with the best European standards. Extraordinary pains are taken with his professional and general education. The amount of headwork he is called upon to get through may seem exaggerated and unnecessary to European critics, but the result certainly appears to justify the system."

"Do you stand for that?" I asked, looking up after reading the paragraph aloud.

"I would be dishonest if I didn't," he answered gravely. "As I told you, I have been in the Navy since 1854. Against the slanders that have been heaped upon the service that I love I want to say again that never in my knowledge has the matériel and personnel been so efficient. The last few years have been very wonderful years for the United States Navy."

For an hour he swept through a record of amazing achievements, rarely pausing to look at his notes, never letting down for a second. The invention and installation of antiaircraft guns, the utilization of the discarded navy yard at Pensacola as an aeronautic station and training school; the creation of a definite division of mining and mine sweeping; the reorganization of the radio service and the use of wireless telephony; the increase of the Navy's powder output from 3,000,000 to 6,000,000 pounds a year; the installation of electric propulsion; the three new battleships; radio equipment for submarines; the unprecedented increase in the Navy's stores of ammunition; the new emphasis put upon the War College, with its study of strategy; experiments with submarine and aircraft—so it went on until I gave up the attempt to follow.

"This is more than I have talked for years," he said at last, rising to his feet and holding out his hand. "But I want the people of the United States to know that it is all right with the Navy. There is no demoralization, no lack of discipline, no absence of enthusiasm. The Navy has never failed America. It will not fail."

As I went away I stepped more proudly than at any other time in my whole life. I had shaken the hand of Admiral George Dewey.

## Democratic Legislation and Democratic Prosperity.

EXTENSION OF REMARKS

OF

## HON. EDWARD W. SAUNDERS,

OF VIRGINIA,

IN THE HOUSE OF REPRESENTATIVES,

*Friday, August 25, 1916.*

Mr. SAUNDERS. Mr. Speaker, the figures of present business in the United States are amazing. They tell a story of unparalleled prosperity, of prosperity in every direction, prosperity for the farmers, prosperity for the wage earners, prosperity for the manufacturers, prosperity for the transportation companies, prosperity for the coal, iron and copper mines, the tale is endless. The Republican spellbinders have howled calamity, and predicted panic until their voices are cracked and husky under the strain. But to no effect. Business refuses to be alarmed. The country continues to pursue the ways of pleasantness, and to tread the paths of peace. We are the one great, peaceful Nation, in the midst of a Bedlam, the one great country whose people can rest in quietness, undisturbed by the thunders and horrors of a world-shaking war. Peace and prosperity, plenty and content, these are great blessings, and the people will be slow to risk their loss in order to acquire the hypothetical blessings of a Republican administration. The dog in the fable was secure in the possession of a juicy piece of meat. Crossing a stream, he saw his reflection in the clear waters below. Excited by the hope of adding to his possessions, he dived for the reflected bacon, narrowly escaped drowning, and in the pursuit of the shadow lost the substance. The people of the United States know a good thing when they see it. The machinery of government is running smoothly. They do not care to take the engine to pieces to see what makes the wheels go round. They are unwilling to drop the pilot of the ship of state, or in more homely phrase, to swap horses when crossing a swollen stream. Let well enough alone is an every day maxim, but it embodies a good working principle. This country is in the very heyday of prosperity, and no fair-minded man can avoid the conclusion that in large measure that prosperity has been secured by wise legislation, and good administration.

If the legislation of the last four years had been vicious, inadequate, and destructive, if the administration of public affairs had been timid, weak, vacillating, and insincere, it is a clear proposition that our present condition would be one of unrest, disorder, discontent, apprehension, and industrial confusion. Capital would be timid, labor would be dissatisfied, profits would be uncertain, enterprise would be curtailed, markets would be disordered, and general business utterly demoralized. These would be the inevitable fruits of crude legislation, and incompetent administration. But if a tree is to be judged by its fruits, it is clear that the fruits of peace, prosperity, and content do not grow on the evil tree of vicious legislation, or of corrupt and inadequate execution. There is something at fault in the argument of our Republican critics who vehemently attack the Democratic Party, but can not explain the prosperity that is patent on every hand. Nor are these critics in a position to assail the great Democratic measures that are responsible in so large a degree for our abounding prosperity, with any sincerity of conviction, or plausibility of argument. Presumably the minority party is in Congress upon the theory that it will expose Democratic follies, and oppose the crudities of Democratic legislation. But how can the gentlemen composing this minority discharge this task with any degree of success, when in such large numbers they have voted for the bills which constitute enduring monuments to Democratic legislative capacity? If the Democratic bills are inadequate and destructive, the work of incapable and incompetent amateurs in legislation, our Republican critics at least are estopped from making this charge, for the record plainly shows that numerous Republican votes were cast for these measures.

Confronted with this record, it is vain for Republican spellbinders to attack the value, or deride the merit of these enactments. Simply stated, these bills were either good, or bad, adequate or inadequate, sufficient or insufficient. If they fell under the latter head, the duty of the minority was clear. One and all they should have voted in the negative. But if support of a measure by the party in opposition, affords any evidence of its merit, then the merits of the measures that I shall cite, are abundantly established. In order that the attesting evidence of Republican support to the merit of Democratic legislative achievement may be made so clear, that he who runs may read, I propose to set down in order the measures upon which the Democratic Party is willing to go to the country, and submit its case to the arbitrament of the voters:

1. The Underwood tariff law. This act revised the tariff so justly, so conservatively, and with such regard for the interests of all the people, that the business world adjusted itself to the new conditions without shock, or jar. Confronted with the present condition of universal prosperity, he would be a rash man indeed who would care to revise again the tariff, and expose business anew to the mischiefs that would attend an inequitable adjustment. This bill passed on September 30, 1913, three years ago. One hundred and three Republicans voted in the negative. It will soon be seen that this was the high-water mark of Republican opposition to Democratic legislation.

2. The income-tax law. When this measure was first passed in a Democratic House in 1912, 40 Republican votes were cast

in opposition, 75 voted aye. Later it was passed as a part of the Underwood tariff bill.

3. The election of Senators by direct vote of the people. Passed in a Democratic House in April, 1912. Fifteen Republicans voted no, 110 Republicans voted aye.

4. The Federal Trade Commission bill. Passed in 1914. No opposing votes.

5. The Philippine bill, guaranteeing ultimate independence to the Filipinos. Passed in 1916. No opposing votes.

6. The Clayton antitrust bill. Passed in 1914, 52 Republicans voting no, 35 voting aye.

7. The Rucker bill, to prevent corrupt practices in elections. Passed House in 1916. No opposing votes.

8. The Federal Trade Commission law. Passed in 1914. No opposing vote.

9. The Federal reserve law, reorganizing and rehabilitating our currency system, and eliminating the possibility of money panics. Passed in 1913, 53 Republicans voting aye, 58 Republicans voting no.

10. The revenue bill. Passed in 1916, 39 Republicans voting aye. Normal Democratic majority in the House about 24. Majority for the bill 100.

11. The good-roads bill, providing Federal aid for the construction of roads in the States. Passed in 1916, 128 Republicans voted aye, 68 voted no.

12. Bill for the safety of railway employees. Passed in 1916. No opposing votes.

13. Workman's compensation law. Passed in 1916, 140 Republicans voting aye, 1 Republican voting no.

14. The child-labor bill. Passed in 1916, two Republicans voted no.

15. Anti-injunction law, for the protection of labor against oppression. Passed Democratic House in 1912, 80 Republicans voted aye, 31 Republicans voted no.

16. Spanish War widows' pension bill. Passed in 1916. No opposing votes.

17. Rural credits bill. Passed in 1916, and denounced in the Republican platform, but on the vote in the House, 108 Republicans voted aye, and 10 Republicans voted no.

18. Four agricultural bills, of peculiar interest to the farmers.

First. The bill to prevent gambling in farm products.

Second. The warehouse bill.

Third. The bill for grading grain.

Fourth. The agricultural extension bill. These bills passed in 1916. No record vote in opposition to the first measure. On the second bill 125 Republicans voted aye, and 31 Republicans no. On the third bill there were no opposing votes. To the fourth bill there was no opposition.

Mr. Speaker this is a formidable aggregate of legislation. Certainly we do not appear to have erred in the matter of omission, for apparently we have provided for every subject matter calling for appropriate treatment. The interests of the farmers, the interests of labor, the interests of the children, the interests of the manufacturers confronted with unfair competition, the interests of the workingmen injured in dangerous employments, the interests of the small land buyer who wants easy money on long time, the interests of labor on the railroads, and in other occupations requiring safety appliances, the interests of general business which require a sound and elastic currency, these are all provided for in the measures I have cited. We wait in vain to be arraigned before the country by our Republican opponents on the demerits of this legislation. Even the doughty champion of that party for the Presidency, the Hon. Charles E. Hughes, declines to take issue on this imposing total of Democratic enactments, which must stand upon their merits, or fall upon their demerits. Surely the wit of our Republican opponents can contrive an indictment against a portion at least, of this legislation. The country expected that Mr. Hughes would find in this body of comprehensive statutes something upon which to make a real issue. But when called upon to define his attitude, he responded by announcing that he stood for undiluted Americanism.

Truly, a clear expression of a definite attitude, and a positive policy! He might as well have announced that the moon was made of green cheese, and rested his appeal to the voters upon that declaration. Failing to formulate any charge of inadequacy, or insufficiency against the legislation upon which the Democratic Party rests its claim for reelection, the Republicans by their silence, admit its merit and sufficiency.

Mr. Speaker, the measures that I have cited, and others that might be cited, constitute a proud record. The Democratic Party has made good, and to each specific promise announced in its platform, it has responded with appropriate legislation.

We promised legitimate business, protection against illegitimate business, and to redeem that promise have passed an antitrust law. The foundation of universal business, is universal opportunity, but universal opportunity did not exist in the trade world until a Democratic Congress passed a trade-commission bill to make all trade, fair trade, and protect the little fellows against the oppressions of overweening rivals.

Every American wants to be a landowner. For years the Republicans promised a rural-credit bill, but kept the word of promise to the ear only. It remained for a Democratic Congress to enact a real rural-credit bill, one that will afford long-time loans on easy terms to the men who hunger to own their own farms, but for lack of means, and high rates of interest, are unable to achieve their desire.

Our merchant marine has been the laughingstock of the world. We have utterly lacked for the past 50 years the ships with which to transport our own goods to foreign markets. The Republican Party promised, and promised, and promised, but took no steps to remove the encumbering and antiquated laws which effectually hindered the development of a privately owned American merchant marine. A Democratic Congress has passed a shipping law which will set that marine upon its feet, and cause American yards to work to their utmost capacity.

The expenditure of money in national elections, particularly in the presidential campaigns, has been a national scandal. The Rucker corrupt-practice act, another piece of Democratic legislation, will effectually curtail these expenditures, and remove this scandal.

The popular election of Senators was agitated for many years. It remained for a Democratic Congress to enact the amendment that provides for that election. This amendment has been ratified by the States.

The general condition of the wage earners has been improved by many laws relating to hours of labor, safety appliances, and relief against oppressive practices. Then of course there is the tariff bill to which I have briefly referred. The Republicans promised to revise the tariff, and offered the Payne-Aldrich bill as the redemption of their promise. On this bill they went to the country, and were utterly defeated.

The incoming Democratic Congress thereupon revised the tariff in the Underwood tariff bill, a measure just alike to the consumers, the manufacturers, and the producers. As a supplement to this measure, we have enacted the nonpartisan tariff commission bill, designed to take the tariff out of politics. Under the Underwood act the country has greatly prospered. Every manufacturing industry has readily adjusted itself to the new conditions, and earned new dividends for the stockholders. This measure is no longer in issue. Two years ago the issue was submitted in the congressional election of 1914, and the act was vindicated by the election of a Democratic Congress. The tariff is out of politics, and should remain out of politics.

A Democratic administration has given this country admittedly the best currency system that it has ever known. In the words of a colleague, "The old system was a rank panic breeder. When the prospect was brightest, and the hum of industry was heard through the land, two links in the chain would suddenly snap, tearing to shreds the whole business fabric, and carrying dismay to every community on the continent." We lived under the shadow of disaster all the time. At regular intervals the storm clouds gathered, the lightnings flashed, the thunder roared, and the storm burst. Disaster followed disaster in quick succession, until the whole country reeled with the shock. This happened in 1873, in 1896, and again in the Roosevelt money panic of 1907, when so many of the banks of the country resorted to the use of scrip, and we were saved from even greater disasters by the house of Morgan, and the powers of Wall Street. It is even now a mortifying reflection that this great country, with its infinite resources was unable to save itself, but in consequence of the miserable system then prevailing was compelled to call outsiders to its relief. But this situation will not recur. The country is no longer dependent for salvation upon the czars and kaisers, the princes and princelets of Wall Street.

"The first notable financial achievement of the present Democratic administration was to revolutionize this wretched currency system, the unhappy victims of which are without number, and the losses beyond human approximation. They affected not alone the financial institutions immediately involved, but the merchants whose credits were suspended, the industries whose shops were closed, the railroads whose cars were made idle, the farmers whose crops rotted in the fields, and the laborer who was deprived of his just wage. No business enterprise, or any individual, ever entirely escaped."

And so once again the Democrats when confronted with responsibility, proved themselves to be equal to the demands of the hour. Time after time the Republicans promised to reform the currency. The net result of their efforts in this direction was an expenditure of over $250,000, and the accumulation of a vast col-

lection of monetary essays, of little value for the solution of the practical questions involved.

But the crowning work, I might almost say, of a Democratic Congress, is the Shackleford bill, providing Federal aid for road construction in the States. This measure will reach into, and affect with its benefits every community, of every State in the Union. It marks the beginning of an era of universal road construction that will give the country a system of wagon roads that will be of vast and permanent utility to the farmers, and the urban dwellers alike.

This is the story of Democratic legislation. No wonder the opposition has not dared to make an attack in the open. No wonder that Mr. Candidate Hughes prefers such glittering generalities, as "undiluted Americanism," to the difficult, nay impossible task of making an issue over these measures of notable achievement. Like the darky preacher who argified with the sinners, and sputified over the Scriptures, but failed "to specify the wherein," Mr. Hughes and his followers have failed to specify wherein this legislation is defective, unwise, and undesirable, or to indicate what, if any of it, if opportunity is afforded, they will repeal.

No wonder the Republicans in Congress voted in such large numbers for these measures. They dared not do otherwise, and go before their constituents.

There are many other measures of intense local interest, and practical value, that I have not mentioned, measures for flood control in the Mississippi and Sacramento Valleys, measures for the development of Territorial Alaska, measures for forest conservation, measures for the development of our water power, and of our great arid areas. These measures are local, but the larger measures that I have cited are neither local, nor sectional in their character and application. They relate to, and affect the interests of all the people of the entire country, and constitute the magnificent redemption of every pledge made by the Democratic Party to enact the legislation imperatively required by public conditions.

No wonder that Bainbridge Colby, the man who nominated Roosevelt at Chicago, has been constrained within the last few days to pay the following tribute to the work of the Democrats in Congress:

The achievements of the Democratic Party, under the leadership of Woodrow Wilson, in the field of progressive legislation, constitute much more than an appeal for support. The opposition to the President's reelection proceeds from an unregenerate Republicanism that has weathered the danger of reform, reabsorbed its most vociferous critic—

I presume he refers to Roosevelt—

and abandoned itself to rancid reaction. There they are, the Old Guard. See for yourself. Count for yourself.

Mr. Colby is a Republican. He ought to know the things whereof he speaks with so much fervor. As a witness against the Old Guard, and the rancid reactionaries who are running the Republican campaign, he is a brand plucked from the burning. The measures that I have grouped for special reference, constitute the seed that the Democrats have sowed in the field of legislation, the hardy trees that they have planted. What of the fruits? Are they good, or evil? To-day the United States is at the very highest pinnacle of wealth and happiness.

The real indices of domestic prosperity are railway earnings, production of pig iron, building operations, and bank clearances. The condition of the iron, and steel trade is regarded as the barometer of the business world. The reports of the earnings of the railway transportation lines exhibit one and all great gains. Up to March 31 of this year the net increases in the railway earnings were over $250,000,000 greater than for the year ending March 31, 1915. And mark you, this means more business, not the oppression of the shippers by the imposition of greater rates. The transportation charges of the railroad lines are now held to a reasonable level by the constraining authority of the Interstate Commerce Commission. No longer are these companies enabled to put more money into their pockets, by the simple device of making the shipper pay more for his transportation, until finally they load down the traffic with all that it will carry. Building is conspicuously active in every city, town, and hamlet in the United States. In the iron and steel trades, not only are all the establishments running on full time, but their products are sold months, and in some instances years ahead. The reports from the office of the Comptroller of the Treasury show new high records in the matter of the resources of the banks of the central reserve, and reserve cities, and of the deposits in these cities.

[Associated Press dispatch, May 28, 1916.]

Resources of nearly $8,000,000,000, a new high record were held by the national banks of the central reserve, and reserve cities of the country, on May 1, so Comptroller Williams announced last night. He issued this statement; The abstract of the condition of all national banks, in the central reserve, and reserve cities, as of May 1, 1916, shows that their resources have reached another high-water mark, total resources being reported as $7,976,000,000, an increase of $259,000,000 over the call of March 7. The deposits in these national banks were $6,593,000,000, an increase of $249,000,000, while loans and discounts increased from $4,164,000,000 to $4,212,000,000 on May 1.

Money is abundant, and available on easy terms for every form of legitimate enterprise.

The figures of the Geological Survey show that the production of iron ore during the year 1916 sets a new high record. To date the production has been 83 per cent greater than for the corresponding period of last year. The production of pig iron for the same period is 66 per cent greater than for last year, while the prices both for pig, and the manufactured products, are in the highest degree satisfactory for all parties concerned. The par value of the stocks of the Bethlehem Steel Co. a few years ago, was $16,534,000. The present value is $115,803,000. Appreciation in these stocks is $99,269,000, or over 500 per cent. A comparative statement of other industrial companies shows advances almost as great as appear in the case of Bethlehem Steel. I refer to companies that are not concerned in munition making, but which supply the industrial wants of this country, and of the world. The figures cited do not seem to presage panic under a Democratic administration, or the advent of hard times.

The figures of the coal output are extraordinary, as given in a report of the Geological Survey. According to this report, the production during the first half of this year was the greatest ever recorded in any half year period. The figures show an output of over 261,000,000 tons, a 35 per cent increase over the first six months of 1915. The estimates of the bureau indicate that over 500,000,000 tons will be mined during the year 1916, a new high record.

What this means in the way of increased traffic for the railroads, and prosperity for all the interests concerned, needs no comment. At no time in the history of our country has our export business been so great. The exports for May of this year were $61,000,000 greater than for the high record of the March last preceding, and total the sum of $472,000,000.

Our foreign trade for the last fiscal year amounts in round numbers to $6,300,000,000, or $2,000,000,000 more than our trade of two years ago. These figures show the amazing extent to which our commerce has increased with every quarter of the globe. For years London has been the center of world trade, but within the last 12 months New York has advanced to the primacy, and is now the world's biggest port. During the last 12 months New York's total of exports and imports amounted to over $2,125,000,000, exceeding the export and import business of London during that period by over $200,000,000. The cost of collection of our internal revenues affords the most remarkable evidence of Democratic capacity, and Democratic efficiency. The receipts from this source for the last fiscal year amounted to the sum total of $572,740,769. This vast sum was collected at a cost of only 1.4 per cent, a new high record of economy.

In connection with the truly extraordinary advance in other business, there has been a notable recent increase in the output of our shipyards, portending the reestablishment of an American merchant marine under the shipping bill passed at this session of Congress. The crying need of the hour is ships with which to transport the products of our farms, and factories to the countries which are clamorously demanding them. "Bursting granaries, teeming factories, overladen ships," that is the story, and the cry is ever for more ships, and more ships, and still more ships for the transportation of the goods piled high on the congested wharves at every port on our coast. The figures given out by the Bureau of Navigation of the Department of Commerce show that shipbuilding in American yards has practically been quadrupled:

On July 1, 1915, there were but 76 vessels of 310,089 gross tons building, or under contract in our yards, compared with 385 vessels of 1,225,784 tons, on July 1, 1916.

Every shipyard is working to capacity, building cargo vessels, bulk oil vessels, colliers, and combined passenger and cargo vessels. The fact that they are building only two purely passenger vessels shows that the business world is preparing for cargo traffic on an immense scale. As a result of these condition in the business world, the products of the farm, meat, corn, wheat, tobacco, and cotton have been rapidly advancing. The price of hogs, and cotton is the highest known. The following table of present prices on the Washington market is interesting reading:

Prices to-day in the markets of the city were about as follows:
Eggs: Hennery, 35 cents to 40 cents per dozen; gathered, 30 cents to 33 cents per dozen.
Poultry: Chickens, 28 cents to 35 cents per pound; broilers, 30 cents to 35 cents per pound; hens, 23 cents to 25 cents per pound; roosters, 16 cents to 18 cents per pound; turkeys, 30 cents to 35 cents per pound; ducks, 25 cents per pound.
Butter: Best creamery, 45 cents per pound; oleomargarine, 15 cents to 30 cents per pound; renovated, 32 cents per pound; medium grades, 35 cents to 45 cents per pound.

Meats: Lamb, 18 cents to 40 cents per pound; beef roast, 18 cents to 30 cents per pound; beefsteak, 25 cents to 35 cents per pound; beef, stewing, 15 cents to 18 cents per pound; veal, 18 cents to 35 cents per pound; bacon, piece, 22 cents to 25 cents per pound; bacon, sliced, 28 cents to 35 cents per pound; pork roast, 25 cents to 30 cents per pound; mutton, 25 cents to 35 cents per pound; pork chops, 25 cents to 30 cents per pound; pork hams, 20 cents to 22 cents per pound; pork shoulder, 18 cents to 20 cents per pound; smoked ham, 20 cents to 23 cents per pound; smoked shoulder, 16 cents to 20 cents per pound; corned ham, 20 cents to 22 cents per pound.

A few nonpartisan witnesses testifying to the conditions of business, and the fact of universal prosperity will be called. The testimony of these witnesses will make interesting reading.

The tide of business is rising at an accelerated pace, and an era of widespread activity is in prospect. Of late industrial expansion has been phenomenally rapid. Reports from nearly all the sections of the country, tell of the unchecked growth of new enterprises, which is everywhere stimulated by the exceptional strength of the fundamental situation. Current transactions, with few exceptions, are steadily enlarging, as is evidenced by the comparisons of bank clearings, railroad earnings, commodity prices, and other statistical barometers. (Dun's Review, October, 1915.)

Not only is there no step backward in general business, but each week the pendulum of progress swings over a wider area, and confidence is further strengthened. Few discordant notes mar the cheerful tone of reports from the leading centers, and trades. A change of spirit finds expression in the launching of many deferred undertakings, while more new enterprises are being started than for several years past. Instead of marked hesitation and caution, large projects are conceived and carried into effect, in a manner that attests the increased confidence prevailing in the commercial world. (Dun's Review, Oct. 30, 1915.)

Trade as well as industries still moves at a brisk pace; prices continue to advance, deliveries of raw, and finished material are complained of as slow, railway traffic is congested, supplies of money are plethoric, and collections are good. (Bradstreet, February, 1916.)

A tale now rather commonplace, is told by the week's reports. A prominent characteristic is unprecedented activity in all the larger lines, distributing, as well as manufacturing. There is a shortage of goods, a steady climbing of prices, and a widespread complaint of an inability to get supplies. (Bradstreet, March, 1916.)

There is no longer any complaint of deferred buying, but of difficulty in meeting the steadily expanding requirements. Exports continue in notably heavy volume, while internal trade is swelled as the holiday season approaches. Development of Christmas business, fulfills the most optimistic expectations. Weekly bank clearings, $3,831,001,525. (Dun's Review, December, 1915.)

The United States Steel Corporation began this month with unfilled orders amounting to 6,165,452 tons of steel. This is the largest amount for years, and is an increase of 847,834 tons over the figures of October 1. Most of the steel is for railroads, bridges, steel-frame building, and manufacturing. This seems to show a healthy state of general business. (Current Events, November, 1915.)

These citations might be multiplied indefinitely, but I will call only two additional witnesses to prosperity, this time from the opposition, and will insert a few brief citations from the editorial, and news columns of those stalwart Republican papers, the Washington Post, and the Washington Times.

[Extract from editorial of Washington Post of Jan. 16, 1916.]

BUSINESS STEADILY EXPANDING IN VOLUME AND INCREASING IN VALUES.

The pushing forward of extensions to industrial establishments, the increase of capacities to output in mines, mills, shops, and factories; the construction of new mills, new shops, new factories continue to be marked features of business in the United States.

The increase of wages of employees in important branches of employment of labor is an accompaniment of the expansion of outputting.

The fact that building operations noted in December, 1915, were of a value, take the country over, of more than 65 per cent increase as compared with the total of December, 1914, is most significant and speaks very encouragingly for building work during the present year.

The balance of trade in favor of the United States of rising $50,000,000 as the result of the first week of 1916 exports and imports indicates that the high tide of the last four months of 1915 is still running in full force.

The fact that exports of coal during the year 1915 were double those of 1914 tells the story of prosperity in the mining regions north, south, and west of the District of Columbia, as well as of the railways which transport the coal and the ports which are benefited by the greater commerce brings to their people.

[Extract from editorial of Washington Post, Apr. 2, 1916.]

ENORMOUS DEMANDS OF THE PUBLIC FOR MANUFACTURERS' PRODUCTS AND MERCHANTS' STOCK OF MERCHANDISE.

As all business men well know, for the first three months of 1916 labor in every branch, labor skilled and unskilled, was employed in greater numbers of persons and in a greater percentage of the available total than ever before in the history of the United States at that period of the year. The reports of State and National officials have also shown that during the last quarter of 1915 the average wage paid was higher than at any other period of our records.

The past three months have witnessed advances in wages of employees over those paid in 1915 to an extent that has increased the daily, weekly, and monthly earning power of more than 1,000,000 of our industrial workers.

Our mills, our furnaces, our factories, our shops, our manufacturing establishments, and our mines are not only crowded with employees earning good wages, but the unfilled orders upon the books of the companies, firms, or individuals controlling these are so large that they guarantee full capacity output for many months ahead, and this is in itself a guaranty of steady, constant, employment to the workers, heavy pay rolls, and enormous demands for materials.

Some of the great steel companies are already booking orders for hundreds of thousands of tons of their outputs for delivery to their customers in 1917.

[Extract from editorial of Washington Post of Mar. 25, 1916.]

There are no persons idle in this country now who are capable of work and desire employment. Farms, mines, shops, mills, factories, the trades—all offer employment to persons capable of doing the necessary work, and they offer steady jobs and at wages that have never been surpassed in amount.

There never were so many people in the United States as there is at this writing; there never was so large a percentage of the population employed as there is now, and never at such continuous work and such high average scale of pay as the present moment.

With the opening of the spring the calls for labor in this country will grow more urgent, and the business activities, already unparalleled in extent, will become still more extended.

With the opening of the spring the earning powers of our 100,000,000 of inhabitants will assume enormous proportions, and this earning power carries with it a purchasing power that will increase proportionately.

If our sales to foreign countries have exceeded all expectations and broken all records, so has the purchasing power of our own people, and the best records of the retail trade in the year 1915 will be far exceeded in the retail trade of this country during the months of the year 1916.

[From the Washington Post.]

UNPRECEDENTED BUSINESS ACTIVITY THROUGHOUT THE REPUBLIC.

There exist unprecedented activities in the industrial districts of the United States, and in many of the most important branches of manufacturing orders unfilled are constantly increasing, even with full capacity of output being maintained.

When the phrase or term "full capacity of output" is used it should be remembered that capacities of many industrial plants have been largely increased during the past 18 months and that now "full capacity" means vastly greater volumes and values than were possible in 1912, 1913, or 1914.

In very few lines of manufactured goods are there any surplus or reserve stocks, and this statement applies to homemade as well as imported articles and from the ultimate distributer, whether a small shopkeeper or an extensive mercantile establishment, to the mill, the shop, or factory of origin, it is a hand-to-hand business now, with all the agencies dependent and waiting upon the manufacturers for delivery of the needed articles.

Whether the articles desired be metals, woods, stone, brick, or fibers, it is wait, wait all along the line from manufacturer to ultimate consumer, and this condition of commodities being sold far ahead has not been equaled in the United States since the days of the Civil War, more than a half century ago.

The entire country is aware of the "sold-ahead" condition in the iron and steel trades, in the copper, zinc, and lead markets, in nearly every class of machinery output, in the locomotive works, the car factories, the automobile and motor-truck manufactories. Lack of sufficient numbers of skilled operatives in the cotton and woolen mills is causing the piling up of orders in these industries, and this is true of the silk mills as well.

Several of the largest carpet and rug dealers have recalled their salesmen from the road, as the mills turning out carpets and rugs have their outputs sold ahead as far as they care to go at this time.

The new wheat from Texas and Oklahoma has commenced to roll over the railway tracks of the Southwest bound for the markets of this country and those of the world, and from now on to next September the urgency of freight for transportation will tax the facilities of the transportation lines throughout the Union.

Active business, larger business, profitable business is booked for the business men of the United States during every succeeding month of the next fiscal year.

[From the Washington Post.]

BUSINESS IN GOOD FORM AND FINE FETTHER.

We direct attention of the readers of the Post to a few of the many encouraging items of business progress throughout the United States.

These items cover very different lines of affairs, but they all tell the story of amazing prosperity so strongly, so forcibly, so eloquently, that we feel that extended comment upon them is superfluous. Standard Oil Co. of Indiana sales in May showed an increase of 1,000,000 gallons over May, 1915.

Public Service Corporation of New Jersey directors have voted to recommend stockholders to increase the capital stock from $25,000,000 to $50,000,000.

Railway equipment orders placed in the last week included 1,116 cars, and the Habana Central Railway is reported to have placed two orders for steel freight cars this week, each order being for 500 cars.

Dominion Steel Corporation has sold its entire output for the current year.

The Northern Pacific's gross revenue for the first two weeks of June was $2,932,000, a revenue which has been exceeded for a similar period but once in the past seven years.

Southern cotton mills are doing the largest business in their history, and the majority of them have sold up their possible output to the close of the year.

At the single port of New York, from June 10 to June 20, inclusive, the exports amounted in value to $70,880,922; the imports were of a value of $44,001,767. Thus from the business of that one port there was an excess value of exports in the nine business days of the period of nearly $26,000,000.

A contract was closed this week by the Oriental Navigation Co., of Battery Place, New York, to ship 15,000 tons of steel billets to Paris, where they are to be converted into projectiles.

Coal and coke shipments on the Pennsylvania Railroad increased in May 874,077 tons.

A $6,000,000 order for electrical equipment was received by the General Electric Co.

[From Washington Times of July 2, 1916.]

TREASURY BALANCE LARGEST SINCE 1908—M'ADOO REPORTS UNCLE SAM HAS $174,965,231, AND ENDS 1916 WITH $78,737,810 SURPLUS.

Secretary McAdoo reported last night that the balance in the United States Treasury is $174,965,231.97, the largest since 1908. The surplus for 1916 was $78,737,810.11, as compared with 1915's $59,436,580.10 deficit.

Income-tax receipts mounted from $79,000,000 to $124,867,430.28; internal-revenue receipts increased phenomenally to $512,740,769.58.

Not only do we find immense present activity in every line of trade, but as a result of the confidence which our business men have in the future, the "extent to which commodities have been

sold ahead has not been equaled since the Civil War." All the agencies are now waiting and dependent upon the manufacturers for delivery. It has been noted that in "the iron and steel trades, in the cotton, wool and silk mills, orders are piling up every day. Several of the great carpet, and rug manufactories have called in their salesmen, having sold their products ahead as far as they care to go."

Our friends on the Republican side have reluctantly conceded prosperity. But they are unwilling to give credit, where credit belongs. They are strong on insinuating a doubt. Trouble they insist, is just ahead, and the only way that this trouble can be avoided is to call in the party which the country has repudiated for the last six years, and put them on the job. They are woefully afraid that the Democrats will be unable to meet the problems that they insist will confront this country at the conclusion of the European war. Hence their anxiety to sacrifice themselves upon the altar of their country's needs, and devote themselves to the solution of these problems. But this apprehension is confined exclusively to these self-sacrificing patriots. The country goes on its way unafraid. Even the Washington Post can not see a cloud the thickness of a man's hand upon the horizon. In a recent editorial it declared that—

There is not a cloud upon the business sky of the United States at this writing. The prospects are so brilliant, and the results seem to be assured, that they can not fail to be satisfactory to the business men, as well as to the masses of the people—

And why should they not be satisfactory?—

Most of the steel concerns have sold their entire output for the year. The southern cotton mills, in the aggregate, are doing the greatest business of their history. All of the railroads are sending in great orders for equipment.

Steel workers are getting surpassingly high wages, and new high marks are being established in every direction.

Another pretension put forward by the minority is that our prosperity is all war prosperity. Of course it would be foolish to deny that the war has stimulated prices, and exports in certain industries, but the reports of the Department of Commerce show that the purely war exports constitute but a small per cent of the immense volume of our foreign trade. The sufficient answer to this contention is found in another editorial from the much-cited Washington Post:

FORGING AHEAD.

When steel common made its recent high record of 95, it topped the previous peak of 1909 by an eighth of a point. The rise of the present year has been sensational. In February of 1915 the stock had dropped to 38. There had been a recovery of 57 points when the high record of 95 was reached. As against the net earnings for 1909, amounting to more than $131,000,000, the net earnings of 1916 are estimated at $312,000,000. There could be no better evidence of the firm foundation on which the prosperity of the country rests. The United States Steel Corporation is not engaged in manufacturing munitions of war. Its business responds to the demand for railway extensions, the construction of steel bridges, and the need for new buildings. The enormous prosperity of the country is an indication that the country is forging steadily ahead, with abundant prosperity in sight.

Mr. Speaker, the Democratic majority in Congress can point to its jewels with all the pride of a Roman mother. These jewels are, the constructive legislation of the past six years, the universal prosperity and happiness which that legislation has secured, and the blessings of peace, due to the fortitude, and strength of a Democratic Executive. Upon this record we are prepared to go forth, and do battle with our adversary.

## The Revenue Bill.

### EXTENSION OF REMARKS
OF
### HON. ADOLPH J. SABATH,
OF ILLINOIS,
IN THE HOUSE OF REPRESENTATIVES,

*Tuesday, August 22, 1916.*

Mr. SABATH. Mr. Speaker, to my mind one of the most unpleasant duties that Congress has to perform is the enactment of legislation for the purpose of raising revenue. Yet, so long as governments are instituted, revenue will be required for the conduct of public business and money will be required to run the machinery of the Government.

The policy of the Democratic Party has always been to lay as light taxes upon the American people as possible. To that end it has at all times advocated economy in every branch of the Government service, but as the wealth and population of the country increases and our interstate and foreign commerce grows in volume the needs of the Government also increase, and this demand must be met. The ordinary expense incurred during times of peace has been augmented recently by the demand of the people for preparedness, following the lessons taught by the European war, and this also has been increased by the complications in Mexico.

Up to a few years ago nearly all of our revenue was raised by an internal tax on beverages, cigars, and tobacco, and by duties on imports. Therefore most of our revenue has been raised by indirect taxation. The Democratic Party, by the adoption of the income-tax provision of the so-called Underwood tariff bill and the corporation tax bill has raised nearly $100,000,000 by a direct tax which is imposed, not on the necessaries of life, but upon net incomes of over $3,000 in the case of unmarried, and $4,000 in the case of married citizens of the United States. To my mind it is the most just tax that could be levied, and inasmuch as revenues must be raised to maintain our Government, I do not know of a tax more equitable than the income tax, unless it is the inheritance tax. Neither the income tax nor the inheritance tax places any burden on the great masses of the people, but it is levied against the surplus funds of those people who can afford to pay.

I have for years urged the passage of a bill similar to this, and I will insert as a part of my remarks the bill which I introduced on the subject:

A bill (H. R. 1750) providing for a graduated tax upon all incomes over and above $3,000 annually.

*Be it enacted, etc.*, That from and after the 1st day of January, 1914, there shall be assessed, levied, collected, and paid annually upon the gains, profits, and income received in the preceding calendar year by every citizen of the United States, whether residing at home or abroad, and every person residing therein, whether said gains, profits, or income be derived from any kind of property, rents, interest, dividends, or salaries, or from any profession, trade, employment, or vocation carried on in the United States or elsewhere, or from any other source whatever, a tax of 1 per cent on the amount so derived over and above $3,000 and below $5,000, 2 per cent on the amount so derived over and above $5,000 and below $10,000, 3 per cent on the amount so derived over and above $10,000 and below $25,000, 4 per cent on the amount so derived over and above $25,000 and below $50,000, 5 per cent on the amount so derived over and above $50,000 and below $100,000, and 6 per cent on the amount so derived over and above $100,000; and a like tax shall be levied, collected, and paid annually upon the gains, profits, and income from all property owned and of every business, trade, or profession carried on in the United States by persons residing without the United States. And the tax herein provided for shall be assessed by the Commissioner of Internal Revenue and collected and paid upon the gains, profits, and income for the year ending the 31st day of December next preceding the time for levying, collecting, and paying said tax.

SEC. 2. That in estimating the gains, profits, and income of any person there shall be included all income derived from interest upon notes, bonds, and other securities, except such bonds of the United States the principal and interest of which are, by the law of their issuance, exempt from all Federal taxation; profits realized within the year from sales of real estate purchased within two years previous to the close of the year for which income is estimated; interest received or accrued upon all notes, bonds, mortgages, or other forms of indebtedness bearing interest, whether paid or not, if good and collectible, less the interest which has become due from said person or which has been paid by him during the year; the amount of all premium on bonds, notes, or coupons; the amount of sales of live stock, sugar, cotton, wool, butter, cheese, pork, beef, mutton, or other meats, hay and grain, or other vegetable or other productions, being the growth or produce of the estate of such person, less the amount expended in the purchase or production of said stock or produce, and not including any part thereof consumed directly by the family; money and the value of all personal property acquired by gift or inheritance; all other gains, profits, and income derived from any source whatever except that portion of the salary, compensation, or pay received for services in the civil, military, naval, or other service of the United States, including Senators, Representatives, and Delegates in Congress, from which the tax has been deducted, and except that portion of any salary upon which the employer is required by law to withhold, and does withhold, the tax and pays the same to the officer authorized to receive it. In computing incomes the necessary expenses actually incurred in carrying on any business, occupation, or profession shall be deducted, and also all interest due or paid within the year by such person on existing indebtedness. And all national, State, county, school, and municipal taxes, not including those assessed against local benefits, paid within the year shall be deducted from the gains, profits, or income of the person who has actually paid the same, whether such person be owner, tenant, or mortgagor; also losses actually sustained during the year, incurred in trade or arising from fires, storms, or shipwreck, and not compensated for by insurance or otherwise, and debts ascertained to be worthless, but excluding all estimated depreciation of values and losses within the year on sales of real estate purchased within two years previous to the year for which income is estimated: *Provided*, That no deduction shall be made for any amount paid out for new buildings, permanent improvements or betterments, made to increase the value of any property or estate: *Provided further*, That only one deduction of $3,000 shall be made from the aggregate income of all the members of any family, composed of one or both parents, and one or more minor children, or husband and wife; that guardians shall be allowed to make a deduction in favor of each and every ward, except that in case where two or more wards are comprised in one family, and have joint property interests, the aggregate deduction in their favor shall not exceed $3,000: *And provided further*, That in cases where the salary or other compensation paid to any person in the employment or service of the United States shall not exceed the rate of $3,000 per annum, or shall be by fees, or uncertain or irregular in the amount or in the time during which the same shall have accrued or been earned, such salary or other compensation shall be included in estimating the annual gains, profits, or income of the person to whom the same shall have been paid, and shall include that portion of any income or salary upon which a tax has not been paid by the employer, where the employer is required

by law to pay on the excess over $3,000: *Provided also*, That in computing the income of any person, corporation, company, or association there shall not be included the amount received from any corporation, company, or association as dividends upon the stock of such corporation, company, or association if the tax provided for in section 1 has been paid upon its net profits by said corporation, company, or association as required by this act.

SEC. 3. That it shall be the duty of all persons of lawful age having an income of more than $3,000 for the taxable year, computed on the basis herein prescribed, to make and render a list of return, on or before the day provided by law, in such form and manner as may be directed by the Commissioner of Internal Revenue, with the approval of the Secretary of the Treasury, to the collector or a deputy collector of the district in which they reside, of the amount of their income, gains, and profits, as aforesaid; and all guardians and trustees, executors, administrators, agents, receivers, and all persons or corporations acting in any fiduciary capacity, shall make and render a list or return, as aforesaid, to the collector or a deputy collector of the district in which such person or corporation acting in a fiduciary capacity resides or does business, of the amount of income, gains, and profits of any minor or person for whom they act, but persons having less than $3,000 income are not required to make such report; and the collector or deputy collector shall require every list or return to be verified by the oath or affirmation of the party rendering it, and may increase the amount of any list or return if he has reason to believe that the same is understated; and in case any such person having a taxable income shall neglect or refuse to make and render such list and return, or shall render a willfully false or fraudulent list or return, it shall be the duty of the collector or deputy collector to make such list, according to the best information he can obtain, by the examination of such person, or any other evidence, and to add 50 per cent as a penalty to the amount of the tax due on such list in all cases of willful neglect or refusal to make and render a list or return; and in all cases of a willfully false or fraudulent list or return having been rendered to add 100 per cent as a penalty to the amount of tax ascertained to be due, the tax and the additions thereto as a penalty to be assessed and collected in the manner provided for in other cases of willful neglect or refusal to render a list or return, or of rendering a false or fraudulent return; and such willful neglect or refusal to render a list or return, or the rendering of a false or fraudulent return shall be a misdemeanor and be punished by a fine not exceeding $1,000 or by imprisonment not exceeding one year, or both, at the discretion of the court: *Provided*, That any person or corporation, in his, her, or its own behalf, or as such fiduciary, shall be permitted to declare, under oath or affirmation, the form and manner of which shall be prescribed by the Commissioner of Internal Revenue, with the approval of the Secretary of the Treasury, that he, she, or his or her, or its ward or beneficiary, was not possessed of an income of $3,000, liable to be assessed according to the provisions of this act; or may declare that he, she, or it, or his, her, or its ward or beneficiary has been assessed and has paid an income tax elsewhere in the same year, under authority of the United States, upon all his, her, or its income, gains, or profits, and upon all the income, gains, or profits for which he, she, or it is liable as such fiduciary, as prescribed by law; and if the collector or deputy collector shall be satisfied of the truth of the declaration, such person or corporation shall thereupon be exempt from income tax in the said district for that year; or if the list or return of any person or corporation, company, or association shall have been increased by the collector or deputy collector, such person or corporation, company, or association may be permitted to prove the amount of income liable to be assessed; but such proof shall not be considered as conclusive of the facts, and no deductions claimed in such cases shall be made or allowed until approved by the collector or deputy collector. Any person or company, corporation, or association feeling aggrieved by the decision of the deputy collector, in such cases may appeal to the collector of the district, and his decision thereon, unless reversed by the Commissioner of Internal Revenue, shall be final. If dissatisfied with the decision of the collector, such person or corporation, company, or association may submit the case, with all the papers, to the Commissioner of Internal Revenue for his decision, and may furnish the testimony of witnesses to prove any relevant facts, having served notice to that effect upon the Commissioner of Internal Revenue, as herein prescribed.

Such notice shall state the time and place at which, and the officer before whom, the testimony will be taken; the name, age, residence, and business of the proposed witness, with the questions to be propounded to the witness, or a brief statement of the substance of the testimony he is expected to give: *Provided*, That the Government may at the same time and place take testimony upon like notice to rebut the testimony of the witnesses examined by the person taxed.

The notice shall be delivered or mailed to the Commissioner of Internal Revenue a sufficient number of days previous to the day fixed for taking the testimony, to allow him, after its receipt, at least five days, exclusive of the period required for mail communication with the place at which the testimony is to be taken, in which to give, should he so desire, instructions as to the cross-examination of the proposed witness.

Whenever practicable, the affidavit or deposition shall be taken before a collector or deputy collector of internal revenue, in which case reasonable notice shall be given to the collector or deputy collector of the time fixed for taking the deposition or affidavit: *Provided further*, That no penalty shall be assessed upon any person or corporation, company, or association for such neglect or refusal or for making or rendering a willfully false or fraudulent return, except after reasonable notice of the time and place of hearing, to be prescribed by the Commissioner of Internal Revenue, so as to give the person charged an opportunity to be heard.

SEC. 4. That the taxes on incomes herein imposed shall be due and payable on or before the 1st day of July in each year; and to any sum or sums annually due and unpaid after the 1st day of July as aforesaid, and for 10 days after notice and demand thereof by the collector, there shall be levied, in addition thereto, the sum of 5 per cent on the amount of taxes unpaid, and interest at the rate of 1 per cent per month upon said tax from the time the same becomes due, as a penalty, except from the estates of deceased, insane, or insolvent persons.

SEC. 5. That any nonresident may receive the benefit of the exemptions hereinbefore provided for by filing with the deputy collector of any district a true list of all his property and sources of income in the United States and complying with the provisions of section 3 of this act as if a resident. In computing income he shall include all income from every source, but unless he be a citizen of the United States he shall only pay on that part of the income which is derived from any source in the United States. In case such nonresident fails to file such statement, the collector of each district shall collect the tax on the income derived from property situated in his district, subject to income tax, making no allowance for exemptions, and all property belonging to such nonresident shall be liable to distraint for tax: *Provided*, That nonresident corporations shall be subject to the same laws as to tax as resident corporations, and the collection of the tax shall be made in the same manner as provided for collections of taxes against nonresident persons.

SEC. 6. That there shall be assessed, levied, and collected, except as as herein otherwise provided, a tax as provided for in section 1 annually on the net profits or income above actual operating and business expenses, including expenses for materials purchased for manufacture or bought for resale, losses, and interest on bonded and other indebtedness of all banks, banking institutions, trust companies, saving institutions, fire, marine, life, and other insurance companies, railroad, canal, turnpike, canal navigation, slack water, telephone, telegraph, express, electric light, gas, water, street railway companies, and all other corporations, companies, or associations doing business for profit in the United States, no matter how created and organized, but not including partnerships.

That said tax shall be paid on or before the 1st day of July in each year; and if the president or other chief officer of any corporation, company, or association, or in the case of any foreign corporation, company, or association, the resident manager or agent shall neglect or refuse to file with the collector of the internal-revenue district in which said corporation, company, or association shall be located or be engaged in business, a statement verified by his oath or affirmation, in such form as shall be prescribed by the Commissioner of Internal Revenue, with the approval of the Secretary of the Treasury, showing the amount of net profits or income received by said corporation, company, or association during the whole calendar year last preceding the date of filing said statement as hereinafter required, the corporation, company, or association making default shall forfeit as a penalty the sum of $1,000 and 2 per cent on the amount of taxes due, for each month until the same is paid, the payment of said penalty to be enforced as provided in other cases of neglect and refusal to make return of taxes under the internal-revenue laws.

The net profits or income of all corporations, companies, or associations shall include the amounts paid to shareholders, or carried to the account of any fund, or used for construction, enlargement of plant, or any other expenditure or investment paid from the net annual profits made or acquired by said corporations, companies, or associations.

That nothing herein contained shall apply to States, counties, or municipalities; nor to corporations, companies, or associations organized and conducted solely for charitable, religious, or educational purposes, including fraternal beneficiary societies, orders, or associations operating upon the lodge system and providing for the payment of life, sick, accident, and other benefits to the members of such societies, orders, or associations and dependents of such members; nor to the stocks, shares, funds, or securities held by any fiduciary or trustee for charitable, religious, or educational purposes; nor to building and loan associations or companies which make loans only to their shareholders; nor to such savings banks, savings institutions, or societies as shall, first, have no stockholders or members except depositors and no capital except deposits; secondly, shall not receive deposits to an aggregate amount, in any one year, of more than $1,000 from the same depositor; thirdly, shall not allow an accumulation or total of deposits, by any one depositor, exceeding $10,000; fourthly, shall actually divide and distribute to its depositors, ratably to deposits, all the earnings over the necessary and proper expenses of such bank, institution, or society, except such as shall be applied to surplus; fifthly, shall not possess, in any form, a surplus fund exceeding 10 per cent of its aggregate deposits; nor to such savings banks, savings institutions, or societies composed of members who do not participate in the profits thereof and which pay interest or dividends only to their depositors; nor to that part of the business of any savings bank, institution, or other similar association having a capital stock that is conducted on the mutual plan solely for the benefit of its depositors on such plan, and which shall keep its accounts of its business conducted on such mutual plan separate and apart from its other accounts.

Nor to any insurance company or association which conducts all its business solely upon the mutual plan, and only for the benefit of its policy holders or members, and having no capital stock and no stock or share holders, and holding all its property in trust and in reserve for its policy holders or members; nor to that part of the business of any insurance company having a capital stock and stock and share holders, which is conducted on the mutual plan, separate from its stock plan of insurance, and solely for the benefit of the policy holders and members insured on said mutual plan, and holding all the property belonging to and derived from said mutual part of its business in trust and reserve for the benefit of its policy holders and members insured on said mutual plan.

That all State, county, municipal, and town taxes paid by corporations, companies, or associations shall be included in the operating and business expenses of such corporations, companies, or associations.

SEC. 7. That there shall be levied, collected, and paid on all salaries of officers, or payments for services to persons in the civil, military, naval, or other employment or service of the United States, including Senators and Representatives and Delegates in Congress, when exceeding the rate of $3,000 per annum, a tax as is provided for in section 1 on the excess above the said $3,000; and it shall be the duty of all paymasters and all disbursing officers under the Government of the United States, or persons in the employ thereof, when making any payment to any officers or persons as aforesaid, whose compensation is determined by a fixed salary, or upon settling or adjusting the accounts of such officers or persons, to deduct and withhold the aforesaid tax as provided for in section 1; and the pay roll, receipt, or account of officers or persons paying such tax as aforesaid shall be made to exhibit the fact of such payment. And it shall be the duty of the accounting officers of the Treasury Department, when auditing the accounts of any paymaster or disbursing officer, or any officer withholding his salary from moneys received by him, or when settling or adjusting the accounts of any such officer, to require evidence that the taxes mentioned in this section have been deducted and paid over to the Treasurer of the United States, or other officer authorized to receive the same. Every corporation which pays to any employee a salary or compensation exceeding $3,000 per annum shall report the same to the collector or deputy collector of his district and said employee shall pay thereon, subject to the exemptions herein provided for, the tax as provided for in section 1 on the excess of his salary over $3,000: *Provided*, That salaries due to State, county, or municipal officers shall be exempt from the income tax herein levied.

SEC. 8. That sections 3167, 3172, 3173, and 3176 of the Revised Statutes of the United States as amended are hereby amended so as to read as follows:

"SEC. 3167. That it shall be unlawful for any collector, deputy collector, agent, clerk, or other officer or employee of the United States to divulge or to make known in any manner whatever not provided by law to any person the operations, style of work, or apparatus of any manufacturer or producer visited by him in the discharge of his official duties, or the amount or source of income, profits, losses, expenditures, or any particular thereof, set forth or disclosed in any income return by any person or corporation, or to permit any income return or copy thereof or any book containing any abstract or particulars thereof to be seen or examined by any person except as provided by law; and it shall be unlawful for any person to print or publish in any manner whatever not provided by law any income return or any part thereof or the amount or source of income, profits, losses, or expenditures appearing in any income return; and any offense against the foregoing provision shall be a misdemeanor and be punished by a fine not exceeding $1,000 or by imprisonment not exceeding one year, or both, at the discretion of the court; and if the offender be an officer or employee of the United States he shall be dismissed from office and be incapable thereafter of holding any office under the Government.

"SEC. 3172. That every collector shall, from time to time, cause his deputies to proceed through every part of his district and inquire after and concerning all persons therein who are liable to pay any internal-revenue tax, and all persons owning or having the care and management of any objects liable to pay any tax, and to make a list of such persons and enumerate said objects.

"Sec. 3173. That it shall be the duty of any person, partnership, firm, association, or corporation made liable to any duty, special tax, or other tax imposed by law, when not otherwise provided for, in case of a special tax, on or before the 31st day of July in each year, in case of income tax on or before the first Monday of March in each year, and in other cases before the day on which the taxes accrue, to make a list or return, verified by oath or affirmation, to the collector or a deputy collector of the district where located, of the articles or objects, including the amount of annual income charged with a duty or tax, the quantity of goods, wares, and merchandise made or sold, and charged with a tax, the several rates and aggregate amount, according to the forms and regulations to be prescribed by the Commissioner of Internal Revenue, with the approval of the Secretary of the Treasury, for which such person, partnership, firm, association, or corporation is liable: *Provided*, That if any person liable to pay any duty or tax, or owning, possessing, or having the care or management of property, goods, wares, and merchandise, articles, or objects liable to pay any duty, tax, or license, shall fail to make and exhibit a list or return required by law, but shall consent to disclose the particulars of any and all the property, goods, wares, and merchandise, articles, and objects liable to pay any duty or tax, or any business or occupation liable to pay any tax as aforesaid, then and in that case it shall be the duty of the collector or deputy collector to make such list or return, which, being distinctly read, consented to, and signed and verified by oath or affirmation by the person so owning, possessing, or having the care and management as aforesaid, may be received as the list of such person: *Provided further*, That in case no annual list or return has been rendered by such person to the collector or deputy collector as required by law, and the person shall be absent from his or her residence or place of business at the time the collector or a deputy collector shall call for the annual list or return, it shall be the duty of such collector or deputy collector to leave at such place of residence or business, with some one of suitable age and discretion, if such be present, otherwise to deposit in the nearest post office, a note or memorandum addressed to such person, requiring him or her to render to such collector or deputy collector the list or return required by law, within 10 days from the date of such note or memorandum, verified by oath or affirmation. And if any person on being notified or required as aforesaid shall refuse or neglect to render such list or return within the time required as aforesaid or whenever any person who is required to deliver a monthly or other return of objects subject to tax fails to do so at the time required, or delivers any return which, in the opinion of the collector, is false or fraudulent, or contains any undervaluation or understatement, it shall be lawful for the collector to summon such person, or any other person having possession, custody, or care of books of account containing entries relating to the business of such person, or any other person he may deem proper, to appear before him and produce such books, at a time and place named in the summons, and to give testimony or answer interrogatories, under oath, respecting any objects liable to tax, or the returns thereof. The collector may summon any person residing or found within the State in which his district lies; and when the person intended to be summoned does not reside and can not be found within such State, he may enter any collection district where such person may be found and there make the examination herein authorized. And to this end he may there exercise all the authority which he might lawfully exercise in the district for which he was commissioned.

"SEC. 3176. That when any person, corporation, company, or association refuses or neglects to render any return or list required by law, or renders a false or fraudulent return or list, the collector, or any deputy collector, shall make, according to the best information which he can obtain, including that derived from the evidence elicited by the examination of the collector, and on his own view and information, such list or return, according to the form prescribed, of the income, property, and objects liable to tax owned or possessed or under the care or management of such person, or corporation, company, or association, and the Commissioner of Internal Revenue shall assess all taxes not paid by stamps, including the amount, if any, due for special tax, income, or other tax; and in case of any return of a false or fraudulent list or valuation, intentionally, he shall add 100 per cent to such tax; and in case of a refusal or neglect, except in cases of sickness or absence, to make a list or return, or to verify the same, as aforesaid, he shall add 50 per cent to such tax. In case of neglect occasioned by sickness or absence, as aforesaid, the collector may allow such further time for making and delivering such list or return as he may deem necessary, not exceeding 30 days. The amount so added to the tax shall be collected at the same time and in the same manner as the tax, unless the neglect or falsity is discovered after the tax has been paid, in which case the amount so added shall be collected in the same manner as the tax; and the list or return so made and subscribed by such collector or deputy collector shall be held prima facie good and sufficient for all legal purposes."

SEC. 9. That every corporation, company, or association doing business for profit shall make and render to the collector of its collection district, on or before the first Monday of March in every year, beginning with the year 1914, a full return, verified by oath or affirmation, in such form as the Commissioner of Internal Revenue may prescribe, of all the following matters for the whole calendar year last preceding the date of such return:

First. The gross profits of such corporation, company, or association from all kinds of business of every name and nature.

Second. The expenses of such corporation, company, or association exclusive of interest, annuities, and dividends.

Third. The net profits of such corporation, company, or association, without allowance for interest, annuities, or dividends.

Fourth. The amount paid on account of interest, annuities, and dividends, stated separately.

Fifth. The amount paid in salaries of $3,000 or less to each person employed.

Sixth. The amount paid in salaries of more than $3,000 to each person employed and the name and address of each of such persons and the amount paid to each.

SEC. 10. That it shall be the duty of every corporation, company, or association doing business for profit to keep full, regular, and accurate books of account, upon which all its transactions shall be entered from day to day, in regular order, and whenever a collector or deputy collector of the district in which any corporation, company, or association is assessable shall believe that a true and correct return of the income of such corporation, company, or association has not been made, he shall make an affidavit of such belief and of the grounds on which it is founded, and file the same with the Commissioner of Internal Revenue; and if said commissioner shall, on examination thereof, and after full hearing upon notice given to all parties, conclude there is good ground for such belief he shall issue a request in writing to such corporation, company, or association to permit an inspection of the books of such corporation, company, or association to be made; and if such corporation, company, or association shall refuse to comply with such request, then the collector or deputy collector of the district shall make from such information as he can obtain an estimate of the amount of such income and then add 50 per cent thereto, which said assessment so made shall then be the lawful assessment of such income.

SEC. 11. That it shall be the duty of every collector of internal revenue, to whom any payment of any taxes other than the tax represented by an adhesive stamp or other engraved stamp is made under the provisions of this act, to give to the person making such payment a full written or printed receipt, expressing the amount paid and the particular account for which such payment was made; and whenever such payment is made such collector shall, if required, give a separate receipt for each tax paid by any debtor, on account of payments made to or to be made by him to separate creditors in such form that such debtor can conveniently produce the same separately to his several creditors in satisfaction of their respective demands to the amounts specified in such receipts; and such receipts shall be sufficient evidence in favor of such debtor to justify him in withholding the amount therein expressed from his next payment to his creditor; but such creditor may, upon giving to his debtor a full written receipt, acknowledging the payment to him of whatever sum may be actually paid, and accepting the amount of tax paid as aforesaid (specifying the same) as a further satisfaction of the debt to that amount, require the surrender to him of such collector's receipt.

Notwithstanding the fact that the bill which has been reported by the Ways and Means Committee does not embody in its entirety my inheritance-tax bill, still I am pleased and greatly appreciate the fact that the committee has adopted the principle for which I have so long contended. I admit that the bill does not go as far as I would like, and I would have preferred that they should have adopted my original plan, but I feel confident that after this act has been in force for a few years the people will see that my proposition was not excessive. In the course of the next few years I expect to see the percentage greatly increased and the act amended so as to come nearer the provisions of my bill.

I will include as a part of my remarks the bill which I introduced on this subject, but I will not take up the time of the gentlemen of the House at this time by reading its full text:

A bill (H. R. 8929) authorizing a tax on gifts, legacies, and inheritances.

*Be it enacted, etc.*, That any person or persons having in charge or trust as administrators, executors, trustees, or otherwise any interests, legacies, or distributive shares arising from real, personal, or mixed property, passing, after the passage of this act, from any person possessed of such property, either by will or by the intestate laws of any State or Territory, or property or interest therein, transferred by deed, grant, bargain, sale, or gift, made or intended to take effect in contemplation of death or in possession or enjoyment after the death of the grantor or bargainer, to any person or persons, or to any body or bodies, politic or corporate, in trust or otherwise, shall be, and hereby are, made subject to a duty or tax to be paid to the United States as follows, this is to say: Where the whole amount of said property shall exceed in value $10,000 and shall not exceed in value the sum of $25,000 the tax shall be—

Where the person or persons entitled to any beneficial interests shall be the lineal issue or lineal ancestor, brother, or sister to the person who died possessed of such property or if they be the decendant of a brother or sister of the person who died possessed, or if any property or interest therein shall pass to husband or wife of the person who died possessed as aforesaid, at the rate of $1 for each and every $100 of the clear market value of such interest.

Where the person or persons entitled to any beneficial interests in such property shall be the brother or sister of the father or mother, or a descendant of a brother or sister of the father or mother, of the person who died possessed as aforesaid, the tax shall be at the rate of $2 for each and every $100 of the clear value of such interest.

Where the person or persons entitled to any beneficial interest in such property shall be the brother or sister of the grandfather or grandmother, or a descendant of a brother or sister of the grandfather or grandmother, of the person who died possessed as aforesaid, at the rate of $2.50 for each and every $100 of the clear value of such interest.

Where the person or persons entitled to any beneficial interest in such property shall be in any other degree of collateral consanguinity than is herebefore stated, or shall be a stranger in blood to the person who died possessed as aforesaid, or shall be a body politic or corporate,

at the rate of $3 for each and every $100 of the clear value of such interest.

Where the amount or value of said property shall exceed the sum of $25,000 but shall not exceed the sum or value of $50,000, the rates or duty or tax above set forth shall be multiplied by one and one-half; and where the amount or value of said property shall exceed the sum of $50,000 but shall not exceed the sum of $100,000, such rates of duty or tax shall be multiplied by two; where the amount or value of said property shall exceed the sum of $100,000 but shall not exceed the sum of $200,000, such rates of duty or tax shall be multiplied by two and one-half; where the amount or value of said property shall exceed the sum of $200,000 but shall not exceed the sum or value of $500,000, such rates of duty or tax shall be multiplied by three; where the amount or value of said property shall exceed the sum of $500,000 but shall not exceed the sum or value of $1,000,000, the rates of duty or tax shall be multiplied by four; where the amount or value of said property shall exceed the sum of $1,000,000 but shall not exceed the sum or value of $2,500,000, such rates of duty or tax shall be multiplied by five; where the amount or value of said property shall exceed the sum or value of $2,500,000 but shall not exceed the sum of $5,000,000, the rate of such duty or tax shall be multiplied by six; where the amount or value of said property shall exceed the sum of $5,000,000 but shall not exceed the sum or value of $10,000,000, the rate of such duty or tax shall be multiplied by seven; and where the amount or value of said property shall exceed the sum of $10,000,000, such rates of duty or tax shall be multiplied by eight.

SEC. 2. That the tax or duty aforesaid shall be a lien and charge upon the property of every person who may die, whether intestate or by will, and on all property subject to this tax for 20 years, or until the same shall within that period be fully paid to and discharged by the United States; and every executor, administrator, trustee, or other persons authorized to make such distributions before payment and distribution to the legatees or any parties entitled to beneficial interests therein shall pay, if tax has not been paid on such property, to the collector or deputy collector of the district of which the deceased person was a resident the amount of the duty or tax assessed upon such legacy or distributed share, and shall also make and render to the said collector or deputy collector a schedule, list, or statement, in duplicate, of the amount of such legacy or distributive share, together with the amount of duty which has accrued or shall accrue, thereon, verified by his oath or affirmation, to be administered and certified thereon, by a judge or officer having lawful power to administer such oaths, in such form and manner as may be prescribed by the commissioner of internal revenue, which schedule, list, or statement shall contain the names of each and every person entitled to any beneficial interest therein, together with the clear market value of such interest, the duplicate of which schedule, list, or statement shall be by him immediately delivered and a tax thereon paid to such collector; and upon such payment and delivery of such schedule, list, or statement said collector or deputy collector shall grant to such person paying such duty or tax a receipt or receipts for the same in duplicate, which shall be prepared as hereinafter provided. Such receipt or receipts, duly signed and delivered by such collector or deputy collector, shall be sufficient evidence to entitle such executor, administrator, trustee, or any other person charged with the care of the estate to be credited and allowed such payment by every tribunal which by the laws of any State or Territory, is or may be empowered to decide upon and settle the account. And in case such executor, administrator, trustee, or any such other person shall refuse or neglect to pay the aforesaid duty or tax to the collector or deputy collector, as aforesaid, within the time hereinbefore provided, or shall neglect or refuse to deliver to said collector or deputy collector the duplicate of the schedule, list, or statement of such legacy, property, or estate under oath as aforesaid, or shall neglect or refuse to deliver the schedule, list, or statement of such estate, legacies, and property under oath as aforesaid, or shall deliver to said collector or deputy collector a false schedule or statement of such legacies and property, or give the names and relationship of the persons entitled to beneficial interests therein untruly, or shall not truly and correctly set forth and state therein the clear value of such beneficial interests, or where no administration upon such property or estate shall have been granted or allowed under existing laws, the collector or deputy collector shall make out such lists and valuation as in other cases of neglect or refusal and shall assess the duty thereon; and the collector shall commence appropriate proceedings before any court of the United States in the name of the United States against such person or persons as may have the actual, constructive custody, or possession of such property, or any part thereof, and shall subject such property, or any portion of the same, to be sold upon the judgment or decree of such court, and from the proceeds of such sale the amount of such duty or tax, together with all costs and expenses of every description to be allowed by such court, shall be first paid, and the balance, if any, deposited according to the order of such court, to be paid under its direction to such person or persons as shall establish title to the same. The deed or deeds, of any proper conveyance of such property or any portion thereof so sold under such judgment or decree, executed by the officer lawfully charged with carrying the same into effect, shall vest in the purchaser thereof all the title of the delinquent to the property sold under and by virtue of such judgment or decree and shall release every other portion of such property from the lien or charge thereon created by this act. And every person or persons who shall have in his possession, charge, or custody any record, file, or paper containing, or supposed to contain, any information concerning such property as aforesaid, passing from any person who may die, as aforesaid, shall exhibit the same at the request of the collector or deputy collector of the district and to any law officer of the United States in the performance of his duty under this act, his deputy or agent, who may desire to examine the same. And if any such person, having in his possession, charge, or custody any such records, files, or papers, shall refuse or neglect to exhibit the same on request, as aforesaid, he shall forfeit and pay the sum of $500: *Provided*, That in all legal controversies where such deed or title shall be the subject of judicial investigation the recital in said deed shall be prima facie evidence of its truth and that the requirements of the law has been complied with by the officers of the Government.

SEC. 3. That the judge of the court in each respective district shall have the power to appoint appraisers of the estate in order that they may ascertain the value thereof. The appraiser shall be paid not more than $10 a day; and any appraiser who shall accept a fee from any relative or kin of the decedent shall be guilty of a misdemeanor and shall be fined not less than $200 nor more than $5,000.

SEC. 4. That when the property is transferred or limited in trust or otherwise and the rights, interest, or estate of the transferee or beneficiaries are dependent upon contingencies or conditions whereby they may be wholly or in part created, defeated, extended, or abridged a tax shall be imposed upon said transfer at the highest rate which, at the happening of any of the said contingencies or conditions, would be possible under the provisions of this act, and such tax so imposed shall be due and payable forthwith by the executors, administrators, trustees, or other persons charged with the care of the estate out of the property transferred. The estates which can not readily be determined as to whether or not they are subject to this tax shall, upon determination, pay a compound interest: *Provided, however*, That no tax shall be levied on any estate which does not exceed the amount of $10,000 and that the first $10,000 in each and every estate shall be exempt from taxation, and further, that all debts, mortgages, or other encumbrances shall also be deducted: *Provided further*, That all charitable, religious, and educational institutions shall be exempt from the payment of this tax.

SEC. 5. That this tax shall be levied on the estate of the person dying possessed before any beneficial interests, income, or interest therein shall pass to any beneficiaries or heirs of the person dying possessed.

SEC. 6. That where the word property is used in this act it shall be construed and is to mean real, personal, and mixed property of every description.

SEC. 7. That all administrative, special, and general provisions of law, including the laws in relation to the assessment, remission, collection, and refund of internal-revenue taxes not heretofore specifically repealed and not inconsistent with the provisions of this act are hereby extended and made applicable to all the provisions of this act and to the tax herein imposed.

SEC. 8. That the provisions of this act shall extend to the District of Columbia, Porto Rico, and the Philippine Islands: *Provided*, That the administration of the law and the collection of the taxes imposed in Porto Rico and the Philippine Islands shall be by the appropriate internal-revenue officers of those governments, and all revenues collected in Porto Rico and the Philippine Islands thereunder shall accrue intact to the general governments thereof, respectively.

SEC. 9. That for the purpose of carrying into effect the provisions of this act and to pay the expenses of collecting the tax therein imposed, and to pay such sums as the Commissioner of Internal Revenue, with the approval of the Secretary of the Treasury, may deem necessary for information, detection, and bringing to trial and punishment persons accused of violating the provisions of this section or conniving at the same; in cases where such expenses are not otherwise provided for by law there is hereby appropriated, out of any money in the Treasury not otherwise appropriated for the fiscal year ending June 30, 1916, the sum of $100,000, and the Commissioner of Internal Revenue, with the approval of the Secretary of the Treasury, is authorized to appoint and pay from this appropriation all necessary officers, agents, inspectors, deputy collectors, clerks, messengers, and janitors, and to rent such quarters, purchase such supplies, equipment, mechanical devices, and other articles as may be necessary for employment or use in the District of Columbia or any collection district in the United States or any of the Territories thereof: *Provided*, That no agent paid from this appropriation shall receive compensation at a rate higher than that now received by traveling agents on accounts in the Internal-Revenue Service, and no inspector shall receive a compensation higher than $5 a day and $3 additional in lieu of subsistence, and no deputy collector, clerk, messenger, or other employee shall be paid at a rate of compensation higher than the rate now being paid for the same or similar work in the Internal-Revenue Service.

SEC. 10. That in the office of the Commissioner of Internal Revenue at Washington, D. C., there shall be appointed by the Secretary of the Treasury one additional deputy commissioner, at a salary of $4,000 per annum; two heads of divisions whose compensation shall not exceed $2,500 per annum; and such other clerks, messengers, and employees, and to rent such quarters, and to purchase such supplies as may be necessary: *Provided*, That for a period of two years from and after the passage of this act the force of agents, deputy collectors, inspectors, and other employees, not including the clerical force below the grade of chief of division employed in the Bureau of Internal Revenue in the city of Washington, D. C., authorized by this act shall be appointed by the Commissioner of Internal Revenue, with the approval of the Secretary of the Treasury, under such rules and regulations as may be fixed by the Secretary of the Treasury to insure faithful and competent service, and with such compensation as the Commissioner of Internal Revenue may fix, with the approval of the Secretary of the Treasury, within the limitations herein prescribed.

It is expected that over $250,000,000 will be raised by the income, estate, and inheritance provisions of the present bills, which will in a measure meet the appropriations which we have made for the Army, the Navy, and our fortifications. The balance should be raised through a tax on the manufacture of munitions of war.

The Ways and Means Committee should be congratulated upon the good judgment displayed in the preparation of this bill and in reporting it to the House of Representatives. To my mind it is legislation in the right direction. For myself, I would not be fair if I did not admit that I am gratified beyond the power of expression with this measure. Not only does it provide for taxation in the right direction, placing the burden upon those who can more easily bear it, but it relieves to a great extent the tax upon the necessaries of life.

It provides, among other things, for a tariff commission, which proposition I have opposed for years. However, after a careful study of conditions in our country during the European war I came to the conclusion that it would be for the best interests of the country if a careful investigation be made by experts before changes, if any, be made in the present law. To that end I have introduced a bill providing for a tariff commission, which bill I will also include as a part of my remarks:

A bill (H. R. 287) to create a tariff commission.

*Be it enacted, etc.*, That there is hereby created a body to be known as the tariff commission, which shall consist of seven commissioners, who shall be appointed by the President, by and with the advice and

consent of the Senate. No person shall be eligible to serve as a member of said commission while holding any other public office of either honor or profit, either by election or appointment, or who is a Senator or Representative elect of the United States. Not more than five of said commissioners shall be members of the same political party. The commissioners first appointed under this act shall continue in office for the terms of 4, 5, 6, 7, 8, 9, and 10 years, respectively, and from the 1st day of July, A. D. 1916, the term of each to be designated by the President, but their successors shall be appointed for terms of seven years, except that any person chosen to fill a vacancy shall be appointed only for the unexpired term of the member whom he shall succeed. Any commissioner may, after due hearing, be removed by the President upon proof of ineligibility or of any violation of any provision of this act, or for inefficiency, neglect of duty, or malfeasance in office. No vacancy in the commission shall impair the right of the remaining commissioners to exercise all the powers of the commission. Said commissioners shall not engage in any other business, vocation, or employment. Each commissioner shall receive a salary of $10,000 per year. The President shall designate a member of the commission to be chairman thereof during the term for which he is appointed. The commission shall appoint a secretary, who shall receive a salary of $7,500 per annum, and such other employees as it may find necessary to the proper performance of its duties, and shall fix the salary or compensation of each. Four commissioners shall constitute a quorum for the transaction of business as a commission.

SEC. 2. That the principal office of the commission shall be in the city of Washington, and the Secretary of the Treasury shall furnish the commission with suitable offices and equipment thereof and with all necessary supplies. The commission shall in addition have full authority as a body by one or more of its members or through its employees, when so authorized by the commission, to conduct investigations at any other place or places, either in the United States or foreign countries, as the commission may determine. Said commission shall promulgate rules and regulations for the safekeeping of all papers, correspondence, tabulations, reports, explanations, and other information gathered by it. All of the expenses of the commission, including all necessary expenses for transportation incurred by the commissioners or by their employees under their orders, in making any investigation in any place other than in the city of Washington, shall be allowed and paid on the presentation of itemized vouchers therefor approved by the chairman of the commission.

SEC. 3. That the commission shall have authority and power, and it is hereby directed to ascertain and tabulate for purposes of comparison the difference in the cost of producing articles of the same or similar quality and kind in this country and in actually or potentially competing foreign countries. The commission shall ascertain and tabulate for purposes of comparison where such tabulation is practicable in connection with the several articles covered by its reports in the United States, and in such foreign countries the wages, hours of service, and efficiency of labor employed and the standards of living of such laborers. The commission shall likewise ascertain the cost and selling prices of raw material, the cost of labor, the fixed charges, the depreciation upon the true value of the capital invested, and all other items entering into and determining the true cost and selling price of the finished product. The commission shall ascertain the market conditions and the prices at which protected products of the United States are sold in foreign countries, as compared with the prices of such products sold in the United States. The commission shall investigate the effect of transportation rates upon the markets and prices of dutiable products, and so far as pertinent to the tariffs fixed upon articles on the dutiable list the control of such markets and absence or presence of free competition in the same, and shall, pursuant to the purposes of this act, in so far as practicable, investigate all questions and conditions relating to the agricultural, manufacturing, mining, commercial, and labor interests with reference to the tariff schedules and classifications of the United States and of foreign countries, and shall investigate the capitalization, industrial organization, and efficiency, and the general competitive position in this country and abroad of industries seeking protection from Congress. The commission shall likewise investigate in general and in regard to particular articles the revenue-producing power of the tariff and its relation to the resources of government, and shall investigate the effect of tariffs both of the United States and of foreign countries on prices, on the wages paid for labor, and on the purchasing power of the consumer. The commission shall also make investigation of any particular subject whenever directed by either House of Congress or the President of the United States. The commission shall have the power to call upon any of the existing departments or bureaus of the Government for information on file in such departments or bureaus which it may require in connection with the work which it is authorized to do by this act, and it shall be the duty of every such department or bureau of the Government to furnish such information on request from the commission. It shall be the duty of said commission to hold hearings from time to time at such places as it may designate to determine industrial, commercial, and labor conditions in relation to costs of production and effects and operations of the tariff schedules and classifications in force in the United States and in foreign countries. Such hearings shall be public, except as otherwise herein provided. The commission shall, whenever practicable, give at least 10 days' public notice of any and all such hearings, and at any such hearing any person may appear before said commission, subject to such reasonable limitation upon the amount of and duplication of testimony and arguments as may be provided by the rules of said commission, and be heard or may be represented by attorney and may file any written statement or documentary evidence bearing upon any matter which the commission may have under investigation. The commission may from time to time make or amend such general rules or orders as may be requisite for the orderly regulation of proceedings before it, including form of notices and the service thereof. Every vote and official act of the commission and of each member thereof shall be entered of record.

SEC. 4. That to assist the President in securing information as to the effect of tariff rates, restrictions, exactions, or any regulations imposed at any time by the United States or any foreign country upon the importation into or sale in the United States or any foreign country of the products affected, and as to any export bounty paid or export duty imposed or prohibition made by any country upon the exportation of any article to the United States which discriminates against the United States or the products thereof, and to assist the President in the application of the maximum and minimum tariffs and other administrative provisions of the customs laws and in obtaining information concerning the economic results of said laws, the commission shall from time to time make report as the President shall direct, and upon direction by the President shall draft a plan for scientific classification of schedules in aid of administration of the provisions of the customs laws.

SEC. 5. That for the purposes of this act in the case of articles on the dutiable list, and such other articles as the commission may decide or may be directed to investigate, the said commission is authorized to require of any person, firm, copartnership, corporation, or association engaged in the production, importation, manufacture, or distribution of any such article or articles, the production of all books, papers, contracts, agreements, invoices, inventories, bills, and documents of any such person, firm, copartnership, corporation, or association, and make every inquiry necessary to a determination of the value of such property and necessary to accomplish the purposes for which said commission is created. In aid of its powers herein granted to secure information the commission shall have the power, whenever necessary for the purposes of its investigations, to prescribe and enforce uniform systems of accounting for protected industries and for manufacturers and producers of commodities protected by import duties. The commission is authorized to require, by notice, the attendance and testimony of witnesses and the production of all books, papers, contracts, agreements, inventories, invoices, bills, and documents relating to any matters pertaining to such investigation. Such attendance of witnesses and the production of such documentary evidence may be required from any place in the United States at any designated place of hearing, and witnesses shall receive the same fees as are paid in the Federal courts. The members of the commission, its secretary, and all investigators designated by the commission shall have the power to administer oaths and affirmations.

SEC. 6. That the district courts of the United States, upon the application of the commission alleging a failure to comply with any order of the commission with relation to the attendance and testimony of witnesses and the production of documentary evidence, shall have jurisdiction to issue the necessary process of writs for the enforcement of the orders of the commission, and in case of disobedience to a subpœna the commission, or a member thereof, may invoke the aid of any one of the district courts of the United States in requiring the attendance and testimony of witnesses and the production of books, papers, and documents within the jurisdiction of such court within which an investigation or inquiry by the commission is being carried on. In case of contumacy or refusal to obey a subpœna issued to any person or corporation subject to the provisions of this act any of the district courts of the United States having jurisdiction as herein provided may issue an order requiring such person or corporation to appear before the commission and produce books, documents, and other papers, if so ordered, and give evidence concerning the matter under investigation by the commission, and any failure to obey such order of the court may be punished by such court as a contempt thereof. The commission may also order testimony to be taken by deposition in any investigation and at any stage of such investigation. Such deposition may be taken before any person authorized so to do by the commission and who has power to administer oaths. Any person may be compelled to appear and depose and produce documentary evidence in the same manner as witnesses may be compelled to appear and testify and produce documentary evidence before the commission as hereinbefore provided. Such testimony shall be reduced to writing. No person shall be excused from attending and testifying or from producing books, papers, documents, or other things before the commission or in obedience to the subpœna of the commission, whether such subpœna be signed or issued by on or more of the commissioners or the secretary of the commission or duly appointed investigator on the ground or for the reason that the testimony or evidence, documentary or otherwise, required of him may tend to criminate him or to subject him to a penalty or forfeiture. But no natural person shall be prosecuted or subjected to any penalty or forfeiture for or on account of any transaction, matter, or thing concerning which he may testify under oath or produce evidence, documentary or otherwise, before said commission in obedience to a subpœna issued by it: *Provided*, That no person so testifying shall be exempt from prosecution and punishment for perjury committted in so testifying.

SEC. 7. That in any investigation conducted by the commission as herein provided the testimony of any witness in regard to secret processes or trade secrets not contrary to public policy shall not be reduced to writing, nor shall any documents of like character be copied into the records of investigations or otherwise made a part thereof, and for the purpose of obtaining such testimony or of examining such documents, and for such purposes alone, the commission shall have the power to hold secret sessions and take evidence therent. All other testimony shall be reduced to writing, and, with all other documentary evidence received, incorporated in the records of the commission for the guidance of the commission and for the use of the President and Congress, as hereinafter provided: *Provided*, That no evidence or information secured for the confidential use of the commission shall be made public in such a manner as to be available for the use of any business competitor or rival of the firm, copartnership, corporation, or association from whom or concerening whom such evidence or information was obtained: *And provided further*, That in case in any investigation authorized by this act the commission shall obtain evidence or information for its confidential use, the commission shall not be required to divulge the names of persons furnishing such evidence or information.

SEC. 8. That the commission shall make annual reports to Congress of its investigations and conclusions and such special reports as the President or either House of Congress may direct.

SEC. 9. That there is hereby appropriated for the purpose of this act, for the fiscal year 1916, from moneys in the Treasury not otherwise appropriated, the sum of $250,000.

I not only have no complaint with the committee because they did not adopt the commission provision for which I contended, but am free to admit that the creation of an evenly selected nonpartisan commission is an improvement upon my bill. The bill provides for an honest, nonpartisan commission, which, to my mind, it should be; as it gives the commission greater freedom and power than I contemplated.

Therefore, after my nine years of service in the House of Representatives, I am in the unusual position of endorsing a great revenue measure the three main provisions of which have been advocated by me during the many years of my service here.

Mr. Speaker, for years I have opposed and criticized the Republican means of raising revenue. I have opposed the raising of revenue for our Government by taxing the masses for the benefit

of the wealthy classes. Under the Underwood bill, as amended by this revenue act, the rich as well as the poor of our country will be obliged to contribute to the maintenance of our Government. If the four years of the operation of the Underwood bill have disclosed any mistakes that may have been made, we will within a short space of time be able to receive a report from this nonpartisan commission which is hereby provided for, and I feel confident that the Democratic Congress will gladly remedy them.

I feel confident that within a short space of time after this measure shall have been enacted into law, the American people will acknowledge the wisdom of this legislation just as they have admitted the wisdom of our great economy reform brought about by our currency legislation. I believe that the Republican politicians and the special interests of our country will never again be able to mislead the American people with their empty dinner pail and protective tariff hue and cry.

For years I have wondered how it was possible for the Republican Party by its protective tariff legislation to favor the special interests at the expense of honest competition and the American consumer and make the masses believe that it was protecting them and that the tariff tax was being paid by the foreign manufacturer. That this legislation will put an end to such foolish contentions is my wish. The calamity howlers will be obliged to find another vocation through which to impose on the American people.

Mr. Speaker, when I advocated the passage of the Underwood tariff bill I stated that it was a bill fairly drawn in the interests of the people, inasmuch as it has reduced the tax on the necessaries of life and has placed the increase upon the luxuries. In many instances it does give protection to American industries, but in each and every instance it protects the consumer from the large interests which have accumulated great wealth—due to the Republican legislation—at the expense of the consumer and the American people. It has been demonstrated that the Underwood bill is a fair and just bill; that it is what it was claimed to be—merely a revenue measure. It has provided a revenue large enough for the ordinary needs of our Government, and were it not for the unfortunate European war it would have provided sufficiently for the needs of our Government at the present time. Commerce has increased and the condition of the laboring man has improved.

To-day under a Democratic administration and under the laws of a Democratic Congress we find the country more prosperous than ever before in the history of our Nation. This must be admitted by even the most rabid Republican, and is admitted by all fair-minded people.

Frequently I have listened with regret to certain gentlemen on the other side of the House who in every way possible have tried to make themselves believe that the conditions of our country are not healthy and that surely we are shortly doomed to hard times and financial panic. This is all being done for political reasons, as they in their own hearts know that, due to our wise currency legislation, panics are impossible and the power of Wall Street over the commerce of our country is broken. Prosperity is ours and I hope that it shall continue to be ours forever.

How some of these gentlemen to whom I have referred can so frequently try to instill fear into the hearts of the people and thereby bring uncertainty to the commercial world I can not imagine. Whenever any Member of this House gives party victory preference over the welfare of his country he is not worthy of American citizenship. How he can justify his acts when reaching his district is beyond my comprehension.

Mr. Speaker, for more than 25 long years I have advocated the cause of Democracy and believe myself to be as good a Democrat as any other, but if I thought for one moment that a Democratic success or a Democratic administration meant financial panic and hard times for the people of the United States I would not hesitate a minute to cast my vote in the other direction. But I feel satisfied that our Democratic legislation has been in the right direction and that this bill is for the best interests of our country and that Democracy has the interests of the people of the Nation at heart.

Under this administration the country will continue to prosper, and I feel confident that the vast majority of the people will not be misled, but will show its appreciation to the party that has so well guided the country and protected its interests, and they will express their confidence in the Democratic Party next November. No party and no administration has ever deserved the approval of the American people as has our party and the present administration under our great President, Woodrow Wilson. [Applause.]

## The Underwood Bill Helps Canada.

### EXTENSION OF REMARKS
OF
### HON. J. HAMPTON MOORE,
OF PENNSYLVANIA,

IN THE HOUSE OF REPRESENTATIVES,

*Tuesday, August 22, 1916.*

Mr. MOORE of Pennsylvania. Mr. Speaker, our commercial relations with Canada are always interesting in a study of the tariff question. We had reciprocity with Canada once and it worked beautifully for the upbuilding of Canada. After it had been in operation for a short time we learned that Canada was getting our money and we were building up Canada's industries by taking of her products. We protected ourselves under the McKinley and the Dingley and Payne laws so that we were able to hold our own business, keep our own money in circulation in our own country, and still not give up everything to Canada. When Mr. Wilson was elected President in 1912, however, all this was changed. By the passage of the Underwood tariff law, October 3, 1913, we put Canada back into her old position, not by a reciprocity act, so called, but by reducing tariff duties and enlarging the free list. The pretense upon which this was done was to secure for the American consumer a decreased cost of living. "Reduce the tariff rates, put cattle and potatoes, and so forth, on the free list, and the American consumer will get cheaper food," said the followers of Mr. Wilson and Mr. UNDERWOOD. That was the way the Democrats looked at it then. How the Canadian brother looked at it we are not told, but we know what the Canadian brother did. If he did not say "Thank you, Mr. Wilson, for keeping us out of war," he certainly ought to have said "Thank you, Mr. Wilson, for opening the American market to Canadian products," for that is exactly what Mr. Wilson did when he insisted upon the passage of the Underwood tariff law, which was to compel American manufacturers and producers "to whet their wits" against the wits of their foreign competitors.

The Canadian brother was on the job and never let go from the moment the Underwood bill was passed. Did he reduce the price of cattle to the American market when the duty was taken off cattle? He certainly did not? If the American brother was fool enough to take the duty off and make cattle free into the United States the Canadian brother was wise enough to put it on the price of his cattle which he sold into the United States. This is exactly what he did, so that while the United States Treasury was minus the duty and the American cattle raiser was minus the protection he had hitherto enjoyed the Canadian cattle dealer obtained a higher price for his cattle in the American market, and the dear consumer, for whom Mr. Wilson and Mr. Underwood had pleaded so earnestly, paid more for beef and got less of it for food than ever before.

It was substantially the same with potatoes, that great American staple, which in recent years has given the State of Maine an exceptional agricultural reputation. The Democrats took the duty off of potatoes, which the Republicans had sustained for the two-fold purpose of protecting the American potato grower and of keeping the Treasury in funds, and the Canadian potato grower, always on the job as usual, immediately flooded the American market. The potato growers of Maine, being right up against the border of Canada, were first to feel the shock and they certainly felt it until the Democratic administration through its ingenious Department of Agriculture, discovered "a wart" on the Canadian potato, which permitted of an embargo on Canadian potatoes, which operated as successfully in covering up the free-trade defects of the Underwood tariff law as the European war has served as a tariff wall to protect American industries generally, despite the administration at Washington and its free-trade heresies.

FIGURES THAT TELL THE CANADIAN STORY.

The Republican Publicity Association has compiled from the records some interesting statistics regarding Canadian trade as it existed under the Republican Payne law and as it now exists under the Wilson-Underwood tariff law. They show the inevitable result. Canada gets our money and we get Canada's products. Mr. Wilson may appreciate the service he is doing the Canadian brother and it may delight the cockles of the heart of the distinguished Senator from Alabama [Mr. UNDERWOOD], who was the author of the tariff-for-revenue measure which gives Canada the preference over the United States, but

I doubt if the American farmer or industrialist will see it in the same light.

The American producer should have the preference in the American market for his own products. These statistics, showing comparatively our relation with our Canadian competitor, indicate that the Canadian brother has decidedly the better of the bargain under the philanthropic influence of the present administration. The statistics to which I have referred are as follows:

*Imports of Canadian products competing with products of border States, fiscal year ending June 30.*

[Compiled by Republican Publicity Association; figures taken from Foreign Commerce and Navigation, 1915.]

| Articles. | Payne law, 1913. | Underwood law (9 months), 1914. | Underwood law, 1915. |

| Furniture | 2,850 | 11,426 | 53,896 |
| Pulp, rough, rossed, etc | 6,954,939 | 7,245,466 | 6,572,839 |
| Pulp, mechanically ground | 4,973,061 | 5,908,517 | 7,563,081 |
| All other manufactures not listed | 77,214 | 94,283 | 126,860 |
| Wool, class 1 and 2 | 62,963 | 1,003,961 | 1,705,674 |
| Wool, wastes | | 91,831 | 165,796 |
| Wool, carpet | 223 | 4,963 | 17,911 |
| Wool, wearing apparel and manufactures not listed | 19,870 | 24,619 | 48,419 |
| Articles not enumerated | 59,429 | 96,348 | 442,667 |
| Total | 60,648,356 | 100,980,282 | 102,415,998 |

NOTE.—Of the $120,571,180 worth of imports from Canada in 1913, $64,006,573, or 53 per cent, came in free of duty. Of the $160,689,709 worth of imports in 1914 (nine months, Underwood law), $115,040,442, or 71.5 per cent, were admitted free. Of the $159,571,712 worth of imports in 1915 (Underwood law, war period), $136,784,408, or 86 per cent, were admitted free. In 1916 we imported from Canada $204,018,227 worth of products and at the rate the percentage of free goods was increasing it is safe to say that $185,000,000 worth of these goods paid no revenue whatever to the Government. In other words, our imports from Canada of duty-free goods during the fiscal year 1916 was over 50 per cent greater than the total value of our imports from Canada, both dutiable and free, during the fiscal year 1913 under the Republican law. Total exports of Canada to Great Britain for the Canadian fiscal year ending in March, 1916, were $452,000,000, compared with $187,000,000 the year before. With the establishment of peace, Canada can direct her enormously increased energy toward extending the market for her products in America.

*Imports from and exports to Canada.*

| | 1913 (Payne law). | 1914 (9 months Underwood law). | Underwood law. | |
|---|---|---|---|---|
| | | | 1915 | 1916 |
| Imports | $120,571,180 | $160,689,709 | $159,571,712 | $204,018,227 |
| Exports | [1] 415,449,457 | 344,716,981 | 300,686,812 | [2] 466,884,415 |
| Trade balance | 294,878,277 | 184,027,172 | 141,115,100 | 262,866,188 |

[1] Peace products. [2] Large proportion, war products.

Forty million dollars increase in our imports from Canada, 1914 over 1913, and $71,000,000 loss in exports; $39,000,000 increase in imports, 1915 over 1913, and $115,000,000 loss in exports; $83,500,000 increase in imports, 1916 over 1913, exports $51,000,000 greater, large proportion of them being munitions of war. The fact that shipping was tied up by the war had relntively little, if any, effect on Canadian trade with us.

## Testimony of Thomas C. Spelling Before the Committee on Industrial Relations.

### EXTENSION OF REMARKS

OF

### HON. JOHN A. STERLING,

OF ILLINOIS,

IN THE HOUSE OF REPRESENTATIVES,

*Tuesday, August 22, 1916.*

Mr. STERLING. Mr. Speaker, under the leave granted to me to extend my remarks in the RECORD I include the testimony of Thomas C. Spelling before Committee on Industrial Relations hearing, May 15, at Washington, D. C., together with the commission's conclusion, as follows:

TESTIMONY OF THOMAS C. SPELLING BEFORE COMMITTEE ON INDUSTRIAL RELATIONS—HEARING MAY 15, 1915, AT WASHINGTON, D. C.—TOGETHER WITH THE COMMISSION'S CONCLUSION.

Thomas C. Spelling, called as a witness, testified as follows:

Chairman WEINSTOCK. Will you please state your full name and residence to the stenographer?

Mr. SPELLING. Thomas C. Spelling; I reside in New York City, 115 Broadway.

Chairman WEINSTOCK. Your profession?

Mr. SPELLING. An attorney at law. I have some other business that I need not mention.

Chairman WEINSTOCK. Will you state for the commission whom you have generally represented in the matter that you have up to discuss before the commission?

Mr. SPELLING. The only party I ever represented was the American Federation of Labor two years, or a little more, in two cases in the courts, and on several occasions before congressional committees, especially and I believe solely in the advocacy of anti-injunction legislation.

Chairman WEINSTOCK. Will you please state in your own way for the information of the commission such matters as you think will be of interest in this connection?

Mr. SPELLING. I would like to ask Mr. Davenport a few questions. I couldn't do that when he was on the stand. I think I can throw more light on the subject in that way than to go ahead and say what I have to say.

Chairman WEINSTOCK. It has not been the practice of the commission.

Mr. SPELLING. I got the permission from the chairman this morning. It is a part of my own statement, if he is willing to answer.

Chairman WEINSTOCK. Are there any objections on the part of any members of the commission to allowing him to do that?

Commissioner LENNON. I have no objection; it is a question as to whether it is agreeable to Mr. Davenport.

Chairman WEINSTOCK. If it is agreeable to Mr. Davenport.

Mr. DAVENPORT. If they are questions I can answer.

Chairman WEINSTOCK. You may proceed if Mr. Davenport has no objection.

Mr. SPELLING. Mr. Davenport, I want to ask you—you can keep your seat. You said that the courts had uniformly and consistently held that labor unions were within the antitrust act. Now, did any court ever hold that a labor union as such was within the act?

Mr. DAVENPORT. No, sir.

Mr. SPELLING. Then we are not in conflict on that.

Mr. DAVENPORT. But that is expressly held by the Supreme Court that they are not.

Mr. SPELLING. Do they not simply hold that when members of unions conspire or combine together and violate the antitrust act they are held to accountability just like anybody else?

Mr. DAVENPORT. The same as the members of a church, I suppose.
Mr. SPELLING. And in that sense they were within the antitrust act prior to the Clayton bill?
Mr. DAVENPORT. Yes, sir.
Mr. SPELLING. And are within it yet, according to your view of it?
Mr. DAVENPORT. Yes, sir.
Mr. SPELLING. Now, you spoke of the case of Connor v. Connolly.
Mr. DAVENPORT. Yes, sir.
Mr. SPELLING. What town was that?
Mr. DAVENPORT. Danbury.
Mr. SPELLING. That town has figured in the litigation that you have been connected with very prominently. However, that is no part of my question.
Mr. DAVENPORT. I was not in the Connor-Connolly case.
Mr. SPELLING. The court denied the union men the privilege of uniting and combining together to exclude the nonunion men; is that not about it?
Mr. DAVENPORT. It was an agreement between the union manufacturers of the town and the unions by which they would not employ anybody but a union man.
Mr. SPELLING. Yes, sir.
Mr. DAVENPORT. And Mr. Connor was a member of the union.
Mr. SPELLING. Yes, sir.
Mr. DAVENPORT. And they had a great strike on, and they were out for several months, with the result that the union owed him quite an amount of money for strike benefits. Then they called upon Mr. Connor for his dues, and before he could go to work again, and Mr. Connor said that he would not pay it; that he had this coming, and that was contrary to the rules of the union, and he was in bad order.
Mr. SPELLING. I beg your pardon—I didn't ask you——
Mr. DAVENPORT (interrupting). I want to come to this. Then Mr. Connolly, representing the union, in pursuance of the agreement that they had with the unionized hat manufacturers, went around and said, "This man is in bad order with the union and got his discharge." Well, he sued the union, and the officers of the union, and it was tried before a jury and he recovered a verdict of $1,100, and it went to the Supreme Court, and they sustained it. Now, the claim was that the agreement between the union manufacturers of Danbury and the union was a valid agreement, and the supreme court of the State held, relying upon decisions of the Supreme Court of the United States, that that was a contract for a monopoly in violation of, or contrary to, public policy, and void.
Mr. SPELLING. Is there any statute in Connecticut that covers that case?
Mr. DAVENPORT. No, sir.
Mr. SPELLING. Suppose all of the men engaged in the jewelry trade in that town had formed a copartnership, or had gotten together, and had a monopoly, would there be any law covering that case?
Mr. DAVENPORT. I guess not.
Mr. SPELLING. We don't want to get into any argument; we want to hasten along and not prolong the discussion. Now, you know the courts have made a distinction between primary and secondary boycotts?
Mr. DAVENPORT. Yes, sir.
Mr. SPELLING. Do you think there is any legal distinction?
Mr. DAVENPORT. There is none; and it was expressly decided so in the Supreme Court of the United States on the Sherman Act in the Eastern Lumber Dealers' Association against the United States.
Mr. SPELLING. Now, in a boycott the clause says no court shall enjoin or restrain any person, single or in concert—hand me that, please—that little book. I guess it isn't there. "No court shall issue any restraining order or injunction restraining any persons, singly or in concert, from," and then we skip a few clauses and come to the boycott clause, "from ceasing to patronize, or peaceably persuading others from ceasing to patronize any party to such dispute." Now, what is the effect of the use of those words, "any such dispute," when you consider it in connection with the limitations of the first paragraph of section 20?
Mr. DAVENPORT. Have I not said all I can possibly say on that subject to the commission?
Mr. SPELLING. Does it not limit to the particular relations which are specified in the first paragraph?
Mr. DAVENPORT. I don't know but what you are right about that; I have not considered that. That would narrow it still more.
Mr. SPELLING. Did you ever hear of a boycott between employees?
Mr. DAVENPORT. No.
Mr. SPELLING. Did you ever hear of a boycott between employer and employees?
Mr. DAVENPORT. No; I don't know that, unless the I. W. Ws——
Mr. SPELLING. I don't think we care to get into that.
Mr. DAVENPORT. No; I never did.
Mr. SPELLING. Now, did you ever hear of a strike between persons seeking employment—I mean a boycott?
Mr. DAVENPORT. No.
Mr. SPELLING. Now, if that connection were broken, and in place of the words "Any party to such dispute" were inserted the words "Any persons whatever"—wipe out the first paragraph and read it that way—it would cover all kinds of boycotts?
Mr. DAVENPORT. Yes; sure.
Mr. SPELLING. The Clayton bill don't do that by a long sight?
Mr. DAVENPORT. I don't think it does. Now, you are punching holes in that bill; there are so many in it it is not worth while to talk about other additional ones. It is shot full of holes now.
Mr. SPELLING. I am not going to take up those things. The strike provision, however, you have very well explained, and I agree with you that the words "lawful and peaceable" clears the whole thing; and when you consider it in connection with the first paragraph, it is worse than no legislation, for this reason—I want to see if you agree with me on that: It confirms to the courts power to hold illegal all acts and all conducts by any party which—I mean jurisdiction to enjoin all conduct and acts which are not lawful?
Mr. DAVENPORT. Yes, sir. Anything that is not lawful can be enjoined.
Mr. SPELLING. If the parties to a strike should commit a misdemeanor and violate some town ordinance or some State statute which did not injure property heretofore, you would have trouble maintaining an injunction in a case like that, wouldn't you?
Mr. DAVENPORT. Well, I don't know; it depends on what you consider property. I regard property as any right of a pecuniary nature.
Mr. SPELLING. We will not debate the question of what is property. I said it did not injure any property, and you had trouble heretofore in maintaining an injunction against that conduct, though unlawful?
Mr. DAVENPORT. Yes, sir; in the Debs case the Supreme Court said it must be property or right of a pecuniary nature, but there have been injunctions issued to protect some personal rights.
Mr. SPELLING. Here is a clause which forbids a court from restraining lawful conduct. Does that not by essential implication give the court authority to restrain illegal conduct?
Mr. DAVENPORT. Yes, sir; sure.
Mr. SPELLING. You said something about this Kansas case.
Mr. DAVENPORT. About what?
Mr. SPELLING. About this Kansas case; Coppage v. Kansas.
Mr. DAVENPORT. Yes.
Mr. SPELLING. The Supreme Court in effect held that an employer could refuse to employ a man or discharge him because he belonged to a union; was not that the gist of it?
Mr. DAVENPORT. Sure.
Mr. SPELLING. Couldn't he discharge him, or refuse to employ him, for any reason?
Mr. DAVENPORT. Sure; good or bad.
Mr. SPELLING. But, if those employers formed a combination, you do not think that is exempted by the Clayton Act, do you?
Mr. DAVENPORT. Surely not.
Mr. SPELLING. Anyone can cease to serve another; he can relinquish employment and persuade others to do so, and strike singly or in concert; what do you understand "singly or in concert" to mean?
Mr. DAVENPORT. I understand that to mean all.
Mr. SPELLING. You mean to act by common impulse?
Mr. DAVENPORT. Rather.
Mr. SPELLING. Suppose that some man went down the street in an automobile and ran over a child, or something, and a hundred people rushed at him, and beat him up, and tore up his automobile, wouldn't that be acting in concert?
Mr. DAVENPORT. Yes; in a sense it would.
Mr. SPELLING. Well, if they met and agreed to do that thing, it would be a combination, wouldn't it?
Mr. DAVENPORT. Yes.
Mr. SPELLING. Do any of the provisions of the act exempt a case of that kind from injunction?
Mr. DAVENPORT. I don't think it does at all, as I have explained.
Mr. SPELLING. So that people are only protected from the use of injunctions in cases where they act in concert, or by a common impulse, without any understanding to do that very thing?
Mr. DAVENPORT. According to my idea of the Clayton Act it is like a treaty of neutrality with Belgium—it is a worthless scrap of paper.
Mr. SPELLING. Now, you said in regard to section six, that it left the unions just as they are now, in their relation to the Sherman Antitrust Act. Now, then, is not the language the negative and prohibitive language which makes associated conduct and certain relations of men lawful—don't that sanction and confirm to the courts power to decide all other conduct to be violative of the Sherman Antitrust Act and place the stigma of illegality on it?
Mr. DAVENPORT. I think what was illegal before is illegal now, and I do not think that anything that was illegal before is legal by the act.
Mr. SPELLING. I wish to get something in the record of a formal, concise, and logical nature, as my own statement, in regard to the status of unions and the laws governing labor organizations; it will take only a few minutes, and then I will be ready to yield to the wishes of the commisison.
Commissioner AISHTON. I suggest that the witness proceed with his statement.
Mr. SPELLING. I am ready.
Chairman WEINSTOCK. The witness will proceed.
Mr. SPELLING. If labor, as organized, had immunity from legislation enacted by the courts, it could take care of itself and need only guard against discriminatory statutes. But rules and customs have grown up among business men, and especially among business corporations, which, while appearing to be merely salutary and protective, yet in reality place the public, and especially that part of the public dependent upon the employment of capital by others, at a great disadvantage. These rules and customs come at length to be acquiesced in by all, and become, for all practical purposes, new rules of jurisprudence.
Now, we find in the Clayton Act conclusive proof of a part of the general fact which I have just stated. Instead of its being a new chart of liberty for labor as has been claimed and extensively proclaimed, I see in the so-called labor sections nothing but admissions at the hands of Congress, in the form of concessions, of unjust and prejudicial limitations upon the individual and collective rights of labor.
Let us now examine one or two of the clauses of section 20 of the act. There is found here legislation on the subject of strikes. It says here "And no such restraining order or injunction shall prohibit any person or persons, whether singly or in concert, from terminating any relation of employment, or from ceasing to perform any work or labor, or from recommending, advising, or persuading others by peaceful means so to do." Is it possible that any legislative sanction was needed to exclude the courts from interfering within so limited a domain? When Congress was requested to protect labor from unwarranted interference by the courts therein, it improved the opportunity to insert a qualifying term which by essential implication recognizes a jurisdiction heretofore always denied to the courts and contested. Congress says here, in what purports to be a codification of injunction law in labor cases, that the courts must not interfere by injunction process with strikers proceeding "peacefully," and the idea that they may interfere with strikes that are conducted by means not peaceful is included. I think this conclusion is warranted by the language of section 20 alone without reference to other parts of the act. The result is to confirm to courts exercising equitable jurisdiction powers similar in some respects to those exercised by the chief of police in a city, or more nearly resembling those of a military governor in a district wherein martial law has been declared. But the power which the judge can exercise is much more far-reaching than that of either. The policeman must proceed according to existing laws and the military commander according to established rules. But the judge initiates the repressive proceeding by making a law to suit himself, after which he proceeds to apply it to a case already before him, and consummates the procedure by executive action, because he measures the penalty for a violation and enforces it. I do not lose sight of the fact that courts are legitimately vested with all these powers in proper cases, but until this enactment, labor insisted with ample legal reason, that if in the initiation and conduct of a strike violence was resorted to or a state of disorder created a case arose to be dealt with only by the police authorities and the law courts.
But so vague and comprehensive a word as "peaceful" or "peacefully" ought never to be used in an act of legislation without specifications as to its meaning. And no one could describe the result of

even the most intelligent attempt to point its proper application of limitations. As this provision now stands, any strike so conducted as to disturb the equanimity or shock the nervous systems of any considerable number of persons is liable to be held to be outside the immunity attempted to be given by it. And under present industrial conditions, and owing to the magnitude of enterprises, a strike which does not cause considerable local inconvenience and disturbance is hardly worth winning; and there is some truth in the assertion, so often heard, that there is no such thing as a peaceful strike. Ample judicial precedent can be found for enjoining strikes by employees of public-service corporations on the sole ground of improper motives in instituting them, coupled with considerations of disturbance of social and business conditions.

But collateral to and yet outside the scope of this narrowly restricted limitation upon the jurisdiction—accepting now the theory that it restricts instead of enlarges jurisdiction—lies the vast, practically unlimited law of conspiracy. The Judiciary Committee of the House in reporting the bill, explicitly and truthfully stated that the bill if passed would leave the law of conspiracy untouched. When these provisions come before the courts, they will attend to the exact legal import of the words used. That is one important function of the courts. And they will hold that the words "in concert" are not synonymous with and have not the same legal import as acting pursuant to a preconcerted plan or common understanding. Persons oftener than otherwise act in concert from a common impulse, without an agreement or mutual understanding, as where they rush simultaneously to a place of safety in case of fire or flood or to the rescue of their fellows in distress. But let it not be forgotten that where laborers deliberate and agree among themselves to strike, the courts have in some cases held that that goes beyond merely acting concertedly for the promotion of a lawful object, and have asserted and exercised the power of inquisition as to the legality or illegality of their motives and purposes; and if they disapproved them the case fell within the legal meaning of conspiracy and might be enjoined as such. And it was this domain of jurisdiction which the Judiciary Committee meant to preserve intact, and which it did preserve, as conclusively shown in its report.

It is the wish of the commission that testimony be not loaded up with authorities. I will cite only one case illustrative of my last statement. In Payne Lumber Co. against Neal, a Federal court case, it was held that although a course of conduct by organized labor was termed a strike and had the form and all the characteristics of a strike, yet the court could inquire as to the inner motives of the strikers; and upon making such inquisition in that case the court held that though started and carried on as a strike it was, in fact, a boycott. I submit that such a ruling completely upsets the theory and nullifies the doctrine that the unions may strike for any reason satisfactory to themselves, or for a variety of reasons, and that, in all their deliberations on a question of striking or not striking, the judiciary may participate at the council board. And a judge having stamped the movement as in fact a conspiracy, to wit, a boycott, and not a strike, of course the clause I have quoted from this act does not apply and the movement would be tested by another provision which I now quote, with its context: "And no such restraining order or injunction shall prohibit any person or persons, whether singly or in concert, * * * from ceasing to patronize * * * any party to such dispute or from recommending, advising, or persuading others by lawful and peaceful means so to do; * * *." I have omitted merely a few irrelevant words.

A comprehensive discussion of the boycott and of the bearing of this provision upon it would occupy considerable space. I must therefore content myself with a presentation of a few pertinent suggestions, ample at any rate to correct certain erroneous views which have been promulgated concerning its legal effect.

That the boycott is morally wrong no one with my mental attitude on the subject need deny. I had as soon deny that the spirit of the boycott is evil as to defend ingratitude. But does it follow that because a thing is morally wrong it should be enjoined by the courts? As a matter of mere expediency, I would treat the boycott as a sort of safety valve for human passion, safeguarding individuals and to some extent the whole community from greater evils and from manifestations of malignity more difficult to deal with or endure. In short, I would leave it severely alone. In fact, all but an infinitesimal fraction of the boycotts intertwined with every thread of the social fabric are let alone. An occasional tradesman or manufacturer may be ruined by a boycott, but many more are ruined in business by the neglect or aggressive competition or malignant conduct of others engaged in trade. In no such instance would any court of equity entertain a complaint for injunctive relief, notwithstanding that in many such cases the injury results from combinations of individuals. Every form of social hate or vindictiveness is, in effect, a boycott.

In view of the constitutional guaranty of free speech, a free press, and of the right of free assemblage I look upon the use by a Federal court of the injunctive process or other equitable remedy against a labor organization, not amounting to a conspiracy in restraint of interstate commerce, as a denial of rights protected by the Federal Constitution and a stark usurpation of jurisdiction. I except the jurisdiction to enjoin boycotts of interstate commerce only because an injunctive remedy is given in the antitrust act without regard to general principles governing equitable jurisdiction. And, of course, I limit this denunciation to what enters into what is, properly speaking, the boycott itself. I do not deny liability for damages and to criminal prosecution where illegal acts are done in carrying on a boycott. But such liability would not justify an injunction. The boycott itself consists entirely of an interchange of information and opinion which, however erroneous, should not be interfered with by injunction, and the courts can not interfere with them in any other capacity than as high priests of morality. Of course, this contravenes the judicial and prevailing legal view. But should I concede its unsoundness, yet I would not know of any property or property right which, according to legal definition, could ever be injured or menaced by a boycott. On other occasions I have gone into this topic at length, and deem it unnecessary to reiterate the arguments.

Returning now to the above-quoted provision of section 20 of the Clayton Act, I premise that it is based on an understanding that injunctive jurisdiction in boycott cases is well established, and it has been widely and, I dare say, recklessly claimed that this provision lops off the jurisdiction and renders the boycott immune, especially the primary boycott. Various statements have been made to the effect that this provision "legalizes the primary, and probably also the secondary, boycott." Those who made them have never analyzed the language of the act nor compared its various provisions, nor is it usually necessary that this be done in order to reach the public through the press and to falsely impress and mislead a large number of credulous readers. The statement contains the erroneous absurdity first promulgated in the Phelan case that there is any such thing as a secondary boycott differing substantially from a primary boycott.

Bearing in mind that the illegality of all boycotts is grounded in the general law of conspiracy, which, as the Judiciary Committee correctly said, remains untouched, such statements need be given no further notice.

The question before us is as to what this legislation accomplishes, and the immediate question relates to the legal effect of this particular provision.

The first thing to notice is that this clause differs from the preceding in the respect that the right here exempted from injunctive process is unquestionably limited by the provisions of the first paragraph of the section, because the party against whom the effort to deprive of patronage is directed must be a "party to such dispute" and the term "dispute" is not used in any preceding part of this paragraph, though it is used in the first. Hence the exemption is inapplicable generally and is to exist only where a dispute has arisen; that is to say, "involving or growing out of a dispute concerning terms or conditions of employment." And no one can be recognized or given status as a party to such dispute unless he hold a relation to another party either of employer or employee or be at the same time seeking employment.

Let us notice the effect of the use in the boycott clause of the words "any party to such dispute," in connection with the use of the same words in the first paragraph. The right to boycott because of such connection is restricted and the exemption narrowed, not only to the cases in which a dispute has arisen, but to cases in which a dispute has arisen between persons holding the particular relations specified in the first paragraph. And parties holding such relations never boycott each other or strike against each other.

The exact and full effect of this limitation is not very clear; but, certainly, there remains not even the right of what is termed "the primary boycott," until a dispute has arisen, nor is any character of boycott exempted from injunctive process unless conducted by "peaceful and lawful means." The use of these qualifying words excludes from the exemption and sanctions and reserves to the courts unrestrained and arbitrary police powers previously mentioned under the strike provision, to be exercised and enforced injunctively.

The primary right to withhold patronage and to induce others to withhold it from a party against whom a boycott is immediately directed, and without waiting for a dispute to arise between him and his employees or between him and persons seeking to enter his employ, fancifully differentiated as a primary boycott, has been heretofore generally conceded by the courts. Only what were differentiated as secondary boycotts were under the ban. That right no longer exists. This clause takes it away. Suppose that deplorable or intolerable conditions exist between a manufacturer of stoves and his employees, but dissatisfaction has not gone so far as a strike or resolution or agreement to strike; in other words, we will suppose that no dispute, in legal sense, has been evolved. In that case and until such dispute arises, there can not be, in the presence of this legislation, inaugurated any kind of boycott against that employer.

But a pretense of making an exemption, and only exempting such acts as are done "by peaceful and lawful means," is so farcical and absurd as to insult the commonest intelligence, because an illegal act can not be done by lawful means. This provision, like the others, merely forbids the issuance of an injunction against lawful conduct, and no court ever held, nor any intelligent lawyer ever asserted that any lawful act could be enjoined.

There are other so-called exemptions in the same paragraph of section 20, to each of which all I have said about the two that I have discussed is equally applicable.

But those defending and seeking to capitalize for political purposes the so-called labor provisions of the Clayton Act have called attention to and emphasized two closing clauses of this second paragraph of section 20. One of them, when connected with its context, reads:

"And no such restraining order or injunction shall prohibit any person or persons, whether singly or in concert, from * * * doing any act or thing which might lawfully be done in the absence of such dispute by any party thereto * * *." The most general statement that I can make about this clause is that it is totally abortive. I have given it much thought, turning it this way and that, and it still appears to me wholly meaningless and innocuous. I could not truly say this were it not for the presence here of that constantly recurring word "lawfully." That completely thwarts any such construction as would relieve laborers from the menace of injunction against them otherwise referable to that clause. Its use throws the question back to the domain of judicial decisions heretofore rendered, and it remains for the courts to determine what any person or persons may "lawfully" do "in the absence of such dispute by any party thereto."

I have likewise given considerable thought to the last clause, "nor shall any of the acts specified in this paragraph be considered or held to be violations of any law of the United States." This has been broadly claimed to contain preservative values, but no one has thought it worth while to specify what such values are. Even if it made any change in existing laws, the courts would be very reluctant to give effect to amendments attempted in a form so slovenly and inept. Under the Constitution, Congress can not, of course, tell the courts how they shall construe and apply existing laws to a given fact. But I may pass that by. What act "specified in this paragraph" is now violative of any law of the United States? Not one. There is not a line of Federal statutory law applicable to one of them per se. What law there is consists of precedents founded on general principles of jurisprudence analogous to the common law. Not one of these subjects is mentioned or comprehended in any "law of the United States." I might ask how any act which must be lawful and peaceable could be violative of any law. But the question furnishes its own answer.

Before dismissing section 20, I will give brief attention to its first paragraph, preliminary to comments on section 17. It provides in substance that in cases arising between persons holding certain relations, and which involve disputes concerning terms or conditions of employment, no injunction shall be granted by any Federal court or judge "unless to prevent irreparable injury to property, or to property right of the party making the application * * *."

This has been proclaimed by politicians as a substantial compliance with the demand by organized labor, persisted in for several years, for the enactment of the Pearre bill, having particular reference to the first section thereof. But only a little attention to the respective wordings of this act and that bill is required to see the fraudulent and makeshift character of this provision when viewed in that light. This provision is substantially a copy of section 1 of the Pearre bill

except that the word "or" is so omitted that the provision is rendered wholly abortive, or thereby completely "queered." The first section of the Pearre bill began thus: "That no restraining order or injunction shall be granted by any court of the United States, or a judge or the judges thereof, in any case between an employer and an employee, or between employers, or between employees, or between persons employed to labor and persons seeking employment as laborers, or involving or growing out of a dispute concerning terms or conditions of employment," etc. Now, the effect of the omission of the word "or" here found before the word "involving" is apparent at a glance. It eliminates an almost unlimited class of cases covered by the phrase "involving or growing out of," etc., and turns the phrase into words of limitation. In fact, nothing worth considering is left. A scrutiny of the language should be convincing to the effect that cases within the description could rarely, if ever, arise.

But still more important comment relates to the mutual bearing on each other of this provision of section 20 and one found in section 17 of the Clayton Act. Ignoring, however, for the moment section 17, Congress has here declared that in certain cases an injunctive process shall not issue unless to prevent irreparable injury to property or a property right. If a legislative body enacts that street cars must not stop until they have reached the far side of street crossings on which there is no other street car track, this obviously permits them to stop on either side, or on both sides, where there are such tracks. And so the natural import of such a prohibition as this part of section 20 is to authorize the issuance of injunctions in all cases not so exempted regardless of any question of property or property right. So it is in order here to ask what cases in which labor may be interested are thus safeguarded. Still bearing in mind the fact that the specific exemptions in the second paragraph are mere drivel or persiflage, as I have already explained, it is difficult to conceive of a case ever arising to which this first paragraph would apply. There is no strike while the relation of employer and employee exists, nor do those in another's employ ever institute a boycott against him. And permit me to inquire if anyone ever heard of employees or persons seeking employment boycotting or striking against each other? Yet, the fantastical legislative theory that there might arise some such case serves as a peg upon which to hang this prohibition, the only real effect of which is to charter not the liberty that is claimed for it but infinite mischief to labor's rights and interests.

If any confirmation of this view were needed, we have only to turn to section 17 to find it. This act is an entire body of legislation, and unquestionably, all the parts must be construed together.

All of section 17 which it seems necessary to quote is in these words:

"SEC. 17. That no preliminary injunction shall be issued without notice to the opposite party. No temporary restraining order shall be granted without notice to the opposite party unless it shall clearly appear from specific facts shown by affidavit or by verified bill that immediate and irreparable injury, loss, or damage will result to the applicant before notice can be served and a hearing had thereon."

The first sentence was inserted either because the constructor of the provision knew little of the subject of injunctions or because he intended to deceive. I prefer the latter construction because of the high degree of cunning displayed in the whole performance. In fact I think the man or men who controlled this situation knew exactly the effect which they wished to produce and how to produce it. This first sentence is completely nullified by what follows it, and is as completely functus officio as if the space it occupies had been left blank. While there is a technical distinction between a preliminary injunction and a restraining order, there is none in legal effect.

Either the part of section 20 which I have been discussing or the provision just quoted is alone sufficient to confirm to the court's jurisdiction so arbitrary, absolute and boundless that not even the most zealous employing interest ever dared insist upon it before a congressional committee, or elsewhere. But both together confirm such extraordinary powers beyond peradventure, with a total indifference to the fundamental restriction of injunctive process to the protection of property and property rights, and to the complete discomfiture of labor with respect to its persistent demands.

Section 17, as here quoted, has the form of a regulation in the matter of notice in injunction cases. But care is taken to preserve to the courts the power to restrain and enjoin without notice in every conceivable case where a court was heretofore authorized to issue an injunction or restraining order at all, and in an illimitable class of cases in addition. But this ripper act does not stop at this. There is the essential implication, as much a part of the law as the part that is expressed, which gives the courts the power to enjoin for any cause, or for the accomplishment of any object whatever, for the protection of any personal right or privilege that may be claimed, subject only to the condition that notice be given.

Having a rather intimate knowledge of the situation in and around Congress with reference to efforts to obtain for labor relief from judicial abuses, I dare say that no one was deeply concerned on the subject of notices in such cases. It has been usually conceded by organized labor that where a party was entitled to an injunction at all he was entitled to as speedy protection against the threatened wrong as could be extended by the courts. Labor's grievance concerned judicial transgression of constitutional limitations in entertaining and acting injunctively on complaints which properly should have been taken jurisdiction of only in civil and criminal courts of law. And this legislative pretense or bluff at regulating notices is but another peg upon which Congress has hung augmentations of judicial power.

As the Clayton bill went from the House to the Senate, it contained between the words "to" and "the" where they occur a second time in the part above quoted, the words, "property or a property right of." The provision, though containing these words, was almost as objectionable as after their elimination, because of its other parts. But the Senate pruned out these words and left the provision as above quoted.

This matter of limiting injunctive jurisdiction to the protection of property and property rights is somewhat technical, and it has ever seemed difficult for the lay mind to become interested in its discussion, or realize its importance. But if ever the organized-labor movement should fail, or should stop short of substantially improving conditions, it will be attributable to the power exercised by the courts, and thus confirmed by Congress, to check and restrain united and aggressive action. In the committee report on the injunction bill in the Sixty-second Congress, in May, 1912 it was said that the time had come when labor could be trusted with liberty. But it seems that the Sixty-third Congress, in September, 1914, by the Clayton Act, barred the way to liberty. The importance of the limitation to property and property rights, where judicial usurpation in labor cases is being considered, can not be overestimated.

However much I would like to further develop this line of thought, I must refrain, owing to limitations of time. But this provision has the same inclusive and exclusive aspect as have those provisions of section 20, already noticed. This provision forbids the issuance of restraining orders and injunctions without notice except where the facts are so-and-so, thereby leaving power in the hands of the judges to issue them without limit or restriction, where the facts are otherwise, provided that they cause notice to be given.

Another of these so-called labor provisions of the act to be noticed is section 6, which has been supposed to exempt labor organizations from the remedial provisions of the antitrust act. As a literary production, it is unique, and read as follows:

"SEC. 6. That the labor of a human being is not a commodity or article of commerce. Nothing contained in the antitrust laws shall be construed to forbid the existence and operation of labor, agricultural, or horticultural organizations, instituted for the purposes of mutual help and not having capital stock or conducted for profit, or to forbid or restrain individual members of such organizations from lawfully carrying out the legitimate objects thereof, nor shall such organizations, or members thereof, be held or construed to be illegal combinations or conspiracies in restraint of trade, under the antitrust laws."

I want to say in regard to what Mr. Davenport said to the effect that unions could become incorporated and escape individual liability, that no labor union can incorporate as a capital-stock corporation unless it goes into business for profit. Take the laws of his own State; they authorize two classes of corporations, corporations for profit and corporations not for profit. The labor unions would come under the latter designation and can not be authorized with capital stock, consequently they can not limit their liability.

Also, as a consequence of going through the form of incorporation, it would give them merely perpetual existence and the right to carry on an organization in a corporate form; but it would have not the slightest effect upon the relations of the members to each other, nor upon their individual relations to the law, nor would it effect judicial remedies against them.

Mr. DAVENPORT. Well, Mr. Spelling, the compulsory incorporation of labor unions would be, to my mind, so utterly unconstitutional that all discussion on that subject is futile and a waste of words.

Chairman WALSH. Just a moment, Mr. Davenport.

Mr. SPELLING. I am perfectly willing——

Chairman WALSH. Just one moment. Just proceed, please, Mr. Spelling.

Mr. SPELLING. On no subject has there been deception, some of it no doubt deliberate. In other instance ignorance or lack of proper study of the matter was responsible for it. It is my individual belief that no legislation has ever been needed to exempt labor organizations from the provisions, civil or criminal, of the antitrust act, and that even if such legislation were needed this so-called exemption accomplishes no such purpose. As my view may not be immediately and universally accepted, I will briefly give my views on section 6 and my reasons for entertaining them.

In the first place, we observe that the declaratory or substantive part of the antitrust act, according to recent constructions, is merely an embodiment of common law, and except for the fact that there are no Federal common-law crimes creates no new legal liabilities. Then we come to the remedial part and observe that it is directed against personal conduct exclusively. It is not a statute affecting the ownership or title or corpus of property, notwithstanding that in its enforcement property rights and interests are often seriously affected.

Now I come to the statement of a proposition which might provoke conflict were it not so firmly founded on legal principle. No labor organization has ever violated or ever can, as such, violate the act, as such, and if any court ever held to the contrary, it was merely because of the neglect of counsel to call attention to the legal status of such organization, or the neglect of the court by which such legal status was overlooked. It legally is as impossible for a labor union, as such, and in the pursuit of the objects for which they are organized, to violate the antitrust act as it would be for this commission, under the act creating it to violate it. But, of course, it is conceivable that its members might conspire together to violate it, and might misuse or pervert the name of the commission in carrying out an illegal purpose. That would not, however, involve or in any way affect the legal status of the commission or render it liable to a proceeding against it in any form as a defendant. If it were dragged in by parties complaining of such violation it might be dismissed from the record on motion, or by the court of its own volition; or if no such action were taken and its name were continued in the record as a defendant, notwithstanding that the court should render a judgment against it, which is an unreasonable supposition, such judgment would be, so far as concerned the commission, simply null and void and have no legal effect upon it. But, of course, the proceeding would be legal and the judgment valid as against the individual members of the commission, as individuals, but not as commissioners, in the suppositious case.

Prosecutions and other proceedings against labor organizations and their officers are of the same legal aspect. Of course, a body of workingmen might frame a constitution or adopt by-laws embodying a scheme of illegality; but such scheme would stamp it as an illegal body, and not a labor union in any legal sense.

But if we concede that the fact that proceedings against unions by name have been in some instances ignorantly tolerated constitutes sufficient reason for demanding an exempting statute, our next inquiry is as to whether the demand has been responded to, substantially, or in any degree, by the enactment of this section.

The first sentence, declaring that "the labor of a human being is not a commodity or article of commerce," has no logical connection with or bearing upon what follows, or upon any other part of this or any other statute. It is a mere abstraction and truism. No one, after examining the definitions of the terms "commodity" and "article of commerce," can find where anybody ever claimed that the "labor of a human being" was within either definition. If the sentence had been so constructed as to exclude as property or a property right the right to do or continue business, and the incidental right, often made the basis of equitable protection by employers seeking injunctions, of going into the labor market and hiring labor, as in the Pearre bill, then there would be some basis for the claim that it accomplishes some desirable end. But as meeting any demand for relief that labor has presented to Congress it is utterly vain.

The balance of section 6 covers a topic which has been the subject of endless discussion, both in and outside of Congress. But to what I have already said with reference to the relation of labor organizations to the antitrust act I need add but a few words.

Congress here attempts to construe a prior act of Congress, which is clearly a function of the courts. But, waiving that defect, I may inquire as to the net result. I do not deem it necessary to do more than call attention to the effect of one or two words. The language is that the antitrust act shall not be construed "to forbid" the existence and operation of certain organizations, instituted so-and-so, or to forbid or restrain individual members of such organizations from "lawfully" carrying out the "legitimate" objects thereof. The concluding clause, "nor shall such organizations, or the members thereof, be held or construed to be illegal combinations or conspiracies in restraint of trade under the antitrust laws," are merely surplusage. They add nothing to what precedes.

But an act of legislation which merely authorizes men or a body of men to "lawfully" carry out their "legitimate" purposes is a waste of words.

To what test or standard will the courts resort when, if ever, called upon to apply this language? Obviously they must look to their own prior decisions, and to these alone, in order to learn what purposes are "legitimate" and how such purposes can be "lawfully" attained.

There are in the act provisions on the subject of jury trials in contempt cases; but as they can not be properly designated as labor provisions I shall refrain from any lengthy criticism of them. I will remark, however, that in the vital provision which is contained in section 24 the whole scheme is thwarted by an exception exactly as wide as the right, rendering nugatory the whole scheme.

The section reads:

"SEC. 24. That nothing herein contained shall be construed to relate to contempts committed in the presence of the court, or so near thereto as to obstruct the administration of justice, nor to contempts committed in disobedience of any law, writ, process, order, rule, decree, or command entered in any suit or action brought or prosecuted in the name of, or on behalf of, the United States, but the same, and all other cases of contempt not specifically embraced within section 21 of this act may be punished in conformity to the usages at law and in equity now prevailing."

Without dwelling upon the exception of all cases to which the Government is a party, I call attention to the established law which extends the "presence" of the court to every point in the country which its process can reach. And an act of disobedience in Oregon of an order made in Maine is constructively committed so near the court as to obstruct the administration of justice. And thus an exception to the rule is made just exactly as broad as the rule itself.

Upon a full consideration of the act, and in anticipation of the consequences of its removal of all judicial limitations, I do not wonder at the sore discomfiture of those who have striven so long and earnestly for remedial legislation.

Chairman WALSH. Mr. Weinstock has some questions.

Commissioner WEINSTOCK. The situation is not altogether clear to me, Mr. Spelling. You have represented the American Federation of Labor in legislative matters?

Mr. SPELLING. Yes, sir.

Commissioner WEINSTOCK. They take the position that the Clayton Act is the Magna Charta of labor, and yet you seem to agree with Mr. Davenport that it brings no advantage, but, on the contrary, a disadvantage to labor?

Mr. SPELLING. I don't know about such representations; they may have been made by the officers of the American Federation of Labor; you will have to inquire as to their present state of mind, it may have changed very materially.

Commissioner WEINSTOCK. Then, from your point of view, labor has gained practically nothing by the Clayton Act, and labor is under a disadvantage greater than it labored under before?

Mr. SPELLING. I may exaggerate a little and put it too strongly, but I think they have received not merely a lemon but dynamite in this act.

Commissioner WEINSTOCK. You are in accord with Mr. Davenport?

Mr. SPELLING. In matters pertaining to this act we don't disagree in any particular, except in regard to a part of section 6. He seems to think it leaves the unions about as they were before. I think it prejudiced them because of the essential implications which attend parts of section 6 of the act in matters which, not being exempt and therefore not essentially in the language of the act, are illegalized by implication. I can not make it any plainer in a condensed expression. I think these lawyers know what I mean, and probably the members of the commission also.

Chairman WALSH. That is all, Mr. Spelling; thank you.

THIRD PARAGRAPH OF COMMISSION'S FINDINGS.

3. Important steps have been taken to deal with this situation by the enactment of the Clayton Act, applying to the Federal jurisdiction, and by the passage of laws in Massachusetts and New York which define the rights of parties engaged in industrial disputes. The actual effect of the Clayton Act can not be ascertained until it has been tested in the courts, but eminent legal authorities have expressed grave doubts that it will accomplish the desired results. At any rate, it does not seem to remove the root of the existing injustice, and, furthermore, in all the States except New York and Massachusetts the grave and uncertain situation already described exists. This situation must be corrected.

## The Naval Bill.

### EXTENSION OF REMARKS

OF

### HON. MOSES P. KINKAID,

OF NEBRASKA,

IN THE HOUSE OF REPRESENTATIVES,

*Tuesday, August 15, 1916.*

Mr. KINKAID. Mr. Speaker, I shall avail myself of the privilege of extending my remarks for the purpose of very briefly stating some of the reasons for my vote against Senate amendment No. 238, providing for naval construction. Let me ask why legislate for construction so far in advance of the performance of the work? Why provide now for construction not to be commenced until 1920? Why violate in this particular instance the long-established rule and practice of making authorizations annually and granting appropriations therefor?

I maintain our authorization for navy building should not reach beyond when it is expected that the world war will have been terminated. Reasons why this should not be done are obvious. Manifestly, when the European war is over, material for the building of capital ships and other equipment can be purchased at values much lower than at present, while the war is on. One well qualified to judge of the matter estimates that by providing the three-year program for construction it will cost the Government one hundred millions more than had it been authorized from year to year, assuming, of course, that the European war will have terminated in something like a year. But dependent upon the result of the European war, with the treaties and peace making effected, navy building may be suspended throughout the world.

At any rate, it would be palpably inconsistent for the United States, with the professions it has made by its proposals to other nations for the settlement of international disputes by peace means, and these professions emphasized now by the provisions contained in this very bill authorizing the President, not later than the close of the European war, to invite all the great nations to a conference for the purpose of formulating a plan for a court of arbitration and to consider the question of disarmament, to not pause in navy construction when the war shall have closed and confer with the hitherto belligerents as to their future policy of naval building. In fact, by the provisions contained in this very bill it will be incumbent upon the President at the close of the war to propose arbitration and disarmament.

I have not objected to the authorization for the construction of equipment, to be commenced as soon as practicable, and which comes within the next fiscal year. This increase will bring our Navy up to date and will round it out, assuming that it is now out of balance for want of fast battle cruisers and especially short in submarines.

I grant that as long as other nations maintain armies and navies it behooves our country to likewise fortify itself for defensive purposes; but with the existing prospects of an early termination of the European war, which may presage a long, if not a lasting, peace, together with our professions made in behalf of the settlement of international disputes by peace means, I regard it as remarkably inconsistent that we should at this juncture legislate a program for naval construction extending so far beyond the expected end of the conflict in Europe.

## Navalism and Militarism.

### EXTENSION OF REMARKS

OF

### HON. JOHN N. TILLMAN,

OF ARKANSAS,

IN THE HOUSE OF REPRESENTATIVES,

*Tuesday, August 22, 1916.*

Mr. TILLMAN. Mr. Speaker, I prefer to take the risks of war rather than burden the country with the taxes necessary to provide the naval and military equipment called for by the naval and Army bills, as agreed upon in conference, hence I shall vote against both measures. Our people will not quietly submit to the expenditures which these bills impose. The cost of armament necessary to satisfy these demands is prohibitive.

There is no such thing as being prepared for war. In support of their position, advocates of these bills assert that Belgium was not prepared to resist Germany, hence was overrun. Belgium, even if she had bankrupted herself, could not have been prepared to resist successfully this invasion.

Mark what stupendous sums we are asked to appropriate this session, to say nothing of future budgets—$267,000,000 for the Army and $315,000,000 for the Navy—more money than all the nations of the old world grouped together ever appropriated for these purposes in any one year prior to the beginning of the great war. These foreign nations are militaristic, and while disclaiming navalism and militarism we are leaping at one bound into the midst of navalism and militarism.

Last year Congress appropriated for the Navy $149,000,000 and for the Army $101,000,000, enough, it would seem, to satisfy the most rabid jingo. One battleship costs now $15,000,000, and its upkeep requires a million a year. If it escapes a mine

or a submarine, it is ready for the scrap heap in a few years. In the great sea battle of Jutland the *Queen Mary*, the new English cruiser, costing $15,000,000, was sunk with all on board in just six minutes. These ships are too expensive to fight with.

Before embarking on militarism and navalism we should wait till the close of the great world war now bleeding Europe white, and then the nations of the Old World will gladly join us in an agreement to limit armaments. Europe is already heartily tired of what the German Crown Prince characterizes as the most needless, senseless struggle of all the centuries. If the war continues much longer it is estimated that it will cost all the belligerents over $100,000,000,000, a staggering colossal debt that will bankrupt the eastern world.

The war between the States cost less than $8,000,000,000, and the Napoleonic wars, lasting over 20 years, cost only $15,000,000,000. Does not every thoughtful man believe that because of the great financial burdens Europe must henceforth bear because of this war that we will be in no danger of attack? Two years ago, when Europe was on her feet, was an armed camp, comparatively free of debt, we seemed to be in no danger of attack and heard no clamor for bigger Military and Naval Establishments. If we were in no danger then, how can we be in danger now, when Europe is on her back, has lost in killed 3,000,000 of her first-line troops, with captured, missing, sick, and wounded amounting to the startling total of 13,000,000, and burdened with a debt that will keep the faces of her people in the dust forever?

Oh, but we must have preparedness. Against whom? Will preparedness avert war? It did not in the case of Germany; on the contrary, it provoked war. In the early days in Arkansas, the man tactless enough to have a pistol in his hip pocket was usually the first man on the grounds to get into a difficulty.

Note the enormous sums appropriated now and about to be appropriated under the various preparedness measures, and distributed as follows:

Navy, $313,384,389.24.
Army, $267,596,530.10.
Fortifications, $25,747,550.
Military Academy, $1,225,043.57.
Nitrate plant, $20,000,000.
Army and Navy deficiency, $34,523,000.
The appropriations for defense last year were:
Navy, $149,661,864.88.
Army, $101,974,195.87.
Fortifications, $6,060,216.90.
Military Academy, $1,069,813.37.
The increase for preparedness over bills of last year is as follows:
Navy, $163,722,524.36.
Army, $165,622,334.23.
Fortifications, $19,687,333.10.
Military Academy, $155,230.20.

An astonishing total of $662,476,512.91 appropriated this session.

SIXTEEN CAPITAL SHIPS PROVIDED FOR IN NAVY'S NEW BUILDING PROGRAM.

The new building program for the Navy provides for the following new ships:

Ten first-class battleships, carrying as heavy armor and as powerful equipment as any vessels of their class, to have the highest practicable speed and greatest desirable radius of action, four of these, at a cost of not exceeding $11,500,000 each, exclusive of armor and armament, to begin as soon as practicable.

Six battle cruisers, with as heavy armor and armament as any vessels of their class and with the highest practicable speed and greatest radius of action, four of which, costing not over $16,500,000 each, are to begin as soon as practicable.

Ten scout cruisers, armed suitable to their size and with the greatest desirable speed, four of which, exclusive of armor and armament, are to begin as soon as practicable, at a cost of not over $5,000,000 each.

Fifty torpedo boat destroyers, 20 to cost not exceeding $1,200,000 each, exclusive of armor and armament, to begin as soon as practicable. Not less than four of these are to be built on the Pacific coast.

Nine fleet submarines.

Fifty-eight coast submarines, of which number three are to have a surface displacement of about 800 tons each, to cost, exclusive of armor and armament, not to exceed $1,200,000 each, and 27 not to exceed $700,000 each are to begin at once. Not less than 12 of the submarines are to be built on the Pacific coast.

One submarine equipped with the Neff system of propulsion, exclusive of armor and armament, $250,000.

Three fuel ships, one to begin at once, at a cost of $1,500,000.

One repair ship.

One transport.

One hospital ship, to begin at once, $2,350,000.

Two destroyer tenders.

One fleet submarine tender.

Two ammunition ships, one to begin at once, at a cost of $2,350,000, exclusive of armor and armament.

Two gunboats, one to begin at once, at a cost of $860,000, exclusive of armor and armament.

SIX THOUSAND NINE HUNDRED AND FIFTY-FOUR OFFICERS AND 175,000 MEN FOR ARMY ON A PEACE FOOTING.

Under the plan of reorganization for the Regular Army not exceeding 6,954 officers and 175,000 men are authorized for peace times. The number of men will not be less than 163,161. Heretofore there were 5,029 officers and 100,000 men authorized, or not less than 81,932 men, in time of peace. The President was authorized last spring to recruit the Army to its full peace strength by adding 20,000 men.

The peace strength heretofore was made up with the Philippine Scouts, enlisted men of the Signal Corps, and the unassigned recruits, who were included in the peace-strength limitation of 100,000 men. This year they are excluded from the peace limitation of 175,000 men. When added they make a total peace strength of 11,327 officers and 208,338 men.

BIG ARMY INCREASE.

When brought up to war strength the combatants in the Regular Army, exclusive of the three units, will be 6,954 officers and 226,649 men; and with the three units, 11,942 officers and 287,846 men in war. The full strength of the new Army may be available after five years.

When the National Guard is brought up to the increased size authorized, which will be within five years, it will have 17,000 officers and 440,000 men in peace. In war these would be increased about 37 per cent. This would give a total strength of enlisted men in the Guard of approximately 602,800.

Added to the Regular Army the total number of men thus available in war will be close to 900,000 men. As men from the Regular Army and National Guard go into the Reserves the number available will be constantly increasing.

The new Army bill provides for four classes of soldiers—the Regular Army, the National Guard, the enlisted Reserve Corps, and the Volunteer Army.

The Regular Army has been increased 34½ regiments of Infantry, and the Porto Rico regiment has been made available for use at Panama or elsewhere. Other increases are: Ten regiments of Cavalry, 15 regiments of Field Artillery, 93 companies of Coast Artillery, 5 regiments of Engineers, and two battalions of mounted Engineers. The Medical Department was increased by adding a new corps of verterinarians. This, with the Dental Corps, is given increased rank. Enlisted men in the Medical Department will be 5 per cent of the authorized strength of the Army, and officers will be 7 to every 1,000.

Hospitals under the American Red Cross for use in national emergencies and in war are authorized.

Thus by a leap and a bound we astonish the world by a military and a naval program exceeding by many millions the aggregate sums appropriated in any one year of all the countries of all the world combined prior to 1914.

Already Japan insists that this program means aggression upon our part toward her and the East.

What will our war-hating, peace-loving constituents think of these big-scale preparations?

A bond issue will be necessary, and a revenue bill taxing everybody is on its swift way to passage.

But the friends of this preparedness program say, "We do not want these big guns and these great ships to fight with; we want them to bluff with," and so we are asked to touch the reluctant taxpayer "with the Midas finger of the State" and bleed gold from him to pay for equipment, for gold-laced admirals, and saber-rattling generals to sport with and to bluff with.

I favor reasonable preparedness. These measures go beyond that. I made my campaign against navalism and militarism and am keeping faith with my people in voting against the naval and military bills on final passage. No question of party regularity is here involved. The President—and I am his loyal friend and supporter—distinctly states that the preparedness issue is entirely nonpartisan. The Republicans are for these measures almost to a man and have sought at every step attending their consideration to increase the size of these appropriations. I am voting against both the Army bill and the naval appropriation as increased by the Senate and stand with the Democratic leader, Mr. KITCHIN, and a respectable minority of my party in this opposition.

## Agriculture.

## EXTENSION OF REMARKS

OF

## HON. JOHN W. LANGLEY,

OF KENTUCKY,

IN THE HOUSE OF REPRESENTATIVES,

*Tuesday, August 22, 1916.*

Mr. LANGLEY. Mr. Speaker, pursuant to the permission recently granted me by the House to extend my remarks in the RECORD on the subject of agriculture, I desire to include as a part of my remarks an address delivered recently at the county fair at McKee, Jackson County, Ky., which is in the congressional district that I have the honor to represent. This address was delivered by Coleman Reynolds, who was at the time just 15 years of age. I heard him deliver it myself, and it was not only a rather remarkable production for a boy of that age, but it was delivered with an ease and grace of manner that would have done credit to any Member of this body. The only further comment that I desire to make upon this address is that the mountains of eastern Kentucky have plenty of boys like young Reynolds, who are not only possessed of talent and ambition,

but who are rapidly coming to the front as leaders among the great people who inhabit that region. Mr. Reynolds said:

THE FIRST PRIZE ORATION ON "AGRICULTURE."

[Delivered by Coleman Reynolds at the Jackson County Fair.]

Ladies and gentlemen, if you will give me your attention for only a very brief time, I will endeavor to say something to you about the greatest occupation known to mankind—the greatest that will ever be known. Possibly it will not be interesting to the officials and business men present here to-day, but, nevertheless, their successes are wholly dependent upon the agricultural pursuits of this country.

Ten years ago our Government did not realize the importance connected with agriculture. But since our population has increased so rapidly it has attracted the attention of our Government, and to-day they are catering to the needs of the farmer with outstretched arms holding budgets like the Smith-Lever bill, Federal-aid bill, and other appropriations for the benefit of the American farmer for which we are grateful to our Congressman, J. W. LANGLEY, for his support.

Agriculture is the oldest of all occupations. It was practiced in the olden times by the Romans, Greeks, Egyptians, Babylonians, and Syrians. You can read about it in the Old Testament how Egypt was a corn country.

Europe, my friends, is the greatest agricultural country on the globe. They are 100 years ahead of America in scientific agriculture. Germany, France, and England are the leading agricultural countries of Europe. Are we going to remain in idleness, so far as scientific agriculture is concerned? No; I repeat it, no. Necessity is the mother of inventions. We are making progress, and have been since Eli Whitney invented the cotton gin in 1793; in fact, since cattle were first brought to New England in 1624. The Department of Agriculture was organized in 1862.

Our work is just now beginning. It must be taught in the schools of Kentucky as it is in 18 States of this Union. In 1897 it was not taught in the schools in a single State of this country of ours. But the recognition of this great work is being made. I can see in the future greater improvements. I can see agriculture in the schools of Jackson County. I can see the educators equipped with knowledge of the soil. Our annual production of corn for the last 10 years has been 2,500,000,000 bushels produced on 95,000,000 acres of ground, an average of 26 bushels per acre; and more than one-half the farmers average less than 26 bushels per acre; twice this quantity is a fair crop, three times this quantity is a good crop, and four times this quantity is often produced.

Along the lines of improvement that will most easily and quickly double the present condition per acre is—

1. Improvement in quality of seed.
2. Improvement in condition of soil.
3. Improvement in method of cultivation.

Soon may be the time when we can double our corn yield and all other crops grown; soon I hope will be the time when the school boys and girls of America can have training along practical lines that will fully equip them for life and that will safeguard this great country of ours.

Farmers, merchants, lawyers, doctors, teachers, and all, you have a duty to perform, and you are expected to perform that duty. The whole world is watching you, and somebody is taking your measure.

As you toil from the dawn of morning 'till setting of the sun,
Do you see that your work is always well and carefully done?
It may seem that no one is watching,
But your details you well may slight.
Somebody is taking your measure.
Are you doing your work just right?

You may toil in a busy workroom,
In the midst of a busy throng,
And your task may seem all but endless,
And the hours weary and long,
But after your day's work is finished
You can feel you have played the man.
Somebody is taking your measure.
Are you doing the best you can?

You are thrown in the crowd.
Work above them;
Do more than your task; it will pay.
Somebody will see and remember the man
Who does the task of each day.
There is always a bigger job waiting
If you work with a willing grace.
Somebody is taking your measure.
Are you fit for a "larger place"?

## Primary Election Expenses in Texas.

---

## EXTENSION OF REMARKS

OF

# HON. J. HAMPTON MOORE,

OF PENNSYLVANIA,

IN THE HOUSE OF REPRESENTATIVES,

*Tuesday, August 22, 1916.*

Mr. MOORE of Pennsylvania. Mr. Speaker, we are told that the administration does not wish Congress to adjourn until it has passed another corrupt-practices act. The idea is that no candidate for President, including Mr. Hughes and Mr. Wilson, shall be permitted to spend, personally or through a committee, more than $50,000 to be elected. This is highly important in view of the recent publication in the CONGRESSIONAL RECORD of the long list of contributors to the Wilson campaign fund of 1912, many of whom were rewarded by appointment to office and some of whom have done very well in financing the European war and making munitions for the allies. Since the contributions reported for the Wilson campaign of 1912 run up into the hundreds of thousands, and are likely, if the magnates and deserving and expectant Democrats appreciate their present and ultimate profits, to be larger in 1916, the insistence of the administration upon the passage of a corrupt-practices act limiting presidential expenses to $50,000 is indicative of an inclination to reform—if it is not downright bunk.

However, it is not my purpose to go into this question extensively at this time. I wanted to refer to the Texas primaries, which recently left bleaching upon the hot sands of the Lone Star State the bones of so many of the heroic trust busters who have recently been fighting for the "down-trodden" cotton grower in the halls of Congress.

The "pee-pul" are a mighty ungrateful lot down in Texas, or they fail to appreciate the sacrifices of those who bled and died in their behalf. Witness the fate of those who stood so gallantly for unlimited gobs of Government gold to valorize cotton at 12 cents a pound in its hour of peril. Poor Yorick! We loved him more in Congress halls than they did upon his native heath.

But it can not be that the "pee-pul" are willfully ungrateful to the champions who never flinch at the smirk of a corporation. There must have been some other reason down in Texas why they should have treated their Representatives so. Uncompromisingly Democratic, it must be confessed also that they broke a little from their great leader in the White House when at the recent primary election they gave a larger vote to the candidate who had denounced the Wilson administration as "the greatest failure in history" than they did to any other candidate. We are told that "we shall see what we shall see" when the finals are run off under the Texas system as between Colquitt, the antiadministrationist, and CULBERSON, who is still persona grata at the White House.

It is an interesting situation and provokes an inquiry as to why the administration is so anxious to have passed this session of Congress a corrupt-practices act, limiting campaign expenses to a ridiculous amount as to general elections, when the expensive contests in States like Texas and Mississippi, where committees select congressional candidates, are always waged at the primaries. It has come to our knowledge here in Congress in numerous contested-election cases that primary fights in the Gulf States are very costly. In such contests we hear a great deal about the influence of money, of "blind tigers," and other primary election instrumentalities, but we hear very little about corrupt-practices acts to correct these abuses.

The corrupt-practices acts thus far passed, including the bill now pending which the administration desires to have passed, are generally intended to hit the big cities and to limit the contributions where the primary elections are not so conclusive as they are in Texas. But the administration has taken its stand and wants more corrupt-practices legislation.

Far be it from me to suggest that the Colquitt antiadministration vote in Texas had anything to do with the desire to limit campaign expenses in that State. The results there speak for themselves. The people voted at their primaries and left many familiar faces outside the congressional breastworks.

It is said that much money was spent at the Texas primaries. It is said that some of the candidates were able to give advertisements to the newspapers and otherwise make expenditures aggregating many times the limit fixed by the Texas law, to say nothing of the laws of the United States. It is rare that we are able to present Democratic authority in support of a statement like this, but it is always refreshing, in view of the administration's desire to prevent campaign contributions for general-election purposes, when we are able to do so.

Witness the Philadelphia Record of August 22, an excellent Democratic authority, which introduces, under the title "High cost of primaries," an extract from the Dallas Evening Journal, another excellent authority in the State of Texas. No mean State is the Lone Star State when it comes to purifying the ballot box. Candidates even in that great borderland of ours can readily be found who will cheerfully spend three or four times the salaries they would receive in an entire term for the sacred privilege of serving their country in official stations. Other States where Democracy is not so thoroughly entrenched may have their election scandals, but heaven forbid that Texas in her primary elections should ever yield to so unholy an influence.

There may be buncombe in the demand of our Democratic brethren for a corrupt-practices act that will apply to Democratic States with equal force it applies to Republican States, but if the movement is earnest and the reform is to be instituted at once, we commend to the administration for investigation this delightful story which comes up through Democratic sources from the Dallas Evening Journal. If the administration is as

successful in cutting down "the high cost of primaries" in Democratic States as it has been in "reducing the high cost of living" in all the States, it will have conferred a lasting boon upon all the people of this great land of ours.

What the Dallas Evening Journal had to say about the "high cost of primaries" in Texas is as follows:

[From the Dallas Evening Journal.]

HIGH COST OF PRIMARIES.

Fresh proof that it is necessary for a comparatively unknown man to spend much money in order to get anywhere as a candidate in a Democratic primary election in Texas is furnished in the account filed by C. H. Morris, late candidate for governor. He spent $20,131.41, or two and one-half times the amount he would have received as salary had he been elected, and more than twice what he would have received as salary and grocery allowance had he been elected and had he accepted the grocery money.

It was understood early in the campaign that Mr. Morris intended to spend $40,000. The question, which, of course, is unanswerable, arises, "Would Mr. Morris have won had he spent all of the $40,000 instead of just a trifle over half?" In this connection it will be recalled that Gov. Ferguson's first campaign cost him a trifle over $30,000. He then was comparatively unknown. He won. And this suggests another question: "Is $30,000 the price an unknown man must pay for the governorship?"

---

**An Editorial by William J. Bryan.**

## EXTENSION OF REMARKS
OF
## HON. JOHN M. EVANS,
OF MONTANA,
IN THE HOUSE OF REPRESENTATIVES,

*Tuesday, August 22, 1916.*

Mr. EVANS. Mr. Speaker, under leave granted me to extend my remarks in the RECORD I include an editorial by William J. Bryan which recently appeared in the Commoner and entitled "Deserving Democrats."

The article is as follows:

"DESERVING DEMOCRATS."

"Now, that you have arrived and are acquainting yourself with the situation, can you let me know what positions you have at your disposal with which to reward deserving Democrats? I do not know to what extent the knowledge of the Spanish language is necessary for employees. Let me know what is requisite, together with the salary, and when appointments are likely to be made."

The above is the letter which I wrote to Mr. Vick, the receiver of customs at San Domingo. Read it carefully. Scan each sentence, examine each word, each syllable. Mr. Hughes, once governor of New York, afterwards justice of the Supreme Court, and now Republican candidate for President, thinks it important enough to quote in his campaign speeches. He is so indignant, so mortified, that he asks: "Should not every American hang his head in shame, that such a thing should occur in our highest department of Government?"

I alone am responsible for that letter, and I am not ashamed of it. Attention is called to it, that I may expose the desperation of the man who has sought to use it as a means of advancing himself politically. The letter was written to an appointive officer, whose office was not under the civil service, and the inquiry was made in regard to offices which were not under the civil service. There was nothing in the letter to indicate a desire or intention to select men who were incompetent. On the contrary, inquiry is made as to "what is requisite." By what logic does Mr. Hughes reach the conclusion that "every American should hang his head in shame," because a Democratic Secretary of State expressed an interest in the appointment of deserving Democrats to positions not under the civil service, for which such Democrats were competent? Mr. Hughes had appointments to make when he was governor. Did he give those appointments to deserving Republicans or to undeserving Republicans? If to deserving Republicans, did his action cause every citizen of New York to "hang his head in shame"? Or, is he so partisan that he regards it as entirely proper and patriotic to appoint deserving Republicans and only shameful to appoint deserving Democrats?

Mr. Hughes recognizes political obligations and has shown himself quite prompt in discharging such obligations. When he was a candidate for governor, he received the support of the railroads of New York and he generously paid the debt by vetoing the 2-cent passenger rate bill. He does not describe that as shameful. When a candidate for governer, he received the support of the New York tax dodgers, the owners of "swollen fortunes," and he paid his debt by sending a message to the legislature protesting against the income-tax amendment to the Federal Constitution. He does not describe that as shameful. He is now being supported by the railroads of the United States and he expects to pay them back by aiding them to escape State legislation, and find a haven of security in "exclusive Federal control" over the railroads; he is being supported by the Shipping Trust and expects to pay them back by helping them to prevent Government competition; he is supported by the tariff barons and expects to pay them back by enabling them to collect tribute from the consumers, through high tariff rates; he is supported by the trust magnates and expects to pay them back by shielding them from punishment for the extortion which they desire to practice; he is supported by Wall Street and expects to pay them back by turning over to them our financial system; he is supported by those who are exploiting Mexico and he expects to pay them back by spending American blood and squandering money raised by taxation, in order to guarantee profits on speculative investments. And yet, with the record which he has made in paying his political obligations at the expense of the public and with the pledges his speeches contain to those who are now aiding his ambitions, he has the impudence to hold up for criticism a legitimate effort to reward competent men for the service which they have rendered to the cause of reform.

For 20 years the people have been engaged in a life and death struggle to save the Nation from the big exploiters, the big "grafters," and the big "pork" hunters—from the plunderbund, to which Mr. Hughes is indebted for all the political honors he has enjoyed and which is now seeking to put him in a position to safeguard plutocracy from further attacks. Mr. Hughes is perfectly familiar with the contest, because he has been conspicuous among the champions of that plunderbund. In the campaign of 1908 he was put forth as the chief representative of the trusts, and his eloquent advocacy of their cause won him a place on the Supreme Bench, where he was quick to show his bias in their favor. But while he has been winning valuable rewards as a Republican, who is "deserving" from the standpoint of the predatory interests, the plain, common people have been waging a brave and continuous struggle for the rescue of their Government from the hands of Mr. Hughes's political friends and supporters, and they have won battle after battle.

They have secured, without Mr. Hughes's aid, the election of Senators by the people, thus putting the Senate in touch with the voters. They have won, in spite of Mr. Hughes's opposition, an income-tax amendment to the Constitution, which has made it possible to transfer a considerable part of the burden of taxation from consumption to incomes. They have secured a reduction of the tariff and a measure of relief from the exactions of the trusts. They have secured currency reform, a rural-credits law, a child-labor law, and other measures of justice to agriculture, labor, and commerce, and they have made their fight at great sacrifice to themselves, and in the face of intimidation, coercion, and ostracism. They have shown a moral courage and a devotion worthy of the great cause in which they have enlisted.

I received the support of nearly six millions and a half of these voters in three campaigns. I would be unworthy of the affection they have shown and the confidence they have manifested, as well as of the support they have given, if I were willing to admit that a Republican is necessarily superior to them either in patriotism or capacity. I would be unworthy of their loyal friendship if I did not welcome every opportunity to reward them by aiding them to secure any appointive offices, outside of the civil service, for which they were competent.

As an official, I enforced the civil-service law to the letter, and upon my resignation, received from the employees of the State Department, more than 90 per cent of whom were under the civil service, a watch which I prize as a priceless treasure. But, while I observed the civil-service law, wherever it was in force, I felt myself free to aid in rewarding deserving Democrats, wherever it could be done without detriment to the service. My regret is that I was able to reward so few of the multitude who are deserving, measured by their political service, by their capacity, and by their fitness for the work to be done.

In a Republic, where the Government is good only when the people are willing to undertake the labor necessary to make it good, political zeal and willingness to spend time and money in behalf of remedial legislation can never be a legitimate objection to political appointment. Those who can raise campaign funds by mortgaging the Government in advance to the beneficiaries of privilege may scorn the labors of the unselfish, the unpurchasable, and the unfrightened political workers, but those whose only appeal is to the conscience and patriotism of the masses will not hang their heads in shame at any legitimate effort that may be made to introduce into Government employment those who combine a heart interest with the service rendered by brain and hand. The "deserving Democrat" is not to be despised—he is as much entitled to recognition as a "deserving Republican"—and both Democrats and Republicans are deserving in proportion as they honestly endeavor to make our Government a government "of the people, by the people, and for the people," and insure its administration, according to the maxim "Equal rights to all and special privileges to none."

---

**Grain Grading.**

## SPEECH
OF
## HON. GEORGE M. YOUNG,
OF NORTH DAKOTA,
IN THE HOUSE OF REPRESENTATIVES,

*Saturday, April 29, 1916.*

The House in Committee of the Whole House on the state of the Union had under consideration the bill (H. R. 12717) making appropriations for the Department of Agriculture for the fiscal year ending June 30, 1917, containing part B, known as the United States grain-standards act.

NORTH DAKOTA PIONEERS IN GRAIN LEGISLATION.

Mr. YOUNG of North Dakota. Mr. Chairman, the wheat and flour testing plant at the Agricultural College, Fargo, N. Dak., was the first complete flour mill and laboratories ever installed by any Government for the benefit of wheat growers. While wheat has been a commercial commodity since the time of the Pharaohs, it is a most surprising thing that never until a poor crop in the Northwest a few years ago did anyone think of having his wheat tested. The farmers had been growing wheat for centuries without any accurate knowledge as to how much flour it would make and of what quality. This was particularly true in the years when wheat was damaged by frost, drought, or other cause. But the big line elevator companies had testing plants. The trade was carried on between producers who did not know what their wheat would yield, either in amount or quality, and purchasers who knew with accuracy the exact milling value of what they were buying. It is not surprising

then that the fellows who knew took advantage of the fellows who did not. The so-called grades established in Minnesota would probably go on forever if it were not for the installation of the testing plant at the Fargo Agricultural College. That came about in this way: During the fall of 1904 a friend of mine living near Leal, N. Dak., brought a sample of wheat in to me to ask my advice as to whether it should be sold then or held until the following year.

THE YOUNG ACT.

It was not very good-looking wheat and had been graded "rejected." I suggested that if it would make good flour that it would be wise for him to keep it until the following year, for the reason that some of the mills in order to secure an adequate supply during the short season would probably buy it upon sample and pay something like its real value. But neither he nor I knew how much flour it would make nor of what quality. After the legislature met in 1905 another farmer wrote me about the desirability of having a means supplied whereby the farmers could know the milling value of wheat. It was to meet this need that I introduced and secured the passage of the Young Act, which provided for the installing of a complete testing plant at the agricultural college, to make milling tests of wheat and chemical and baking tests of flour available to every farmer in the State. I have gone into the situation in our State with some particularity to show the great need for a definite, known measure of value, a standard of value by which both the seller and the buyer would know the intrinsic value of what was being sold.

A HALF LOAF BETTER THAN NO BREAD.

Mr. Chairman, the bill now before us empowers the Secretary of Agriculture to establish standards of value, which means to fix grades to properly describe the wheat and other grains offered for sale throughout the country. This will be of immense value. It will at least put an honest measure in the hands of the inspectors. Heretofore they have not only had crooked measures of value but handled them in many instances in a crooked way. The bill also requires that State inspectors shall secure licenses from the Secretary of Agriculture, and provides for a certain amount of national supervision. We have been fighting for actual inspection by United States officers, but this is the best bill the committee can agree upon. I am frank to say, with a few amendments which I think will be made, that the bill if enacted into law will do much good. It is not what our people have hoped for. The committee decided not to give us an inspection service by officers appointed by, paid by, and answerable to the United States. Instead we are to have the grades, sometimes called standards, defined by the United States, and the work of State grading officials is to be supervised.

Mr. Chairman, a half loaf is better than no bread, but I would like to feel sure in this case that we are getting at least half a loaf, so we must insist upon certain amendments.

A DISHONEST, CROOKED MEASURE.

I was quite interested in the story told by the gentleman from Minnesota [Mr. ANDERSON], in his usual forceful way, in respect to the Minnesota inspection system and the way it is managed. But there is one thing that was omitted, and that was the standard or measure that was used by the inspectors. He told you how the inspectors operated, but not what kind of a measure they had. Perhaps he was not informed as to that. Men who want to be crooked can use an honest measure in a dishonest way or they can use a dishonest measure. We claim in North Dakota that a dishonest measure has been used in Minnesota for many years, a dishonest, crooked measure, a measure that did not grade at all.

The Grand Forks Herald just received gives a quotation of No. 1 northern at $1.09, and the rejected grade at 85 cents. That is a difference of 24 cents between 1 northern and rejected. At our Fargo testing plant, at the United States experiment station, where there is in operation a small milling plant, they grind the wheat and give the flour a chemical test and a baking test. The result of the tests made by Dr. Ladd, reported in a bulletin issued over a year ago, showed that No. 1 northern and all other grades between, down to rejected, were of much the same value, and in fact that the entire products of 100 pounds of rejected grade brought $2.31 as against $2.28 for No. 1 northern.

Now, if the grades were honest measures, every grade when it is ground into flour and the product sold, the miller or whoever handled it, ought to get the same percentage of profit. But, as a matter of fact, it was shown by the experimental station at Fargo that the manufacturer got a profit of 33 cents on No. 1 northern and 56 cents on rejected.

Mr. MOORE of Pennsylvania. What becomes of the rejected grade?

Mr. YOUNG of North Dakota. The rejected makes first class flour. It has more gluten in it than No. 1 northern. No. 3 northern is highest in gluten content. The gentleman was present at the pure flour hearing a month ago, and he will recall that every expert said that the main thing in wheat was to get the greatest amount of protein, another name for gluten. In the tests by Dr. Ladd it was shown that the rejected had more gluten than No. 1 northern.

Mr. MOORE of Pennsylvania. When the small farmer, if there are any in the gentleman's country, puts his grain on the way to the miller, or wherever it is to be shipped, does he receive his money in advance or does he stand to lose if the grain does not pass muster?

Mr. YOUNG of North Dakota. If he sells to the elevator, the transaction is closed; but a large per cent of the grain is shipped in carload lots and only a part of it paid in advance.

Mr. MOORE of Pennsylvania. The small farmer then stands to lose something?

Mr. YOUNG of North Dakota. Certainly.

THE GRAIN SHARKS MUST GO.

It might be well for a moment to consider what grades are for, why standards are necessary. North Dakota farmers can not deliver wheat at the doors of flour mills in Pennsylvania. For that reason the practice grew up of indicating the quality by having it examined and marked. Presumably, to begin with, the grades indicated to eastern and foreign buyers what they were actually buying without being on the ground to examine the wheat. But that is now a thing of the past. The eastern buyer is kicking, too. With honest grades it would be possible for the farmers to know what they were selling and the eastern and foreign buyers to know what they were buying. It is the duty of governments to establish conditions under which business can be conducted safely and honorably. Under present conditions that is next to an impossibility in the grain trade. The producers are defrauded and the eastern and foreign buyers are cheated. In the past no redress was obtainable excepting from the State of Minnesota, where the doors were locked. They seemed to think it was clever business to take a large slice from both ends. The farmers have suffered—not altogether in silence, but the time has come now when there is a rift in the sky. The end of the grain sharks is in sight. They must go. This bill, if passed, will empower the Secretary of Agriculture to clean up the present intolerable conditions, and I believe he will do so. If he does not, millions of farmers will ride his neck.

PRESIDENT LADD'S EXPERIMENTS.

In the bulletin issued by Dr. E. F. Ladd during the month of January, 1915, it was demonstrated that the different grades of wheat as graded during the fall of 1914 yielded products of substantially the same value, using as the basis of his computations the quotations for the different grades of wheat, flour, shorts, bran, and so forth, as contained in the Northwestern Miller. The items are given in great detail in the bulletin, but I quote only the totals, showing the receipts for all products from 100 pounds of each grade as follows:

| | |
|---|---|
| No. 1 northern | $2.28 |
| No. 2 northern | 2.27 |
| No. 3 northern | 2.34 |
| No. 4 northern | 2.31 |
| Rejected | 2.31 |

From this it will be seen that 60 pounds of one grade of hard wheat is worth about the same as 60 pounds of any other grade. Then why does the Minnesota system employ eight different grades to describe the wheat, when two, or at most three, grades would serve to describe it so that the buyer living at a long distance would know what he was getting if purchased upon grade? The answer is obvious. It is a trick. By it arbitrary reductions in the prices paid to farmers for wheat are made easy. The farmers, and in fact the public generally, have been educated to believe that each grade describes a different variety of wheat of distinct or differing milling value. The gentlemen in the grain trade who have easy consciences, if they have any at all, discovered a number of years ago that grain growers were entirely in the dark about the subterfuges known as grades. Finding that the producers were easy and that the Minnesota grades were regarded seriously, they concluded that some more grades could be created which would still further mystify the producing public in order to facilitate the skinning process. That was back 10 years ago, at which time two new grades were established, known as No. 3 and No. 4 northern. The trade got along well enough without them before. Why the change? To let the eastern buyer know more accurately what he was buying? Not at all. The eastern buyers have been up against a bigger gamble as to the quality of the wheat purchased during the past

10 years than ever before. Grades signify very little after the wheat has left the farmers. When Uncle Sam establishes the grades, as will be the case under this bill, I will venture the prediction that the first thing done will be to reduce the number of grades. To get a concrete idea of what the multiplicity of grades means in pounding down the prices of the farmers, may I call your attention to quotations found in the copy of the Grand Forks Herald just received, and from which I quoted a few minutes ago:

*Grand Forks markets, Thursday, Apr. 27, 1916.*

| | |
|---|---|
| No. 1 hard | No quotations. |
| No. 1 northern | $1.09 |
| No. 2 northern | 1.05 |
| No. 3 northern | .99 |
| No. 4 northern | .92 |
| Rejected | .85 |
| No grade | .80 |

The weight of each measured bushel has much to do with determining the grades under the Minnesota system. Light wheat takes a low grade. It should be remembered, however, that when the farmers haul in the wheat it is not sold by the measured bushel but by weight, so that even when the wheat is "light" the purchaser gets the same number of pounds per bushel—60 pounds.

It should be remembered that the farmers as a rule have no quarrel with the local grain buyers so far as the grading is concerned. They must follow the rules respecting the grading of the grain which are now in force in Minnesota. It is quite probable that the local buyers would be very glad to have the system changed and made to honestly describe the wheat purchased. Doubtless many others connected with the system, either closely or remotely, would welcome a change who take no pride in being connected with a grading system which readily lends itself to crooked business.

EQUITY COOPERATIVE EXCHANGE.

Mr. Chairman, when this bill becomes a law the members of the great western organization known as the Equity Cooperative Exchange of St. Paul, headed by John M. Anderson, J. G. Crites, A. M. Baker, F. B. Wood, former Congressman James Manahan, and other well-known men of the Northwest, will welcome the passage of a law which will give the opportunity to have just standards established for the grading of grain, and in addition to that probably some improvement in the conduct of the inspection department of the State of Minnesota by reason of what we hope will be the watchful eye of supervising officials appointed by the United States. This excellent organization of farmers, which has done so much good for the grain shippers of the Northwest, has been greatly fettered by the crooked Minnesota inspection service.

When this bill becomes a law the honorable Secretary of Agriculture will find a very valuable fund of accurate, scientific information in the various bulletins issued by Dr. E. F. Ladd, of the North Dakota Agricultural College, who is one of the most noted chemists of our country. If I had time I would quote from the last bulletin received, which gives the combined results of experiments conducted over a period of eight years. I shall ask to have those portions of it printed in the RECORD which deal with the gluten content, which will more completely answer the question asked by the distinguished gentleman from Pennsylvania [Mr. MOORE]. The experts at the pure-flour hearing last winter said that 10 per cent of protein—another word for gluten—was sufficient for a high-grade patent flour. It will be noticed that all of the hard-wheat grades contain more than that.

The CHAIRMAN. The time of the gentleman from North Dakota has expired.

Mr. YOUNG of North Dakota. Mr. Chairman, I ask permission to print in the RECORD portions of Bulletin No. 114, showing the chemical and physical contents of wheat and mill products, which I hope everyone interested in this subject will read, and those who desire to examine the complete bulletin may call at my office, or write Dr. E. F. Ladd, Fargo, N. Dak., for copies.

The CHAIRMAN. Is there objection to the request?

There was no objection.

[Portions of Bulletin 114.]

CHEMICAL AND PHYSICAL CONSTANTS OF WHEAT AND MILL PRODUCTS.

[By Dr. E. F. Ladd, Fargo, N. Dak.]

INTRODUCTION.

The State law enacted in 1905 makes it the duty of the experiment station "to conduct experiments and determine the comparative milling values of the different grades of wheat by making chemical analyses of the different grades of wheat and baking tests of the flours made therefrom. A record shall be kept and published of the different grades of wheat, by whom graded, and the person from whom received, with the address, the nature of the soil, previous cropping, etc." The enactment of this law was secured through the efforts of Congressman GEORGE M. YOUNG while he was State senator.

In accordance with this provision of the law experiments were undertaken, and from 1907, when the regular milling tests were first made, to 1914, inclusive, some 660 complete trials were carried out on North Dakota grown wheat to enable us to gather data both with regard to the several varieties of wheat generally grown in the State and as to the climatic and soil influences on the value of the wheat for milling and baking purposes. The real value of the product must ultimately be determined by the demands of the consumer, as expressed in his choice and his willingness to pay a reasonable price for the article. The great mass of data can not well be presented and, at best, we can only at this time present a compilation or summary; otherwise, the whole mass becomes confusing in any attempt at presentation of figures for each individual test.

In a general way we can present studies for the several varieties, especially for Fife, Bluestem, Velvet Chaff, and Durum. Marquis and Winter wheat can hardly be compared since our first studies with Marquis wheat began in 1913 and were continued through 1914 for 26 samples, so there can not be considered the wide range for seasonal changes, and the results therefore are only comparable for the two years.

* * * * * * *

PROTEIN IN WHEAT.

The amount of protein (N×6.25) in the several varieties of wheat for the eight years 1907 to 1914, inclusive, shows not a wide range for the several varieties in the same grade:

TABLE VI.—*Per cent of protein in wheat.*

| Variety. | Grade No. 1. | Grade No. 2. | Grade No. 3. | Grade No. 4. | Rejected. | Mean. |
|---|---|---|---|---|---|---|
| Bluestem | 14.41 | 13.25 | 15.69 | 14.76 | 14.72 | 14.56 |
| Fife | 14.54 | 14.55 | 16.29 | 14.32 | 12.69 | 14.48 |
| Velvet Chaff | 14.21 | 12.56 | 14.59 | ..... | 14.84 | 14.05 |
| Durum | 14.39 | 16.27 | 16.16 | 14.52 | ..... | 15.33 |
| Average | 14.38 | 14.15 | 15.68 | 14.53 | 14.08 | 14.60 |

The average of protein for all the samples of wheat is 14.60 per cent, while the maximum was 16.29 per cent for grade No. 3 Fife wheat, and the minimum was 12.56 per cent for grade No. 2 Velvet Chaff.

PROTEIN IN FLOUR.

Determinations made of protein in some six hundred and odd samples of the several grades of wheat and the amount of protein when nitrogen was multiplied by 6.25 showed as follows:

TABLE VII.—*Per cent of protein in flour.*

| Variety. | Grade No. 1. | Grade No. 2. | Grade No. 3. | Grade No. 4. | Rejected. | Mean. |
|---|---|---|---|---|---|---|
| Bluestem | 13.25 | 12.95 | 14.32 | 13.88 | 13.93 | 13.46 |
| Fife | 13.63 | 13.12 | 15.04 | 13.55 | 11.69 | 13.14 |
| Velvet Chaff | 12.77 | 11.56 | 13.32 | ..... | 12.44 | 14.45 |
| Durum | 14.52 | 14.89 | 15.32 | 13.82 | ..... | 13.76 |
| Mean of all | 13.12 | 13.19 | 14.45 | 13.78 | 13.06 | 13.70 |

The difference, therefore, in the per cent of protein found in the flour made from the several grades of wheat does not materially differ, and the average for all the grades and varieties was 12.78 per cent, while the per cent of protein in the wheat averaged for all varieties and grades 14.60, or, for the flour 1.82 per cent lower than the average for all the wheats from which the flour was produced.

Taken as a whole, Velvet Chaff showed a lower per cent of protein than either of the other varieties, while the Durum averaged somewhat higher.

TABLE VIII.—*Per cent of protein in wheat, by grades and years.*

BLUESTEM.

| Year. | Grade No. 1. | Grade No. 2. | Grade No. 3. | Grade No. 4. | Rejected. |
|---|---|---|---|---|---|
| 1907 | 12.09 | 14.78 | 13.12 | 13.37 | ..... |
| 1908 | 12.82 | 11.39 | 16.56 | ..... | ..... |
| 1909 | 13.21 | 11.94 | 16.66 | ..... | ..... |
| 1910 | 13.89 | ..... | 13.31 | ..... | ..... |
| 1911 | 13.52 | 13.14 | 14.10 | 14.36 | 14.62 |
| 1912 | 14.06 | 14.09 | 14.79 | 14.78 | 14.09 |
| 1913 | 13.17 | 12.48 | 12.66 | ..... | ..... |
| 1914 | ..... | 12.84 | 15.50 | 13.02 | 13.18 |
| Average | 13.25 | 12.95 | 14.32 | 13.88 | 13.94 |

FIFE.

| | | | | | |
|---|---|---|---|---|---|
| 1907 | 12.59 | 12.50 | 15.50 | ..... | ..... |
| 1908 | 14.78 | 10.06 | 15.25 | ..... | ..... |
| 1909 | 14.45 | 12.67 | 15.25 | ..... | ..... |
| 1910 | 14.66 | 15.87 | ..... | ..... | ..... |
| 1911 | 13.36 | ..... | 14.39 | 15.14 | ..... |
| 1912 | 12.69 | 13.81 | ..... | ..... | ..... |
| 1913 | 12.81 | 13.81 | ..... | ..... | ..... |
| 1914 | ..... | ..... | 14.81 | 11.97 | 11.69 |
| Average | 13.65 | 13.12 | 15.01 | 13.55 | 11.69 |

TABLE VIII.—*Per cent of protein in wheat, by grades and years.*—Contd.

| Average | 14.52 | 14.80 | 15.32 | 13.82 | |

## Naval Appropriation Bill.

## EXTENSION OF REMARKS

OF

# HON. THOMAS J. STEELE,

OF IOWA,

IN THE HOUSE OF REPRESENTATIVES,

*Tuesday, August 15, 1916.*

Mr. STEELE of Iowa. Mr. Speaker, the staggering excess of appropriations in the Senate amendments to the naval bill over the amount carried by the original House bill seem to me to be unwarranted, unjustified, and, if ours is not a militaristic Nation, un-American, and I can not conscientiously support the motion to accept these amendments.

The House bill for which I voted, as it went to the Senate, carried $269,996,254.74 appropriations. This bill was approved by the chairman of the Naval Affairs Committee, by the Democratic membership on that committee, the Democratic membership of the House, the Secretary of the Navy, and the administration. While it seemed to me that the apparent demand from the people of the country for such a tremendous increase in our Navy as this bill carried was due to certain vague fears for our country's safety instilled into the minds of the people by the Navy League's preparedness parades, motion pictures, and other agencies of their selfish propaganda; while it seemed to me that the appropriations in this bill, which exceeded the appropriations of last year—the largest in our history—by $130,000,000, were a response to a certain hysteria, I nevertheless voted for the bill upon the assumption that it was still far within the lines of moderation as compared with the wild and staggering specifications set forth in the program proposed by the Navy board and the defense leagues, and as compared with the extravagant and reckless program advocated by the Republican minority. I voted against the extravagant increases in the bill proposed by the Republicans, which were denounced by the Democratic leadership of the House and by the administration.

It was slightly over two months ago that we voted the $270,000,000 program and rejected the tremendous increases proposed by the Republican minority, and this amount was $30,000,000 in excess of the amount originally agreed upon as the administration program. To-day we are asked to accept the Senate amendments, which increase the total appropriations to $315,000,000—$46,000,000 more than the original House bill and $76,000,000 more than the program originally agreed upon as the administration program and $166,000,000 more than the amount appropriated for the last fiscal year.

Is there any justification for placing this additional burden upon the taxpayers of the country? If the minority program, which was rejected by the Democrats of the House, and which provided for approximately the increases which these Senate amendments carry, was wrong, reckless, and extravagant two months ago, it is wrong, reckless, and extravagant now. Is it not time to protest against action which can only be construed by the world to be a sudden transformation of our country to a militaristic Nation, and which, if continued, as it is sure to be, will make the load upon the backs of our taxpayers unbearable? Is it not true that when once a standard of excessive naval appropriations is fixed it is almost impossible to lower it?

During the past year we have heard much from the jingoists and the selfish interests behind the preparedness propaganda about the weakness of our Navy as compared with the navies of the other nations of the world. In this connection I submit the following figures, showing the expenditures of the various naval powers of the world since the opening of the twentieth century:

*Total naval expenditures by principal naval powers.*

| Fiscal year— | Great Britain (Apr. 1 to Mar. 31). | United States (July 1 to June 30). | Germany (April to March). | France (January to December). |
|---|---|---|---|---|
| 1900-1901 | $145,792,850 | $61,721,695 | $37,173,074 | $72,683,180 |
| 1901-2 | 150,560,190 | 68,438,301 | 46,315,800 | 67,079,011 |
| 1902-3 | 150,679,328 | 82,977,641 | 48,818,700 | 59,217,558 |
| 1903-4 | 173,548,058 | 104,126,192 | 50,544,000 | 59,740,222 |
| 1904-5 | 179,138,049 | 116,655,826 | 49,110,300 | 60,178,623 |
| 1905-6 | 161,117,947 | 109,725,050 | 54,918,000 | 61,565,779 |
| 1906-7 | 152,954,342 | 98,392,144 | 58,344,300 | 59,514,296 |
| 1907-8 | 151,880,617 | 117,353,474 | 69,133,500 | 60,685,813 |
| 1908-9 | 136,401,161 | 120,421,579 | 80,737,026 | 62,194,916 |
| 1909-10 | 181,936,341 | 122,247,365 | 95,047,820 | 64,899,589 |
| 1910-11 | 202,056,258 | 111,791,980 | 103,302,773 | 74,102,439 |
| 1911-12 | 211,596,296 | 133,550,071 | 107,178,480 | 80,371,109 |
| 1912-13 | 224,443,296 | 129,787,233 | 109,989,096 | 81,692,832 |
| 1913-14 | 237,530,459 | 136,858,301 | 112,091,125 | 90,164,625 |
| 1914-15 | 260,714,275 | 141,872,786 | 113,993,329 | 123,828,872 |

| Fiscal year— | Russia (January to December). | Italy (July 1 to June 30). | Japan (April to March). | Total. |
|---|---|---|---|---|
| 1900-1901 | $42,101,212 | $23,829,206 | | |
| 1901-2 | 45,488,462 | 23,875,532 | $21,373,954 | $423,140,250 |
| 1902-3 | 50,789,465 | 23,522,400 | 17,654,528 | 433,639,620 |
| 1903-4 | 60,018,895 | 23,522,400 | 17,553,279 | 489,053,046 |
| 1904-5 | 58,076,543 | 24,300,000 | 10,018,024 | 497,477,365 |
| 1905-6 | 60,228,444 | 24,494,400 | 11,378,202 | 433,427,831 |
| 1906-7 | 60,703,557 | 25,865,068 | 30,072,061 | 485,846,368 |
| 1907-8 | 43,012,166 | 27,516,454 | 35,124,346 | 504,706,370 |
| 1908-9 | 49,682,482 | 30,453,697 | 39,347,332 | 539,238,793 |
| 1909-10 | 58,059,040 | 31,812,885 | 35,005,719 | 589,008,759 |
| 1910-11 | 46,520,465 | 40,595,204 | 36,889,158 | 615,258,277 |
| 1911-12 | 56,680,915 | 40,780,987 | 42,944,329 | 673,111,187 |
| 1912-13 | 82,019,633 | 41,803,420 | 46,510,216 | 716,335,726 |
| 1913-14 | 117,508,657 | 49,550,147 | 48,105,152 | 791,808,466 |
| 1914-15 | 128,954,733 | 56,920,440 | 69,111,653 | 895,396,088 |

These figures show that for the 10 years preceding the war we had expended on our Navy $317,000,000 more than Germany, $463,000,000 more than France, $518,000,000 more than Russia, $852,000,000 more than Italy, and $827,000,000 more than Japan had expended on its Navy.

For these 10 years Germany expended on its navy $904,332,000, France expended on its navy $759,014,000, Russia expended on its navy $703,365,000, Italy expended on its navy $360,876,000, Japan expended on its navy $394,485,000, but the United States expended on its Navy the huge sum of $1,222,000,000.

Again, I ask, What danger is imminent that justifies the stupendous appropriations in this bill? Since the beginning of the consideration of this bill in the House Committee on Naval Affairs it seemed that the object sought to be attained by the chairman of the Naval Affairs Committee, by the membership of the same committee, by the war traffickers, through their various defense organizations, by the Navy League, and by the administration, was to put this Nation in the second place among the navies of the world. It has been proven by hearings before the committee and by the admission of the Secretary of the Navy himself that we are already in second place. What, then, can be the purpose of making the gigantic appropriations contained in this bill? And since the proof and admissions were made that we are in second place among the navies of the world, the nation whose navy was pressing us hardest for second place has lost 400,000 tonnage. There is absolutely no argument in favor of the enormity of these appropriations.

It is contended by the naval extremists that we require the vast appropriations in this bill to put the Nation in "a proper state of defense." Does it mean nothing to our Navy to have the best coast defenses in the world? The highest authority on this subject is Gen. Erasmus Weaver. He is a member of the General Staff, a member of the Board of Ordnance and Fortifications, and a member of the Joint Army and Navy Board. In his testimony given a few months ago before the House Committee on Military Affairs he said:

**We have the best coast defenses in the world. The guns now mounted and those contemplated will give us an entirely satisfactory defense.**

This is what Gen. Miles said in his testimony before the House Committee on Military Affairs on the condition of our coast defenses:

I am prepared to say that our coasts are as well defended as the coasts of any country and with the same class of high-power guns and heavy projectiles. They are better in some respects than the guns that are mounted at the Dardanelles, which have resisted the most powerful ships of war of the British and French Navies.

The results at Alexandria, Port Arthur, and at the Dardanelles furnish sufficient evidence that guns on board ships are no match for coast fortifications and submarine guns.

Admiral Frank H. Fletcher, chief of the Atlantic Fleet, ranking officer in our Navy and an authority of the highest rank on coast defenses, has testified as follows:

It has been recently forcibly demonstrated that ship attacks on forts are futile. This war has conclusively demonstrated what every military strategist knew before, that it is impossible for sea craft to successfully attack land fortifications.

Surely, with such strong coast defenses as these experts testify that we have, there is no valid excuse for making such a raid on the Treasury to build 150 additional fighting ships for "defensive purposes," as the three-year program contemplates. We are told also by naval experts that "the dangers of transporting a fleet across a great expanse of water and maintaining it are almost insuperable." When we consider that our great coast defenses protecting our great cities and harbors are impregnable, that our coasts can be effectively patroled by submarines, that powerful transportable long-range guns can be moved with expedition to any part of our open coasts, that our harbors can also be protected against the entrance of possible foreign foes by the laying of mines, it seems to me that the taxpayers of the country ought to be saved from the tremendous burdens which this mad rush toward militarism places upon them.

It is not patriotism alone that has prompted the Senate to add these enormous apropriations to the House bill. I agree with our majority leader, the gentleman from North Carolina [Mr. KITCHIN], that the people of the Nation will find out sooner or later that it is profit to the shipbuilders, to the munition makers, and to the war traffickers, not danger to the country, that has been one of the greatest incentives and inspirations to the size of this program, and because I feel that it is a wanton waste of the people's money and poor business I can not and will not subscribe to it.

---

**Prohibition National Platform and Convention Addresses of W. G. Calderwood and Daniel A. Poling.**

---

## EXTENSION OF REMARKS

OF

# HON. CHARLES H. RANDALL,

OF CALIFORNIA,

IN THE HOUSE OF REPRESENTATIVES,

*Friday, August 25, 1916.*

Mr. RANDALL. Mr. Speaker, under unanimous consent granted me by the House, I insert in the RECORD the platform adopted by the Prohibition national convention at St. Paul, Minn., July 21, 1916, and the convention addresses of W. G. Calderwood and Daniel A. Poling.

The matter referred to is as follows:

PROHIBITION NATIONAL PLATFORM.

The Prohibition Party, assembled in its twelfth national convention in the city of St. Paul, Minn., on this 21st day of July, 1916, thankful to Almighty God for the blessings of liberty, grateful for our institutions and the multiplying signs of early victory for the cause for which the party stands, in order that the people may know the source of its faith and the basis of its action should it be clothed with governmental power, challenges the attention of the Nation and asks the votes of the people on this declaration of principles.

PROHIBITION.

We denounce the traffic in intoxicating liquors. We believe in its abolition. It should be made a crime, not a business, and ought not to have governmental sanction.

We demand, and if given power we will effectuate the demand, that the manufacture, importation, exportation, transportation, and sale of alcoholic liquors for beverage purposes shall be prohibited.

To the accomplishment of this end, we pledge the exercise of all governmental power, the enactment of statutes, and the amendment of constitutions, State and National. Only by a political party committed to this purpose can such a policy be made effective. We call upon all voters believing in the destruction of the drink traffic to place the Prohibition Party in power on this issue as a necessary step in the solution of the liquor problem.

SUFFRAGE.

The right of citizens of the United States to vote should not be denied or abridged by the United States or by any State on account of sex. We declare in favor of the enfranchisement of women by amendment to State and Federal Constitutions.

We condemn the Republican and Democratic Parties for their failure to submit to the States an equal-suffrage amendment to the National Constitution.

We remind the 4,000,000 women voters that in 1872 we declared for their political rights—the first so to do—and we invite their cooperation in electing the Prohibition Party to power.

PEACE AND PREPAREDNESS.

We are committed to the policy of peace and friendliness to all nations. We are opposed unalterably to the wasteful military program of the Democratic and Republican Parties. Militarism protects no worthy institution. It endangers them all and violates the high principles which have brought us as a Nation to the present hour. We are for a constructive program in preparedness for peace. We declare for and will promote a world court, to which national differences shall be submitted, so maintained as to give its decrees binding force.

We will support a compact among nations to dismantle navies and disband armies; but until such world court and compact are established we pledge ourselves to maintain an effective Army and Navy and to provide coast defenses entirely adequate for national protection.

We are opposed to universal military service and to participation in the rivalry which has brought Europe to the shambles and now imperils the civilization of the race.

Private profit, as far as constitutionally possible, should be taken out of the manufacture of war munitions and all war equipment.

In normal times we favor the employment of the Army in vast reclamation plans; in reforesting hills and mountains; in building State and National highways; in the construction of an inland waterway from Florida to Maine; in opening Alaska; and in unnumbered other projects, which will make our soldiers constructive builders of peace. For such service there should be paid an adequate, industrial wage.

Those units of our Navy which are capable of being converted into merchantmen and passenger vessels should be constructed with that purpose in view, and chiefly so utilized in times of peace.

We condemn the political parties which for more than 30 years have allowed munition and war-equipment manufacturers to plunder the people and to jeopardize the highest interests of the Nation by furnishing honey-combed armor plate and second-rate battleships, which the Navy League now declares are wholly inadequate.

We will not allow the country to forget that the first step toward physical, economic, moral, and political preparedness is the enactment of national prohibition.

MEXICO AND THE MONROE DOCTRINE.

Mexico needs not a conqueror but a good Samaritan. We are opposed to the violation of the sovereignty of the Mexican people, and we will countenance no war of aggression against them. We pledge the help of this country in the suppression of lawless bands of marauders and murderers who have taken the lives of American citizens on both sides of the border as well as of Mexicans in their own country.

The lives and property of our citizens when about their lawful pursuits, either in the United States or Mexico, must and will be protected. In the event of a breakdown of government across the border we would use, in the interests of civilization, the force necessary for the establishment of law and order.

In this connection we affirm our faith in the Monroe doctrine, proclaimed in the early days of the Nation's life and unswervingly maintained for nearly a hundred years.

We can not claim the benefits of the doctrine, and refuse to assume or discharge the responsibilities and the duties which inhere therein and flow therefrom.

These duties have long been unmet in Mexico. We should meet them now, acting not for territory, not for conquest or for ourselves alone, but for and with all the nations of North and South America.

The Democratic Party has blundered, and four years ago the Republican Party evaded and passed on the problem it now seeks the opportunity to solve.

THE PHILIPPINES.

The abandonment of the Philippines at this time would be an injustice to them and a violation of our plain duty. As soon as they are prepared for self-government by education and training, they should be granted their independence on terms just to themselves and to us.

TARIFF AND RECIPROCITY.

The countries at war are preparing for a fierce industrial struggle to follow the cessation of hostilities. As a matter of commercial economy, international friendliness, business efficiency, and as a help to peace, we demand that reciprocal trade treaties be negotiated with all nations with which we have trade relations.

A commission of specialists free from the control of any party should be appointed, with power to gather full information on all phases of the questions of tariff and reciprocity and to recommend such legislation as it deems necessary for the welfare of American business and labor.

MERCHANT MARINE.

The necessity of legislation to enable American ship builders or owners to meet foreign competition on the most favorable terms is obvious.

Materials for construction should be admitted free of duty.

The purchase of ships abroad when low prices invite should be allowed, and when so purchased should be admitted to American registry.

Harbor rules and charges and navigation laws should not be onerous, but favorable to the highest degree.

Liberal payment should be made by the Government for carrying the mails and for transport services.

All shipping from the United States to any of our possessions should be reserved to ships of American registry.

The people should not overlook the fact that the effect of nationwide prohibition, on labor and industry generally, will be such as to lower the cost of shipbuilding per unit, and at the same time permit the payment of higher wages. The increased volume of trade and commerce which will result when the wastage of the liquor traffic is stopped will quicken our shipping on every sea and send our flag on peaceful missions into every port. This is urged as an incidental effect of wise action on the liquor question, but is none the less to be desired, and will aid in the solution of the problem of our merchant Marine.

CIVIL SERVICE.

In order that the public service may be of the highest standard, the Government should be a model employer in all respects. To enforce the civil-service law, in spirit as well as in letter, all promotions should be nonpolitical, based only upon proven fitness; all recommendations for demotions or removals from the service should be subjected to the review of a nonpartisan board or commission.

The merit system should be extended to cover all postmasters, collectors of revenue, marshals, and other such public officials whose duties are purely administrative.

We reaffirm our allegiance to the principle of secure tenure of office during good behavior and capable effort, as the means of obtaining expert service. We declare for the enactment of an adequate retirement law for disabled and superannuated employees, in return for faithful service rendered in order to maintain a high degree of efficiency in public office.

LABOR AND CAPITAL.

Differences between capital and labor should be settled through arbitration, by which the rights of the public are conserved, as well as those of the disputants. We declare for the prohibition of child labor in factories, mines, and workshops; an eight-hour maximum day, with one day of rest in seven; more rigid sanitary requirements and such working conditions as shall foster the physical and moral well-being of the unborn; the protection of all who toil, by the extension of employer's liability acts; the adoption of safety appliances for the protection of labor and for laws that will promote the just division of the wealth which labor and capital jointly produce. Provision should be made for those who suffer from industrial accidents and occupational diseases.

SOCIAL JUSTICE.

We stand for justice to humanity and for its rights, safety, and development; we believe in the equality of all before the law; in old-age pensions and insurance against unemployment, and in help for needy mothers, all of which could be provided from what is now wasted for drink.

AGRICULTURE.

While it is admitted that grain and cotton are fundamental factors in our national life, it can not be denied that proper assistance and protection are not given these commodities at terminal markets in the course of interstate commerce.

We favor and pledge our efforts to obtain public grain elevators at necessary terminal markets, such elevators to be owned and operated by the Federal Government; also to secure Federal grain inspection under a system of civil service, and to abolish any board of trade, chamber of commerce, or other place of gambling in grain or trading in "options" or "futures" or "short selling" or any other form of so-called speculation, wherein products are not received or delivered, but wherein so-called contracts are settled by the payment of "margins" or "differences" through clearing houses or otherwise.

This party stands committed to free and open markets, based upon legitimate supply and demand, absolutely free from questionable practices of market manipulation. We favor Government warehouses for cotton at proper terminals, where the interests of producers so require; and the absolute divorce of all railroad elevators or warehouses owned by railroad companies, whether for public or private use, from operation or control by private individuals in competition with the public in merchandising grain, cotton, and other farm products.

We furthermore indorse all proper cooperative methods which tend toward broader and better markets for producer and consumer.

PUBLIC OWNERSHIP.

Public utilities and other resources which are natural monopolies now are exploited for personal gain under a monopolistic system. We demand the ownership or control of such utilities by the people and the operation and administration in the interest of all.

FREE INSTITUTIONS.

We stand for the preservation and development of our free institutions and for absolute separation of church and state, with the guaranty of full religious and civil liberty.

DEPARTMENTAL DECISIONS.

Departmental decisions ought not to be final, but the rights of the people should be protected by provisions for court review.

CONSERVATION.

We reaffirm our declaration in favor of conservation of forests, water power, and other natural resources.

EFFICIENCY.

We pledge a businesslike administration of the Nation's affairs, the abolition of useless offices, bureaus, and commissions; economy in the expenditure of public funds, efficiency in governmental service, and the adoption of the budget system.

The President should have power to veto any single item or items of an appropriation bill.

We condemn, and agree when in power to remedy, that which is known as "pork-barrel" legislation, by which millions of dollars have been appropriated for rivers where there is no commerce, harbors where there are no ships, and public buildings where there is no need.

MARRIAGE AND DIVORCE.

We favor uniform marriage and divorce laws, the extermination of polygamy, and the complete suppression of the traffic in girls and women.

SINGLE PRESIDENTIAL TERM.

We are in favor of a single presidential term of six years.

RULE OF THE PEOPLE.

We favor the initiative, referendum, and recall.

AMERICANISM.

We stand for Americanism. We believe this country was created for a great mission among the nations of the earth. We rejoice in the fact that it has offered asylum to the oppressed of other lands and to those more fortunately situated who yet wished to improve their condition. It is the land of all peoples and belong not to any one; it is the heritage of all. It should come first in the affections of every citizen, and he who loves another land more than this is not fit for citizenship here; but he is a better citizen who, loving this country, has reverence for the land of his fathers and gains from its history and traditions that which inspires him to nobler service to the one in which he lives.

The Federal Government should interest itself in helping the newcomer into that vocation and locality where he shall most quickly become an American. Those fitted by experience and training for agricultural pursuits should be encouraged to develop the millions of acres of rich and idle land.

CONCLUSION.

This is the day of opportunity for the American people. The triumph of neither old political party is essential to our safety or progress. The defeat of either will be no public misfortune. They are one party. By age and wealth, by membership and

traditions, by platforms and the character of their candidates, they are the conservative party of the United States.

The Prohibition Party, as the promoter of every important measure of social justice presented to the American people in the last two generations and as the originator of nearly all such legislation, remains now the only great progressive party.

The patriotic voters who compose the Republican and Democratic Parties can by voting the Prohibition ticket this year elect the issue of national prohibition.

To those of whatever political faith who have the vision of a land redeemed from drink we extend a cordial invitation to join with us in carrying the banner of prohibition to Nation-wide victory.

The following resolution was passed by the Prohibition national convention:

MEDICAL FREEDOM.

We believe in medical freedom which will give the individual the privilege of choosing for himself the treatment he desires. This declaration shall not prejudice the power of the Government to provide against the spread of disease and to insure in all ways deemed necessary the physical safety of the whole people.

---

SAVE AMERICA AND SERVE THE WORLD.

[Address of Daniel A. Poling, of Boston, Mass., temporary chairman of the Prohibition national convention, delivered to the convention at St. Paul, Minn., July 19, 1916.]

We are a political party; our concerns are the concerns of government. Conceived in the minds of men who saw a great truth clearly and who were in courage and statesmanship competent, this organization was providentially born to remove the liquor institution from the civilization of a great people.

The fathers of the Prohibition Party were fundamentally constructive. They sought the destruction of the rum traffic as a means toward an end, the end being the unshackling of the race from bondage chains more galling than any irons that ever held a subjected people in physical slavery.

They moved against a wrong, politically entrenched, that stood in the progress road of society as an insuperable barrier. Their weapons sought the very vitals of an evil thing that burrowed its foul way deep into the souls of the Nation's physical, moral, economic, and political greatness.

WHY A POLITICAL PARTY.

Because they understood the science of government and the philosophy that inheres in a democracy, they became, not a crusade, not a society, not a loosely joined confederation of individuals, but a political party.

By no accident were those men of 1869 brought together. In Good Templary they learned the magnitude of their problem, and in a thousand fiercely contested battles, fighting with the weapons then at hand, they had come to see clearly the essential political nature of that problem. The conclusion that political organizations committed to license and regulation could not be expected to establish prohibition was inevitable; and to those men the conclusion that the only way to accomplish in a government, controlled not by a monarch but by many sovereigns, a change in public policy, a complete reversal of governmental attitude, is by the method provided in the Constitution itself, in the twelfth amendment of that great instrument, was also inevitable.

Conceding, as they did, that the liquor problem was in the last analysis a political question, those brave souls of 47 years ago organized themselves in harmony with the political system of the Republic of which they were responsible citizens.

Thus from a heroic but useless struggle against the saloon, against the wrongs that went crying in the street, men, agreeing together as concerning the end to be accomplished, came together in a permanent political union and set themselves against the evils behind the saloon, the greater wrongs that in silence did their foul work, the political forces that created, protected, and enlarged the traffic itself.

In its first convention the Prohibition Party declared what it has never since failed to declare—that only by capturing the Government, the whole Government, can the power of the liquor institution be finally broken. Not until the three branches of our Government—judicial, legislative, and executive—are brought into harmony and are directed by one governmental voice will national prohibition become a fact.

GOVERNMENT BY POLITICAL PARTIES.

Only after long wilderness wandering have we come to see what the fathers knew and what led them as a beacon in a single day out of their political Egypt, namely, that both the legislative and judicial departments of the Government may provide fully for prohibition, and to worse than no avail. For have we not witnessed in a thousand cities and in a dozen States the law and the courts defied, defied by base public officials, who granted immunity to those who sold and to those who bought, and by the political parties of which these delinquent executives were but the hired minions, the directed hands of the directing bodies, political parties that in their platforms openly announced and from the stump brazenly declared that if elected to power they would nullify the statutes and make anarchy respectable.

Prohibition is nowhere accomplished until a Prohibition administration, a Prohibition executive department, is elected. A Prohibition administration is dependent upon Prohibition votes, and this is a Government of political parties. The party is the poltical instrument of the citizens that comprise it, and under our system there could be no stable government without political parties. Parties exist to make effective the voice of the people, and if the voice of the people is not heard a democracy dies.

There have been times when a particular party has fallen into evil ways, become the tool of unscrupulous hands. In such times men have been misled into condemning the system itself—a system which is fundamental in free government.

That those who recognize the liquor question as a political question will come inevitably to the conclusion that there must be a united political constituency to effect prohibition, we are convinced. And why a political constituency without political action, and how effect political action without a political party? There is no method known to this Republic by which the three branches of government can be harmonized, united in principle and action, other than the party method—call that method by some other or any other name, throw away the branding iron—the fact yet remains that until citizens having a common purpose of public policy get together, stay together, leaving entirely those other citizens who are of another mind as to the public questions at issue, they are as helpless as a hound baying at the moon.

UNITY OF ACTION.

And it is also an incontrovertible fact that just in proportion as the union of citizens of like thought and determination is orderly, correctly consummated, and enduring will it prove effective in accomplishing the program that called it into existence.

Such a union is a political party, and when such a union prevails the government becomes its expression—the law decrees, the courts confirm, and the whole administration executes.

As we survey the work of those patriots who nearly five decades ago in Farwell Hall declared:

"Inasmuch as the existing political parties either oppose or ignore this great, paramount question and absolutely refuse to do anything toward the suppression of the rum traffic * * * we are driven by an imperative sense of duty to sever our connection with these political parties and organize ourselves into the national Prohibition Party."

As we survey their work we are exalted. In them, as well as in their labors, we have a goodly heritage. In a time when to leave an established political organization was political treason, and when the political traitor was not distinguished from the man who insulted the flag, it required the finest courage to lift this new standard in the land.

To-day we are looking down the path wise men and brave opened—the path they were the first to tread—and our gaze is not obstructed, for there are no hazards and there are no turnings in the way; its course lies as straight as the pole line to the star.

SACRIFICE AND TOIL.

All words of tribute that in this hour of high circumstance we bring are small words, for their deeds were great and they were greatly good. When the last rum flag has been buried in the ruins of John Barleycorn's last battlement to crumble men will write a book of many pages, and there will be pages for all who have fought. The heartaches will be all forgotten and the differences will be unrecalled. Our children will read only of the long marches against the common foe, the night attacks, the charges at dawn, the reverses and the onward press that could not be denied—and, please God, they shall read of final triumph.

And we who stand here to-day are glad to believe that our sons and daughters will remember and be glad that we fought, too.

But, sir, more pages in that book, which will be a book of men's and God's remembrances, than are devoted to us or to all others will be given over to chronicling the consecrated activities, the sacrificial labors of those men and women of unfaltering faith and iron will, who lifted the flag of prohibition in the night when no star of hope shone anywhere, and through jackal howls of hate groped their way toward the dawn they could but faintly see.

There are gray-haired, bowed-shouldered men and women before me who have faced the brunt and met the shock of the revilement I have but dimly felt. To you, the fathers who yet abide—to you in memory of these brave souls gone to their coronation, we say, hail, hail, thrice hail!

But the breed has not been exhausted, and men and women live now who walk worthily the sacrificial road the fathers trod. In obscure places many labor, while others put into jeopardy high positions and the esteem of distinguished friends, but whether they go forward in seclusion or in prominence they are soldiers of a common cause, comrades of one vast brotherhood.

We can not repay the editors who in these latter days, when so many voices called, have held before us all the open book of sound political wisdom, who have capitalized poverty to make us rich in knowledge and in the faith that comes with understanding. And I would fail here if my voice did not speak the name of the quiet man, the far-eyed seer, the prophet of greater things, the strategist and general, who more than any other has made a political desert blossom as the rose.

Ladies and gentlemen of the convention, the book of this reform will carry, in letters large, the name of Virgil G. Hinshaw.

THE PROHIBITION PARTY OMNIPOTENT.

During the life of the Prohibition Party, 21 national political organizations have come into existence and died. All of them had the support of worthy men. None of them championed prohibition, and some of them were frankly hostile to prohibition. While these parties have come and gone this party has remained, and slowly but surely it has grown in power and prestige. Without triumphs to cheer its adherents, and with no spoils of victory to divide, it has retained its original vitality and enlarged its sphere of influence. It has abandoned or altered no principle, and the philosophy that nourished its youth is the strong food of its maturity, which is now so full of promise.

The tumult and the shouting dies,
The captains and the kings depart—

but truth is eternal and some values never change. Out of a conviction for which 47 years of history is a sufficient warrant, we declare that the Prohibition Party is omnipotent until its work is done, until national prohibition has become the fixed policy of the Government.

We make no argument to-day for the principle of prohibition, for we are met, not to prove prohibition, but to plan for its triumph. The Prohibition Party will continue to lend itself with enthusiasm to the temperance educational campaign of the Nation. Its voice will not fail to speak out with the voices of its allies to arouse the people to the waste of alcohol; to the iniquitous thievery of the saloon; the moral blight of the dramshop. The campaign of education must be strengthened until we are prepared to say that the last man of every race and tongue found under the Stars and Stripes has heard the truth.

We must adapt the truth that we tell to the needs and prejudices of all classes, and we must make the truth attractive.

But to-day and here we deal with the policies of a Government, the policies of a Government in partnership with the liquor traffic, a Government in partnership with a traffic that science, economics, good citizenship, and religion unite to denounce as evil and only evil. The message of this convention must be a message of constructive statesmanship with which the servants of our will, the standard bearers of our party, shall go forth to unite in one political unit all citizens who are one in the high purpose that the partnership between the United States and the "United Societies" shall be dissolved.

TWO-THIRDS OF PROGRAM ACCEPTED.

Already we have seen all men who desire the solution of the liquor problem accept two-thirds of the program of this political party. All agree that the prohibition of the liquor traffic is the only solution for the liquor problem. All agree that there can be no ultimate prohibition anywhere until national prohibition has become the policy of the Government.

And even now the multitudes are turning to say with us there can be no national prohibition without a Prohibition Party supreme in Washington.

Long and honestly we have tried other programs that promised much. And time, which waits on truth, will not be uncharitable, for always the race has learned wisdom by practicing error and has snatched victory out of defeat. But we have suffered many defeats, that even our glorious triumphs do not obliterate, and we have made many mistakes Often we have clamored for the great crowding back the greater.

PARTY FIDELITY AGAINST PRINCIPLE.

But we have reached now the time when the developments of political expediency clearly demonstrate what sound principle has long since established.

There are unaccounted victims of party regularity sleeping in quiet political cemeteries throughout this Union, and for them there is no Memorial Day—they are forgotten. They dared champion an issue that their party associates, their party organization found no favor in; they lived their little day and passed. And let it not be forgotten that those who stayed loyally with these to their latest breath went promptly then into the camp of the political assassins. Indeed, they themselves being "dead" were later found ballasting the very vehicles of their destruction.

But to-day we are about to witness in the United States the conflict of loyalty to an unattached principle with party loyalty, and already the first gauge of battle has been thrown down.

Recently the press of the country carried the announcement of the congressional plans of the Democratic Party for 1916. Indiana, always regarded as a doubtful State, was listed as one of the centers of conflict. The statement appeared that a tremendous effort would be made to elect two Democratic United States Senators and a full delegation to the House. Among the names of the prominent Democratic statesmen who will campaign in Indiana this fall appeared those of four Congressmen and one United States Senator, who have with courage championed the Hobson amendment. The United States Senator named is the leader of the temperance forces in the Senate—MORRIS SHEPPARD, of Texas. And all these men are assigned to the fight to elect THOMAS TAGGART, of French Lick Springs, and his associates.

Great organizations of temperance men and women are openly committed against the election of Mr. TAGGART; are sworn to battle for his defeat and for the destruction of the political machine he manipulates. Perhaps Mr. SHEPPARD and these other gentlemen will eventually be assigned to another and a less compromising field; perhaps they will publicly refuse to enter Indiana.

But why should they refuse? Are they not Democrats? Surely, you say; but they are Americans first. Granted; and as Americans who are also Democrats are they not bound to feel that what this country needs, and needs supremely, is the continuation of the Democratic Party in power? And how can the Democratic Party be continued in power unless it elects its candidates—unless it elects a clear majority of all candidates? And can the Democratic Party in this or in any other election afford to assist in the defeat of any one of its duly selected representatives for the United States Senate, or can it afford to remain silent when such a candidate fights for his political life?

Prohibition is not a Democratic gage. THOMAS TAGGART is a Democrat, and if he is defeated the Democratic Party is defeated; and the Democrat who raises no voice of protest while such a slaughter takes place becomes in so far a partner to a high political crime. I would hang my head in shame, as a man who has greatly admired the gentleman from Texas, to see him enter the arena of public debate in the interest of Mr. TAGGART, but I would be bound to grant Mr. SHEPPARD the absolute logic of his position. He could say, "One man is an incident; the honor of the Republic at home and abroad is involved. I believe the defeat of my political party would be a vast disaster. This man is but a pawn on the chessboard of state; history will forget. Washington tolerated traitors when by doing so he could advance the cause to which he was giving his all. History will forget this man, but it will not forget me if because of my lack of support or because of my opposition the administration fails."

Ladies and gentlemen of the convention, 10,000,000 citizens of this Republic whose votes are ours by every claim of high principle may not have seen the Indiana picture as yet. Yet, by the blood of the innocent for 10,000 years dripping from the fangs of this liquor Moloch, we pledge high heaven and the State that before November 7, 1916, they shall see it.

The Indiana picture will be copied before two years have passed in every State of the Union where the liquor traffic is a controverted issue. Men who desire to be politically honest, who have political convictions that are not purchasable by either gold or silence, will find themselves compelled to fight, as some are already fighting, for the committal of the parties to prohibition. In the meantime, comrades of the convention, our golden dawn is breaking, the clock of our opportunity strikes.

THE "LIBERAL PARTY OF THE UNITED STATES."

And we are ready. Not only are we secure in being established upon a rock of principle immovable and eternal, not only do we have the fervor of a moral idea unequaled in 50 years, not only are we in possession of the only issue quickly defined and easily presented to the people—these are ours, and all of these. But we have more. We are the only national progressive political organization constituted and promoted in harmony with the governmental plan of the Nation to-day existing in the United States.

Nor are we progressive because of any recent declaration or actions. Our progressive record is one long established. And

it could not have been otherwise, championing as we have for nearly half a century the cause of human liberty. The Prohibition Party has taken an advanced stand on every important reform of the past two generations. Some of these more important issues have been reluctantly adopted by the older parties, but others are still denied. And of all the political parties we were the first to declare for woman suffrage, for civil-service reform, for direct elections, for 2-cent letter postage, for international arbitration, against lotteries and gambling, for uniform marriage and divorce laws, for a nonpartisan tariff commission, for an income tax, against child labor, for the conservation of natural resources, against the white-slave traffic, and for national prohibition.

The record stands, and history will write it in letters large across the sky of the advancing social order.

And, ladies and gentlemen of the convention, we are more, vastly more, than this recital declares. As you speak today, so speaks to-morrow, by whatever name known, the Liberal Party of the United States. We cradle here the child of freedom's highest hopes.

To another the opportunity that is now ours came 39 days ago; it knocked, but though a few heard there were none to open. It turned away, and behind it was the empty room of a departed glory. To-day opportunity knocks again, and the doors are open wide, the child that it bears finds raiment and a welcome, and by the cradle stand the tried soldiers of truth that shall not be defied.

VICTORIES NOW BECKON.

We have in this hour encouragement and instruction from victories already achieved. First came legislative triumphs in many States, and notably in the State that entertains this epoch-making convention. Party Prohibitionists were elected to the house and then to the senate. Soon these successes were followed by startling gubernatorial campaigns and by campaigns that endangered old party strongholds in the great lawmaking body of the Nation. And finally, two years ago, surmounting difficulties that at all times seemed beyond our financial strength and political wisdom, CHARLES RANDALL was elected to Congress from California.

Coincident with these larger activities of the past four years, a concentration program was evolved, and a campaign fund of $250,000 was raised, the latter an accomplishment which, in view of all the circumstances surrounding it, stands without precedent in the history of this or any other reform ever attempted by political action.

To-day, sobered by a responsibility that no man of us may fully understand, though every man of us is conscious of it, we hear the tread of many feet, the gathering of the new recruits, and in the sky we see a banner, first lifted by the Christian Endeavorers of the continent, but to which all the fighting divisions of the temperance army have long since repaired, and on it we read, "A Saloonless Nation by 1920." Comrades of the convention, it is sunrise, and the rays of lifting light have faded that slogan away, and in its stead I read, "A Saloonless Nation Now!" And, by the grace of God and the votes of the people, it shall be done.

WE HAVE DISCOVERED WAR.

The Prohibition Party faces a changing world. Pessimism cries, "A dying world," but out of this death will come life. A new world is in progress of construction. What do we say, then, in an hour when America finds herself, if the vast forces set in motion in Europe are taken into consideration—finds herself the old and plodding, the unawakened, while the nations across the Atlantic are experiencing a new birth.

Let us take account of stock. Let us chart our surroundings, that we may speak, and, speaking, convince. God is teaching lessons to the children of men, lessons reserved to no people or tongue, lessons that many nations are copying in blood, and that we must arouse ourselves to learn if we would avoid their chastening.

We have discovered war. We thought him heroic; we know him now as thrusting boys against bayonets; we see him riding forth, not on a gaily caparisoned steed but on the back of womanhood; we thought him honorable; we find him snatching the savings of the poor, laying a mortgage on the possessions of the child still in the womb and tearing up treaties. We thought him chivalrous; we find him fouling the bed of virtue and prostituting motherhood to make young for his cannon. He has lost his clean coat in the trenches of Flanders, the honors we pinned upon his breast are buried beneath the ruins of Belgium, and he stands naked to-day on the shores of the lakes of East Prussia and on the plains of Poland. We painted him a connoisseur of art and as a respecter of the works of genius, but the smoke of Rheims and the dust of Louvain have ruined the picture. He is not English; he is not French; he is not German; he is not Russian—he is savage. He is not Christian, for Christ is not a barbarian. He is abysmal hate, a cataclysmic horror.

We have no heart to look upon the picture. Fields manured with young flesh, fences of whitening skulls from the Channel to Switzerland, from the Baltic Sea to Roumania, across the Alps and down the Dardanelles to Africa and China. And there are red bubbles on every ocean. And these were the flower of the world.

We take no account here of anguished breasts and the fatherless. We do not figure the moral toll of war. We say no word of those who pay the greater price of war, but God counts the toll, and He will not forget. His law of compensation is inexorable.

It is the strong and fit who are dying, the impetuous and heroic; the dreamers follow battle flags, the well-bodied and noble-souled. When cowards go to war, they go hanging back, and are not the first to die.

When nations burn out their best in the furnace of Moloch, the fires of civilization burn slowly, because the fuel is inferior. You can not eat your cake and keep it. You can not slay your young men and have them alive. War destroys the bravest we breed.

But in the human mortgage war places upon its unborn generations the world counts its greater losses. War limits the future rather than checks the present. Let these worshipers of Mars who point with satisfaction to the stupendous struggles of nature which do seem to overcome the handicap of war's residue of inferiors and weaklings remember that it is not so much what the race is as what it might have been. I see not the young men slain. I see the millions of potential fathers destroyed. I hear not the wails of the dying. I hear the cries of the never-to-be-born. I weep for those who were and are not, but mourn for those who might have been and who never can be.

Within the loins of those who fall, these millions of the strong,
The singers and the healers die, the prophets and the seers,
The architects of larger good, saviors of coming years,
Upon the ghastly battle plain, unnamed, without a prayer,
The sires of greater freedoms lie, and wombs that shall not bear.
Yes, this is war; and these no mortal eye will ever see;
These are the murdered builders of the world that was to be.

OUR GREATER FOES WITHIN.

Do you say that we run the risk of national destruction by remaining as we are, "hopelessly unprepared for war"? To make America an armed camp is to invite the disaster that inevitably descends upon those countries that have maintained themselves with drawn swords.

The foes of this Republic are not without; they are within. We must set our own house in order before we can hope to offer to others the assistance they will soon sorely need. This country will not die if war fleets must bring her destruction from lands beyond the sea. Let no mad obsession rob us of this confidence. Lincoln said, "If destruction ever comes we ourselves must be its author and finisher."

We will fall, if we fall, by the weakening of our national trunk through dry rot from within, by the drawing away of the rich elements that nourished the first tiny rootlets of our present greatness, and out of which were drawn the strength and uniqueness of our Government. There has never been a time when militarism had anything in common with our national ideals. Yet at no point of our existence as a Nation have we failed to successfully cope with the situations thrust upon us.

Of the present conflict I need not speak. When one nation prepares, her neighbors quickly follow suit, and the balance is maintained at the expense of international confidence. The United States, with a standing Army of a million men, which she could more easily maintain than any other country in the world, and with a Navy equal to that of Great Britain, would be frankly regarded as a menace by South America and Canada. The virus of militarism acts quickly. The Western Hemisphere would soon become as war burdened and as war mad as Europe. Eventually, prepared nations devour themselves when they are not devoured.

At the beginning of the new social order for the world God forbid that a coward fear should rob us of our birthright message of fundamental democracy, which is brotherhood.

But war is; and who among us is qualified to say that after the present conflict ceases war will not come again? We stand confronted by the fact of war against which a propaganda for peace finds itself compelled to search for new terms; compelled, if it is to be forthcoming, to bravely readjust itself. And let no hysterical fever rob us of our reason and persuade us to cease seeking after peace; the quest must become more serious, more

vigorous; it must be timed to catch the enthusiasms of the young, and above all it must be constructive.

The whole world is against war to-day, but where is the sufficient statesmanship to show those who grope in darkness with great lamentations, the way to peace?

MUST SHOW WAY TO PEACE.

We must add our judgment, our poor wisdom and our lives, if necessary, to the solution of a problem as old as the human race and as intricate as human nature itself. For the world listens to-day to hear the voice of America. One after another the great political parties have sounded their trumpets and the air is full of discordant noises. Who, then, will vocalize the spirit of the great Republic? Humanity, civilization, with riddled body, battered head, and broken heart waits for the one clear note that shall give the direction in this awful night. For us to fail is to embrace the greater disaster.

It has been with ill-becoming zeal that certain manufacturers and certain other professional preparedness agitators have ridiculed the men and women who, with unselfishness and a courage in the face of manifold misrepresentations that is sublime, have set themselves against the wild rush toward an unlimited war program. These discriminating leaders of public thought stand for preparedness for peace and against the preparedness for war that makes war inevitable. Their faithful speaking and clear visioning will not be shaken by a sudden storm. In the end the clear thinker will take the place of the loud shouter.

The recent words of Jane Addams, spoken to friends when reference was made to the venomous abuse poured upon her because of her peace activities, illuminate the vast distance in motive between the war trust and those citizens who are unselfishly struggling for an abiding peace. She said, "You do not care much for praise or blame except as it helps or hinders the cause." And history will write her name and the name of the man who piloted the *Oscar VI* in letters larger than the royal crests that led the nations into the war the evils of which they toil to assuage.

NOT PEACE AT ANY PRICE.

We do not seek peace at any price, for we are Americans, and we can never forget that those who love liberty will always be ready to throw their bodies into boiling caldrons of oppression to possess it, and that for freedom they will bear a thousand tortures. As to where and how life or its sacrifice will count for the most, every man must decide for himself; conscience must be the final arbiter until the Nation acts, and then personal choice is bound up with the decision of the State; the individual loses his identity in society.

There are some things for which we would all die. We do not proclaim here a gospel of nonresistance. Absolutely no. Some things must be resisted unto death. There are some things worse than war. Slavery was worse than war.

Injustice may be worse than war. Liberty is always worth fighting for, and freedom must never be sold for peace. I have no heart for the abstract theory Tolstoi so profoundly believed. I would fight for my child, and my religion binds me thereby to fight for yours, to fight with my bare hands to the bones of their fingers if no weapon is at hand. In her need I would fight for my country if I am not a coward, for America has a message for the world, and she must be preserved to deliver it. If the institutions her history has evolved are worth perpetuating they dare not be surrendered while one free man remains alive to put his body between them and their foes.

But militarism protects no institution. It endangers them all, and with us it violates the covenants that have brought us with distinction to this hour. And it is this preparedness advocated by selfish financial interests and those who have been deceived by them that we move against. We declare for preparedness for peace; we announce a constructive peace program to the Nation.

Agreeing that for some high considerations we would not hold our lives dear, we must so plan as to make our consecration not only unselfish but effective. There is consistency in the argument for absolute disarmament, however you may deny its reason, but there is neither consistency nor reason in sending soldiers into battle with ancient rifles and wet powder, in maintaining an antequated military equipment. There is room for argument—and this is the high time for it—against the ultra-preparedness that would inevitably stand as a threat against the nations of the world with which we are at peace, against the preparedness advocated by the munition manufacturers of the country and those honest gentlemen who have been deceived by the munition manufacturers. But there can be no sound argument offered against making the preparation that the sober judgment of a great democracy now decides to be necessary and adequate to protect its shores and to hold secure its position in the respect and in the councils of all the world. There can be no sound argument offered against making such preparations absolutely, effectively, and complete. We stand, then, facing the horror of the present war and surrounded by priceless institutions that the old world after its travail will supplicate us for, institutions for which others lived and died, and for which we are now responsible—we stand, then, for peace, the peace of righteousness, the peace of justice, the peace of brotherhood.

PREPARATION FOR PEACE.

And the preparation that we pledge our lives and sacred honor to quickly give this Nation if elected to power is the preparation for peace that, as distinguished from the preparation for war, which the dominant parties of the Republic jointly advocate, as different as right differs from wrong.

And, lest we fall into the easy generalities of our political opponents, let us specifically state what we as a political party conceive to be preparation for peace. Is it not first of all a clear differentiation of true Americanism from the spirit of the blustering bully who goes about armed to the teeth, shouting a shibboleth, and with a chip on his shoulder? He serves the world who saves America, and he is no friend of this Nation who fastens an armament program upon her that, aside from the fact that it levies a far too heavy burden upon the poor, is in the very nature of its equipment—far-cruising battle fleets designed for distant seas—an invitation for other nations to join us in a mad race that leads only to another Belgium.

THE MONROE DOCTRINE.

Do you say that unless such fleets are built the Monroe doctrine must be abandoned? Do not forget that the greatest triumph of the Monroe doctrine was achieved in the Venezuela case, when our Navy was so small that it could not have hoped to land a single man on the coast of South America and when our Army was only a fraction of what it is to-day. We stand unequivocally for the Monroe doctrine and our strength as champions of this instrument, the perpetuity of which continues to be vital to unhampered liberty in the Western Hemisphere, north of the Panama Canal as well as south, has been in the past and will be in the future moral and financial.

No nation has dared to set a robber foot on any strip of land of North or South America since this country emerged as a world power, because no nation has dared incur the industrial and financial as well as the political enmity of the United States. When we argue for a naval and military preparedness adequate to assume the violent aggressive against any foreign power and to protect as well our own far-flung coast lines we argue for a program that in the light of our past expenditures will take every cent of the revenues of this Government and leave us still hopelessly unprepared.

Let our preparation be a preparation against a possible invasion of our own country, and then from our stronghold of peace let us say to every potential international bandit: "Strike at your peril; cast covetous eyes upon the territorial possessions of any neighbor; launch any attack on any country; turn a single prow on conquest bent where the fleet of Columbus parted the waves, and America, free and democratic America, fabulously wealthy America—America, whose peaceful purpose to all lands, great and small, is conclusively proved by her maintenance of a military establishment, the nature and extent of which is the crowning evidence of her purpose—this America will be your abiding and relentless foe. To you her ports will be closed and from her to you no produce-laden ships will travel. Her face will be turned against you in the markets and in the councils of the world. The lids of her coffers will close down upon your financial neck and strangle you into bankruptcy."

Do you say that we speak the talk of a madman? The financial position of the United States to-day is such that when this war closes no nation will be able to finance a new conflict without American gold. We are not dreamers. We announce here a program vastly more reasonable than any program calling for a battle fleet capable of taking the aggressive against the whole world—and this latter is the program of certain gentlemen whose stocks have jumped from 40 to 600 since the present war began and who recently declared a dividend of 200 per cent.

We are for peace and for the preparedness on land and sea that will to the limit of human wisdom and ability insure it to us, and through us secure peace for others and for all.

A WORLD COURT WITH POWER.

What, then, is the first step?

The very first step in America's preparedness for world peace should be an announcement to the nations by joint resolution of Congress of our purposes. This announcement should declare for a permanent world court to which all differences between the

nations should be submitted—a world court with power. The announcement should further declare our determination to support and promote a practical plan for disarmament, our readiness at any time to join with other nations in scrapping battle fleets, in disbanding armies, and our willingness to enter a compact to maintain an international police force on land and sea.

Such a resolution, coming now from the richest nation of the world, from the country admittedly more able than any other to establish and maintain an overwhelming war equipment, would live in history as a transcendent pronouncement of national unselfishness and as an instrument of supreme statesmanship.

Do you ask for a clear statement of how such a world court would function? By an international police force, as we have already stated—an international police force operating on land and sea.

COMMERCIAL RECIPROCITY.

But there is another weapon, and a weapon most powerful, ready for the hand of such a court. The conviction is gaining in the world that the flourishing bay tree of international conflict springs from the seed of jealousy that has its rich soil in international trade rivalries. Even now trade compacts are being negotiated between certain of the warring nations that, if consummated, will so discriminate against other nations that any peace that may be soon brought about in Europe will be little more than a truce—a truce ending in a renewal of the awful conflict. The United States should declare for more and vigorously champion more than freedom of the seas. The time has come—and it is a high time—when the United States should evolve a definite program for international reciprocity.

It is not by accident that the Prohibition Party to-day finds itself confronted by the opportunity that the world of trade presents in a time when all trade relations are either broken or in process of revolutionary change. We were the first to declare for what both Republican and Democratic Parties now indorse—a nonpartisan tariff commission—and this year it remains for us to present international reciprocity as a definite policy of government.

That reciprocity is not a faddist theory is evidenced by the fact that its first and greatest champion was Blaine, and its latest advocate was William McKinley himself, who in his last speech, which was interrupted by the assassin's bullet, declared:

> Our capacity to produce has developed so enormously and our products have so multiplied that the problem of more markets requires our urgent and immediate attention. Only a broad and enlightened policy will keep what we have. No other policy will get more. In these times of marvelous business energy and gain we ought to be looking to the future, strengthening the weak places in our industrial and commercial systems, that we may be ready for any storm or strain.
>
> By sensible trade arrangements which will not interrupt our home production we shall extend the outlet for our increasing surplus. A system which provides a mutual exchange of commodities is manifestly essential to the continued and healthful growth of our export trade. We must not repose in fancied security that we can forever sell everything and buy little or nothing. If such a thing were possible, it would not be best for us or for those with whom we deal. We should take from our customers such of their products as we can use without harm to our industries and labor.

Reciprocity is the natural outgrowth of our wonderful industrial development under the domestic policy now firmly established. What we produce beyond our domestic consumption must have a vent abroad. The excess must be relieved through a foreign outlet, and we should sell everywhere we can and buy wherever the buying will enlarge our sales and productions, and thereby make a great demand for home labor.

The period of exclusiveness is past. The expansion of our trade and commerce is the pressing problem.

If those words were true then, they are doubly true now. The system under which we operate to-day is not only archaic—it is wrong. In it is a most fruitful source of international controversy. In reciprocity we will find not only that absolutely essential readjustment of trade conditions but the economic basis for abiding world peace as well.

For times such as these the tariff declaration of the temporary chairman of the Republican convention and of the platforms of the Democratic and Republican Parties are altogether inadequate. Twenty years ago they would have aroused enthusiasm. To-day they are voices from the tomb.

WASTED MILLIONS.

The question is not, then, Shall we prepare for peace, but there is a question in its proportions vast and at times terrifying. It is this question, How shall we prepare, and who shall superintend the construction? Before letting this contract we must examine the records of the contractors submitting bids. And in examining records let us remember that the Republican and Democratic contractors have already expended in the last 30 years more for preparedness, with one exception, than has any other nation of the world.

At an outlay for war leading all nations in the world, save England alone, or for $250,000,000 a year, we have made multimillionaires, purchased disgrace, and accomplished an Army that we are told the world laughs at, a Navy that ranks fourth but is outclassed in speed and in gun range by five foreign powers.

Let the stewards of the Republic for these past 30 years make their accounting. Out of our $250,000,000 present annual expenditure for the Army and Navy at least $50,000,000 is excessive gain realized by the war manufacturers in addition to what is allowed as a very liberal profit.

What have we done with the more than $2,000,000,000 spent for war preparation since 1887—$2,000,000,000 taken largely from the common man, realized by customs duties on the things we eat and use and wear?

Perhaps some specific instances will suggest where the $2,000,000,000 has gone and why America stands to-day so poorly equipped, if the extreme preparedness orators are correct.

The War Department has paid the trust $17.50 for 3.8-inch common shrapnel, which it manufactures at Frankfort, Ky., for $7.94 at a saving of considerably more than 50 per cent. In the Government arsenal a 31-second combination fuse is manufactured for $2.92, for which the private concerns have been paid $7. On a contract given to the Frankfort Arsenal for ammunition valued at $1,908,640 the Government saved $979,840, or nearly $1,000,000 on a $2,000,000 order.

What has the administration done with officers who, jealously guarding the poor man's money, have paid $115,075 for supplies that could have been obtained for $58,246, as was demonstrated in a recent contract awarded a new firm for torpedo flasks? What have the administrations in power done with these men? Promoted them!

The Government has paid exorbitant prices for a gun carriage, invented by an Army officer while in the employ of the Government, and on which he received a royalty of from $1 to $23 on each carriage accepted. This particular Army officer was still a partner to the above contract when he was passed over 27 officers and three grades and made Chief of Ordnance. Thus we witnessed the spectacle of a buying agent of the Government realizing personally on each gun carriage of a certain pattern purchased, and at the same time profiting on the sale of his gun carriage to foreign powers, for the carriage was offered and sold in the open market of the world—a disappearing gun carriage, by the way, that experts now state loses 50 per cent of its range efficiency by its recoil.

No, we have not been skimp in our expenditures for the Army and Navy. In a year when the total revenues of the country, not including postal receipts, amounted, under a Republican administration, to $702,000,000, 76.88 per cent of the total spent to defray the entire expenses of the Government was invested, against the prospect of war, for munitions and equipment. In 1914, before the present war broke out, Germany was spending 55 per cent of the revenues on account of war; Japan, 45 per cent; Great Britain, 36 per cent; and France, 35 per cent. What shall we do, then, with the political parties that have wasted our money and made us only the jest of the world?

The four firms which enjoy a practical monopoly of the large Army and Navy contracts have secured orders amounting to $200,000,000 since 1887, and have realized in profits from 20 per cent to 60 per cent more than the prices at which their supplies could have been manufactured in governmental arsenals and navy yards.

THE MUNITIONS TRUST.

To the Powder Trust, that supplied under contract to a German firm exact data as to the amount of powder we had on hand from time to time, the Government has paid more than $25,000,000 since 1905 at from 53 to 80 cents per pound. And we were recently informed by high authority that there was not enough powder on hand to keep our forces engaged for 24 hours. Government plants are manufacturing the same powder at 39 cents per pound.

To-day we secure for every dollar spent for battleships and aeroplanes, munitions, and all war equipments about 65 per cent of fighting strength, and under such undesirable working conditions for labor that the American Federation of Labor in 1914 indorsed the Government manufacture of war materials.

While the abnormal war conditions have resulted in abnormal wage conditions in ordinary times, private munitions firms have been among the most bitter enemies of organized labor. The United States Bureau of Labor made a special inquiry into the munition class of industries in 1910, and in the Bethlehem Steel Co. especially found employees shamefully mistreated and greatly underpaid; 46 out of every 100 men were receiving less than $2 a day and 51 out of every 100 men were working 12

hours a day. The Bethlehem Steel Co. was at the time, and has been ever since, receiving contracts from the Government running into millions of dollars.

Whether men favor disarmament or vastly increased armament, in a nation-wide movement to take private profits out of war by manufacturing an increasing proportion of all war equipment in Government owned or controlled institutions all citizens earnestly desirous of patriotically serving the country may unite.

Let us not become possessed with the fear that unless we deal with extreme courtesy with our powder and munitions patriots we will be left without the supplies they alone at the present time are prepared to furnish. Let us remember that in the Spanish-American War, when every true American was bound to be unselfishly offering or willing to offer himself for the protection of the Nation and the furtherance of her policies and principles at home and abroad, the Armor Plate Trust like a highway robber, blocked the road our Armies trod, mined the seas our Navies plowed, with the cry, "Money, or your life! Give us a hundred dollars more a ton or we quit."

NO PRIVATE PROFIT IN WAR.

The Prohibition Party serves notice now that if in power in such a crisis private munitions plants will be immediately taken over, continued under Government control, with a just wage for labor, a just regard for the rights of all stockholders, and a fair return to them. And we here solemnly pledge, if the temporary chairman has read the minds of his comrades, if he knows their determination, to move with all possible rapidity to take private profits out of war. That it is to the interest of the few to leave the profits in war while it is to the imperative interest of all men to remove it, no man can honestly deny. That it is a thing monstrous beyond all words, whatever the high considerations that lead a nation into a conflict, that some men should tear themselves out of woman's arms, turn their backs upon the faces of their children, and sacrifice their lives in bloody trenches or lie disemboweled on shell-plowed fields, while other men of the same breed and time remain at home to become immensely rich, to live on in more voluptuous ease—no man whose fingers are not soiled with the red of sticky coin will deny.

All citizens should know what is conclusively established, that private manufacturers of war's necessities have no patriotism; that they are international pirates.

The present Secretary of War said recently:

> Even now the improvements in armor and designs worked out by the Navy Department have been embodied in a warship finished by the Bethlehem Steel Co. for another nation.

In this connection it is interesting to note that Japan has erected its own armor plant and surrounded it with an unbreakable cordon of secrecy.

FOR REVENUE ONLY.

Recently a Member of the present Congress charged unchallenged that when the War with Spain was imminent the three concerns which have a monopoly on the armor plate in this country issued an ultimatum to their Government stating that they would not manufacture a single piece of armor plate unless they were paid $100 a ton more than the price fixed by Congress. But the patriotism of these concerns did not interfere with their selling armor plate for which they asked this country $616 a ton to Russia for $249 a ton.

In 1897 the Du Pont Powder Co., another benign monopolist, entered into a world agreement which reads:

> Whenever the American factories receive an inquiry from any Government other than their own, either directly or indirectly, they are to communicate with the European factories through the chairman appointed, as hereinafter set forth, and by that means to ascertain the price at which the European factories are quoting or have fixed, and they shall be bound not to quote or sell at any lower figure than the price at which the European factories are quoting or have fixed. Should the European factories receive an inquiry from the Government of the United States of North America, or decide to quote for delivery for that Government, either directly or indirectly, they shall first in like manner ascertain the price quoted or fixed by the American factories, and shall be bound not to quote or sell below that figure.
>
> The American factories are to abstain from manufacturing, selling, or quoting, directly or indirectly, in or for consumption in any of the European territory, and the Europeans are to abstain in like manner from manufacturing, selling, or quoting, directly or indirectly, in or for consumption in any of the countries of the American territory. With regard to the syndicated territory, neither party is to erect works there, except by mutual understanding, and the trade there is to be carried on for joint account in the manner hereinafter defined.

The Democrats have no monopoly on the principle "For revenue only"; the armor plate and powder plants have applied it rigorously to their patriotism.

There is no record of a member of the du Pont family having been tried for treason, but within 49 days I have heard votes cast for a member of this same family for the Republican presidential nomination.

Charles M. Schwab testified, when questioned concerning the plugging of blowholes in defective armor plates, that he "believed it was done," and Superintendent Corey testified directly, "Mr. Schwab knew about it in a general way." And the Government continues, "the servants of the Carnegie company, whether with or without the knowledge of the company, to increase its gains, deliberately continued for many months to commit acts whose natural and probable consequences would be the sacrifice of the lives of our seamen in time of war and with them, perhaps, the dearest interests of the Nation."

Philander C. Knox, general counsel for the Carnegie Steeel Co., who later became Attorney General of the United States and Secretary of State under a Republican administration, and who 39 days ago received votes for the Republican presidential nomination, vigorously protested against the assessment of any damages. And he was a most successful advocate, for the damages finally collected amounted to only $140,000.

A RECORD OF SHAME.

In 1882 the cost of our Navy was $14,803,559; in 1914, $140,718,434, an increase of $125,814,875, accomplished by five Republican and three Democratic administrations. And what do we have? In the classical words of the big-navy men who know, because they disbursed the funds—"scrap."

And what have we accomplished? Thank God, the story is not altogether infamous. Not every manufacturer was as false as those who sold rotten armor plate to their country. This history of these years has its story of the *Oregon*, and of Santiago, and its pages shine in the glory of Dewey at Manila Bay. The doughty tars who sail the seas for the honor of Columbia are the welded fighting metal of all races, and these, with their brothers of the land as fighting men, are unsurpassed in all the world.

God pity us, then, for the unnecessary risks we have subjected them to, that money mad and unscrupulous capitalists might snatch a larger profit! Listen to the record that shames the Nation: In the nine years preceding 1912, 147 men were killed and 102 maimed for life as the result of explosions on war vessels, due to faulty construction—more than were killed in action during the Spanish War—and a record that leads the world. The story of the submarine tragedy in Hawaii is too recent for any of us to have forgotten.

WORSE THAN THE HYPHEN.

Can we regard seriously the peace declaration of political parties that are absolutely dominated by the big-business interests that connive with each other and with like interests in foreign lands to enlarge their store by placing yet further burdens on the poor, who grew rich by trafficking in rotten armor while brave men die amidst bursting flues that are weakened by the hand of greed? What shall we say to those who have no voice to use against these blackest traitors to the flag, the hyphenate who openly prates about the country of his nativity, and the spy owing allegiance to a foreign ruler, who secretly poisons our social springs and seeks to make us vassals of a foreign court, must be driven to their own shores.

But they are Patrick Henry and Paul Revere when compared with the creatures of greed who speak without an accent their words of treachery; who, to make their infamy more lucrative and complete, organize to capture the very institutions that all political conventions pledged our sons to die for.

Temporary Chairman HARDING said, amid roars of appreciative laughter in the Coliseum, "A Federal nitrate plant to supply powder to the patriots and pap to the paternalists, and Federal fertilizer to farmers in competition with private enterprise." The political party that voices such a sentiment to-day in the light of known truth concerning private monopolies that have exploited the Nation's honor and risked her very life for gold, is not competent to rule, is not fit to live.

WHO PAYS?

And how does the Navy League, chief promoter of ultrapreparedness in the United States, plan to raise the proposed $500,000,000 for battleship construction? These gentlemen who, with palpitating hearts, view with unmeasured alarm our defenseless condition, a condition which they have labored long and under various administrations, for large financial returns, successfully to accomplish, would finance the cost of naval preparations by taxes on sugar, gasoline, and by other duties, taxes which the common man would pay; they would, of course, continue present indirect taxes which yield $620,000,000 a year. In other words, since they build the ships, they quite generously concede to the farmer and worker a share in the labor of national protection by allowing the workingmen to pay the cost of construction.

The scheme is mean and worthy of its promoters. Let the 2 per cent of the people who own 60 per cent of our national

wealth, rather than 65 per cent of the people who own only 5 per cent of our national wealth, pay the bill, for the 2 per cent enjoy the only gains of war. The 2 per cent are those who hold the war munitions stocks that in one year have increased in value nearly $900,000,000. Shall we tax the wage earner for a $500,000,000 bond issue for battleships while we refuse to levy a single cent on swollen inheritances and while we have scarcely opened the income mine? We declare here, let those who profit pay; and we publish our allegiance to the cause of those who, should the evil times of war come upon us, would fill the trenches and feed the cannon; those who fight the battles capitalists decree. For the common man we speak, rather than for others who profit in stocks enriched in human blood.

PROMOTERS OF MILITARISM.

And what of this Navy League so eager to spend the people's money for war preparation? If patriotism runs to copper and steel in the United States, and we are inclined to believe that it does run to s-t-e-a-l, the Navy League is composed almost exclusively of gentlemen in whose company Paul Revere would feel like a hired Hessian.

Is it only a coincidence that there are but three firms in the United States that manufacture armor plate, and each one of them is represented on the list of 19 men who were the founders of the Navy League? Of the remaining 19 nearly all were connected with firms that would directly profit from expenditures for a larger Navy.

There have been at all times officers, directors, and honorary vice presidents of the Navy League, whose unselfish patriotism is not questioned. But even former Presidents of the United States have been most unfortunate in their later business associations. It is interesting to note that the president of the Navy League is also, or was, president of the New York Metal Exchange, and chairman of the board of directors of the Nickel Trust. It is quite a coincidence that Sir Alfred Mond, vice president of the British Navy League, is chairman of the Mond Nickel Co., a large manipulator of the metal so indispensable to war preparations. These gentlemen might have been builders of brick cheese, or promoters of grapefruit groves in the Isle of Pines, but they are not.

And the plot thickens. The various navy leagues have enjoyed a most delightful international fraternity, and have always been most brotherly. Do not for an instant think that the fear so widely pounding in the unselfish patriots, that our abject helplessness will make us an easy prey to some foreign power, has deterred them from observing the fine amenities that govern the trade in war munitions and equipment.

The Navy League of the United States, through its official organ, the Navy League Journal, has enthusiastically lauded the spirit and results of the propaganda carried on by the British Navy League, the German Navy League, the French Navy League, the Italian Navy League, the Spanish Navy League, and so forth. With their round robins these war-promoting organizations clasp hands around the world. The spectacle is one to terrify all honest hearts, one to inspire only those who rejoice in unprincipled and greedy trade.

These journals write not to encourage each other to labor for a reduction of armament. They shout words of congratulations as machines increase by which millions die, but in the making of which there is rich reward for the few who, to quote the words of the temporary chairman of the recent Republican convention, "Sluice gold from rivers of blood."

None of that gold will pave the way of the Prohibition Party to power. None of those men sit in these councils to-day. We come to the people with clean hands.

Listen to the Navy Journal as it speaks in 1903:

> Without exaggeration it may be asserted that to the German Navy League more than to every other influence is due the fact and wholesome growth of the German Navy.

Two Secretaries of State were affiliated with steel and armor concerns, either before or after their service in the Cabinet. They were not Prohibitionists.

Many of our naval officers have been and are in the employ of industries that grow great by manufacturing war munitions. Educated and honored by a democracy, they wax rich in profits that are large just in proportion as the ideals of democracy grow small.

Fifteen steel companies in the United States, all of the greater ones; 8 copper companies, the great ones; 9 zinc, lead, and brass companies, and 10 nickel companies have their official leaders in the membership directory of the Navy League. Of the 19 founders of the Navy League, 14 were vitally connected with great institutions bound to profit enormously by war and the preparation for war.

We have witnessed the spectacle of at least one Army general on the pay roll of the Du Pont powder plant and the Government at the same time.

SKIPPERS OF HIGH FINANCE.

Shall we intrust the ship of state longer, or again, to political crews whose financial captains know but one sea, the sea of high finance? Shall we risk the vessel of human liberty, of which Washington was the first high admiral, and to which Lincoln gave a course through the tempestuous tides of slavery and disunion, into the safe harbor of liberty and union, now and forever, one and inseparable? Shall we risk that ship, freighted to-day with the governmental hopes of all the years, to parties that honor men who establish uniform powder prices with foreign capitalists, charge the Government that protects them $616 for armor sold to Russia for $249, plug blowholes in battleship plates, install defective boilers in torpedo boats, thus becoming accessories in moral fact to the death of brave men who served Old Glory under a political Government unwilling to break with the confessed grafters who so lightly held their lives? Shall we intrust that priceless ship to a political crew which seats in its forecastle the sellers of Government war secrets, those who barter the product of American laboratories and state engineering rooms with as little regard for morality and ethics as the Turk who sells a wife out of his harem?

If the confessed powder dealings of the American Du Ponts with the war manufacturers of Germany do not constitute treason, then the dictionaries have not correctly defined the word.

The paramount question in mechanical preparation for war to-day, agreeing as we all do that the obligation to police our possessions and properly safeguard the institutions for which civilization and God have made us responsible, is not a subject for debate, is not, Shall we thus prepare? The question is, Who shall superintend the work—Democratic builders, Republican builders, or sober builders? Shall the carpenters of the capitol at Harrisburg, the gold-brick layers of Albany, N. Y., the manipulators of French Lick Springs, the multiple home builders of Utah, the powder boys of Delaware? Not if wisdom comes with experience.

Let us give this contract to those master builders who, with singleness of purpose, undiscouraged by slow progress, unpersuaded by the promise of shorter hours, have for 44 years been fashioning a house upon the unyielding foundation of governmental truth, a political habitation of which the American people are now invited to take possession.

We have enumerated here blunders and crimes inexcusable and sickening, and in the last analysis they are the errors and sins of one political group still appealing to the American voters under two emblems and two names, for in spirit both parties are conservative, in policy both are reactionary, and in appalling maladministration they are equally guilty.

A RECORD OF WASTE.

From 1884 to 1916 the record has been one of inefficiency and waste. No political change has for a single hour shaken the control by criminal big business of the functioning power of the Government. The whole people has been exploited in the interests of the few who for gold were ready to betray and did betray their country. The demoralization proclaimed by the Republicans in this campaign is unmistakably from the tree of ruin, which is of their own planting and nurturing, and which the Democracy has never failed to water. If men gather figs from thistles and grapes from thorns, then may America expect to secure her relief by electing either the Democratic or Republican Party to power. But if men do not thus gather, then lay the ax to the root of the tree.

The Prohibition Party alone of all parties emphatically declares and clearly proves that so long as war and preparation for war—which levies a monumental tax burden upon the generation that fights, and lays an accumulative mortgage upon generations unborn, brings stupendous profits to a certain few—continues the peace of the world is in constant menace; the hope for a practical disarmamet of the nations and a league among responsible governments for the enforcing of world order rises and falls with the fluctuations of the market.

Watch closely those who would have us believe that the supreme business of this campaign is to return the Republican Party to power, that only thus can the honor of the Nation be restored, her integrity reestablished at home and abroad. Watch closely, for their voices are the voices of REED SMOOT, BOISE PENROSE, and William Barnes. This convention submits to the American people that the supreme business of the campaign now opening is the election to power of a political party with unsoiled hands, the only political party brave enough to declare itself upon the greatest issue now troubling the gov-

ernments of men, the only party competent to rule in a time when cowardice and selfishness will bring disaster, when to misrule means ruin. The supreme business of this campaign is the election to power of the only party of human liberty, the only party of the Lincoln spirit and vision, and to return the Republican Party to the political dead house of 1912, companioning with it the Democracy of 1916.

MEXICO.

But let us be specific again. Our Army and Navy can be enlarged without menace to our institutions until they are sufficient to police our boundaries and to help carry the white man's burden of responsibility for those people of our island possessions and in troubled States immediately at our doors, who by long years of exploitation at the hands of conquerors and greedy capitalists, and because of their slower development are not competent to rule themselves—peoples that may not be left to themselves without endangering civilization itself. It is true of nations as of individuals, that he who does not help others eventually loses the inclination and the ability to help himself.

In Mexico we are confronted by the inevitable, and the inevitable is not war, but a clean-up—a clean-up of civilization. Just as a city addresses itself to a plague spot that endangers the health and life of its people, so must we address ourselves to the Mexican plague spot that menaces the peace of the Western Hemisphere and slays civilization amoung 16,000,000 human souls. The Democratic administration has erred, erred in spite of the wise counsel of men fully conversant with the situation. And the Republican Party is as bad, for four years ago it evaded and passed on the problem it now so loudly shouts for a chance to solve.

We go to the Rio Grande, if we go, to reap a harvest of Republican sowing and Democratic tending, and we go, too, in the train of unscrupulous finance that corrupter a Mexican Government for gain and exploited Mexican ignorance for profit. But we go, and for humanity's sake and the honor of the flag we must not turn back until our work is well done, until order has been brought out of chaos, until the safety of the citizens of our border States is absolutely secured, and an adequate Government established in the Halls of Montezuma. The price to be paid is vast; and who shall direct its payment? No false modesty will seal our lips in this campaign.

A CONSTRUCTIVE ARMY.

Our perparedness for peace is indeed poorly begun if it does not place very early in its program the conservation of mines, forests, natural waterways, and unclaimed soil—the conservation of all natural resources. In such conservation lies an opportunity to employ our armies in times of peace so as to make them constructive builders of the Nation. Two hundred and fifty thousand men could be engaged for well-nigh unnumbered years in the Mississippi and Missouri Valleys, reclaiming the flood lands, the richest of the country, in strengthening the banks of these rivers from source to mouth, in building a system of reservoirs at the headwaters of all great rivers to eliminate disastrous inundations and so as to give an equal distribution of water throughout the dry season; in reforesting the hills and lesser mountains; in vast irrigating projects that will make out of the Great American Desert a waving wheat field and a garden; in building a system of National-State highways; in opening up Alaska; in completing an inland waterway from Florida to Maine that would make possible the prompt mobilization in perfect safety of vast forces to be used against a possible invader; and in building networks of railways paralleling both sea coasts to be in times of peace highways of commerce, and in time of conflict, should the necessity ever arise, the carriers of munitions and defenders.

Such armies would be a crown of glory to the Republic and one of the surest guaranties for world peace that America could provide.

The chief menace of the standing Army, idle and unoccupied minds, would be removed. Men of the uniform would be no longer trained to think destructively, but constructively; the direct, daily military instruction, while not neglected, would be an incident in their business as soldiers; the supreme task of their lives would be the building of the State, the creation of a greater America.

Such a program would enable us to pay the soldier and the sailor an industrial wage, a wage large enough to guarantee the enlistment of men desirable morally, physically, and mentally; and it would also assure the Nation that these men on retirement from Army service would be equipped for all the tasks that fall to the lot of the private citizen.

Adequate coast fortifications should be constructed without regard to cost, but the lessons of the present war must not be forgotten—a sand dune is more effective than a fort of masonry and steel. Great batteries should be constructed on armored trains that could be quickly shifted to any threatened point of the coast.

In our preparedness for peace we will not forget social preparedness, workingmen's compensation for in dustrial accidents, minimum-wage laws, the prohibition of child labor, and continued efforts to eliminate industrial abuses—abuses that have grown up under the criminal neglect and the mismanagement of the two dominant political parties who have heard the clink of the dollar before they have heard the call of the child. The hours of toil for women must be shortened. In the last two years the good citizenship of many States has forced breaches in the wall of political indifference large enough to crowd through some five hundred laws dealing with these social problems, but we have just begun the work.

INDUSTRIAL PREPARATION.

We must deal more specifically with the problem of the unemployed. While some other countries provide cheap transportation for labor so that it can be quickly shifted from places where it finds no market to the centers that may be at the same time suffering from a labor scarcity, the Hepburn Act prohibits this in the United States. The Hepburn Act should be promptly amended.

In all of our attempts to organize American industry and to relieve social conditions we have suffered the handicaps of political administrations fundamentally conservative. The comparatively few good laws passed have largely failed in their operation because intrusted to unsympathetic if not positively unfriendly administrations. Social justice in the United States needs a new approach. It looks to-day for a friend glad to champion its policies and programs. It turns away from those who gave little or nothing, and who, when they gave at all, did so under duress, reserving to themselves the privilege of emasculating any good laws passed in fulfillment of preelection promises.

Our industrial conservation should begin now a careful consideration of economic conditions throughout the country, for unless we guard ourselves closely a financial disaster will come upon us with the close of the war the like of which we have not witnessed since 1873. Present conditions are abnormal; they are not sound, and will not survive. Wages in the great manufacturing cities are unprecedented. The cost of living, which has shown for years a more steady upward trend than wages, and far less tendency to decline than wages, which are the most sensitive gauge of economic conditions, continues its wild flight. And the cost of living can not increase beyond a certain point without revolution. A well-fed people will suffer many indignities in silence, but a starving city is soon a howling mob.

THE HIGH COST OF LIVING.

And here again the issue of prohibition crowds itself directly across the path of politics. We can go on manipulating the tariff, tinkering with its schedules, but the solution of the problem of the high cost of living will continue to wait on the solution of the liquor problem. So long as the American people countenance and protect the robber that filches two and a quarter billion dollars from them annually—an amount which approaches $100 for every family under the Stars and Stripes—the cost of living will not be greatly reduced.

How long will we continue to worse than throw away this vast amount? For it there is no good thing returned; it is wasted. The institution that manipulates the iniquitous transaction is a parasite on society, for the liquor traffic is not a business, but a crime. But the waste of the drink bill of the United States can not be computed in dollars. Hundreds of thousands of wage earners have their earning power impaired or cut off entirely because of their drinking habits, for industrial prohibition is now a fact in every State of the Union and in well-nigh every great industrial institution.

Release the drink bill of the United States, turn it into legitimate channels of trade, that it may buy necessities and comforts for the people, strengthen the hands of honest industry by increasing honest sales, and reward a larger number of laborers with an increased wage. Instead of allowing it to enlarge a concern whose success is achieved by the loss of business capacity and earning efficiency on the part of those who buy its product, set it to work in the places where men grow wiser and richer and better as the result of its investment. When we destroy John Barleycorn we will have destroyed the most heartless exploiter of the vital needs and legitimate comforts of the common people. Ours is a constructive program for prosperity, for prohibition is the impartial friend of honest labor and honest capital.

THE MELTING POT.

Such a peace program as we have outlined gives a new cast to the always embarrassing problem of foreign immigration. America must not fail to be the harbor in which the ships of every foreign country bearing those who seek liberty and will prize it shall find asylum. But the criminals of all countries must be barred. No literacy test is sufficient at this point, or at any other, for some of the most worthy who came to us in times past came illiterate, and through no fault of their own. They fled from lands that barred to them the doors of education. A son of one such is president of a great American university to-day. Others who read and write and speak many languages are haters of all law, defiers of all order, enemies of the moral standards that we cherish, and they should be turned back from our shores.

But let us not satisfy ourselves with the hurried examination at our Ellis Islands, which results generally in another shipload of strangers being sent haphazardly in the East Side of New York or the slums of San Francisco or Boston. There should be maintained in connection with our Agriculture Department, a bureau having in charge the transportation of foreigners who come from agricultural districts of Europe, to Goverment-laid-out, irrigated, and equipped farms in the West. And much of the millions of acres of waste land of New England could be eventually thus employed, for these people who come to us are in thousands of instances intensive farmers who have made a living on mere scraps of land, and to whom the richer fields of the States would be a paradise. Let these Governments give these farmers superintendents and instructors, to furnish them the training that our agricultural colleges are furnishing our own citizens in many States to-day. Let there be long-term credits with easy semiannual or annual payments. Such a plan, closely watched, under a businesslike management, would not only help solve the fuel problems for the melting pot, but it would decrease the foreign menace in our great cities, stimulate the movement back to the soil, and eventually pay into the National Treasury millions of dollars. The problem of conservation and foreign immigration can be and should be related so as to help solve each other.

PROHIBITION SPELLS PREPAREDNESS.

But the Prohibition Party, with full deference to all other considerations that enter into the constructive program of preparedness for peace, declares that in a most vital and comprehensive way, prohibition spells preparedness. And we further declare that any political orgainzation not wise enough to see, not brave enough to openly champion this truth, is not competent to rule.

What, then, shall the word of America be to political parties remaining silent on the liquor problem? A problem which Russia has settled by national prohibition, which Germany recognizes by sending orders into the trenches calling upon her soldiers to refrain from drinking intoxicating liquors, which France moves against by banishing absinthe, and of which Lloyd-George, of England, declares, "We are fighting Germany, Austria, and drink, and so far as I can see, the greatest of these three deadly foes is drink. I have a growing conviction, based on accumulating evidence, that nothing but root-and-branch methods will be of the slightest avail in dealing with the evil. I believe it is the general feeling that if we are to settle with German militarism, we must first of all settle with liquor."

What shall our word be to political parties remaining silent on this question? There is only one word, that word is defeat.

The challenge of the Prohibition Party to the citizens of the United States is the challenge of highest patriotism. Judged in all of its phases, industrially, physically, and economically, politically, and morally, the liquor problem constitutes the most vast and immediate issue before the American people. Here is an institution that directly takes, annually, out of the pocketbooks and tills of our citizens two and a quarter billions of dollars; for which it gives no return of value; for which it renders to the State wrecked and diseased bodies, minds, and souls; for which it impoverishes labor, interferes with the investments of honest capital, and disturbs the whole economic system. The indirect financial loss to society through the operations of the liquor traffic is quite $4,000,000,000.

In physical loss we pay a price no man is able to adequately estimate, for John Barleycorn drives his poison into the loins of potential fathers and into the wombs of potential mothers, to predoom the race with the eugenic taint of alcohol. To-day the Stars and Stripes float over recruiting stations that before the trouble with Mexico, were turning back 65 per cent of all applicants as physically unfit, and of these a distressing majority were the victims of diseases that the alcohol appetite, more than any other one thing, is responsible for, because it so quickly and completely breaks down the will that resists passion.

When we count our revenues, will we excuse political parties that call us to new and greater financial sacrifices but have no word for the criminal maker who fills our prisons, our almshouses, and asylums; who fastens upon us the burden of the physical and moral incompetent?

We demand justice for little children, and shall we be deceived by political parties that prate of social justice and at the same time by unanimous vote deny even an open discussion of the traffic that cuts off the earning power of the drinking parent, makes him a victim of industrial prohibition, and thus drives into cotton mills and deep mines a million thin-chested and blood-impoverished boys and girls, who must fight for bread and breath? To these the school doors quickly close, if they have ever been opened; for them there are no playgrounds, no green fields with singing birds and smiling flowers.

Shall we forgive a silence that condones an institution without which the white-slave traffic, as an organized vice, could not live for 10 days?

CONSERVATION OF HUMANITY.

We have a voice in this convention not for the conservation of forests and rivers and minerals; we speak here for the conservation of women and children and men, for the conservation of humanity. And, that the Government shall come into the hands of the friends of the people, we pledge, as did our fathers theirs, "our lives and sacred honor."

Let no man be deceived. More than possible foreign foes endanger us; an internal enemy menaces our freedom. I fear to-day the foul thing that burrows its way into the very vitals of our greatness, that breaks us down in our physical tissue and moral fiber. Give to America strong bodies and clear minds and clean hearts, and she will turn back the fleets that bring hostile armies to her shores; she will prove sufficient for her present and future problems, even as she has answered the grave questions that faced her past.

But America needs every man at his best. For the sake of all the world, America must not fail. And the liquor traffic will give to the armies of her progress trembling limbs, palsied arms, deafened ears, blinded eyes, poverty of purse and of soul, and hearts that are too frail to pump the blood of mighty deeds.

This chiefest enemy of America Democrats and Republicans feared to face. And remember, they were petitioned. Have no mercy now, grant no quarter. The spokesman of 20,000,000 men and women called upon them to take up the gauge of battle against the rum shop, and by silence they reaffirmed their committal to policies ranging from assurances of noninterference to promises of open friendship.

The Herman Raster "personal-liberty" resolution is still the liquor policy of the Republican Party, as no doubt the wholesale liquor dealer who represented the Indianapolis district in the Republican national convention of this year, with the Cincinnati delegation, would testify. And Democracy still stands loyally for its "antisumptuary" plank of 1876.

To the eloquent appeals of the Methodist Episcopal Church, the 4,000,000 Christian Endeavorers, the 150,000 pledged petitioners of the Flying Squadron of America, and the Committee of Sixty, the latter assembled by Dr. Irving Fisher, of Yale, and representing the great educational, economic, and social-service organizations of the country, appeals which called for an unequivocal platform declaration in favor of national prohibition, the Democratic, Republican, and Progressive conventions answered "No."

The Progressive Party was brave enough to discuss the question on the floor of the convention, but it was not brave enough to leave off following a man to pursue a principle, and so, by way of Sagamore Hill, it journeyed to the political potter's field.

THE COVENANT OF 1912.

A great Progressive editor from Kansas well said that the platform was incomplete and eloquently plead for a rebaptism of the courage of 1912, but he plead in vain. It remained for the son of a martyred President to advance the amazing argument that the issue of prohibition is too big, that it would dwarf the platform if included, and in effect crowd out all other planks. To those who saw Ichabod written over the name Progressive that day the conviction was unavoidable that to be the sons of patriots is not enough, and that those who have for a long time been the beneficiaries of political power find it scarcely possible to follow any principle unrewarded for longer than four years. Civic piety does not build moral muscle on political pie.

For the men of the Progressive convention who fought a brave fight and gloriously lost, who lifted their voices in pro-

test against secret high chambers, who refused to sit quietly at the feet of political reactionaries, and who battled without compromise and who still battle for the reaffirmation of the principles that called the Progressive Party into existence we have only words of commendation. And as their blood brothers, their own house having been gutted by its master builder, we invite them to rest under our roof while we together raise a structure that shall shelter a hundred million people from the storms of private and public greed.

Our invitation to those betrayed citizens who in 1912 gave up all to follow a new flag of social justice and who took a vow to break the power of an invisible government is as open as it is sincere. The principles that called them out of old associations still survive, even as the corrupt manipulator of politics from whom they turned away and to whom they are now called to return still survive. No flood of words can wipe out the fact that every reason existing for the organization of the Progressive Party four years ago exists to-day for the continuation of the fight against the evils the Progressive Party was created to destroy.

If the gentleman who followed Theodore Roosevelt in the last campaign follow still the justice, the Americanism he then proclaimed, they can not follow Theodore Roosevelt now. The terms demanded in 1912 have not been granted; the conflict begun then has not been finished, and he is not a safe guide who makes a new vow in lieu of an old promise unkept.

THE FEMALE ULTIMATUM.

I have seen towering trees fall before the joint cuttings of two axemen, who, working together, with blow following blow, hewed to the heart of the monarch of the forest. I have seen a giant workman laying the bricks of a city pavement, with his left and right hands toiling in perfect unison and with almost incredible rapidity. In the crash of a great line drive on the gridiron I have felt the swaying of the human mass in deadlock, and then the impact of the reserve from the backfield that destroyed the balance and forced the ball over the line.

Just as the tree falls slowly before the attack of a single axeman, just as the paving waits on a "one-handed" layer of bricks, just as the gridiron struggle remains undecided until it has felt the drive of the reserve back, so society waits to-day on the fullness of the strength of womanhood. No resource of power available for the world program of peace, sobriety, and the economic freedom of the masses dare be overlooked. Hear the female ultimatum to the race—a lift or a drag, a plaything or a mate, a parasite or a partner.

And hearing the ultimatum the Democratic and Republican parties declared "We are for—but—".

And as regards the liquor traffic, which has been responsible for the slaughter of more human beings than all wars, with pestilence combined, the Democratic and Republican parties also agree for both by silence say, Let the murderer continue to prey upon the people. The Democratic Party and Republican Party are one party—by age and wealth and membership, by tradition, platform, and tickets they are one party—the Conservative Party of the United States.

By their fruits we know them. And if uniformly bad fruit for 30 years ever warranted the destruction of a tree the Democratic and Republican trees, in the year of grace 1916, are long overdue for the axe.

Return either of them to power and the evil influences that dominate both will continue to exploit the people.

ONE OLD PARTY.

The Republican and Democratic Parties are "one party." Save only where each indulged in personalities and where one affirmed what the other denied with regard to Mexico, their platforms substantially agree. A great newspaper critic has well said: "The two conventions were as alike as two 'P's'—in politics and preparedness." The Democratic and Republican platforms this year are both "We are for —— but" platforms. Both declare in generalities for "strict neutrality" and the protection of "human rights," for a vast and aggressive preparedness, for the conservation of natural resources, the cutting down of administration expenses; both announce their holy opposition to graft, urge an adequate tariff, and measurably indorse woman suffrage—the platforms of the two dominant political parties are in agreement.

THE PLANK OF COWARDICE.

The supreme cowardice of the leadership of the dominant political organizations came to a climax in their equal-suffrage declarations. Fearful of the righteous anger of the enfranchised womanhood of 12 States, goaded toward justice by their own liberal members, but chained fast by reactionary bosses to prejudice and time-worn tradition, they accomplished a pronouncement that sounds like a political address delivered by an inebriate in 1896, the burden of whose remarks was "Hurrah for William McKinley and free silver." We denounce their double-dealing and their cowardice. We reaffirm our unequivocal declaration for the enfranchisement of womanhood, her complete political emancipation. We declare that man, who wrote himself into the Constitution, shall write in woman, too. In every State campaign and in every effort to secure woman suffrage by the action of Congress we pledge the wholehearted and complete support of the Prohibition Party. This political organization, which was the first to speak for the ballot in the hands of the women, remains to-day the uncompromising political champion of her equal rights. The Prohibition Party will not swerve one hair's breadth from its course until to the provisions of the fourteenth amendment of the Constitution, which gave liberty to the black man, is added the word "sex," which will also free the mothers of men.

WHO WILL STOP THIS MURDER AND SMASH THE PORK BARREL?

Will the party of Hughes or the party of Wilson stop the murder of a hundred thousand of our citizens annually by John Barleycorn? Will either of these parties stop the infamous trade in rum that debauches Africa? Will either of them lift a finger as political organizations to abate the drunkenness of our island wards, and will they smash the pork barrel?

Absolutely, no! They will continue to spend a billion dollars of the people's money annually at a waste of at least $80,000,000, and millions of that money will continue to go for criminal appropriations to rivers that can never have traffic and for Federal buildings that remain as the chief attractions of the cities that will never be; they will continue to buy armor plate from those who plugged blowholes, and they will continue the purchase of powder from the trust that betrayed its Government.

Will either of these parties eliminate the standing committees of Congress that exist merely to provide chairmanships and petty perquisites? Emphatically, no. There is the Committee on Transportation Routes to the Seaboard, for instance, which keeps no records, has no work to do, and which has not held a meeting in 37 years. But it commands the services of three clerks—gentlemen in waiting to the politicians who load the committee. In January the overburdened chairman of this committee presented a resolution to the Senate asking for a fourth clerk—and these bills the people pay.

ODE TO PORK.

(Dedicated to one of a large number of deserving statesmen.)

"The alien stands without the gate,"
The statesman shouts and mops his pate;
"The need, compatriots, is great
For pork."

"Five hundred millions for big ships"—
The pluto statesman smacks his lips,
And then the program sadly slips
On pork.

"The Army needs a Gatling gun,"
And in a year he'll give it one,
And for the deed so bravely done
Take pork.

He buys an aeroplane or two,
A submarine that drowns her crew,
And then enjoys his favorite stew
Of pork.

He shouts for "freedom of the seas,"
And spouts of "Greece . . . and suppliant knees,"
And yells, "Ye gods, the forest trees,"
And pork.

To all the past he points with pride,
He drops a tear for those who died,
Then turns with anguish hollow eyed
To pork.

"A billion dollars for the flag,
Then not a stripe shall ever drag;"
But when his district hears him brag,
'Tis pork.

As generous as he can be,
A spender jovial and free;
This is the man who sends bum seeds to me—
My pork.

Then a patriot's lusty shout
When the assessors cry "shell out!"
For how could freedom live without
Its pork—

And build canals across the moon,
And seaports in New Mexico,
And dig a channel to the sea
From every town where cat-tails grow,
And at each crossroad of the land,
Lest patriotic ardor lag,
My faith, behold a city grand,
And rear a building with a flag?
And should a battle fleet arrive
And land an army on our coast,
Just send the admiral to the house
And feed him on a royal roast
Of pork.

The United States needs a business manager, a manager who will departmentize the Government and cut the red tape of political bureaus. And for such a position a wise firm never selects a proven incompetent or one who has been worse.

HUGHES AS A PROGRESSIVE.

The keynote speech of Senator HARDING declared for a ship subsidy and against Federal armor and powder plants, and the Republican platform directly or indirectly so declares, and Mr. Hughes, accepting the nomination, says:

I can fully indorse the platform you have adopted.

In opposing these progressive measures to relieve the Government from the exactions of the Powder and Armor Trusts, and to open new markets and mills, measures for which practically all Progressives stand, Mr. Hughes, whose high conviction no man questions, is no doubt animated by the same peculiar progressivism that caused him, as governor of New York, to veto the 2-cent passenger law passed by the legislature, and "full-crew" law, and to recommend to the same legislature that it vote against ratifying the Federal income-tax amendment.

It really requires more than the indorsement of the Hon. REED SMOOT, of Utah, and Senator BOISE PENROSE, of Pennsylvania, to convince the American people that a candidate for public office is a great liberal statesman.

And what of the Democratic convention and its candidate? With a word picture that brought the St. Louis convention to its feet in a frenzy, Temporary Chairman Glynn pictured the President of the United States wringing a surrender from the mightiest military nation of the world, a surrender that left no wife a widow and no mother without her son. But for the wives who have watched their husbands burning in the fires of the rum Moloch, the mothers without number who have followed their sons to drunkards' graves, and their daughters to the stake of man's alcohol-fed lust that convention had not a word.

"DEAD MAN'S HILL."

I have seen a picture inexpressibly sad, of Dead Man's Hill, in France, with its 300,000 graves and as many wooden crosses. Far as eye can reach are the figures of black-shrouded women. But they have their pitiful compensation—there are trinkets of the Legion of Honor, and the memories of heroism that will never die. Powder-blackened and disemboweled, their sons were dumped into long trenches, but the flag of the fatherland and the tricolor of France float proudly above them and they live forever. There is compensation.

But to-day I see another Dead Man's Hill, and this hill is infinitely sad. Women crowd it with their forms and cover it with their lamentations, and for them there is no compensation, no flag to drape above a picture, no cross of honor to press into a baby's hand, no memory but one of infamy and shame. They mourn their dead and through their tears no rainbow ever shines, for their dead have died in vain.

Who speaks for them? Does the distinguished jurist who turns back from the great court that in the minds of the fathers and for the safety of the whole Government was to be forever inviolate against partisanship, whose door until this hour has shut out the partisan, inclosed only the American, whose walls have never before failed to be politically sound proof, and whose bench has never before been a political ladder? No.

Does the great Democrat who desperately fought for the confirmation of a wet commissioner in the District of Columbia, and to whom the most eloquent tribute since Ingersoll plumed his knight was paid by a former governor of New York? No; not one word.

Who, then, speaks for the wife and mother of the drunkard, for the mourner who laments the unnumbered slain of alcohol? The Prohibition Party speaks for her.

Out of this hall rides forth her knight, and he will not turn back until her dead are avenged and her wrongs righted, until her tears have compensation, until her little children are no longer menaced by the despoiling of their father, until, by the grace of Almighty God and the votes of the American people, there has been consummated a saloonless nation.

ELECT PROHIBITION.

The whole strategy of the campaign for us from now on must be built about the proposition that until the Government is captured our principles are helpless, for we can do nothing. Our platform, our candidates, our party administration, our party papers and party speakers, our entire program, must be dedicated to the one monumental effort to win the three departments of the Government, to elect national prohibition.

In this fight, which is of vaster import than the election of a presidential candidate or the achieving of an immediate success, all Prohibitionists, all friends of peace and all promoters of social justice, all honest men of business who would labor for abiding prosperity and the economic comity of the nations, all toilers who have been exploited and all suffragists who have been deceived, we invite to join.

And specifically do we invite the millions of young people who have announced their determination to turn away from political parties, unmindful of the issue they have so gloriously championed; specifically do we invite the great Methodist Episcopal Church, which called upon the Democratic and Republican national conventions to declare for prohibition in their platforms; and specifically do we invite all Christians, for once again the voice of Methodism is the voice of the Kingdom.

And specifically do we invite the millions of honest toilers, men and women, whose prosperity and hope of peace are alike insecure so long as the Government remains in the hands of political parties that give robbers' profits to high finance and continue the crime of the liquor traffic.

And specially do we invite the Committee of Sixty, representing in its personnel the university, the board of health of the State and great city, organized labor, the newspaper, and great industries, specifically do we invite this committee, for, announcing that "Whenever politicians or political parties prefer the liquor traffic above public health, efficiency, and morals, such men must be set aside and such parties abandoned," it has faced the platform committees of the great political parties only to be decisively refused. We alone accept the challenge the Committee of Sixty presents. We alone of all the political parties do not prefer the liquor traffic above public health, efficiency, and morals.

And specifically do we invite the incomparable white-ribbon host, whose matchless leader, Frances Willard, in the name of national prohibition, was the first to face the derision and insult of a great political party's platform committee room.

All of these we invite, and with them we call the 150,000 pledged signers of the Flying Squadron of America, and every other man and woman who desires to cast a clean ballot against a foul saloon. The lists are open wide, the banner of political chastity, the flag of human liberty, is unfurled; join the fight, and join now.

Ladies and gentlemen of the convention, it is for us to write a platform that will grip the imagination of the country and capture its faith. It is for us to nominate a ticket that will thrill the hearts of the converging temperance forces of this Union as the nomination of John P. St. John thrilled the men who followed Finch in 1884. And, God helping us, we will so write and we will so nominate.

And we will raise out of our poverty and we will spend with the discernment of those who know the value of sacrificial coin a million dollars before the first vote is cast in November. We will shower the Nation with our literature. We will conduct platform meetings and meetings in shops and on the street in every city and town. We will put out our party papers into 2,000,000 homes and swing our standard across the continent and back again in special trains.

THE HIGH COVENANT.

And to the people of this Nation we pledge ourselves to begin immediately on election to power an authorized campaign to establish a world court, and we further pledge that we will move at once to secure reciprocal trade arrangements with the countries from whom we purchase and to whom we sell.

We will proclaim our constructive program to secure the practical brotherhood of the nations. And as we move to stop the slaughter of war, remembering the unnumbered dead, the unnumbered living, and the unnumbered unborn cursed by alcohol, we will immediately deprive the liquor traffic of the use of the mails, take from it the protection of interstate commerce, place upon it a prohibitive tax, move to accomplish a prohibition amendment to the Constitution, and thus we will stop the greater slaughter of peace.

We pledge ourselves to fortify the Nation, to make her a citadel impregnable, but to preserve her human and natural resources with every dollar that builds her Army and her fleet. We covenant with the people to take private profit out of war and to punish the traitors who placed rotten armor between our countrys' defenders and their foes. And we solemnly swear to make our preparation a preparation for peace, harmonized to every ideal of the democracy whose message must not fail, for it is the hope message of the world. And we will not forget that prohibition spells preparedness.

We go forth to champion the unrestricted political rights of womanhood and demanding an ample justice for little children. And in every effort made for social justice we will remember that the supreme tangible foe of motherhood, her most bitter

enemy when she asks for the ballot, and the Judas Iscariot of her sons and daughters, is king alcohol.

To accomplish these things we will give ourselves without reserve, give ourselves as the fathers of this party gave themselves, give ourselves as Lincoln gave himself, give ourselves to "the last full measure of devotion"—our money out of poverty, our influence though dear dreams be shattered, our minds until they fail, our hearts until they break, our vital forces until their inner fountains are dried up.

Comrades, the call of the hour is the challenge of a supreme opportunity to an unparalleled sacrifice. These are the words of triumph: Peace, prosperity, and prohibition. Elect prohibition. Write woman into the Constitution. Turn out the exploiters of the people. Take private profit from war. Stop the slaughter of peace. Save America and serve the world.

---

ADDRESS OF WELCOME TO THE PROHIBITION NATIONAL CONVENTION, ST. PAUL, MINN., JULY 19, 1916, BY W. G. CALDERWOOD, OF MINNESOTA, CANDIDATE FOR UNITED STATES SENATOR.

I am honored beyond my deserts in this opportunity of extending to you the official welcome of the North Star State. I welcome you as that group of Americans who, in politics, have kept alive that fundamental American truth, that this Nation was established among men to insure to them their God-given rights of life, liberty, and the pursuit of happiness. I greet you as the one political organization that has dared to face the great organized enemy of these fundamental purposes of government—the liquor traffic.

NEVER RECEIVED A WOUND IN THE BACK.

It has not been your lot to be alone in the apprehension of the vision that this evil is the destroyer of life, and lays in the grave the bodies of a hundred thousand of our kith and kin every year; nor was it yours alone to discover that the slavery of the liquor traffic is, as the great emancipator declared, "A viler slavery and a greater tyrant" than any other, and that in this land of liberty there are millions in a bondage more galling than fetters of brass and chains of steel. Nor were you alone in the discovery of the fact that that most sweet and tender purpose of government, the happiness of the people, was turned into ashes and gall and bitterness through this evil bearing the official sanction of government. But you have distinguished yourselves as brave and intelligent patriots in that you have dared to face that enemy when every other political party has turned craven, and for 44 long years you have faced in the political arena every form of man and beast that the broad empire of whisky-dominated politics could furnish, and never yet received a wound in the back. You are distinguished in that bravery, heroism, and patriotic fidelity to the foundation principles of our liberties, and for that reason I stand to extend to you on this auspicious hour the official hand of greeting for the Prohibitionists and for the people of the State of Minnesota.

A TRAIL BLAZER.

Your faith of heart and your sinew of purpose have led the ceaseless fight for motherhood, for childhood, for labor, for the home, for the flag, and for everything for which the flag stands. In its leadership for progressive reform, in its stand against special privilege and the plundering of the masses in the interest of the classes the Prohibition Party rings true to every purpose of the Declaration of Independence, and it alone has had the bravery and statescraft to translate that immortal document into modern phrase and apply it to modern problems. King George III is dead. But you alone seem to comprehend it, for you alone invoke the principles of the declaration against his tyranny to protect the life, liberty, and happiness of the people from tyrants and oppressors compared with which he was both puny and indulgent. The Prohibition Party has been the clear brained and fearless pioneer, blazing the way for nearly every one of the meager reforms that have been wrung from the old parties, and it introduced to the world every issue of their progressive wings. Thus has it been the political brains of the Nation and has done the sane and progressive thinking of the people for the past generation. Nor is this an idle boast. It is the verdict of history and the sentence of events. Let the record speak.

WE LED BRAVELY WHERE OTHERS TIMIDLY FOLLOWED.

The Prohibition Party led the demand for civil-service reform in 1872 when the Jacksonian doctrine, "To the victor belongs the spoils," was both law and prophets in every other political school.

In 1876, 24 years before any other party comprehended the need, it demanded the popular election of United States Senators—a reform esteemed by many to be the greatest since the emancipation.

It faced the taunt of paternalism and the charge of meddling with the sacred right of contract when, in 1872, it demanded the regulation of railroad, steamship, and telegraph rates. And the people lost millions of dollars waiting for the tardy action of the old parties.

It was the pioneer (1872) in the demand for 2-cent letter postage, and it has remained for a Prohibition Congressman in 1916 to evolve a practical, scientific measure to reduce letter postage to 1 cent without the impairment of the general postal service.

COOPERATION VS. INDUSTRIAL WAR.

Its first platform (1872) declared for reform labor legislation and laws prohibiting discrimination in favor of capital. Had it been given power it would, by laws that promote the just division of the wealth which labor and capital jointly produce, have produced a condition of friendliness and cooperation between those elements instead of the hostility that now constantly menaces the public weal by threatened or actual industrial war.

It was the first (1872) and for many years the only party to stand for equal suffrage, holding, under the Declaration of Independence, that "governments derive their just powers from the consent of the governed," and it has kept up the fight till the justice of the demand and the final triumph of the cause of political equality are almost universally conceded.

Its platform of 1876 demanded that Government lands should be granted to actual settlers only, a provision most tardily enacted by the Republican Party after millions of acres of the public domain had been grabbed by land sharks and speculators. As a people, we are still suffering an annual loss of millions of dollars because of this evil, while hundreds of thousands of people are congested in the cities, being denied cheap lands which they would develop into productive tracts but for the unstatesmanlike policy so long and so foolishly pursued.

It was the first (1876) to demand the suppression of lotteries and the denial of the mails to lottery business and advertisements. Its bills of a like nature against the liquor traffic, which are now pending in Congress, would put an end to that crime.

It championed the suppression of polygamy in 1876, and was the first party to propose the protection of the home through uniform marriage and divorce laws.

It was the pioneer in the demand for postal savings banks, providing safe and convenient banking privileges for the common people, under which savings deposits have enormously increased.

These are some of its reforms that have been achieved.

AND IT STILL LEADS ON.

It began its crusade against the unspeakable traffic in girls in 1876, a generation before the slow brains and money-engrossed hearts of the license parties awakened to the fact that virtue has value. Nor do they yet seem to know that it is more hideous for the Nation to condone the traffic in white girls' hearts than in black men's bodies.

In 1872 it demanded the abolition of the electoral college, and the popular election of the President and Vice President.

It was the first to propose the nonpartisan commission of tariff experts to handle the everlasting question upon which the old parties keep the people in ignorance and divided, while monopolies and trusts feed fat on excessive profits on American sales at the same time that they market their products at a reasonable profit to foreign consumers at prices far below those charged at home. This proves that our tariff, as at present administered, is a burden upon the American consumers and not upon foreign manufacturers.

GAMBLING IN FOOD PRODUCTS.

It was the first, and up to this hour, the only party to demand the abolition of gambling in grain and food products, which practice costs the Nation millions annually in artificially created high prices of the necessities of life, and through which vast fortunes are taken from the consumers by produce gamblers who create no values.

It is the only party to declare for terminal elevators and warehouses, which, when established, will save the farmer and the consumer the immense sums every year which now go to nonproducing market and grade manipulators.

It was years in advance of any other party in its demand for universal peace through an international court of justice, by which international differences should be settled by reason rather than by the bloody butchery and wanton waste of war.

And it now stands as the one party that would halt the mad rush toward militarism into which the Navy League, the munitions manufacturers, and the subsidized press would force us.

Before the European outbreak we were expending more money on account of war than Germany, which is military mad; or Russia, with double our territory and surrounded by jealous and unfriendly neighbors; or any other nation except England, which has four times our territory, scattered in every part of the globe. And we were expending a larger proportion of our total national outgo than any of them and nearly twice as large a proportion as some of them. Yet, though we paid dearly for preparedness, through mismanagement, favoritism, and graft we are, so we are told, criminally unprepared. After having paid the Du Ponts alone upward of $25,000,000 for powder in the past 10 years, during which we have not fought a battle, we are told that there are not sufficient powder reserves to keep our coast guns in action against a hostile fleet for 60 minutes. The Republican Party after 16 years of uninterrupted administration, during which they spent over 50 cents of every dollar for war purposes, past or present, and the Democratic Party at the end of three years in power will probably join in trebling our appropriations for preparation. And even this profligacy, which is to be paid by the common people in the high cost of the necessities and comforts of life, does not satisfy the patriots of the Navy League, the controlling members of which will make enormous profits through the sale of war materials.

THE NAVY LEAGUE.

What is the Navy League? Largely a war traffickers' club where gather together armor-plate patriots who shove up the price of armor plate $100 per ton when their beloved country gets into war, as was done during the Spanish-American War; who out of devotion to the Star Spangled Banner sell their Government armor plate at $616 per ton and the same to Russia at $249—less than half; who perjured themselves in order to swindle the Government, thereby imperiling our sailors and putting the safety of the Nation in jeopardy by palming off armor plate full of blowholes—the same companies and men are still awarded contracts for armor plate; powder companies who charged the Government over 50 per cent excessive profit, and at the same time entered into contract with the foreign powder manufacturers to keep them at all times advised as to sales to the United States Government, so that Harper's Weekly of May 9, 1914, contained the following paragraph in comment upon the astonishing condition:

Do you recall the friction in 1898 over the German squadron in Manila Bay? A German admiral brought on a condition that might have held momentous consequences, and Germany knew to a pound what our powder reserves were and what their qualities were.

And Senator HENRY A. DU PONT, of Delaware, who signed this treacherous if not treasonable contract, is now chairman of the Senate Committee on Expenditures in the War Department. The publicity given to this contract has resulted in its abandonment.

A WOLF IN SHEEP'S BATHING SUIT.

What is the Navy League? The Navy League is the American(?) institution which, through its official organ, The Seven Seas, went squarely on record for war for conquest and national aggrandizement in the following very remarkable language in the issue of November, 1915, only nine months ago:

It is the absolute right of a nation to live to its full intensity, to expand, to found colonies, to get richer and richer by any proper means, such as armed conquest, commerce, diplomacy.

Thus the Navy League, whose members are largely those who "get richer and richer" through war and preparation for war, put "armed conquest" as the first means by which a nation may exercise its "absolute right." The shocking abhorrence expressed for lovers of peace and humanity in the September number of the same official organ of the Navy League (The Seven Seas) breathes even a more un-American spirit. I quote:

The true militarist believes that pacifism is the masculine and humanitarianism is the feminine manifestation of national degeneracy. World empire is the only logical and natural aim of a nation.

This marks the Navy League as a wolf in sheep's clothing—but very thin. For it loudly protests its love of peace and its desire to prepare for war that we may have peace, and then in the official columns of its own press it propagates the doctrines of armed conquest and world empire, which doctrines are treason to the flag and to the genius and purposes of this Government and to the people. To what length may it not go in the privacy of its secret councils?

One of the founders of the Navy League is J. Pierpont Morgan, referred to by Lloyd-George in a speech in the British Parliament less than a month ago as the official agent of the British Government in America. He is a director and was the organizer of the United States Steel Corporation, which was on the carpet of governmental investigation for monopolistic irregularities. Senator Clark, of Montana, is also a director. The president is Robert M. Thompson, of the International Nickel Co., and also of the New York Metal Exchange. It was he who first proposed before a group of munition men that a propaganda be launched for the Government to appropriate $500,000,000 in this session of Congress for Navy expansion, and certainly the press and politicians like "the ox that knoweth his master's crib," have done valiant service for the plutocrats by playing alternately on the fear and patriotism of the people. A few of the other war traffickers who are represented in the Navy League by directors are the Carnegie Steel, Consolidated Copper, Utah Copper, Lackawanna Steel, Midvale Steel—but the list is long. If anyone wishes fuller particulars, write to me.

Oh, but Charles M. Schwab, the armor-plate swindler, who has been pleading with the people in advertisements that must have cost many hundreds of thousands of dollars, to use their influence to keep the Government from manufacturing its own armor plate, must not be forgotten. He was one of the founders of the Navy League. After he had been found guilty, as Carnegie's general superintendent, of selling the Government rotten armor plate, fraudulently concealing its worthlessness, the congressional investigating committee had this to say of his crime:

CRIMINALITY OF THE CARNEGIE CO. (CHARLES M. SCHWAB, GENERAL SUPERINTENDENT).

If the criminality of a wrongful act is to be measured by the deliberation with which it is committed, the magnitude of the evils likely to result from its perpetration, and the want of provocation with which it is done, the frauds which your committee have found are worthy to be called crimes. The servants of the Carnegie Steel Co. (whether with or without the knowledge of the company) to increase their gains, deliberately continued for many months to commit acts whose natural and probable consequence would be the sacrifice of the lives of our seamen in time of war, and with them, perhaps, the dearest interests of the Nation.

The company were hired to make the best possible armor plate and paid an enormous price for so doing. They were hired to make an armor that would stand the shots of an enemy and upon which the Nation might rely in time of need. They were paid between $500 and $700 a ton and thousands of dollars a plate for so doing. Resting under these obligations the company or its servants have perpetrated manifold frauds, the natural tendency of which was to palm off upon the Government an inferior armor, whose inferiority might perchance appear only in the shock of battle and with incalculable damage to the country.

No fine or mere money compensation is an adequate atonement for such wrongs. The commission of such frauds is a moral crime of the gravest character. Your committee do not consider it as within their province to draft a criminal statute; but they do feel under obligation to call the attention of the House to the importance of protecting in the future the interests of the Treasury, the lives of our seamen, and the safety of the Nation by appropriate legislation, denouncing as crimes all such acts of fraud and deception practiced upon the Government in connection with armor plate and other material of war, and making such acts severally punishable in all persons who commit them or aid and abet their commission.

He stands bravely for naval expansion against all comers, and incidentally for the appropriation of more of the people's money to pay him increased profits for armor plate.

I welcome you as the only political convention that would cheer, or even tolerate a statement of these facts.

"FAITHFUL OVER A FEW THINGS—RULER OVER MANY THINGS."

And these companies which reap immense profits from war, and thereby heap intolerable burdens upon the common people, do not neglect the patriotic duty (?) of putting men in legislative and administrative office who will do their bidding. And they especially show themselves to be Scriptural in making the man who has been faithful over a few things ruler over many things. Philander C. Knox had been the faithful attorney for the Carnegie Steel Co., and, it is undisputedly stated, on Mr. Carnegie's recommendation, was made Attorney General of the United States. Afterwards he was sent to the Senate, which is a favorite place for attorneys and other servants of big business who have served well.

It is a good place for them to continue their service of big business while drawing their salary from the people. It will be interesting to recall that when the Government had assessed damages of $600,000 against Mr. Carnegie's company for one of the rotten armor-plate swindles perpetrated by this patriotic corporation against the flag—our flag—that Philander C. Knox got the damage reduced to $140,000, saving the "steal" company $460,000 that was rightfully due the Government. To rob your Government is to rob you. Benjamin F. Tracy, as Secretary of the Navy, also did a good turn for the Carnegie Steel—Charles M. Schwab, general superintendent—by awarding to it a large contract without competitive bids, and he was rewarded by being made general counsel for both the Carnegie and Harvey Steel Cos. Robert Bacon was a member of J. Pierpont Morgan Co., bankers and founders of the United States Steel, for 10 years before he was made Secretary of State; Herbert L. Satterlee, one of the founders of the Navy League, former Assistant Secretary of the Navy, is general counsel for the United States Steel; and Beekman Winthrop, of the Lackawanna Steel, formerly held the same under secretaryship. And time would fail me to tell of the faithful servants of big business who have

been given seats of advantageous service in the United States Senate.

WAR TAX ON NECESSITIES.

Nor are they neglecting their opportunities hereabouts. Mr. Frank B. Kellogg, nominee for the United States Senate in this State, was counsel for the Steel Trust in Minnesota for years. He now makes the main drive of his campaign the military program of the Navy League which the war traffickers are promoting by an expensive and apparently subsidized propaganda. This is no charge against his honesty. It is rather a proof of it. His mature life has been in the world of big business, apart from the thought and atmosphere of the common people and sturdy, thoughtful yeomanry who bear almost the entire burden of war and preparation for war. He is for the big Navy. It is to the interests of his world. But it is destructive to every interest of the farmer, the laborer, the artisan, and the modest business and professional man. Under our present system of taxation the people would pay on what they eat, wear, and use $455,000,000 of that $500,000,000, and men with incomes of $4,000 per year or more would pay the remaining $45,000,000 on their incomes. But a man with a $4,000 income who pays a tax of $100 pays it without denying himself any necessity. The laboring man who pays a tax of $10 must deny himself or family some needed thing. But in the high cost of living the surtax of the man who supports a family runs into some hundreds of dollars per year. Sugar was 17 pounds for the dollar before the war, it is now 10 pounds. The retail price of butter is nearly a half greater. Shoes cost from $1 to $2 more per pair for the same grades.

AN EXORBITANT METHOD OF TAX GATHERING.

And much, if not most, of this goes to rich monopolies. Thus for every dollar of these high prices that goes to the Government for revenue several dollars go to the monopolies. An editorial writer recently estimated that the European war is now costing the people of the United States in added prices imposed by monopolies, with war as an excuse or cause, an aggregate of not less than $1,940,000,000 per year. It will later appear that on gasoline alone it is $2,460,000. These monopolies are waxing enormously rich at the expense of the consumer. Add further war burdens and the consumer, not the monopoly, will pay $10 out of every $11 of that burden. And the war traffickers are making the most profit of them all. When the war broke out Bethlehem Steel was quoted at under $40. In a year and a half it had mounted to $474. It is said that 2 per cent of the people own 60 per cent of the wealth and that 98 per cent of the people own but 40 per cent.

RICH ENRICHED FROM THE PENURY OF THE POOR.

Preparation for war means that those who are already rich will be made richer at the cost of those already poor. And should actual war eventuate from the preparation for it, those same poor are the men who would go into the trenches to bite the dust, writhe with poison, or smear the earth with their blood, and the same women and children who had been robbed of the necessities and comforts of life to prepare for war would be robbed of all that was left to them of life by the actuality, while those already made rich would live in safety, piling up added profit from poverty's Calvary.

DO YOU WANT WAR FOR CONQUEST?—THE NAVY LEAGUE DOES.

The Navy League advocates a war of conquest. It would mean profits for them. In pursuance of their purposes they urge huge appropriations and vast increase of the Navy and standing Army. The man who advocates their program, if he knows their program, knows that its adovcacy looks toward militarism and war for conquest. If he does not know, he is an unsafe representative of the people's interests in this critical period. Mr. Kellogg loudly champions the war program of the Navy League, the steel interests, and the Powder Trust.

AMERICA FIRST.

Another big interest that needs a big man to look after its big jobs is the Standard Oil.

America is the great producer of petroleum. For some years we have produced nearly half and some years more than half of the world's supply.

A congressional investigation brought about by CHARLES H. RANDALL, Prohibition Congressman, shows that:

American gasoline, pumped from American wells, drilled in American soil, refined by American refineries, sold at the American seaboard to American purchasers at 6 cents per gallon more than for export to Europe. That is to say that the peace-loving (?) big-business men charged peaceful America 42 per cent more for an American product at an American port than they charged warring Europe. The Standard Oil and its compatriots believe in "doing" America first. And the diabolism of it is that the same big-business men gave out to the public prints that the high price charged in America was caused by the European war. Before Mr. RANDALL turned on the light the oil interests sent out the prediction that if the war continued we would see gasoline up to 50 cents a gallon. In Canada it is now reported at 35 cents. Since the introduction of RANDALL's bill the price has ceased to rocket, and it is prophesied that it will decline to more nearly normal. The average export price, as reported by the United States Department of Commerce, December 18, 1915, was 14.6 cents. The average domestic price for eight leading Atlantic cities for the same date was 20.6 cents. It goes without saying that the oil companies were making some money on their export price. Suppose they were making 1 cent. Then, on American sales they were making 7 cents. That is as much on 1 gallon sold to America as on 7 sold to Europe. Doing America first—and worst. In 1915 we consumed 41,600,000 gallons of gasoline. If we consume a like amount in 1916 the 6 cents extra profit that Americans will pay to the American oil industry—more than they would pay if they were foreigners—will amount to the tidy little sum of $2,460,000.

OIL CONDITIONS BAD—OIL DIVIDENDS GOOD.

But it is stated by the oil industries that the oil conditions are bad. The Cushing field has fallen off from 300,000 barrels per day to 100,000, and the Rittman process has not given the promised relief. Yes. Conditions bad? But the stocks of 17 of the active Standard companies advanced an average of 87 points from March, 1915, to April, 1916. Bad conditions usually show in a slump, not a jump, in stocks. And dividends also are a fair index. One Standard company paid 40 per cent quarterly, or at the rate of 160 per cent annually. They ought to be able to wiggle along. Two others paid 24 per cent quarterly; four paid 20 per cent each, quarterly; two, 16 per cent each, quarterly; and seven, 12 per cent each, quarterly—all in 1916, under "bad" conditions, but under a 6-cent per gallon artificial profit charged to Americans—only.

A PROFITABLE LOSS.

Five years ago the Standard Oil Co. was dissolved into its several component or subsidiary companies. The reason was that the Standard had throttled competition, in which process it had strangled many competitors. It was dissolved under the Sherman antitrust law. While the old Standard Oil Co. was intact it could not, under the Clayton law, discriminate in prices—freight considered—between different places. It was through such discrimination that prior to the passage of the Clayton Act the Standard made much of its money through unfair manipulation.

JOINT OF COMMON OWNERSHIP.

Let it now be remembered that during the past few years the oil field has vastly broadened. Back in the seventies, when Rockefeller began his oil operations, the Appalachian field was the only oil field in the United States. Up to 1900, at which time the Standard absolutely dominated the field, Pennsylvania, New York, Ohio, and West Virginia, all in the Appalachian field, produced 53,000,000 of the 64,000,000 barrels produced in the entire United States. But in 1911, the date of the dissolution, the production of the Appalachian field had fallen to 28,000,000 barrels, while California, Oklahoma, Texas, Kansas, and other Western States had taken the lead and the production had jumped to nearly 210,000,000 barrels. Thus, the Appalachian field, which produced 83 per cent of the total as late of 1900, produced but 13 per cent in 1911; but the Standard Co., while existing as a single corporation, was prohibited under the Clayton law from discrimination. Its old, familiar, and profitable method of business was thus impossible. Yet with oil fields in all parts of the Nation, discrimination was more than ever necessary in its program. How could that difficulty be overcome? By dissolution. But dissolution was fatal unless it could be accomplished without disturbing the joint or common ownership of the component or subsidiary companies. If it could, the Standard would still have every power to fix and control prices which it possessed in its existing form, and would escape the Clayton law, thus giving it a free hand to discriminate, which would add immeasurably to its power and hence to its profits. But it would all depend upon the form of the decree of dissolution. Here was a big job for a big man.

THE IRON COUNTRY.

Let us now bring up a line of relevant history. The iron fields of Minnesota had been discovered by the Merritts, of Duluth. They were hardy frontiersmen and started out to develop the new industry as they had helped to develop the

timber and shipping industries. The panic of 1896 caught them. They were advised to ask John D. Rockefeller to help them out—and he did. He helped them clear out. After he had acquired title to the vast riches of the iron country, his holdings were, in whole or in part, transferred to J. Pierpont Morgan, who organized the United States Steel Corporation. Davis, Kellogg, and Severance were attorneys in the case, and appeared as such in the directories of the company as late as 1911, the date of the Standard Oil decree. In his testimony before a congressional commission, Mr. Kellogg said that he personally attended to much of this business. It is quite possible that Mr. Rockefeller recognized in Mr. Kellogg a big man for big business during these negotiations.

WON THE CASE BUT LOST THE COIN.

When suit was brought against the Standard Oil Co. to dissolve it, it made appropriate and vigorous defense of itself, and fought the case at every point; at least so it seemed. But the Government won and the Standard was dissolved. By court custom it is presumed that the winning counsel, in this case Mr. Frank B. Kellogg, wrote the decree. The decree did not disturb the joint or common ownership of the component or subsidiary companies into which the Standard was dissolved. Permit me to quote a few sentences from an address delivered by R. L. Welch, general counsel for the Western Oil Jobbers' Association, at St. Louis in March of this year:

The application of the Sherman law to the Standard Oil Co. has been a failure not only because it did not produce the results hoped for but because it has conferred a positive immunity upon the subsidiaries of the Standard Oil Co. It has given them a power of discrimination which could not have existed but for the remarkable decree.

No consideration of the legal aspect of the situation can be complete which does not embrace an analysis of the purposes and effects of that famous decree.

The Government's contention both as to the law and as to the facts was sustained, and yet the practical situation as to competition has not been changed except to confer upon the common owners of the Standard Oil Co.'s subsidiaries immunity from regulation as a whole.

The price is fixed by the Standard Oil Co. At this very moment there is not a jobber, there is not a refiner, there is not a producer who may not be caused enormous losses if the Standard Oil Co. reaches the conclusion, rightly or wrongly, that the supply of crude has become such that the price should be dropped.

And likewise there is not a consumer who can escape similar loss if the Standard Oil Co. reaches the conclusion, rightly or wrongly, that the price of crude should be boosted.

In no essential respect since the dissolution decree has this power (to fix prices) been changed. * * *

And here we find the jobber, by virtue of the dissolution decree, in such a situation that the provisions of the Clayton law against discrimination can not in any respect be applied to the Standard Oil Co. as a whole. * * * My point is that that decree was worse than nothing. A more futile, a more purposeless, a more absurd decree was never entered by a court. * * * It would have been far better for the people of the United States and for the independent oil industry if the Government had either made the dissolution effectual or had done nothing at all.

A BIG JOB FOR A BIG MAN.

That was a big job for big business. It made big prices for the people, big jumps in the stock market, and big dividends for the Standard Oil Co., and counsel for the people got a big fee—$59,000—from the Government. Sure, some big man!

Mr. RANDALL, in presenting his case at the hearing before the Committee on Mines and Mining, said in part:

WHY DO GASOLINE PRICES SOAR?

The most commonly accepted defense of the increase in the price of gasoline is given as the war in Europe and an alleged enormous export demand.

Before showing in detail the fallacy of this claim I want to call attention to some curious facts in relation to the decree dissolving the Standard Oil Co.

If export conditions do not sustain the claims made in that direction and if our suspicions that the dissolution decree makes of the Standard Oil Co. a more powerful combination than before then it can reasonably be argued that this corporation is responsible entirely for the alarming situation confronting 3,000,000 users of gasoline.

I exhibit here an official list of 1911 of the officers of the United States Steel Corporation and its 86 subsidiary companies. On page 10 I find listed in the legal department as attorneys of all these companies the firm of Davis, Kellogg & Severance, of St. Paul, Minn. In the hearings before House committees in 1911 the fact developed that Frank B. Kellogg was paid $59,000 by the United States as attorney's fees in the Standard Oil dissolution case.

Now, curious fact No. 1 is that John D. Rockefeller, jr., was a stockholder in the United States Steel Corporation, of which Mr. Kellogg's firm were attorneys at the very moment that Mr. Kellogg was prosecuting the Standard Oil Co. on behalf of the United States.

Curious fact No. 2 is that in the Standard Oil dissolution decree is found this language: "But the defendants are not prohibited by this decree from distributing ratably to the shareholders of the principal company the shares to which they were equitably entitled in the stocks of the different corporations that are parties to the combination."

This sort of a decree was well described by James J. Hill, who, at a banquet stated that the only effect of the dissolution decree in the Northern Securities case was to compel him to exchange one certificate of stock for two others of different colors. Standard Oil shares are now printed in many colors, but the same interests own them.

Coming to the claim of increased prices on account of export demands, from official sources it will be demonstrated that while in April, 1915, the average price of gasoline in eight Atlantic cities was only a fraction of 1 cent per gallon above the export price, whereas by December, 1915, the domestic price was 6 cents above the export price.

YOU SHOULD SAY "THANK YOU, SIR."

When a man buys gasoline he should say "Thank you, sir," to the counsel for the United States Government who secured—and probably wrote—the decree, for the extra 6 cents per gallon which he is privileged to pay. That item of 6 cents looks small, but in the aggregate it means $2,460,000 annually to the bank account of the oil magnates. And it was made possible by the dissolution decree. It was a big job all right.

IT IS OF RECORD.

All arguments aside, this much is of record. In 1911, when the decree was entered, the tank-wagon price of gasoline in the Indiana field, for example, was 11 cents per gallon. By March, 1912, it was 12 cents; in June it was 13 cents; in August it was 14 cents; in October, 15 cents; and by February, 1913, it was 16 cents, the highest price it had attained up to that date, since the earliest years of the petroleum industry. And in 1916 it surpassed all previous records, with export trade at a standstill and the American consumer soaked 6 cents per gallon for not having the patriotism to be a foreigner!

A CORRECT PRINCIPLE.

I welcome you, and I congratulate you that it is a Prohibition Congressman that has introduced the bill that has brought the Standard Oil to bay—a bill in harmony with the principles of the party—providing for the Government ownership or control of the oil fields and refineries. That bill has stopped the mad flight of prices, and if enacted into law will put the greatest monopoly in any article of general commerce where it can no longer enrich the opulent by an unfair surtax upon the people. And thus again our principles show in pleasing contrast with the faltering, puttering, tinkering policies of the old parties.

"IF WE STAND FIRM, WE SHALL NOT FAIL."

The history of our statecraft stands out upon the horizon of American politics as the Matterhorn shoulders the sky. During all these years, lit by no glint of immediate victory, you, the Prohibitionists of the Nation, have fought on in the gloom of what the world calls failure. And in the gray dawn of the morning after election day the blare of the lonely battle bugle of the loyal Prohibitionist sets the air athrob as his undaunted faith shouts "Victory!" and makes mockery of events that seem to spell defeat.

THIS YEAR OF VICTORY.

This has been a trench warfare. Steadily and irresistibly have we pressed forward, driving the enemy from his defenses of indifference, custom, law, and greed until on this happy hour I dare to stand and prophesy to you that the day is not far distant when we shall break through the last line and take the citadel at Washington. In the providence of God and by the heroic patriotism of the American electorate, strengthened as it now is by the battalions of women in 12 States, it is by no means unthinkable that with a statesmanlike platform and with candidates who will inspire the confidence of the American people, backed by the loyal support of the rank and file of the Prohibition Party—it is not unthinkable, I say, that we shall this year write the eternal doom of the liquor traffic by electing not only scattering officers but more; for, though we fail to elect our national candidates, we shall elect the national issues for which those candidates stand and for which this party has for more than a generation given its lofty and unswerving devotion.

THE GODDESS OF LIBERTY LIGHTING THE WORLD.

I welcome you not by my own lips but by the lips of the Prohibition forces of this State. I welcome you in the name of the unconquered and unconquerable army that marches on to that victory which, under God, is as certain as sunrise. I welcome you with the assurance that I make no vain prophecy when I state that when the next Congress shall assemble the State of Minnesota will be represented by one or more Prohibition Members. I welcome you with the certainty that never again will any Prohibition Congressman be as lonesome as CHARLES H. RANDALL, of California, has been. I welcome you in the confidence that with the growing loyal support of the patriotic voters of the United States the Prohibition Party shall press forward in its holy war until there shall not be a disfranchised woman or a legalized drunkery anywhere under the flag and that this land of our life, of our liberty, and our love shall be the "Goddess of Liberty" lighting the path of the world with the torch of Peace, Progress, and Prohibition.

**A Comparison of the Present Administration with Preceding Administrations in Legislation and Achievement for the Development of the Navy.**

EXTENSION OF REMARKS

OF

# HON. LEMUEL P. PADGETT,

OF TENNESSEE.

IN THE HOUSE OF REPRESENTATIVES,

*Friday, August 25, 1916.*

Mr. PADGETT. Mr. Speaker, in view of the widespread interest throughout the country on the subject of preparedness, and especially the interest of the people in the Navy, and in view of the many unjust criticisms and untrue reports which have been published broadcast through the country, I deem it appropriate to call attention to the achievements and accomplishments of the present administration under the lead and guidance of President Wilson and the administration of the Navy Department under Secretary Daniels, and to submit comparisons with the achievements and accomplishments of preceding administrations. In so doing I have full confidence that the facts will bear testimony to the splendid achievements and accomplishments of the present administration and will refute the untrue charges and misstatements relating to the Navy which have been circulated broadcast throughout the country and will demonstrate to the people that the present administration and the present Secretary of the Navy, Mr. Josephus Daniels, are deserving of praise and commendation for the results accomplished.

I shall not attempt to deal in rhetoric or in flights of grandiloquent phrases, but shall content myself with a plain business-like statement of the facts and show what has been accomplished in building up the matériel of the Navy and in legislation for the reorganization and improvement of the personnel of the Navy, and to show that the administration and the Congress has kept faith with the people and has redeemed the pledges and fulfilled the assurances given to the country.

The Democratic platform of 1912 declared, with reference to the Navy, that—

> The party that proclaimed and has always enforced the Monroe doctrine and was sponsor for the new Navy will continue faithfully to observe the constitutional requirements to provide and maintain an adequate and well-proportioned Navy sufficient to defend American policies, protect our citizens, and uphold the honor and dignity of the Nation.

In pursuance of the declaration of the Democratic platform in 1912 President Wilson, in a message to Congress, announced the position of the administration with reference to the naval strength in these words:

> We shall take leave to be strong upon the seas, in the future as in the past, and there will be no thought of offense or provocation in that.

And in a later message to Congress the President states:

> We have always looked to the Navy of the country as our first and chief line of defense; we have always seen it to be our manifest course of prudence to be strong upon the seas.

In pursuance of the declarations of the Democratic platform and of President Wilson thorough investigations were made by the Navy Department and by the committees of Congress with a view of determining, first, the fighting efficiency of the existing Naval Establishment as regards its personnel and matériel; second, the means to be adopted to increase the efficiency of the existing personnel and matériel; and, third, the necessary legislation to provide additional personnel and matériel to render the Naval Establishment more nearly adequate to defend the interests of the United States and place our Navy, the first line of defense, in a great state of preparedness.

As to the first of these investigations, the Wilson administration found the Navy short of officers, short of men, short of fighting craft, short of aircraft, short of munitions, and with an organization in the Navy Department that did not effect proper efficiency. The Navy was not balanced and was not adequate, nor was there at any time a continuous policy to render the Navy well balanced or adequate. While it is true that the Navy General Board had a policy for 48 ships of the first line by 1919, no Secretary of the Navy had ever adopted the recommendations of the General Board in the annual estimates to Congress. The lack of a fixed and definite policy led Senator LODGE in a speech in the Senate on July 13 of the present year to state:

> I have already said, when I began to speak, that this bill went some distance in remedying the haphazard, ill-balanced, often stinted, and ill-proportioned recommendations of Congress made by committees and compromises, and all that, without any system.

Owing to this lack of a fixed policy or system, our Navy, under Republican administration, was allowed to drop prior to 1911 from second to third place.

In an attempt to prevent our Navy dropping still further in relative strength due to such haphazard policies, President Wilson, in his message to Congress in December, 1915, urged the adoption of a well-considered and well-proportioned continuing program for the construction of new vessels. Although the General Board since 1903 had constantly recommended a continuing program that would have given the United States 48 capital ships with other craft in proportion by 1919, it was not until the present year, under the administration of President Wilson, that the recommendation of the General Board for a well-proportioned continuing program was adopted and both Houses of Congress have approved such a policy. The action of the administration and Congress means that the new American Navy will be developed along the lines of a fixed, definite, and continuing policy, and that our first line of defense will not be built in a haphazard fashion, as heretofore.

The continuing program authorized in the Naval bill, which has just passed both Houses of Congress and been approved by the President will shortly assure the United States a well-proportioned and well-balanced Navy, second in strength in the navies of the world, and authorizes constructions in an amount that will tax the capacity of private shipbuilders as well as the shipbuilding facilities of the Government for the next three years.

The following table shows conclusively the haphazard policy which has been indulged in by previous administrations since 1903. The table shows the recommendations made by the General Board as regards new constructions, the recommendations made by the Secretary of the Navy, and the authorizations of Congress:

*Construction recommended and authorized since 1903.*

| Recommended by the General Board. | Recommended by the Secretary of the Navy. | Authorized by Congress. |
|---|---|---|
| 1903. | (Secretary Moody.) | (Act of 1904.) |
| 2 battleships | 2 hospital ships | |
| 1 armored cruiser | 1 battleship [1] | 1 battleship. |
| 3 protected cruisers | 1 armored cruiser [1] | 2 armored cruisers. |
| 4 scout cruisers | 3 protected cruisers [1] | |
| | 2 to 4 scout cruisers [1] | 3 scout cruisers. |
| 2 fuel ships | 2 submarines | 4 submarines. |
| 3 destroyers | 2 fuel ships [1] | 2 fuel ships. |
| 1904. | (Secretary Morton.) | (Act of 1905.) |
| 3 battleships | 3 battleships [2] | 2 battleships. |
| 6 destroyers | 6 destroyers (if practicable) [2] | |
| 5 scout cruisers | | |
| 6 torpedo boats | | |
| 2 fuel ships | | |
| 1 gunboat | | |
| 2 river gunboats | | |
| 2 Philippine gunboats | | |
| $850,000 for submarines | | |
| 1905. | (Secretary Bonaparte.) | (Act of 1906.) |
| 3 battleships | 2 battleships | 1 battleship. |
| 1 gunboat | 1 gunboat | |
| 2 river gunboats | 2 river gunboats | |
| 3 scout cruisers | 2 scout cruisers | |
| 4 destroyers | 4 destroyers | 3 destroyers. |
| 4 submarines | 2 submarines | 8 submarines. |
| 4 torpedo boats | | |
| 2 small gunboats | | |
| 1906. | (Secretary Bonaparte.) | (Act of 1907.) |
| 2 battleships | 1 battleship, and, with hesitation, 2. | 1 battleship. |
| 1 gunboat | 2 gunboats | |
| 2 river gunboats | 3 river gunboats | |
| 4 destroyers | 4 destroyers | 2 destroyers. |
| 2 fuel ships | 2 fuel ships | |
| 4 ships' torpedo boats | 4 ships' torpedo boats | |
| 2 scout cruisers | | |
| 2 small gunboats | | |
| 1 ammunition ship | | |
| 1907. | (Secretary Metcalf.) | (Act of 1908.) |
| 4 battleships | 4 battleships | 2 battleships. |
| 4 scout cruisers | 4 scout cruisers | |
| 10 destroyers | 10 destroyers | 10 destroyers. |
| 4 submarines | 4 submarines | 8 submarines. |
| 2 fuel ships | 4 fuel ships | 2 fuel ships. |
| 1 ammunition ship | 1 ammunition ship | |
| 1 repair ship | 1 repair ship | |
| 2 mine-laying ships (conversion of 2 cruisers now on list). | 2 mine-laying ships (conversion of 2 cruisers now on list). | |
| 4 ships' motor torpedo boats. | | Purchase of 3 new fast ships. |

[1] Recommended in his hearings before the House Naval Committee. Not in his annual report.

[2] Recommended in his hearings before the House Naval Committee. No specific recommendation in his annual report.

*Construction recommended and authorized since 1903*—Continued.

| Recommended by the General Board. | Recommended by the Secretary of the Navy. | Authorized by Congress. |
|---|---|---|
| 1908. | (Secretary Metcalf.) | (Act of 1909.) |
| 4 battleships | 4 battleships | 2 battleships. |
| 4 scout cruisers | 4 scout cruisers | |
| 10 destroyers | 10 destroyers | 5 destroyers. |
| 4 submarines | 4 submarines | 4 submarines. |
| 3 fuel ships | 3 fuel ships | 1 fuel ship. |
| 1 ammunition ship | 1 ammunition ship | |
| 1 repair ship | 1 repair ship | |
| 2 mine-laying ships (conversion of 2 cruisers now on list). | 2 mine-laying ships (conversion of 2 cruisers now on list). | |
| | | 1 destroyer whose vitals are located below the water line. |
| 1909. | (Secretary Meyer.) | (Act of 1910.) |
| 4 battleships | 2 battleships | 2 battleships. |
| 1 repair ship | 1 repair ship | |
| | | 2 fuel ships. |
| | | 4 submarines. |
| 10 destroyers | | 6 destroyers. |
| 4 scout cruisers | | |
| 1 ammunition ship | | |
| 1 fuel ship (oil tank) | | |
| 1910. | (Secretary Meyer.) | (Act of 1911.) |
| 4 battleships | 2 battleships | 2 battleships. |
| 1 gunboat | 1 gunboat | 1 gunboat. |
| 2 river gunboats | 1 river gunboat | 1 river gunboat. |
| | 2 submarines | 4 submarines. |
| 4 fuel ships | 1 fuel ship | 2 fuel ships. |
| 2 tugs | 2 tugs | 2 tugs. |
| 3 submarine tenders | 1 submarine tender | 1 submarine tender. |
| 16 destroyers | | 8 destroyers. |
| 1 repair ship | | |
| 4 scout cruisers | | |
| 2 destroyer tenders | | |
| 1 mine layer | | |
| 2 transports | | |
| 1 hospital ship | | |
| 1911. | (Secretary Meyer.) | (Act of 1912.) |
| 4 battleships | 2 battleships | 1 battleship. |
| 4 fuel ships | 2 fuel ships | 2 fuel ships. |
| 16 destroyers | | 6 destroyers. |
| 2 destroyer tenders | | 1 destroyer tender. |
| 5 submarines | | 8 submarines. |
| 2 submarine tenders | | 1 submarine tender. |
| 1 repair ship | | |
| 4 scout cruisers | | |
| 1 ammunition ship | | |
| 1 mine layer | | |
| 2 transports | | |
| 1912. | (Secretary Meyer.) | (Act of 1913.) |
| 4 battleships | 3 battleships | 1 battleship. |
| 2 battle cruisers | 2 battle cruisers | |
| 2 gunboats | 2 gunboats | |
| 16 destroyers | 16 destroyers | 6 destroyers. |
| 6 submarines | 6 submarines | 4 submarines. |
| | 1 fuel ship (conditionally) | |
| 1 ammunition ship | 1 ammunition ship | |
| 2 transports | 2 transports | 1 transport. |
| 2 tugs | 2 tugs | |
| 1 submarine tender | 1 submarine tender | |
| 1 destroyer tender | 1 destroyer tender | |
| 1 supply ship | 1 supply ship | 1 supply ship. |
| 1 submarine testing dock | 1 submarine testing dock | |
| 1913. | (Secretary Daniels.) | (Act of 1914.) |
| 4 battleships | 3 battleships | 3 battleships. |
| 16 destroyers | 8 destroyers | 6 destroyers. |
| 8 submarines | 3 submarines | 8 or more submarines. |
| 1 destroyer tender | | 1 submarine testing dock. |
| 1 submarine tender | | |
| 2 fuel ships (oilers) | | |
| 2 gunboats | | |
| 1 transport | | |
| 1 supply ship | | |
| 1 hospital ship | | |
| 1914. | (Secretary Daniels.) | (Act of 1915.) |
| 4 battleships | | 2 battleships. |
| 16 coast submarines | 2 battleships | |
| 16 destroyers | 6 destroyers | 6 destroyers. |
| 3 fleet submarines | 8 submarines or more, 1 to be of seagoing type and 7 or more of coast-defense type. | 2 seagoing submarines 16 coast-defense submarines. |
| 4 scouts | | |
| 4 gunboats | 1 gunboat | |
| 2 oil fuel ships | 1 oiler | 1 oil fuel ship. |
| 1 destroyer tender | | |
| 1 submarine tender | | |
| 1 Navy transport | | |
| 1 hospital ship | | |
| 1 supply ship | | |

The amounts appropriated for the Navy Establishment under the administrations of McKinley, McKinley and Roosevelt, Roosevelt, Taft, and Wilson, by calendar years, are as follows:

| | |
|---|---|
| *McKinley administration.* | |
| 1898 | $144,566,940.77 |
| 1899 | 57,297,569.78 |
| 1900 | 66,949,286.62 |
| 1901 | 83,020,090.23 |
| *McKinley and Roosevelt administration.* | |
| 1902 | $85,347,345.29 |
| 1903 | 84,993,697.99 |
| 1904 | 103,852,179.91 |
| 1905 | 118,459,897.56 |
| *Roosevelt administration.* | |
| 1906 | $105,815,342.50 |
| 1907 | 100,893,431.98 |
| 1908 | 130,013,153.60 |
| 1909 | 140,042,655.85 |
| *Taft administration.* | |
| 1910 | $133,216,693.19 |
| 1911 | 127,818,681.48 |
| 1912 | 129,739,055.88 |
| 1913 | 142,744,167.27 |
| *Wilson administration.* | |
| 1914 | $148,254,332.41 |
| 1915 | 151,033,908.03 |
| 1916 | 313,384,212.84 |

The tonnage of the vessels authorized by Congress for the same calendar years are stated by the Chief Constructor of the Navy to be as follows, showing that during the 16 years of Republican rule the total tonnage authorized amounted to 1,116,018 tons, while during the three years of the Wilson administration the tonnage authorized amounted to 1,014,666 tons:

BUREAU OF CONSTRUCTION AND REPAIR,
NAVY DEPARTMENT,
*Washington, August 24, 1916.*

I give below the tonnage of the vessels authorized by Congress each year from 1898 on. The first authorization under the first McKinley administration was in 1898. These tonnages include submarines. The displacement of submarines is not given in the data books, and hence these tonnages are slightly greater than would be obtained from a compilation of the displacements shown in the data books.

For the new program the tonnages, of course, are approximate, and are based upon the assumption that those of vessels to be constructed in future years are the same as for vessels to be undertaken this year:

| | Tonnage. |
|---|---|
| 1898 | 59,570 |
| 1899 | 105,084 |
| 1900 | 100,736 |
| 1901 | None. |
| 1902 | 63,630 |
| 1903 | 77,600 |
| 1904 | 83,605 |
| 1905 | 52,000 |
| 1906 | 23,924 |
| 1907 | 21,400 |
| 1908 | 126,120 |
| 1909 | 76,552 |
| 1910 | 98,020 |
| 1911 | 108,365 |
| 1912 | 81,681 |
| 1913 | 58,331 |
| 1914 | 106,134 |
| 1915 | 95,532 |
| 1916 | 813,000 |

Very sincerely,

D. W. TAYLOR,
*Chief Constructor, United States Navy.*

During the administration of McKinley and Roosevelt, from March 4, 1901, to March 4, 1905, the total cost of vessels authorized amounted to $107,006,642. During the Roosevelt administration, from March 4, 1905, to March 4, 1909, the total cost of vessels authorized amounted to $83,192,938. Under the Taft administration, from March 4, 1909, to March 4, 1913, the total cost of vessels authorized amounted to $127,747,113. While during the Wilson administration, from March 4, 1913, to August 25, 1916, the total cost of vessels authorized amounted to $655,289,806. The above figures show that the total cost of vessels authorized in the Wilson administration to date is more than twice the cost of vessels authorized in the Republican administrations from March 4, 1901, to March 4, 1913, by over $19,000,000. The total authorized tonnage of the Republican administration from March 4, 1901, to March 4, 1913, amounts to 1,116,018 tons. The tonnage of vessels authorized during the Wilson administration to date amounts to 1,014,666 tons.

The naval bill which passed Congress during the present session authorizes the construction of the following vessels prior to July 1, 1919:

| | |
|---|---|
| Battleships | 10 |
| Battle cruisers | 6 |
| Scout cruisers | 10 |
| Torpedo-boat destroyers | 50 |
| Submarines | 67 |
| Submarine with Neff system (experimental) | 1 |
| Fuel ships | 3 |
| Repair ship | 1 |
| Transport | 1 |
| Hospital ship | 1 |
| Destroyer tenders | 2 |
| Submarine tender | 1 |

| | |
|---|---|
| Ammunition ships | 2 |
| Gunboats | 2 |
| Total | 157 |
| *Appropriated for this year.* | |
| Battleships | 4 |
| Battle cruisers | 4 |
| Scout cruisers | 4 |
| Torpedo-boat destroyers | 20 |
| Submarines | 30 |
| Submarine with Neff system (experimental) | 1 |
| Fuel ship | 1 |
| Hospital ship | 1 |
| Ammunition ship | 1 |
| Gunboat | 1 |
| Total | 67 |

The above vessels, as heretofore stated, restore the United States to second in naval strength among the powers of the world, which position we had lost under Republican administration. The vessels authorized are to be the most powerful of their class. The battleships are to carry the heaviest armor and the largest number of any vessels of their class, while the battle cruisers are to have an unprecedented speed of 35 knots and the unprecedented horsepower of 180,000, having a length of about 850 feet, carrying a battery of 14-inch guns, almost equal to that of the present battleship. The scout cruisers and torpedo boats are to be the best of their class, while the submarines and auxiliaries are to be of the most modern and most efficient type.

The following table shows the relative fighting strength and efficiency of ships of the Navy, taking the *Delaware* as a value of 100:

RELATIVE FIGHTING EFFICIENCY OF SHIPS OF THE NAVY.

According to the table prepared by the Office of Naval Intelligence, taking the *Delaware* value as 100, the comparative value of battleships of the Navy is as follows:

| Ship. | Comparative value when completed. | Comparative value corrected for age in 1914. |
|---|---|---|
| Indiana | 20.64 | 7.40 |
| Massachusetts | 20.64 | 7.40 |
| Oregon | 20.64 | 7.40 |
| Iowa | 20.96 | 10.09 |
| Kearsarge | 23.55 | 15.07 |
| Kentucky | 23.55 | 15.07 |
| Alabama | 21.41 | 14.72 |
| Illinois | 21.41 | 14.72 |
| Wisconsin | 21.41 | 14.72 |
| Maine | 28.84 | 22.20 |
| Missouri | 28.84 | 22.20 |
| Ohio | 28.84 | 22.20 |
| Georgia | 39.40 | 31.54 |
| Nebraska | 39.40 | 31.54 |
| Virginia | 39.40 | 31.54 |
| New Jersey | 39.40 | 33.10 |
| Rhode Island | 39.40 | 33.10 |
| Connecticut | 51.46 | 46.19 |
| Louisiana | 51.46 | 46.19 |
| Kansas | 49.98 | 46.06 |
| Minnesota | 49.98 | 46.06 |
| Vermont | 49.98 | 46.06 |
| New Hampshire | 49.98 | 47.10 |
| Michigan | 78.51 | 75.37 |
| South Carolina | 78.51 | 75.37 |
| Delaware | 100.00 | 97.44 |
| North Dakota | 100.00 | 98.56 |
| Florida | 100.28 | 99.64 |
| Utah | 100.28 | 99.64 |
| Arkansas | 135.64 | 135.42 |
| Wyoming | 135.64 | 135.42 |
| New York | 169.38 | 169.38 |
| Texas | 169.38 | 169.38 |
| Nevada | 190.31 | 190.31 |
| Oklahoma | 190.31 | 190.31 |
| Pennsylvania | 230.84 | 230.84 |
| Arizona | 230.84 | 230.84 |
| New Mexico | 267.83 | 267.83 |
| Mississippi | 267.83 | 267.83 |
| Idaho | 267.83 | 267.83 |
| 43, Tennessee | 273.00 | 273.00 |
| 44, California | 273.00 | 273.00 |

The 16 ships that made the cruise around the world in 1907–1909, and their comparative value as shown by the above table was 597.48. The comparative value of battleships added to the fleet by completion or authorization since the around-the-world cruise is 3,409.39. It must be understood, however, that the comparative value of battleships of other nations has increased in the same proportion.

The above table demonstrates how the fighting efficiency of vessels has increased with each authorization, so that the splendid program, as set out in the present naval bill, will tremendously increase the fighting efficiency of our first line of defense.

So much inaccurate and unjust criticisms from irresponsible sources have been made that the Committee on Naval Affairs of the House of Representatives called before it the then commander in chief of the North Atlantic Fleet, Admiral Frank F. Fletcher, United States Navy, and interrogated him as to the condition of the matériel of the fleet. Admiral Fletcher states in substance that the battleships and destroyers with the fleet, which constitute its main fighting element, are in a very satisfactory condition with a few exceptions. The submarines are operating separately and devoting all of their time to getting the machinery in more efficient condition and training. The auxiliary service of the fleet is satisfactory. The division of mining has made satisfactory progress in its development. The cruiser squadron has been actively employed in foreign service in Haiti, Mexico, and Central America and rendered most efficient service. The powder and shell furnished our Navy is as good powder for naval service as that of any country in the world, if not better, and the fleet has absolute confidence in it. The projectiles of the Navy are of the highest standard, and the target-practice shells meet with the requirements of the fleet as to their behavior and reliability. The guns are as good as any, and the mines and torpedoes operate in a satisfactory way.

POWDER.

As to the supply of munitions on hand, the present administration has relieved the shortage of powder, so that the supply at present is very satisfactory both as regards the current and reserve supply. The Navy has on hand or ordered all of the powder and reserve powder for all of the battleships that are in commission or about to be in commission, and has the allowance of powder for all their guns in the service and nearly all in reserve. The present administration has increased the capacity of the Government powder factory at Indianhead, Md., from 4,000,000 to 6,000,000 pounds per annum, and is manufacturing the best smokeless powder at 34 cents per pound, including all overhead charges. During the last year, by reason of the efficiency of the Government powder factory, it has not been necessary to purchase powder from private contractors who charge 53 cents per pound. The present bill appropriates money sufficient to provide all the ammunition, both current and for reserve, for all the ships of the Navy, including the ships authorized to be constructed this year.

TORPEDOES.

The shortage in torpedoes has been remedied during the present administration, and for every 100 torpedoes the Navy had on hand in 1913 it now has 158 more. The enlargement of the torpedo factory has enabled the Government to construct torpedoes in its plant at Newport at a saving of over $1,000 on each torpedo. Not only are more torpedoes provided for less money, but the Navy Department has won its suit to prevent a private company selling its torpedoes to foreign Governments, thereby disclosing naval secrets. Judge Cox, in rendering the decision in this suit, said:

This suit illustrates the importance of the United States having a manufactory of its own for the manufacture of torpedoes and other implements of war, which are improved and changed from time to time by the addition of ingenious mechanism, which should clearly be kept secret unless our enemies are to profit equally with ourselves in every improvement which the ingenuity of our Army and Navy officers may suggest.

MINES.

When the Wilson administration came into power it was found that there was no mining division of the fleet, and that there was a totally inadequate supply of mines. A complete mining division has been organized, and the Navy Department has obtained the right to manufacture mines of a successful foreign type in this country and is doing so in its own plant, the mines being of a type used by European powers in the present war. The mines are being built at a cost of between $175 and $200 less than the price contracted for when purchased abroad. At the present time there are four times as many mines in the Navy as at the beginning of the Wilson administration, and the number is being multiplied daily. For the first time in the history of the American Navy its position in regard to mines and mining is satisfactory.

SHELLS.

A large shortage in armor-piercing shells which had been existing for years has been found upon investigation, and the present naval appropriation bill authorizes the expenditure of $13,720,000 for shells to supply a deficiency in reserve for the guns of the ships heretofore authorized, and also appropriate sufficient money to supply all shells needed for the new ships authorized constructed this year.

It is believed by the ordnance experts of the Navy Department that the Government can manufacture armor-piercing projectiles cheaper than it can purchase them, and the Chief of Ordnance reports that the department knows accurately the cost of the steel, the cost of labor, and the percentage of loss in the manufacture of projectiles. It is believed that a Government factory will create competition with private manufacturers and the best quality of projectiles will be obtained. The present naval appropriation bill provides for a Government projectile plant. The total capacity of all private plants which

have heretofore furnished the Government with armor-piercing shells meeting the Government specifications is only 22,000 14-inch shells per annum. The contemplated building program requires additional capacity, and it is necessary for the Government to supplement the private production of armor-piercing shells and at the same time will have a check on the cost and quality of the projectiles produced. It is known to be a fact that practically no ammunition was delivered from the United States to the belligerents for 10 months after the war began, although they had fabulous sums of money at their disposal to equip their plants. The Government projectile plant is absolutely necessary in the interest of real preparedness, and this administration is the only one ever to so recommend and legislate.

GUNS.

With two or three minor exceptions which are negligible the guns on hand and in process of manufacture meet all the requirements of the department as to guns and reserve guns. All of the 14-inch batteries and reserve guns for these batteries are built or building and the Navy Department has perfected a 16-inch gun which is to be placed on the new battleships. This gun will fire a projectile that will hit harder than any gun now in use in any foreign navy. The ordnance experts of the department have designed, completed, and placed on the latest dreadnaughts antiaircraft guns of the greatest known efficiency.

RESERVE ORDNANCE SUPPLIES.

The present administration has adopted a policy for the accumulation of a complete reserve of ammunition and other ordnance supplies in the interests of real preparedness, and the present naval bill carries an appropriation of $4,503,424 for this purpose. This is the first legislative provision for such purpose.

IMPROVEMENT IN TARGET PRACTICE.

The report of the commander in chief of the Atlantic Fleet and the testimony of expert naval officers in the recent hearings before the Committee on Naval Affairs of the House of Representatives emphasized the fact that the Navy is recovering in target practice from the slump from 1909 to 1913. Admiral Fletcher, in his report dated October, 1915, stated:

It is believed that the scores reported are higher than ever before in the open sea.

Capt. W. S. Sims, United States Navy, stated to the House Committee on Naval Affairs that the last target practice "came up about 40 per cent," adding that the president director of target practice "is the best equipped man in the Navy to handle it." The officer in charge of gunnery, in speaking of the practice of the turret guns on battleships, stated:

The records of the fall of 1915 indicate that we are advancing by leaps and bounds.

Target practice to-day is held at longer ranges than ever before and at as long ranges as any firing in the present European war. Admiral Fletcher states:

It is probable that some 10 to 20 per cent of the shots fired could have been landed on a battleship at 18,000 yards.

Capt. J. S. McKean, United States Navy, speaking of the progress of the Navy as a whole, stated to the House Committee on Naval Affairs:

We have made more progress in the last two years than in any previous five years in my experience.

ARMOR PLANT.

It having been demonstrated to the satisfaction of the Navy Department and the Committees on Naval Affairs of the Senate and House of Representatives that free and voluntary competition in the bidding for contracts to supply armor plate to the Navy no longer existed, the department recommended and the Congress authorized in the present naval appropriation bill the construction of a Government armor plant in order that the Government might be in a position to determine a fair and reasonable price to be paid for armor plate and thereby secure for itself a measure of protection.

AVIATION.

The total appropriation for aviation during the Wilson administration amounts to $5,217,278.57. During the Taft administration there was expended for aviation the sum of $61,888.06. In the appropriation bill of the present session of Congress the sum of $3,500,000 was appropriated for aviation purposes and $420,000 for the aviation station at Pensacola, Fla.

In the present naval appropriation bill a Naval Flying Corps is established as well as aeronautic schools are authorized. Provision is also made for 10 aviation stations along the coast of the United States to be under the supervision of the Coast Guard for the purpose of saving life, sighting derelicts, and for the national defense—something not heretofore attempted.

The present administration under authority of law created the Advisory Committee for Aeronautics. The work of this committee is progressing along practical lines as well as scientific lines. It is the agent of the military and naval service of the country in the development and utilization of the things that are common to these services in the field of experimental and practical aviation, and it coordinates activities of the aviation work of the military and naval services with those bureaus of the Government whose work is essential to the development of practical aviation, such as the meteorological work of the Weather Bureau and the development of the properties of materials under the Bureau of Standards. Further it is stimulating the manufacturing interests of the country in the production of material, equipment, and accessories needed in aviation by placing before them proper specifications of the things required. The committee consists of members of the Army, Navy, Smithsonian Institution, Weather Bureau, Bureau of Standards, and not more than five additional persons acquainted with the needs of aeronautical science or skilled in aeronautical engineering or its allied sciences. This is a new naval activity.

MOBILIZATION IN AMERICAN INDUSTRIES.

When it was learned how far behind some of the belligerent nations were in the manufacture of munitions of war, the Secretary of the Navy concluded that real preparedness required that an attempt should be made to mobilize the industries of the United States as well as to provide means for military and naval protection. This had never been attempted before. Mr. Daniels appointed a civilian Navy consulting board, of which he made Mr. Thomas A. Edison chairman, and the Government has obtained the invaluable services, rendered without compensation, of the Nation's foremost engineers and chemists. Their counsel, cooperation, and initiative are now made readily available to aid in the solution of the many complicated problems always before the Navy Department. A committee of this consulting board has already completed the first census ever made of the country's industrial resources for war. This information and the contemplated work of this committee in the new experimental laboratory to be erected in accordance with the provisions of the present Navy bill place the great facilities of American industry at the service of the country in the event of war. Industrial preparedness, never before contemplated in this country, is an accomplishment of the Wilson administration.

DRY DOCKS.

Since no battle cruisers were authorized during any administration previous to the Wilson administration—although every other large naval power in the world had in active commission such vessels—no provision was made in previous administrations for docking vessels of the size of the modern battle cruiser. It therefore became necessary for the present administration to authorize two stone dry docks, one in Norfolk Navy Yard and one in Philadelphia Navy Yard. Otherwise no docking facilities in the United States owned by the Government would be provided for the battle cruisers authorized in this year's building program.

NAVY-YARD SITUATION.

The consensus of expert naval opinion as expressed before the Committee on Naval Affairs of the House of Representatives seems to be that in case of a naval engagement between the United States and a foreign foe the most probable theater of war would be the Caribbean Sea. The present Congress deems it important that it should be advised as to whether or not the docking and repair facilities along the coasts south of Hatteras, the Gulf of Mexico, and the Caribbean Sea are sufficient to provide proper strategic and repair bases. A commission is directed to report as to the necessity, desirability, and advisability of establishing an additional navy yard or naval station in that territory, and also to report as to the facilities for the care and repair of our fleet on the Pacific coast. The commission is composed of five naval officers.

ECONOMIES EFFECTED DURING THE PRESENT ADMINISTRATION.

By the appointment of industrial managers in the various navy yards to supervise the work in the shops the Navy Department has effected material savings in the cost of work in the various yards and stations. Heretofore, during the administration of Secretary Meyer, the shop management was largely in the hands of line officers. An officer of the line would be detailed to supervise the shop management in navy yards who perhaps previous to that time had never performed any such work. In consequence of this management, extravagance was most apparent in navy yards. The present administration is adopting the policy to detail as industrial managers officers who do not go to sea and who have done nothing but supervise the work in shops for years. The workingmen are more content in the shops and the work proceeds more expeditiously. This efficiency and economy has been produced notwithstanding

the fact that the average pay per day for employees in 1912 was $2.723, as compared with $2.997 in 1916, an increase of pay of $0.274 per day. The number of employees in navy yards is 7,485 more than when the Wilson administration came into power.

Continued and repeated insistence upon some form of competition among armor plate manufacturers saved the Government $1,110,084, and $600,000 of this sum was on one ship alone, the *Arizona*. The same policy of continued insistence for some form of competition among the projectile manufacturers has saved the Government $1,077,210. By increasing the capacity of the Government Powder Plant at Indianhead, Md., the capacity of output has been increased from 4,000,000 to 6,000,000 pounds annually and the cost of powder reduced to 34 cents per pound, effecting a saving on the additional powder, when the factory is worked to its full capacity, of $570,000 per annum. The cost of manufacturing torpedoes has been reduced from $4,202 each to $3,245 each, effecting an estimated saving in torpedoes of about $300,000 for the past year. Numerous other economies of various kinds effected a saving of about $2,000,000, of which $1,000,000 was reappropriated for aviation and $800,000 for additional submarines.

Experience had demonstrated that the battleships *Mississippi* and *Idaho* could not maintain the required speed of the fleet, and whenever they attempted to do so they met with accidents, sometimes breaking shafts. In addition to that, in a heavy seaway it was found that the turrets shipped water and interfered materially with the handling of the turret guns. The present administration therefore sold these misfit battleships after about six and a half years' service for $12,535,275.96, which was the original cost of both. This sum, with an additional two million dollar appropriation by Congress secured the modern dreadnaught known as the *Mississippi*, now building at Newport News.

By carefully watching the transportation of enlisted men between naval stations and ships a saving of $176,645.56 was effected. The Navy Department by care and vigilance in using naval colliers to bring from distant ports articles used in large quantities by the Navy, such as hemp for auxiliaries, sodium nitrate for powder, tin, shellac, and like material, and for the transportation of coal to west-coast stations and to the Philippines; by insisting on competition in the purchase of steaming coal; by remelting of scrap metal; and in the purchase of provisions, the department has effected economies amounting to $1,342,595. If these economies had not been effected the current working appropriations of the various bureaus would have been increased by the above additional amounts in order to meet the requirements of the naval service.

ENLISTED MEN.

The records of the Bureau of Navigation show that on March 3, 1913, there were less men in the Navy than on June 30, 1912, notwithstanding the fact that Congress on August 22, 1912, had increased the enlisted strength by 4,000 men. Recruiting had fallen to such a low ebb that at the end of 1912 the battleship fleet was short 1,648 men to effectively man the ships. It therefore appears that previous administrations were unable to obtain the men that Congress had authorized, and in consequence the active fleet was short of men and the reserve ships were compelled to lie idle at the docks and deteriorate for lack of men to keep them in good condition. On March 4, 1913, the present administration found the Navy short of its authorized enlisted force by 5,312 men. During the Roosevelt administration 7,500 enlisted men were added. This provided only enough to man the ships authorized during that administration, making no provision for a reserve or for relieving the then existing shortage. This shortage existed through the Taft administration, and although Congress during that administration authorized an increase of 7,000 men, only 3,000 were actually enlisted, leaving a deficiency in the authorized strength of the Navy in enlisted men of 5,312. An investigation was made, and after careful consideration means were adopted to increase recruiting in the Navy, as it appeared at the time the first need of the Navy was enlisted men. The present administration immediately took steps to open the avenues for promotion for enlisted men, and provided for their instruction on board ship in order that they might be educated to advance in rank in commissioned and warrant grades. Under new legislation during this administration, 25 enlisted men can now be appointed annually to the Naval Academy and may qualify to rise from apprentice seaman to admiral. Already 28 enlisted men have been appointed, and this new recognition has had a salutary effect throughout the entire Navy. Fifteen enlisted men have been appointed as assistant paymasters; 64 to the position of pay clerk. Thirteen enlisted men have been promoted to ensign from the ranks during three years of the present administration as compared with three appointments during the entire administration of Mr. Taft. In consequence of these reforms the shortage of the enlisted men was rapidly overcome and the only difficulty has been in keeping the enlistments down to the number authorized by law. The Wilson administration within three years added over 6,331 men to the enlisted strength of the Navy, a number sufficient to man six dreadnaughts of the latest and most modern type. There are 56 more vessels in commission now than when President Wilson was inaugurated.

The present administration found that highly trained and valuable men of long service were leaving the Navy in large numbers. From 1909 to 1912 the percentage of such men who left the Navy for other pursuits increased from 35 to 46 per cent. The percentage of such men leaving the Navy decreased to 15 per cent in 1915 and the Navy has to-day 6,000 more highly trained and experienced enlisted men than it had three years ago, as reenlistments have increased from 52 to 85 per cent. By proper administration of justice, punishments and discipline the naval desertions in the past three years decreased 31 per cent, and the number of prisoners have been reduced from 1,800 to 700 under improved penal systems. These results have been obtained notwithstanding the fact that the standards for acceptance of recruits and for retaining enlisted men in the Navy have been made much more rigid. The present administration recommended and Congress has authorized that the number of enlisted men in the Navy be established at 74,700 men, exclusive of the Hospital Corps of 3,151 men and the Flying Corps of 350 men, making a total of 78,200 men, and the President is further authorized in time of war or national emergency to increase this number to 87,000, exclusive of the Hospital and Flying Corps. The enlisted men in the Marine Corps in the present naval bill has been increased from 9,947 men to 14,981 men. The President is authorized to increase that number in national emergency or war to 17,400 men.

This number of enlisted men will enable the department to fully man every ship in the Navy and provide men for new ships to be completed within the year as well as for a number of merchant ships which would be taken over as auxiliaries in time of war.

All great naval powers have a policy of maintaining in active commission and fully manned a certain portion of their fleet. The most modern vessels are generally kept in commission while the older vessels are kept in reserve with reduced crews on board. In foreign countries a reserve organization of men is maintained in order to fill the ships' crews in reserve when it is desired to mobilize the entire fleet for maneuvers. The policy of England was to maintain one-half of her fleet in full commission, one-fourth in reserve, with 60 per cent of a full crew on board, and one-fourth in reserve with 12 per cent of a full crew. Germany has had a somewhat similar policy, but maintained in active commission a greater percentage of her ships than England.

Notwithstanding the fact that during the administration of Secretary Meyer there existed no naval reserve the practice of placing some ships in reserve was established having one-third of the engineer crew and one-fourth deck crews. The other vessels of the Navy were laid up in navy yards with only a few men on board to care for them. At present the policy of the department in this respect is as follows: All ships of less than 15 years from date of authorization, one-half the number of cruisers, all serviceable gunboats, all destroyers, and submarines less than 12 years from date of authorization, and the necessary number of auxiliaries to attend the fleet as well as men and officers shall be kept in full commission. All other vessels of the Navy are to be kept in reserve.

The present administration was the first to be successful in the enactment of law providing for an adequate reserve force. In February, 1914, Congress passed a bill reorganizing the Naval Militia of the several States, which placed the Naval Militia on the same basis regarding Federal control as did the Dick bill for the National Guard. During the present Congress the Naval Militia pay bill was passed in the naval appropriation bill, whereby the Naval Militia is placed on the same basis as regards duty and pay as is the National Guard under the terms of the bill for the reorganization of the Army. Likewise, for the first time, the present administration was successful in securing the enactment of a law creating a Naval Reserve in addition to the Naval Militia. The present naval appropriation bill provides for a Naval Reserve force consisting of six classes, composed only of citizens of the United States with experience at sea, who may be called into service by the President in time of war or national emergency. Therefore the present administration has not only improved the condition of the enlisted men of the Navy and Marine Corps but has greatly increased the number in active service, and has likewise provided for the first time an organized and Federal trained Naval Militia and an adequate Naval Reserve with men of experience afloat.

In addition to the reserve forces above enumerated the present Navy bill provides that in time of war the Coast Guard, at

present consisting of 255 commissioned officers and 3,886 warrant officers and enlisted men, specially skilled in duties afloat and duties of coast protection, together with the Lighthouse Service, are automatically transferred to the jurisdiction of the Navy Department. The Coast Guard Service is a very efficient body of officers and men and affords a splendid coast protection.

COMMISSIONED PERSONNEL.

The present administration took immediate steps to relieve the lack of officers of the United States Navy. The principal supply of officers for the line of the Navy is supplied by graduates of the Naval Academy at Annapolis, Md. In order that the Navy should have more officers it was necessary to increase the number of graduates, and during the present session it was provided that each Senator and each Representative in Congress be allowed three appointees to Annapolis instead of two, as had heretofore prevailed, and steps have already been taken at that institution to care for this increase.

President Wilson, in his annual message to Congress, called the attention of the country to the shortage of officers and the necessity for specialists in engineering in the following words:

It is also necessary that the number of midshipmen at the Naval Academy at Annapolis should be increased by at least 300 in order that the force of officers should be more rapidly added to, and authority is asked to appoint, for engineering duty only, approved graduates of engineering colleges, and for service in the Aviation Corps a certain number of men taken from civil life.

The present naval appropriation bill carried out the recommendation of the President in this respect.

In the present naval appropriation bill the Hospital Corps of the Navy is also reorganized and increased to 3,151 men. The number of medical officers has been increased and the number of chaplains has been increased. Previous to 1914 the last increase in the chaplain corps took place in 1841 and although the Navy had increased from 12,000 men to 51,500, no increase was recommended by previous administrations. It is contemplated that before long there will be a chaplain on every large ship. The commissioned personnel of the Marine Corps has been thoroughly reorganized along efficient lines.

The present naval appropriation bill provides for promotion of officers of the line of the Navy by selection; that is, only the best fitted shall be promoted to the highest grades. At the present time promotion in the line of the Navy has been such that nearly every captain in the Navy has reached the rank of rear admiral and shortly thereafter retired on three-quarters pay of that rank without having sufficient time to become experienced in handling a squadron, division, or fleet. In consequence of this short service in the grade of rear admiral our fleet has not received such efficient handling, drilling, and maneuvering as it would receive from officers more experienced in the duties of that grade. The present naval bill therefore provides that no officer shall be promoted to the grade of rear admiral unless he shall have at least eight years to serve in that grade, thereby insuring the proper drilling and handling of the fleet. All other nations of the world select their officers for command and flag rank, and if the United States is to meet a foreign foe, its fleet should be handled by the best-trained and most experienced officers the Navy can produce. Promotion by selection of the best is recognized by experts as one of the great steps in advance by the present administration for the greater efficiency of a fighting navy.

WAR COLLEGE.

The sympathetic cooperation by the present Secretary of the Navy has greatly increased the activity of the War College and has greatly increased the efficiency of the Navy by requiring the higher education of our officers in the art of war and the science of naval strategy. Under previous Republican administrations the War College course for officers had been so neglected that in 1913 it had only about five student officers and nine instructors. In April, 1914, two courses at the Naval War College were established and now there are 32 officers taking the regular course, while the new correspondence course is being taken by 499 officers. This new course brings the instruction and study of the War College in close touch with the officers of the fleet. In February, 1916, the president of the War College, Rear Admiral Knight, stated to the Committee on Naval Affairs of the House of Representatives that "The recent development of the War College, which has been rather striking, has been due in large measure to the interest which has been taken in it by our present Secretary of the Navy. The War College has been in existence since 1885 and during a large part of that time it has had to struggle for existence. Its ideals have always been high and its methods of work have always been admirable, but never until this present administration has it found any active, aggressive support from the Navy Department. Very early in his administration Mr. Daniels came to the War College. He saw at once what it was and what its possibilities were, and he said: 'I am a friend of the War College.' From that time on he has done everything possible to support the War College and strengthen it, and the work that we are doing there now is very largely due to him."

NAVY DEPARTMENT REORGANIZATION.

When the present administration came into power it found an organization at the Navy Department that proved to be unworkable for the best efficiency of the Navy afloat and ashore. Mr. Meyer had as his advisers four aids, which he called the Aid for Operations, the Aid for Personnel, the Aid for Matériel, and the Aid for Inspections.

In addition to these aids he had what he called director of navy yards. The duty of these aids and the director of navy yards was such that in effect five additional bureaus were established and the routine work, together with the duplication of work, was greatly increased in the Navy Department. There was little or no coordination between the aids, the General Board, the War College, and the various bureaus in the department. The industrial work in navy yards was supervised by line officers who were not educated in scientific shop management or industrial efficiency. Great extravagance resulted in the management of yards and greatly increased cost of productive work resulted. At the Navy Department the activities of the aids frequently conflicted with the work of the bureaus to such an extent as to create friction in the progress of work. The principal function of the aids seemed to be to decide for the Secretary all matters which would come before him of a technical nature where the jurisdiction of two or more bureaus were concerned. In other words, the four aids of Secretary Meyer seemed to spend their time in reconciling differences between the bureaus and between departments in the navy yards and naval stations instead of laying down and pursuing broad questions of naval policy for the management of a great organization for the first line of defense of the country. There was a total lack of initiative on the part of any officers or any organization in the Navy Department to pursue the higher questions of naval policy involved in the naval defense of the country. The present administration planning a better matériel and personnel determined that some officer or organization should be created whereby all branches of the naval service afloat and ashore should be coordinated and constructive policies pursued for the greater fighting efficiency of the Navy.

The present administration soon realized that one of the prime essentials of a proper organization to produce the maximum efficiency of a fleet is the assignment of officers to high command who possess rank commensurate with the importance of the duties placed upon them.

The Sixty-third Congress provided that the commanders in chief and the second in command of the fleets shall have the rank of admiral and vice admiral, respectively. A proper fleet organization requires that a division should be commanded by a rear admiral, a squadron by a vice admiral, and a fleet by an admiral. This is recognized by all foreign navies. The commander in chief of a fleet frequently has important and delicate problems calling for wise diplomacy as well as ability to command a fleet, and when fleets of other countries meet with the fleets of the United States it is most important that the United States fleet should have an officer of high rank, so that our Government might be properly represented in International conferences and in the event of combined operations.

The office of Chief of Naval Operations was also created in the naval appropriation act of 1915, and in the present appropriation act of 1916 the rank of the officer holding that position is increased to that of admiral, and he is made senior to all other officers of the Navy, except Admiral Dewey. To assist him in his work not less than 15 officers are detailed exclusively for this work, and it is believed that a better coordination of the various branches of the Naval Establishment will be effected and greater efficiency will result.

The Office of Naval Operations, through its various officers, will make a study and analysis of the past naval campaigns; a study of the inherent interests of all nations and the policies that will naturally follow; the study of the theaters of possible wars of every aspect and the sources and means of supply for naval forces; the study of tactics, particularly in relation to strategy, in order to insure that the tactics of the fleet may be kept constantly up to date and conform to the character of the ships and weapons that will be used; the study of the strategical and tactical plans involving the requirements as to supplies at the beginning of the war, during the war, and the organization of transportation and many other things incident to the auxiliary service, including the inspection of merchant vessels; the study and operation of plans for organization for war in order to secure the most efficient flow of authority, the best administrative and tactical grouping of forces, detail of personnel for command, and the orders necessary for the exe-

cution of the various plans; the study of the mobilization with a view to keeping always up-to-date plans for mobilizing for each of the various naval stations arising from or conflicting with possible enemies; the study of methods for the training of naval forces and the preparation of strategical problems and tactical exercises involving combined maneuvers of battleships, auxiliaries, submarines, aircraft, and mining vessels; and the study of plans devised for the execution of all work connected with preparation for war.

In the past two years marked progress has been made toward the work above described, and in another year or two a scientific and practical organization will be perfected whereby the Navy will be on a footing so efficient that at a moment's notice the various agencies of the Naval Establishment will be put in motion and well-conceived plans will be instantly carried into execution. In other words, in the interest of real preparedness the work done by the Chief of Naval Operations is of the highest importance. Up to the time of the present administration no such organization existed in the Navy Department, nor was such an organization ever recommended. This organization in no way does violence to the principle of civilian control of the Navy Department.

The Democratic administration, including the Sixty-third and Sixty-fourth Congresses have so increased the efficiency of the men, ships, munitions, and the organizations necessary to handle them that the impartial student of naval affairs will readily see that the efficiency of the Navy, the first line of defense of the United States, has increased to a tremendous degree and gigantic strides in the interest of real preparedness have been made.

Mr. Speaker, to summarize in a graphic way the foregoing facts that the eye may readily see the splendid progress and wonderful development of the Navy made by the present administration and to confound those who slander and to silence those who criticize, I submit the following illustrated tables and invite and challenge comparison of the achievements of the present administration with its predecessors since 1898:

## INCREASE IN OFFICERS.

*Showing by comparison the number of midshipmen appointed at the Naval Academy under the Roosevelt, Taft, and Wilson administrations:*

| | |
|---|---|
| Roosevelt | 4 yrs., 978 |
| Taft | 4 " 945 |
| Wilson | 3 " 1,473 |

## INCREASE IN ENLISTED MEN.

*Showing the enlisted personnel of the Navy, as authorized by law:*

| | | |
|---|---|---|
| Roosevelt | Authorized 1905 | 37,000 |
| | " 1908 | 44,500 |
| Taft | " 1909 | 44,500 |
| | " 1912 | 51,500 |
| Wilson | " 1916 | 78,200 |

*Showing increase under each administration:*

| | |
|---|---|
| Roosevelt | 7,500 |
| Taft | 7,000 |
| Wilson | 26,700 |

The act just passed permits the President, at his discretion, in an emergency, to increase the Navy to 87,000, which would be an increase of 35,500 over the Taft administration.

## NAVY YARD INCREASE.

### NUMBER OF MEN.

*Showing the total number of employees in the principal navy yards in the United States as of date June 1, 1913, and July 1, 1916:*

| | |
|---|---|
| 1913 | 16,898 |
| 1916 | 24,383 |
| Increase | 7,485 |

### DAILY PAY.

*Showing the total daily pay of such employees in 1912 and in 1916:*

| | |
|---|---|
| 1912 | $46,027.35 |
| 1916 | 73,091.12 |
| Increase | 27,063.77 |

### COMPARISON OF PAY.

*Showing the average daily pay of such employees in 1912 and in 1916:*

| | |
|---|---|
| 1912 | $2,723.00 |
| 1916 | 2,997.00 |
| Increase | 274.00 |

## ENLISTED MEN PROMOTED.

*Showing the number of warrant officers of the Navy appointed ensigns under the Roosevelt, Taft, and Wilson administrations:*

| | |
|---|---|
| Roosevelt | 4 yrs., 10 |
| Taft | 4 " 3 |
| Wilson | 3⅓ " 17 |

*Showing the number of assistant paymasters appointed from among enlisted men under the Roosevelt, Taft, and Wilson administrations:*

| | |
|---|---|
| Roosevelt | 4 yrs., 1 |
| Taft | 4 " 3 |
| Wilson | 3⅓ " 15 |

Prior to the act of March 3, 1915, pay clerks were selected by individual paymasters from any source within or without the Navy. Under the new law, all pay clerks are appointed by the Navy Department from the enlisted personnel.

## INCREASE IN AERONAUTICS.

*Showing the expenditures for aeronautic purposes under the Roosevelt, Taft, and Wilson administrations:*

| | | |
|---|---|---|
| Roosevelt | | No expenditure. |
| Taft | Fiscal yr. 1912.. | $24,532.79 |
| Taft 8 mo. / Wilson 4 mo. | " 1913.. | 56,032.90 |
| Wilson | " 1914.. | 194,492.46 |
| Wilson | " 1915.. | 219,429.20 |
| Wilson | " 1916.. | 884,679.28 |
| Wilson | " 1917.. | 3,920,000.00* |

*{$3,500,000 for aviation. / $420,000 for aeronautic station, Pensacola, Fla.

*Showing the total expenditures under the Taft and Wilson administrations:*

| | |
|---|---|
| Taft | $61,888.06 |
| Wilson | 5,217,278.57 |

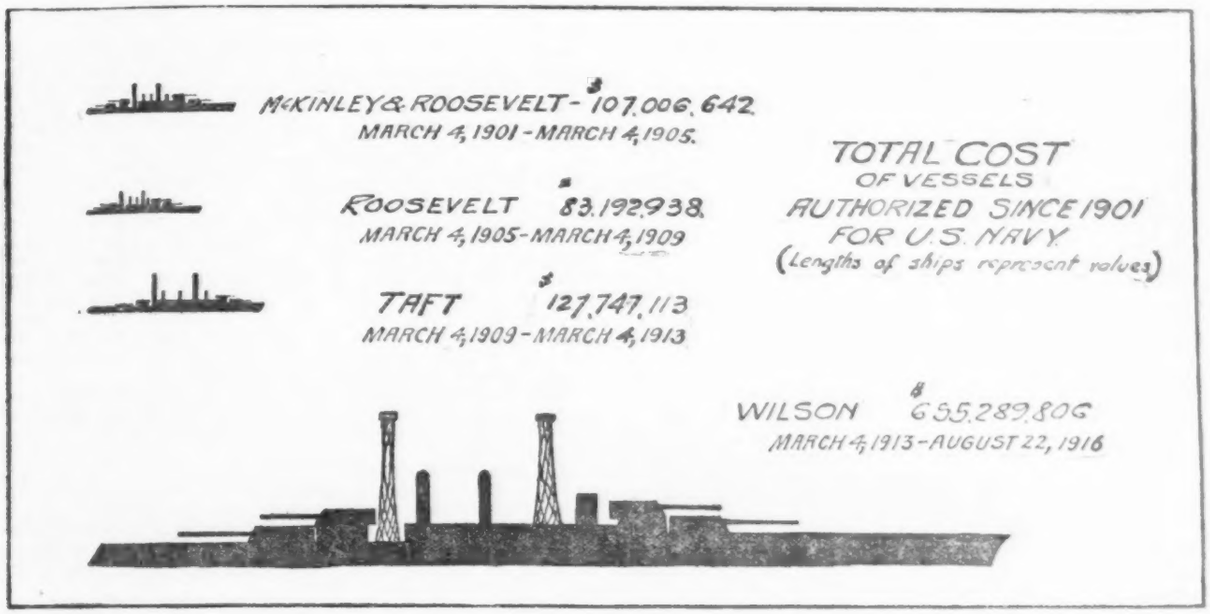
## RESERVE OF MUNITIONS.

*Showing the percentages of total orders placed during each administration:*

*Projectiles—*

| | |
|---|---|
| McKinley-Roosevelt | 5.1% |
| Roosevelt | 8.6% |
| Taft | 22.4% |
| Wilson | 63.9% |

*Torpedoes—*



| | |
|---|---|
| McKinley-Roosevelt | .9% |
| Roosevelt | 9.4% |
| Taft | 18.2% |
| Wilson | 71.5% |

*Mines—*

| | |
|---|---|
| McKinley-Roosevelt-Roosevelt and Taft | 9.7% |
| Wilson | 90.3% |

*Smokeless Powder—*

| | |
|---|---|
| McKinley-Roosevelt | 17.1% |
| Roosevelt | 20.0% |
| Taft | 23.4% |
| Wilson | 39.5% |

**Revenue.**

## EXTENSION OF REMARKS
OF
# HON. EDWARD W. SAUNDERS,
OF VIRGINIA,

IN THE HOUSE OF REPRESENTATIVES,

*Friday, August 25, 1916.*

Mr. SAUNDERS. Mr. Speaker, to say of this bill that it is a meritorious measure, is to pay too mild a tribute to its excellence. If the merit of a bill to raise revenue may be fairly determined by the extent to which benefits received are considered in the apportionment of the burdens of taxation, and further by the equitable adjustment of these burdens so that they will not press too heavily upon the individuals, or the enterprises least able to support them, then this measure is entitled to our enthusiastic support, and fervid commendation. It is worthy of note that this bill has been so fairly and scientifically constructed, that it has compelled the support of a number of our political adversaries who would willingly have made capital out of opposition to a Democratic measure, if they could have done so without the sacrifice of self-respect, or the abandonment of principles of taxation which they, and their party, had heretofore maintained. This measure has been vehemently assailed by a number of speakers on the minority side, but its essential features have been sustained by some able men in that minority, notably the gentleman from Ohio, Mr. LONGWORTH, and the gentleman from Iowa, Mr. GOOD, both of whom gave evidence of the faith that was in them, by voting for the bill when it was first considered, and passed by the House.

Many of the attacks upon this measure have been manifestly unfair, as for instance the intimation, so often made by its Republican critics, that the necessity for its passage was due to Democratic maladministration, or reckless extravagance in administering the affairs of the Nation. Neither of these charges are true. But I shall not content myself with a bare denial. Later I shall call certain Republican witnesses, and out of the statements made by them upon the floor of this House, and reported in the official record of our proceedings, establish not only the essential merits of this bill, but the unusual conditions which created the necessity for its preparation, and passage. It may be conceded that even under natural conditions our appropriations for this fiscal year would have somewhat exceeded the appropriations for last year, but this increase would have been normal, and directly related to the growth and development of our country. It is inevitable that with the rapid increase in our population, and the steady expansion of Government activities, the expenditures of this country will naturally increase from year to year. But for two years past the times have been abnormal, and unusual. Confronted with the horrors of the war in Europe a large and influential class of our citizens, whether wisely, or unwisely, it is not needful to discuss in this connection, has insisted in season and out of season, upon a vast increase in our armed forces both land and naval, upon the plea that this increase was required to protect this country against the introduction into our midst of the misery and wretchedness that have afflicted the warring countries abroad. Under the pressure of this insistence considerable additions have been made to our Army, and Navy. These additions would have been far greater, but for the moderation and conservatism of the party in power. The Republican minority has denounced us for not providing even more extensive armaments, and authorizing more ships, more men, and more guns. Apparently these gentlemen have scorned to consider the problem of ways and means, or to give heed to the suggestions of prudence to the effect that great authorizations, require great appropriations, and that in the result the public must pay the piper. Sounding loudly the call to arms, our Republican critics have assailed the Democratic majority on the ground that it has failed to afford either an adequate Army, or an adequate Navy. The more reckless of these critics have proclaimed with vehement emphasis that all that has been done by this administration in the name of preparation, does not even make a noise like preparedness. Confronted with the problem of raising the revenue necessary to meet the increase in our expenditures occasioned both by unusual conditions, and the considerations of military defense, the Committee on Ways and Means have decided that the people from whom the largest measure of clamor for a military policy has proceeded, and the individuals and enterprises which have profited, and will profit in an exceptional degree by the development of a militaristic policy in the United States, should pay the largest proportion of the burdens which this outcry has occasioned.

This was a most just and equitable view to take, and the gentlemen who have favored an even greater measure of preparedness than has been provided, should assuredly be willing to pay for what has been done in that direction. This demand for preparedness having emanated chiefly from the representatives of great wealth, the possessors of that wealth should cheerfully support this bill, and welcome the taxes which it imposes. The great cities of the United States, particularly the cities situated on the Atlantic coast, have been vehement and imperious in their demands for a vast increase in the Army and Navy. The newspapers in these localities have been unsparing in their attacks upon the so-called little army, and little navy Members of Congress. Time and again have these papers carried lurid stories depicting possible dangers to our coastal cities, arising from our alleged unpreparedness. The danger to these cities

of bombardment and ransom was insisted upon as being very real, and very present. Even the aid of the moving pictures has been invoked as a part of this campaign. Thrillers were put upon the stage, presenting in frightful detail attacks upon New York, both from the air, and from the water, until the mind reeled in contemplation of the horrors presented. In view of their alleged defenselessness, their exposed position, and the vast extent of their riches, these cities have insisted that exceptional measures should be taken for their protection. But if the merit of their claim in this respect is conceded, certain things must follow from that contention. If it is necessary to impose an exceptional burden upon the country in order to afford an unusual degree of protection against the dangers presented in such startling terms, then the property interests which insist upon this excessive preparedness, and demand a policy which others do not favor, or in which others are not so acutely, or directly interested, should be willing to bear a liberal portion of the burden entailed by a policy of which they will be the peculiar beneficiaries.

It is one of the merits of this bill that it recognizes the principle of proportioning the burden to the benefit received. By the terms of this measure the revenues necessary to be raised, will be derived in large measure from sources indicated as appropriate by the highest considerations of equity, and sound policy. While I do not propose to make an elaborate review of all of the features of popular interest that this bill contains, I do desire to call attention to a few provisions of unusual interest. First and foremost, it repeals the vexatious stamp taxes. Second, it provides for a graduated increase in the income tax. Like the tax on real and personal property which is paid by the farmers, the income tax is a liability that can not be passed on by the man charged therewith, so as to escape ultimate liability. Most taxes, particularly the indirect taxes, are passed on to the ultimate consumer. A householder who enjoys an income of over $4,000 a year for the discharge of his domestic and family expenses, is a man in affluent circumstances. A tax imposed on the excess over $4,000 per annum, is not a burden in any real sense. Such a taxpayer will merely contribute out of his abundance to the necessities of the Government. But an income tax on the laborer, or the clerk, making a few hundreds, or even one, or two thousand dollars a year, would be vexatious and oppressive. The man of slender means is continually confronted with the necessity of retrenchment and economy. A small tax of even five, or ten dollars, taken from his income, often means the loss of some item essential to welfare and comfort in his household. Wisely the law does not impose an income tax upon such persons. They are already paying sufficient taxes in other directions. But it is far otherwise with the man who enjoys an income large enough to provide every luxury, and anticipate every want. From such a man the income tax takes nothing vital to his existence. It does not even reduce, to any material degree, his ability to surround himself with the things that delight the eye, and please the fancy. Another meritorious feature of the bill is that as the income increases, the tax rate increases. The larger the income, the greater the surplus for investment, or enjoyment. Hence the greater reason for a graduated increase of the rate on incomes, the greater incomes paying the greater tax. This tax is not a tax on poverty, or appetite, as has been aptly said of certain other taxes, but is a tax on ability.

A man with an income of a million should assuredly pay, not only a greater tax, but be subject to a greater rate of taxation, than the man whose income is a few thousands. In no cases however are the rates imposed, excessive or unjust. A head of a family enjoying an income of $5,000 a year will pay, in addition to his other taxes, an income tax of $20, leaving for subsistence the comfortable sum of $4,980 per annum.

A citizen in the possession of an income of $1,000,000 a year, will pay the Government $100,000, leaving the snug residue of $900,000, quite sufficient to keep the wolf from the door.

"The bill levies a tax on incomes from $4,000 to $20,000, of 2 per cent, and levies an additional income tax of 1 per cent per annum on the amount by which the total net income exceeds $20,000, and does not exceed $40,000, 2 per cent per annum on the amount by which it exceeds $40,000, but does not exceed $60,000, 3 per cent per annum on the amount by which it exceeds $60,000, but does not exceed $80,000, 4 per cent on the amount by which it exceeds $80,000, but does not exceed $100,000, 5 per cent on the amount by which such total net income exceeds $100,000, but does not exceed $150,000; 6 per cent on the amount by which it exceeds $150,000, but does not exceed $200,000, 7 per cent upon the amount by which it exceeds $200,000, but does not exceed $250,000, 8 per cent on the amount by which it exceeds $250,000, but does not exceed $300,000, 9 per cent on the amount by which such total net income exceeds $300,000, but does not exceed $500,000, and 10 per cent on the amount by which such total net income exceeds $500,000."

The only criticism that our Republican friends have directed against this Democratic tax, is the complaint that we have placed the exemption too high. Apparently our friends are so wedded to their favorite methods of taxing the little fellows, that they would reduce the limit of exemption in the bill so as to impose an income tax upon hundreds of thousands of small wage earners whom the Democrats propose to exempt. The gentleman from Ohio, Mr. LONGWORTH, thinks that the ideal income for taxation would be about $1,500. In other works, he would tax all incomes down to that amount. Citing the very words of Mr. LONGWORTH, we find that he "is opposed to an income tax, as he would be to any direct tax which is borne by less than one-half of 1 per cent, of all the American people." This attitude of the gentleman from Ohio may be taken as a typical Republican attitude. They would place the exemption at the "Minimum of existence," while the Democratic disposition is to impose the greater burden of this taxation on the maximum ability to meet the obligation without distress.

Many Republican critics insist upon an even greater reduction of the limit of exemption, than is favored by the gentleman from Ohio, but to this reduction, the Democrats are steadfastly opposed.

This Republican opposition to the principle of the income tax, and their efforts to make it unpopular by reducing the exemption, merely serve to show how hopelessly they are wedded to the old order of things, and with what difficulty they adjust themselves to progress and development. The income tax is with us for all time. It is recognized by every progressive State, and every progressive country in the world.

Democracy was never more thoroughly vindicated, nor the entrenchments of ancient privilege more decisively overthrown, than when the Federal Constitution was amended to authorize the Congress to impose this tax. Having in mind the expanding activities and increasing expenditures of this Government, the exercise of the right to derive revenue from this source has relieved many a small taxpayer from burdens that would otherwise have been imposed. Another very equitable tax included in this bill, and worthy to be associated with the income tax, is the inheritance tax. The accumulation of vast estates, and the dangers to the body politic from this accumulation, have furnished ground for much serious thought in the last three decades. Many plans have been advanced for dealing with and breaking up the present accumulations, and for preventing like accumulations in the future.

But pending the final solution of the problem, public sentiment seems to be generally agreed that the Governments which have made these accumulations possible, and provided for the safe passage to the beneficiaries, are justified in taxing the inheritance on a graduated scale before the distribution is made. The highest rates, as a matter of course, justly attach to the largest estates, for the same reason that the biggest incomes are required to pay the largest taxes. Most if not all of the States derive revenue from this source. In wealthy States like New York, the annual sums from the tax on inheritances form a prodigious aggregate.

Having in mind that a double inheritance tax, one National, and the other State, would operate a hardship in the case of small estates, this bill exempts from Federal tax all estates of $50,000, or less. The rates provided for inheritances that will be subject to this tax are moderate. For instance the tax on an estate of $100,000, that is the tax on the one-half that would be subject to taxation, would be $500. The tax on a $1,000,000 estate would be $50,000. The inheritance tax rates runs from 1 to 5 per cent according to the value of the estate. There is another tax included in this bill that will be even more favorably received than the taxes I have discussed, and that is the tax on the munition makers.

If there is any one element in our country which has contributed the very largest measure of clamor for increased armaments, it is the manufacturers of munitions. Their profits on pending contracts have been so enormous, that it is something peculiarly fitting and appropriate to require them to carry a liberal but not unreasonable proportion of the burdens which they have insisted that the country should assume. The earnings of many of these munition makers have been colossal and unparalleled. For instance the Du Pont Powder Co. earned in one year over 94 per cent on its common stock. The figures of many other stock companies are equally amazing. The value of shares in the Bethlehem Steel Co. advanced from something like $30 a share in 1914, to over $500 a share in 1915.

Such advances are almost unbelievable. They would be rejected as incredible, if they did not rest on a most solid basis of fact. Confronted with the relation of the munition companies

to our new burdens for preparedness, and the amazing story of their profits, the Committee on Ways and Means were not slow to select this business of munition making as one of the sources of new and legitimate revenue. But while the committee has justly selected these enterprises for taxation—and this selection will be approved by every right-thinking man—they have been neither oppressive nor unjust in dealing with the capital invested. The enterprises are legitimate—and the taxes should be neither unreasonable nor confiscatory.

The House bill provides that "all legitimate, honest capital invested in plants for the manufacture of munitions of war shall receive 10 per cent dividend—and unless the profits enable them to receive 10 per cent dividend, the tax levied by the bill shall not be collected." Think of it! These concerns which are so largely responsible for the propaganda which has affected the whole country with alarm over our alleged defenselessness, are not taxed to support the policy which they have advocated with such strenuous zeal, until all honest, legitimate capital invested in the manufacture of munitions of war shall have received 10 per cent dividend. Every right-thinking man will agree that if the committee has erred in respect of this tax, it has erred on the side of moderation.

Another feature of interest in this bill is the clause containing the antidumping provisions, designed to restrict undesirable foreign importations. The wisdom and capacity of a Democratic House to deal with the problems that will attend the conclusion of the European war, are clearly manifested by the stringent terms of this anticipatory legislation. This country is likely to be confronted with a flood of cheap foreign manufactured products on the restoration of peace. In the effort to take over the trade which the wise legislation of the past four years has enabled our manufacturers to secure in every portion of the globe, our competitors in Europe will be likely to resort to cut-throat competition under the urge of imperious necessity. Every ounce of energy in those countries is now directed toward keeping the machinery of war in motion, and all their business is related to the output of the munition factories. But when the wheels of these factories cease to turn, and the inevitable time of adjustment arrives, the foreign manufacturers of commercial wares must have business, profitable business if possible, but if not profitable, then business on any terms that will bring subsistence to the families of thousands of laborers who will turn from the forging of cannon, and the making of high explosives, to the conversion of swords and spears into the implements of prosaic toil.

For the time being neither the foreign manufacturer nor the laborers in foreign factories, will be concerned over the question of profits. Business, business anywhere—and on any terms, will be the slogan with which they will invade every country of the world. Of course we can not exclude these competitors from the markets of the present neutral countries. In those quarters we must meet their competition as best we can. But we cannot afford to allow this destructive flood of goods produced by labor that will be reduced to almost pauperism at the conclusion of hostilities, to pour unhindered and unchecked upon the domestic markets of the United States. Such a flood would disorder industry, interrupt established business, and introduce universal confusion.

Hence the wise provision to which I have referred, and which is pronounced by the gentleman from Ohio to be the most stringent antidumping provision within his knowledge. This is the answer of the Democratic Party to the charge that it is not equal to the task of governing this country. Having secured prosperity through legislation of the most comprehensive character, devised with a skill that has come from fullness of knowledge of the subject matter, and adapted with singular precision to existing conditions, we propose to hold that prosperity against unfair competition by means of legislation equally comprehensive, and equally efficient to secure the end designed. What are the terms of this antidumping legislation that has been drafted to protect our business, and maintain our domestic market? First, with a view to deterring an importer from importing large quantities of cheap goods with a view to unfair competition, and with intent to destroy and injure existing industries in the United States, provision is made for prosecuting such an importer in the criminal courts. Second, any person injured in his business by unfair competition arising from the forbidden use of foreign cheap goods, may secure punitive damages from his unfair competitors. Third, articles imported for a purpose, or under an agreement forbidden by the act, such for instance as that the importer or any other person shall not use, purchase, or deal in the articles of any other person, are charged with a special duty, equal to double the duty otherwise imposed.

Well might the gentleman from Ohio say that this was the most stringent antidumping law every devised. No Republican can challenge the wisdom of this antidumping provision by claiming it as a Republican principle. We are not concerned with this contention. The main inquiry is whether we have devised a sufficient remedy to meet a condition that will inevitably confront this country within the next few years. We maintain that we have done so, and our Republican opponents reluctantly, and with reservation of a claim to priority of discovery, admit our contention. There are other features of this bill to which I might refer, but time forbids.

I have had two things in view in the discussion of this measure, first to present the solid and distinctive merit of its salient provisions, second to acquit our party of the reckless and unfounded charge that the necessity for this legislation arises out of the inadequacy of Democratic administration. The facts acquit us of this charge. The country is well aware that the clamor for preparedness is responsible for the preparations that constitute preparedness. If the country desires preparedness, it must be willing to pay for it. It is the peculiar merit of this legislation that the burden of taxation needful to provide preparedness will fall upon the men who have made the outcry. This is just, and as it should be. But I have stated that I would call a witness or two to testify that the Republicans having insisted upon preparedness on a prodigious scale, are now estopped from protesting against the bill designed to provide the wherewithal to support this policy. The first witness that I shall adduce is that frank exponent of extreme Republicanism the Hon. JAMES W. GOOD, of Iowa. In his speech of July 10, 1916, he made the following statement:

> This bill ought not to be a partisan measure. This Congress will appropriate many millions more for preparedness than was ever appropriated for this purpose by any preceding Congress. The cooperation of Members of Congress, irrespective of political allegiance, in making these appropriations is without a parallel. There was no politics in contracting the bills for preparedness, there ought to be no politics in providing the money with which to pay these bills. Let us assume that this demand for preparedness had struck the country when the Republicans were in power, to what source would we have turned to secure additional revenue with which to pay for preparedness?
>
> Where could we have obtained the money to pay for this increased cost of preparedness? Certainly we would not have increased the tariff duties. The defeat of the Republican House in 1910 was so universally charged to excessive duties in the Payne law, that in 1912 in our Republican platform, we said: "Some of our import duties are too high, and should be reduced." I for one do not propose by my vote to impair the Government's credit by refusing to make provision for the payment of bills which were so freely and patriotically contracted. If this bill was offered to raise money to pay for the useless and extravagant appropriations of this Congress, a different question would arise. *Where will we get the money, if we do not resort to the very subjects of taxation provided for in this bill?*

It is a pity that some of the carping critics of this measure who have aided by word and vote to create the liabilities for which this bill provides, do not imitate the frankness of the gentleman from Iowa.

This representative of stalwart Republicanism freely concedes that the country has been confronted with unusual conditions. Having supported the policy called for by these conditions, he now acquits the Democrats of extravagance in this direction, and joins hands with them in providing the revenue required to make the new policy effective. In other words he votes like he talks. He is not willing to talk preparedness, and vote preparedness, and then when pay day arrives, seek to escape his just proportion of liability. One more witness. The gentleman from Ohio Mr. LONGWORTH has been cited in another connection. He is a member of the Ways and Means Committee which reported this bill, and his Republicanism is undiluted with any leaning toward progressivism whether of the Democratic, or Republican brand. But like the gentleman from Iowa he is unwilling to oppose this measure on false pretenses.

In his speech of July 6, 1916, the gentleman from Ohio made the following declaration of his attitude:

> I am for preparedness. I am for a program decidedly more extensive than the Democratic Party offers us. I have voted a number of times for authorizations and appropriations for this purpose larger than those finally adopted. Can I then with any degree of consistency refuse to pay the bill when the time comes, even though I should disapprove many of the details of the only method offered which is possible of enactment? Fortunately no such unattractive alternative is now offered by this bill.

Contrary to the action of his Republican colleagues who have viciously attacked the new revenue bill as another illustration of Democratic bungling, Mr. LONGWORTH justifies his support of the measure on the ground that it is Democratic in name only. His language to this effect is as follows:

> The methods of revenue raising that this bill provides, instead of being contrary to Republican policies, in large part adopt them. Moreover it is proposed to enact into law a number of legislative and administrative policies for which the Republican Party has stood against Democratic opposition. It offers us an opportunity to have made into law policies for which we have fought for years. Is this an opportunity which we can afford to overlook?

I am not concerned with the gentleman's claim to Republican priority of discovery of the principles which find expression in this enactment. It is sufficient for present purposes that the gentleman from Ohio, like the gentleman from Iowa, sustains the necessity for this measure, and vindicates the justice and propriety of its essential features. Keeping this in mind, their contention that the bill represents a raid on Republican principles may be dismissed as irrelevant. The main point is that the bill is a good one, not only good enough for unanimous Democratic support, but good enough to secure a large following on the minority side. The normal Democratic majority in the present House is about 24, while the majority for this bill was 100, thereby revealing the extent of Republican support. This support affords a weighty testimonial to the skill and ability of the men who devised and reported this measure. It has been attacked, as a matter of course, attacked vehemently, viciously, with the heavy artillery of solid argument, and the light artillery of sarcasm, humor, and derision.

One critic has made the charge of sectionalism on the ground that the bulk of the income taxes will be paid by a small number of States in the North, and Middle West. But conceding this statement to be true, how does that fact establish the charge of sectionalism? An income tax, of necessity, must be paid by the taxpayers who receive the incomes. The tax is universal in its application, and the fact that there is a greater accumulation of wealth in one, or more States, than is found in the balance of the country, does not alter the just and universal character of the statute. The man who pays the tax is concerned to know that every other man enjoying a like income, pays the same tax. That is fundamental justice. But such a taxpayer has no just cause of complaint, or for that matter any cause of complaint, because there is more wealth, and more taxable incomes among his neighbors, than in some other section of the country. The cities always pay a greater aggregate of income taxes than the country, for the simple reason that there is always more accumulated wealth in the urban centers, than in the rural communities. So long as there is an income tax, the men who have the incomes will pay the tax. This is an unescapable feature of the system. But after all that has been said, this bill has passed unscathed through the fiery furnace of criticism, and will take its just place with the other great measures that have been enacted during the past four years by a Democratic Congress, measures that will remain as enduring monuments to the clear vision, the broad grasp, the profound statesmanship, and the constructive capacity of the men who have been concerned with their preparation, and enactment.

## Questions Put to Hughes.

### EXTENSION OF REMARKS
OF
### HON. WILLIAM E. COX,
OF INDIANA,
IN THE HOUSE OF REPRESENTATIVES,

*Wednesday, August 2, 1916.*

Mr. COX. Mr. Speaker, under leave granted to me to extend my remarks in the RECORD, I include an article from the Baltimore Sun of August 2, 1916.

The article is as follows:

QUESTIONS PUT HUGHES—COMMITTEE OF AMERICAN WRITERS CALLS FOR DEFINITE STATEMENT OF POLICY—GENERALITIES OF NO VALUE—CANDIDATE CHALLENGED TO PUT HIMSELF ON RECORD AS TO WHAT COURSE HE WOULD FOLLOW.

NEW YORK, *August 1.*

On behalf of a committee of distinguished American writers, the executive group of which met to-day at the Hotel Biltmore, George Creel gave out the following open letter:

"To the Hon. CHARLES E. HUGHES:

"The professional writers who sign this letter have small interest in parties, but a very deep interest in democracy. It is our hope, through this voluntary association, to assist in the promotion of honest, educational discussion in order that fundamental issues may not be decided in prejudice and ignorance.

"Mr. Wilson's beliefs have been expressed in law and in declared policies. He has made an open record by which he may be judged. Wise choice is not possible unless you yourself make equally specific statement of purposes and convictions.

"Without intent to offend, we feel justified in charging that in no single public utterance have you filed a bona fide bill of particulars, nor have you offered a single constructive suggestion.

"Generalities are without value. Blanket criticism is worthless. What we desire to know, what it is fair that the electorate should know, are the exact details of your disagreement with President Wilson. What has he done that you would not have done, and what has he failed to do that you would have done or proposed to do? Honesty and patriotism demand that you put yourself upon record in such manner as to permit people to judge you as they are now able to judge President Wilson. For example:

"1. Would you have filed instant protest against the invasion of Belgium and backed up that protest with the United States Navy?

"2. It is arrant nonsense to talk about action that would have prevented the *Lusitania* tragedy. The vague advertisement did not appear until shortly before the hour of sailing. The occurrence was one of those things that civilization had made the world regard as incredible. The only honest question is this: Would you have made the disaster the subject of diplomatic negotiations or would you have broken relations with Germany at once?

"3. Would you have urged upon Congress an embargo upon the shipment of munitions to the allies?

"4. Would you urge universal compulsory military service?

"5. You are frank in stating that Huerta's morals were of no concern to America. Does this mean that you would have recognized Huerta?

"6. As matters stand to-day, would you be in favor of intervening in Mexico?

"7. Does your attack upon the Wilson shipping bill mean that you are in favor of ship subsidies?

"8. You speak enthusiastically of the rights of the worker. Does this imply that you indorse the Clayton antitrust law and the seamen's bill? Or will you urge their repeal?

"9. What are your specific complaints against the Federal reserve law?

"10. As governor of New York you opposed the income-tax amendment. Does this antagonism persist? Do you or do you not believe in paying for preparedness out of a tax on incomes, inheritances, and munitions?

"We agree with you that it is a 'critical period,' by far too critical, indeed for candidates to talk in terms of office seeking rather than in the simple, earnest language of definite Americanism.

"Samuel Hopkins Adams, Ray Stannard Baker, Ellis Parker Butler, L. Ames Brown, Dante Barton, Irvin Cobb, Wadsworth Camp, J. O'Hara Cosgrave, Stoughton Cooley, William L. Chenery, George Creel, James Forbes, Frederick C. Howe, Gilson Gardner, Frederick Stuart Greene, Oliver Herford, Prof. Louis Johnson, Richard Lloyd Jones, Peter D. Kyne, Percy Mackaye, A. J. McKelway, Basil Manley, Meredith Nicholson, Albert Jay Nock, Harvey J. O'Higgins, Charles Johnson Post, Eugene Manlove Rhodes, William McLeod Raine, Boardman Robinson, John Reed, Opie Reed, Edgar Selwyn, Wm. Leavitt Stoddart, Lincoln Steffens, Frank V. Rooman, Augustus Thomas, George West."

## Speech of Ex-Senator Gardner.

### EXTENSION OF REMARKS
OF
### HON. WILLIAM A. CULLOP,
OF INDIANA,
IN THE HOUSE OF REPRESENTATIVES,

*Friday, August 25, 1916.*

Mr. CULLOP. Mr. Speaker, under the leave given me to extend my remarks I desire to insert in the RECORD an extract from a speech delivered by Ex-Senator Obadiah Gardner at Camden, Me., on the evening of August 17, 1916, which shows the many controversies, serious, aggravating, and far-reaching in their consequences, which this country has settled by diplomacy with foreign nations. President Wilson is following the precedent and is obtaining wholesome results. The result of such a course has demonstrated its wisdom. By diplomacy victories have been won without bloodshed, without the sacrifice of life, and without the expenditure of money, of greater benefit to the country, and in much less time than could have been won by a resort to arms. The speech of Ex-Senator Gardner reviews these important matters in our history and is as follows:

"The issue raised by our opponents of the vigor with which our neutrality has been enforced is a comparative issue which can be decided only by comparative results.

"And what are the comparative results? How stands the record of this administration compared with other administrations?

"When Grant was President, during the war between Spain and the Spanish West Indies, a Spanish gunboat seized the vessel *Virginius*, flying the American flag, and a Spanish commandant in cold blood shot the captain of the *Virginius*, 36 of the crew, and 16 of the passengers.

"But we didn't go to war. Grant settled our troubles by negotiation, just as the President of the United States is trying to do to-day.

"When Benjamin Harrison was President the people of Chile conceived a violent dislike to the United States for our insistence upon neutrality during the Chilean revolution. When this feeling was at its height one junior officer from the United States warship *Baltimore* was killed outright in the streets of Valparaiso and 16 of our sailors wounded, of whom one afterwards died. In a message to Congress on January 25, 1892, supported by Secretary of State James G. Blaine, and on evidence submitted

by Fighting 'Bob' Evans and Winfield Scott Schley, President Harrison said this assault on our honor 'had its origin in the hostility to these men as sailors of the United States wearing the uniform of the Government and not in any individual act of personal animosity,' and that this Nation 'must take notice of the event as an infraction of its rights and dignity' and as an invasion of its 'international rights.'

"But we didn't go to war. Harrison settled our troubles by negotiation, just as the President of the United States is trying to do to-day.

"When Lincoln was President this country's rights were violated on every side. England, Russia, France, and Spain were guilty of such flagrant violations that Secretary of State Seward advanced a plan to go to war with all of them at one and the same time.

"France used every possible influence short of open war to injure us. She not only permitted the building of Confederate vessels in private shipyards but she allowed at least two to be built in the national navy yard of France, and she supplied them with supplies from her Government arsenals.

"And England did more.

"Through his Secretary of State, Lincoln called England to account for the seizure of the U. S. S. *Chesapeake* on the high seas, bound from New York to Portland; for the burning of the U. S. S. *Roanake* off Bermuda; for the seizure on Lake Erie of the ship *Philo Parsons* and the scuttling of the *Island Queen*, the shooting of its engineer, and the wounding of its passengers; and he protested to England against the invasion of the territory of the United States by a band of Southern sympathizers from Canada, who rode across the border into Vermont, burned a portion of St. Albans, looted its homes, robbed its bank of $211,000, killed one of its citizens, and wounded several more. In stinging language he told England that she violated neutrality by permitting "the use of British ports and British borders as a base for felonious depredations against the citizens of the United States," and he wrote into history his diplomatic battle against England for letting loose the *Alabama* to prey upon our commerce, to destroy $100,000,000 worth of property, to capture 84 of our vessels, and drive our flag from off the seas. No nation ever inflicted upon another nation a more damnable or more maddening wrong than England inflicted upon the United States in the *Alabama* outrage.

"But we did not go to war. Lincoln settled our troubles by negotiation, just as the President of the United States is trying to do to-day.

"When Van Buren was President a detachment of Canadian Militia, during the internal troubles in Canada, boarded the U. S. S. *Carolina* in the American waters of Niagara River, killed an American member of the crew, fired the ship, and sent her adrift over Niagara Falls.

"But we did not go to war. Van Buren settled our troubles by negotiation, just as the President of the United States is trying to do to-day.

"When Jefferson was President, England seized hundreds of our ships and Napoleon hundreds more. From 1793 to 1807 historians say England and France together captured 1,600 American vessels and $60,000,000 worth of American property. England compelled over 2,000 American seamen to serve against their will in the English Navy, and Napoleon ordered the seizure and confiscation of American ships wherever found. Our shipping rotted at every French and British port; our crews were cast into prison and left to die of abuse and neglect. The British ship *Leopard* fired upon the American cruiser *Chesapeake* in American waters, killed and wounded several of our sailors, took three native-born American citizens off the *Chesapeake*, and hanged one of them in Halifax.

"But we did not go to war. Jefferson settled our troubles by negotiation, just as the President of the United States is trying to do to-day.

"When Adams was President, France preyed upon our commerce. She extended her seizures, searches, and confiscations to the very waters of the United States themselves until she had piled up in our State Department charges of over 2,300 violations of neutrality's law. American ambassadors who sought to adjust these wrongs were refused recognition and openly insulted at the French court. President Adams called Washington out of retirement to head the Army, he created the Navy Department, and he built 12 battleships.

"But we did not go to war. Adams settled our troubles by negotiation, just as the President of the United States is trying to do to-day.

"When Washington was President and "neutrality" first declared, war convulsed Europe, our ships dared not to put out to sea, commerce was paralyzed, and business depressed. American passengers and American crews were thrown into prison and deprived of legal rights. Genet, the minister of France, fitted out privateers in our harbors, flouted our officials, and tried to rally this country to the support of France in return for the help France gave us in the Revolutionary War. England and France seized 400 of our ships and confiscated millions of dollars' worth of our property, and up in Quebec Lord Dorchester promised Canadian Indians the pleasure of burning American homes and scalping American citizens.

"But we did not go to war. Washington settled our troubles by negotiation, just as the President of the United States is trying to do to-day. During President Cleveland's last administration a serious controversy arose with Great Britain over Venezuela, but President Cleveland did not resort to arms. He settled it by diplomacy and won a great victory for our Government in the upholding of American rights through the enforcement of the Monroe doctrine.

"In the face of this record, do Republicans realize that when they arraign the policy of the President of the United States to-day they arraign the policy of Harrison, of Blaine, of Lincoln, and of Grant? For the pleasure of criticizing a Democratic President, are they willing to read out of the Republican Party the greatest men the Republican Party ever had? Are they willing to say that the Republican Party of to-day condemns what Hamilton did in Revolutionary days, what Lincoln did in Civil War days, and what Grant and Blaine and Harrison did but yesterday?

"In his policy of peaceful negotiations to-day, the President of the United States follows the example set him by the greatest Presidents the Democratic Party and the greatest Presidents the Republican Party ever gave this Nation.

"Do the critics of the present administration believe that Lincoln should have risked national disaster by using the sword rather than the pen in pressing the Alabama claims? Are they willing to braud Grant as a coward because he kept us at peace with Spain?

"Yet no incident of the present war shows so gross a violation of our neutral rights as England's action in building a navy to prey upon our commerce; no submarine attack surpasses in horror the butchery of American citizens by that Spanish firing squad in Santiago when Grant was in the presidential chair.

"In this, as in all the other big questions of life, the more we understand the past the better we shall judge the present. Where it took 10 years to secure inadequate compensation for the *Alabama* claims the present administration has already secured in the case of a single claimant reparation greater than all the *Alabama* claims combined. Where, in other administrations during great foreign wars, the American flag was merely an invitation to plunder, to-day that flag is the best protection of all who desire to be safe upon the seas.

"We challenge our critics to deny a single fact in the record. We defy them to show a single point at which the helmsman who has safely piloted us through Europe's storm has departed from the course laid down by those who established America's foreign policy.

"For the first time in the history of our country the United States leads the world in exports. We are more prosperous than ever, and mills which have not turned a spindle for years are now busy. All the laborers of the United States are employed as never before. With the world war raging our country is the only neutral one that is not in distress and the only one that has not declared a moratorium. Every demand of the stress of war the Democratic Party has met quickly. We have freed business from the blackmail of the politician as we have emancipated it from the clutch of monopoly.

"It is a perfectly easy thing for the President of the United States to plunge his country into war if he is a politician before he is a patriot. He would seek his own reelection as he came upon horseback by the bloody highway of contending armies. Of course our Army could invade Mexico and march in triumph to its capital, but after the war was over other armies would march—an army of widows and orphans, an army of cripples and men broken in health, an army of pensioners, and an army of tax collectors gathering up the earnings of the people to pay the great war debt.

"The President has acted quickly when there was an invasion of American territory, and the punitive expedition now is doing all that this country can do with honor in Mexico.

"No President during the life of this Republic ever had to deal with so many delicate and dangerous problems as those which have confronted President Wilson. With more than half of the world in arms in Europe, with Mexico in revolution at our border, these difficult and complicating problems have confronted him almost daily, and he has handled them as becomes a patriot and a statesman. When the *Lusitania* was sunk, the

militant voice of Theodore Roosevelt cried out for war; and if he had been President of the United States at that time, to-day 500,000 brave American sons would be contending around the forts of Verdun in this mighty maelstrom of blood; thousands would have been buried in ditches. Our President, patient, patriotic, far-sighted—the real statesman—handled this question with the greatest ability, and won for America its greatest diplomatic victory. There are hapoily two kinds of courage—the courage of the man who is willing to undertake the dangers himself and the courage of the man that sends others to the conflict. Woodrow Wilson has both kinds of courage, the courage of conflict and the courage to act coolly and sensibly when he is dealing with the lives of others—the fate of a nation.

"Four years ago they sneeringly called Woodrow Wilson the school-teacher; to-day he is the world teacher. His subject is the protection of American life and American rights under international law. 'And without orphaning a single American child, without widowing a single American mother, without firing a single gun, he wrung from the most militant spirit that ever brooded above a battlefield an acknowledgment of American rights and an agreement to American demands.' He has elevated himself to that lofty but lowly eminence occupied by George Washington, Abraham Lincoln, and Woodrow Wilson, the three worst abused and best loved Americans the Republic ever grew."

---

**Newspaper Comment on Philippine Bill.**

---

## EXTENSION OF REMARKS

OF

# HON. CLARENCE B. MILLER,

OF MINNESOTA,

IN THE HOUSE OF REPRESENTATIVES,

*Friday, August 25, 1916.*

Mr. MILLER of Minnesota. Mr. Speaker, herewith I submit editorials from many of the leading papers of the country reflecting, as they undoubtedly do the opinion of the American people respecting our attitude toward the Philippines. The Democratic program adopted last January, with the active cooperation of the President, contemplated an early withdrawal of our sovereignty in the Philippines and an abandonment of our work for the Filipinos. This program received a prompt and emphatic rebuke from the press, both Democratic and Republican.

The New York Times, a strong Democratic and proadministration paper, published the following editorial on May 1, 1916, the day the bill was considered in the House:

A BILL TO BE KILLED.

The Philippine bill, which, according to the program, will be taken up in the House of Representatives to-day, is not an essential piece of legislation. It does not possess sufficient relative importance to be rushed through the House in a crowded session, when so many other matters of prime importance demand serious attention. Even without the objectionable Clarke amendment, which its advocates will try again to force through, it is a measure to dubious value.

It is associated in the public mind with a deliberate plan of scuttling. That, and not to provide an organic law for our Far Eastern colonies, was the uppermost thought in the minds of its projectors. The bill ought to be voted down. The people in the Philippines are making good progress toward self-government now. There is no real demand for new laws to govern them, they need no new privileges at present.

This same paper had already expressed its sentiments as follows, on April 28 and April 29, 1916:

KILL THE SCUTTLING BILL.

The 30 Democratic Members of the House of Representatives who stood out in Wednesday's caucus against the passage of the Philippines bill under gag rule have rendered a patriotic service to their country. Despite the President's support, the Philippines bill should not be passed. To repeat our promise to grant independence to the inhabitants of the archipelago as soon as they are capable of self-government is quite unnecessary. To promise to give them independence within four years, if the promise were kept, would be a gross betrayal of the trust we assumed when we took the control of the islands away from Spain. Both Brig. Gen. McIntyre, Chief of the Bureau of Insular Affairs, and Mr. W. Morgan Shuster have lately reported that good progress is making in the Philippines, the people are learning, they will be capable of self-government some day, but that day is in the distant future. If they were released from American rule now, all the good work that has been done would be undone. The pretense that peace and prosperity would be continued under a hastily acquired independence by a vast multitude of people of different religions and ideals, many of them still illiterate, is too shallow to deceive anybody.

The only excuse for getting out of the Philippines is that we want to get out. Revolution would follow our withdrawal, a new and worse Mexico would be created in the Far East. It is unnecessary to conjecture what the ultimate result would be. The national honor demands that we fulfill our obligations and devote our energies to the development of the islands in the arts and industries and educate their people. Freedom they already possess. They are not the subjects of a despotic or greedy Government exploiting them for its own purposes. Mr. Shuster's report shows that they are doing well and learning how to administer their own affairs.

The action of the 30 Democratic Members indicates that the obnoxious bill can not pass in its present objectionable form, if, indeed, it can pass after reasonable amendment. Republicans will vote against it for party reasons, but it ought not to be considered a party measure. Our responsibility in the Philippines is recognized by a large majority of our citizens irrespective of party. The Philippines bill should be discarded.

ABANDON THE BILL.

In regard to the proposed Philippines legislation the World believes that it ought to be possible to get rid of the obnoxious Clarke amendment without defeating the entire bill. But the Clarke amendment is really the essence of the bill, which was originally planned as a scuttling measure. Senator CLARKE managed to restore to the bill its original purpose, which was to commit this country to the abandonment of its obligation to develop the Philippines and make its people fit to govern themselves. The whole bill ought to be defeated, if it is brought to a vote. It was conceived in the wrong spirit. There is no evidence that it is a well-considered, constructive measure or that the administrative changes it provides for are needed. The World admits that "a specific promise [of independence] now is likely to raise false hopes, and its almost certain cancellation, as provided for, could hardly fail to involve us in serious complications." But this Clarke amendment, with the specific promise which we all feel would not be kept, is the essential part of the measure. The Filipinos need not be assured again that we intend to grant them independence when our trust is fulfilled. They know that. The congressional fight is for the Clarke amendment, which its advocates still hope to force through.

The whole measure should be discarded. Legislation for the Philippines should be postponed until there is time to spare to consider it seriously in the right spirit. The object of this bill is wholly political. It is designed to undo the good constructive work done in the islands under three Republican administrations. Brig. Gen. McIntyre and Mr. Shuster have shown us that the Filipinos are doing very well under present conditions, and the question of their future development should not be treated from a partisan point of view.

On the same day, May 1, 1916, the New York World, the strongest proadministration paper in America, contained the following editorial:

SETTING A NATION FREE.

The House of Representatives having decided to dispose of the Philippine Government bill to-day, there ought to be wisdom enough in that body to eliminate the Clarke amendment providing for independence in four years and pass the measure in other respects substantially as it came from the Senate.

To insist upon the independence of the islands in 1920 is to confer self-government upon a population alien and remote with much less preparation than was insisted upon in the case of many of our Territories at home. The pending bill goes to great lengths in making the Philippines a full-fledged Territory of the United States, like Alaska and Hawaii. This is the natural and orderly course to pursue. By doing more, Congress will presume to act in advance of events, without knowledge and with a recklessness never before exhibited in its dealings with a dependency.

The Clarke amendment contemplates more than statehood for the Philippines. It creates an independent nation. Making the islands a self-governing Territory for the first time since the Spanish conquest, it ignores the possibilities of failure and fixes only four years away the precise date of their sovereignty, subject, of course, to the bare chance of repeal by a later Congress. What domestic Territory, inhabited by kindred people and directly under the influence of our own political ideals, ever received such distinguished consideration at the hands of the legislative department?

Territorial self-government is richly merited by the Filipinos. That is the final stage for them as it was for many American Commonwealths in the business of preparation for independence, but it is not to be hurried or evaded altogether. In decency Congress can not do less than confer that great privilege upon them in the expectation that they will make the most of it. To go beyond that reasonable guaranty of liberty at this time, when most of the world is ablaze with war, and turn them adrift without experience or stability would be rampant folly.

In setting up free States a responsibility rests upon the liberator as well as the liberated. Until now we have always recognized the fact.

On the preceding day the same paper said:

NO RASHNESS IN THE PHILIPPINES.

The Democratic quarrel over the bill conferring self-government upon the Philippines is likely to be a test of American capacity for self-government. No serious objection is made to the measure except that it contains a vexatious clause fathered by Senator CLARKE, of Arkansas, providing for independence in not less than two or more than four years.

If a great piece of legislation, just to the Filipinos and creditable to ourselves, shall be lost, because Congress proves unable or unwilling to proceed wisely and safely in the matter of extinguishing American sovereignty in the islands, a lasting reproach will attach to all responsible for the failure. This bill in various forms has been under consideration for several years. It gives the Philippines a constitution, a bill of rights, and a form of government like that which our own continental Territories enjoyed. It is a fulfillment in all things except independence of every pledge we have made. Independence itself will come in due season.

Our Territorial system has been more widely commended and imitated than any other feature of American Government. As we were the first great Nation to lay the foundation for free States in the wilderness, it would be shameful, indeed, if Congress, confronted by an ill-considered attempt to do too much, should fall short of a glorious duty by doing nothing at all.

The New York Sun, under date of May 3, 1916, said editorially:

A REBUKE WHICH MR. WILSON HAS DESERVED.

Representative MILLER of Minnesota, who has visited the Philippines several times and is familiar with conditions in the islands, said, in the debate on the Clarke amendment to the Jones bill, that he was surprised at the "suddenness" with which the administration accepted the "scuttle" policy. It has been a surprise to everybody who remem-

bered the Philippine plank in the Democratic platform, a document that Mr. Wilson has invoked time and again as the Democratic gospel of committal and omission. What was in the platform he professed to regard as his sailing chart, and he has made a convenience of what was not in it. Also, Mr. Wilson's acceptance of the "scuttle" policy seemed strangely inconsistent with his preachment that America existed to serve humanity, either in peace or war, and thus be an example to less spiritual nations.

The Democratic Party in its platform in 1912 called for "an immediate declaration of the Nation's purpose to recognize the independence of the Philippine Islands as soon as a stable government can be established." But Mr. Wilson, in spite of this unequivocal statement of policy, accepted a proposal to give the Filipinos independence in two to four years, with this string attached to it, that if the President as the four years were expiring concluded that the natives were not ready to govern themselves he could refer the question of independence to Congress for further consideration.

To set a sliding time limit to the sovereignty of the United States would be to disregard the Democratic platform flagrantly; but, even worse than that, the purpose to fool the Filipino people would be transparent to any but the most simple of them. Altogether, the Clarke amendment was as evasive, dishonest, and stupid a device as was ever submitted to Congress in the form of a serious legislative proposal; and yet Woodrow Wilson, preacher of the humanities and keeper of the national conscience, not only jumped at the Clarke amendment but did all in his power to impose it upon Congress.

Thanks to the common sense and courage of some 30 Democrats under the splendid leadership of Representative FITZGERALD, of New York, the House has rejected the hypocritical and vicious Clarke amendment and definitely substituted the original House or Jones bill for the Senate measure. The Jones bill provides a form of government for the islands in which the Filipinos will have a larger representation and greater responsibility, and it follows the Democratic platform by promising independence "as soon as a stable government can be established." The Senate wisely shows a disposition to throw the Clarke amendment overboard and accept the House bill.

Mr. Wilson's leadership has suffered a palpable check, and the independent Democrats have administered a rebuke which it would be well for him to take to heart. They have set his feet once more in the straight path, the path of fidelity to party principles and the humanities, from which he strayed so unaccountably.

—

"The honor and integrity of the United States," so eloquently championed by President Wilson in a speech on Monday afternoon, received the loyal support of 30 antiscuttle Democrats in the House on Monday evening.

On April 27, the Sun had expressed the following warning:

DON'T MEXICANIZE THE PHILIPPINES.

That shocking proposed display of political irresponsibility, the abandonment of the Philippine Islands, would outdo even the irreparable wrong done to Mexico in the hounding of Huerta, costly as that bit of canting presumption has been in suffering to the millions submerged in an era of Mexican butchery and banditry. Mexico should have taught Mr. Wilson not to play at ideals with other people's blood. It has not brought him to his senses. He is fatuously gambling with the destinies of 8,000,000 Filipinos, threatened with miseries exceeding those of Mexico, once they are cast out and marooned, left to their own mercies under a travesty of liberty.

No wonder that the first session of the Democratic caucus on Philippine affairs developed opposition to the administration plans. The reading of the President's letter to the caucus failed to still an opposition grounded on more honest, if less showy, views of the country's duty than those the President holds.

Against the urgency of Mr. Wilson rises the voice of a considerable number of the Philippine inhabitants themselves. The cry in the islands is not all for independence, however much that brilliant catchword may attract a part of the population.

Filipino property owners reputed to hold some $20,000,000 of the wealth of their islands have sent Representative MILLER a petition against the Jones bill to withdraw United States authority from the Archipelago. Their voice is heard at the time when the House bill for Filipino independence, with its Senate amendments, comes before a Democratic caucus. There is good ground for hope that the petition may help to drive the wicked folly of independence for the islands out of the heads of some of those now bent on that bit of idealistic double mischief to this country and the Filipinos themselves.

It becomes increasingly evident that 12 years of American rule have raised among the islanders themselves a great class who put their trust in the big American brother and depend upon the pledge, implied in his past beneficient control, that the control will continue; islanders not to mention American settlers, who have staked their labors, their property, and the prospects of their families on the expectation that the United States would not quit what it had begun.

Is it true that the Filipinos are fit to govern themselves according to American standards of government? They certainly do not themselves all believe so, or none would have signed the petition sent to Mr. MILLER. In the face of this new and added grave evidence of political self-distrust and of aversion to being deprived of American control, the caucus may well show some signs of doubt as to the wisdom of casting the islands off to fall back again into their old misery.

Other New York papers carried the following editorials:

[From the New York Tribune, Apr. 29, 1916.]

A SAVING REMNANT.

The 28 Democratic Representatives who revolted against the Senate Philippine bill have it in their power to save the people of this country from dishonor. They can prevent a brutal and despicable repudiation of the obligations which the United States Government assumed when it ratified the treaty of Paris.

Two months ago, when the House Committee on Insular Affairs reported the Senate Philippine bill without amendment, it looked as if the only hope of averting this betrayal lay in the President's veto. It was a frail hope at best, for the President, in dealing with the Philippine problem, had manifested the same indecision, the same uncertainty and frailty of purpose which had marked his attempts to deal with the problem of preparedness, with Mexico, and with the critical questions arising out of the European war.

The administration was at first committed to a continuance of American control over the Philippines until the Filipinos should demonstrate their capacity for self-government. Independence was to be promised them, but no definite date for the termination of American sovereignty was to be set. Secretary Garrison had strongly indorsed the Hitchcock Philippine bill, and it was universally understood that in doing so he spoke also for the President.

Senator CLARKE of Arkansas, the most feared of the Democratic leaders in the Senate, because the most outspoken and independent, was dissatisfied with what he considered the milk-and-water character of the Hitchcock measure and started an agitation for a ruthless compliance with the pledges of independence for the Filipinos given in various Democratic national platforms. He defied the administration on this issue, as he had previously defied it on the shipping bill. He took the Philippine measure out of Mr. HITCHCOCK's hands, amended it so as to turn the Philippines loose unconditionally four or five years hence and passed it without inquiring whether or not it harmonized with the President's ideas or wishes.

Mr. Wilson was undoubtedly annoyed at first by Mr. CLARKE's blunt repudiation of all concerned on our part for the future of the Philippines. What his attitude and professions in the past should have led him to say was well said to him (unfortunately not for him) by Secretary Garrison when the latter wrote: "I consider the principle embodied in the Clarke amendment an abandonment of the duty of this Nation, and a breach of trust with the Filipinos, and, so believing, I can not accept it or acquiesce in its acceptance."

But the President was unwilling to antagonize Congress on a small matter like scrapping the treaty of Paris. All he would say in response to Mr. Garrison's courageous words was this: "It is my judgment that the action embodied in the Clarke amendment to the bill extending self-government to the Philippines is unwise at this time, but it would clearly be most inadvisable for me to take the position that I must dissent from that action should both Houses of Congress concur in a bill embodying that amendment."

Mr. Wilson broke with Secretary Garrison on preparedness and accepted the leadership of Mr. HAY. On the Philippine question he broke with himself and accepted the leadership of Senator CLARKE and Mr. JONES of Virginia.

Far from preserving the attitude that he must yield unwillingly if both Houses should approve the Clarke amendment, he has been using all his influence to dragoon the House into accepting that amendment. By letter written for the purpose of being read in the recent Democratic House caucus he put himself squarely on record as favoring action in regard to the Philippines which he had only a little while before declared to be "unwise at this time."

The country will therefore owe nothing to Mr. Wilson if it escapes the dishonor of breaking its word, given to the Filipinos, to Spain, and to the world—of running away from a service to civilization which we undertook of our own accord and which we can not now, without shaming ourselves, abandon before it is finished. We shall owe it to the courage of a small number of Democrats in the House, more regardful of the country's good name than the President is, if our Government keeps its faith and continues to do its duty.

This little group of unintimidated Democrats, joining with the Republicans, can prevent the sullying of our good repute, the frivolous striking of our flag, the cession, without condition and without compensation, of territory of vast present and still vaster prospective value, and the relinquishment of a mission which we accepted as a part of that "service to humanity," on which Mr. Wilson lavishes so many gilded phrases, but of which his administration has so far failed to give the slightest practical illustration.

Call these seceders Tammany men, disaffected patronage seekers, imperfect Wilsonians, or anything else you will! The fact remains that they are performing a high patriotic duty. They are helping to frustrate an infamous attempt to deed away American territory, to lower our national prestige, and to turn the inhabitants of a now orderly and prosperous dependency over to a fate even worse than that of anarchy-ridden Mexico.

If it succeeds in staving off these things this Democratic remnant will hold the place of honor in the history—scanty enough in honor—of a Democratic administration under which the Americanism and statesmanship have become almost obsolete terms.

—

[From the New York Herald, Apr. 29, 1916.]

WHEN "BOLTING" REPRESENTS AMERICANISM.

Is there no place for the honest, hard-working, peace-loving Filipino behind the ægis of humanity? Must this ward of the Nation stand alone and apart, a sacrifice upon the altar of American politics?

Democratic leadership at Washington has decreed that this is to be the Filipino fate, but not all Democrats of the House of Representatives will respond to the party lash. Some—apparently enough to prevent the writing of such a disgraceful chapter in American history as the Democratic Party under Cleveland attempted to write in regard to Hawaii—stand squarely against "scuttle."

No American possessing even primary knowledge of the Philippines believes it possible for the people of the islands to maintain and protect independence in the period of "from two to four years" provided by the Jones bill, nor does any Filipino of even primary intelligence believe this possible. Withdrawal of the wholly beneficent American protectorate at this time or within the period contemplated would be abandonment of the Filipino people to become prey of more militant orientals. Incidentally, this would mean placing the only Christian people of the Orient at the mercy of a puissant paganism.

Democratic Representatives who refuse to support the independence provision of the Jones bill are playing the better part by this Nation, by the Filipino people, by true humanity, and by the political party of their allegiance.

Nothing could be less wise than the effort of the Democratic leadership to make the Philippine question an issue of politics. It is an American question to be eventually solved according to the dictates of the American conscience, and has no place in any party caucus. "Bolting" such a caucus is a credit to the bolters.

—

[From the New York Journal of Commerce, Apr. 29, 1916.]

THE PRESIDENT'S PHILIPPINE MISTAKE.

The action of the caucus of Democratic Representatives and the revolt of a relatively small minority of them in relation to the Philippine bill indicates that it is likely to be defeated on the final vote in the House. The resolution declaring approval of the bill as it stands and its passage without change was adopted by a vote of 140 to 35, and 28 of the 35 gave notice that they would not be bound by the caucus action. There is hardly a question that some of the 140 voted against

their conviction and from party motives and a desire to sustain the President, who has been using his influence to carry the measure through. The Republican vote will be nearly if not quite solid against its passage.

The fact is that this mistaken measure has owed its support and its chance of success mainly to the fact that it had the administration behind it, with the President desirous of having it passed at this session. It provides for giving the Philippine Islands over to self-government, for which they are very far from being prepared, in four years from the passage of the bill. There is a serious question whether any promise of independence for the islands should be made, and certainly provision for making it actual in such a short time is a wrong to their own people and in effect a violation of faith pledged in the treaty with Spain for taking them over as a possession of the United States.

A responsibility was then assumed, not only to the natives but more directly to those of Spanish descent, for the maintenance of their rights under authority of the American Government, which would be abandoned by this act. All that has been accomplished would be lost under a delusive idea that the people of the islands are capable of carrying on the work so successfully begun. There is a moral certainty of relapse instead of continued progress, and a serious liability of the loss of that independence which had been so prematurely and unwisely given to them.

If the bill is defeated, the President may be saved from the consequences of the mistake. If it is not, there is a chance that a different control of Congress and of the administration may undo the work before the provision for independence takes effect. Even so, serious trouble will have been caused, and the difficulty of carrying on the process that has been begun will be considerably enhanced. This mistake of the President is akin to that committed with regard to Mexico, but is morally and politically more serious because of the pledge of faith and the responsibility assumed in the treaty by which the islands were acquired.

—

[New York Evening Journal, May 1, 1916.]

IS THIS A GOOD TIME TO GIVE UP THE PHILIPPINES?—WITH THE NATIVES UNFIT FOR SELF-GOVERNMENT—A MAJORITY OF THEM SAVAGE—AND WITH THE POSSIBILITY OF A JAPANESE WAR THAT WOULD MAKE THE PHILIPPINES MOST CONVENIENT TO US.

At a cost of tens of millions this country has established itself in the Philippine Islands. We have more than paid for all that we got there.

We gave the unhappy people freedom from Spain's brutality and superstition.

We gave them thousands of public-school teachers and paid the teachers.

We even paid cash to Spain. And where religious organizations felt that they had suffered financially because the United States came in we paid cash, many millions, to religious organizations.

The United States is in the Philippines by every right—the right of conquest, which we put lowest in the scale; the right of good government, the right of good intention.

We have coaling stations in the Philippines—note that—and harbors for our warships, and when the war with Japan comes, as it will eventually, those coaling stations will be convenient.

In the face of these conditions it is proposed by "statesmen" that the United States should retire from the Philippines, abandon all we have done there, relinquish the work of civilization and our tens of millions of expenditure—turn the whole thing over to the natives, which would mean giving the Philippines to Japan.

What idiocy, what feeble-mindedness inspires this course?

Suppose the Japanese had spent millions upon millions in great possessions, honestly acquired, as close to us as the Philippines are close to Japan.

Suppose the Japanese had, within convenient reach of us, coaling stations, harbors, and forts. Can you imagine any Japanese sufficiently idiotic to advocate giving up those possessions if he knew that when the Japanese went out the Americans would go in?

How can any American be idiotic enough to suggest giving up the Philippines, giving up our whip hand in Asia, giving up the power of making possible reprisals on Japan should Japan attack us—how can any person in this country suggest giving up that power, that advantage, that duty, in the name of maudlin sentimentality?

There should be enough force in public opinion to prevent it.

—

[From the New York Evening Post, May 2, 1916.]

Since the Philippine bill, fixing a definite time for declaring the independence of the islands, had been made an administration measure, its defeat in the House yesterday was a defeat for President Wilson. The bill has had unskillful parliamentary handling. The amendment fixing four years as the period after which the Philippines were to go their own way was written into the bill in a rather haphazard way in the Senate. At the time Mr. Wilson was supposed to be against it, but a letter from him indorsing it was read to the House Democratic caucus. Its rejection is thus another blow to his prestige with Congress. The House finally passed the original Jones bill, giving to the Filipinos a larger measure of home rule and reaffirming the purpose of the United States to grant them independence in due time. Whether the Senate will agree to this is as yet uncertain. One would say that administration and party pressure to get through some kind of Philippine legislation, looking to the keeping of Democratic pledges, would be strong. It will not have escaped notice that among the Democratic bolters in the House was a large proportion of gentlemen with Irish names. They would doubtless fight to the death for an Irish republic. A Philippine republic, however, seems to them a fearsome thing.

—

[From the New York Evening Mail, May 2, 1916.]

STICKING TO THE PHILIPPINES.

Evidently no policy of scuttling from the Philippines can be adopted by this country with the consent of the House of Representatives. The lower branch of Congress is closer to the people than the Senate. In many instances in our national history, aside from the Philippine matter, it has proven more responsive to the real sentiments of the country.

Our people are not willing to set the Philippines adrift, and the House so records itself. It would be an unworthy course to follow at this time. The best thought among the Filipinos themselves is emphatically against so-called "independence" for their islands. They realize that independence would mean chaos, until some other Government stepped in and took the place the United States had abandoned.

The House vote of 213 to 165 yesterday is practically a defeat of the measure—for this Congress at least. It is an administration bill, and the large adverse vote is, therefore, significant, particularly in view of the fact that the Senate, yielding to White House pressure, had passed the bill.

The time will come when the Filipinos should have absolute independence. No lover of liberty would delay that day a single moment, and this Government, last of all in the world, should resist it. It would be a shame and disgrace to us, however, if we should now establish a Mexico on the Asiatic shore.

—

[From the New York Globe, Apr. 28, 1916.]

NO PHILIPPINE PLEDGE NOW.

The division developed in the House Democratic caucus over the Clarke amendment to the Philippine bill and the passage of a resolution that takes the amendment out of the party-measure class make it practically certain that no pledge of Philippine independence will be passed by the present Congress. President Wilson has steadily urged the making of the pledge, but his advice does not promise to be followed.

The country, as a whole, will be satisfied with this action. The feeling is common, even among those who believe that it is immoral and impolitic to govern the Filipinos against their will, that the time has not yet arrived to withdraw from the Philippines. It is not yet clear, looking at matters practically, that conditions are such as to warrant decisive action.

The Clarke amendment is objectionable in that it is merely an academic declaration. It is contingent. It provides, in the form it is proposed to press it, that in 10 years, if the Filipinos then want independence and Congress deems it wise to grant their request, for the setting up of a new nation under American protection. It would seem unwise to attempt to bind the future in this way. No one knows what conditions will exist in 1926.

In the 16 years that have elapsed since the acquisition of the Philippines great progress has been made. Slowly but steadily a non-representative military government has been converted into an autonomous and highly representative one. The Filipinos in most matters now govern themselves. As fast as it has been deemed safe to confide authority to them the grant has been made. No one can reproach this country with having sought to exploit the Filipinos and to repress their just aspirations. But this country is properly not willing to turn another Mexico loose on the world. There must be reasonable assurance that separation from this country shall not be marked by a reversion to anarchy. To avoid this danger it seems wise to go on as we have—that is, to enlarge autonomy from time to time as experience warrants it, leaving the separation, if it is to come, representing not an amputation but the natural dropping away of ripened fruit.

The following editorials appeared in the Brooklyn papers:

[From the Brooklyn (N. Y.) Citizen, Apr. 28, 1916.]

THE PHILIPPINE BILL.

Twenty-eight Democrats who have refused to abide by the judgment of the party caucus on the Philippine bill are entirely within their rights as party men in the position they have taken. The bill as it stands is in no proper sense a party measure and can not be made one by any whipped-up majority. Nor is there any reason for questioning the claim of the minority that they are doing what their constituents desire. This is certainly true of the Members from Brooklyn. There is not the least ground for doubting that Mr. FITZGERALD and his colleagues are correct in saying that the bill as it stands is not and is not likely to be approved by the people to whom they owe their seats.

It would, in the light of all the information obtainable, be unwise for the administration to press the issue in its present form. What good political sense suggests is that some amendments be adopted which will obviate the objections raised by the intelligent and conscientious gentlemen in question. It is so distinctly contrary to good party policy to do the contrary that the President will, we feel confident, decline to sanction it.

When to considerations of sound party policy we add the thought of what the best interests of the islands call for, it is not too much to say that the minority and not the majority ought to prevail. The time may come, perhaps, when it will be practicable for the people of the Philippine Islands to assume the responsibilities of self-government. It may be that this degree of intellectual and moral development will be reached in the course of the next generation. That they are in no such position yet is what only the merest theorists, to whom facts are irrelevant considerations, will deny.

It would, in other words, be rather a crime against the natives of the islands than a benefit to thrust a responsibility upon them which could result only in reducing whatever is orderly to chaos. The hope of the Citizen is that our Brooklyn Democratic Members will stand firm and that the points for which they are contending will be yielded by the caucus leaders.

—

[From the Brooklyn (N. Y.) Citizen, May 2, 1916.]

THE PHILIPPINE BILL.

The rejection by the House yesterday of the Philippine bill in its present form is gratifying to nearly every student of the condition of the islands. The 30 Democrats who stood firmly by their objections, despite the action of the caucus, are thus entitled to the thanks both of the country and the Democratic Party, for it is quite certain that neither the party nor the country desired any such measure as the caucus indorsed.

Whatever be thought of the future of the Philippines, it is agreed by all practical observers that they are not yet in a condition for the establishment of popular sovereignty, nor are they likely to be so for a generation to come. This is not the opinion of men who wish to retain them under American control. It is the opinion of men who would be glad to see them intrusted with the complete management of their own affairs, and who are convinced that it would be to the advantage of this country to be rid of them.

That they are a burden to the United States and will always remain so is as fully recognized by the opponents of the bill in question as by its supporters, but the further question of duty to the world as well as to the islanders can not be escaped from on any merely economic pretext. It was no doubt an error to annex them in the first place. This is not likely to be seriously denied to-day in any well-informed quarter; but, being annexed, we can not without injustice to the inhabitants turn them over to all the horrors that would overtake them if our troops were withdrawn. It is from this point of view that the proposal of the

bill to give them their so-called liberty, a word which they do not understand, within four years, excited the opposition of by far the greater part of thoughtful America, not to mention other parts of the world.

—

[From the Brooklyn (N. Y.) Eagle, Apr. 27, 1916.]

PROJECTING THE PREMATURE.

There are honest differences of opinion as to what we should do with the Philippines. To these differences the two great political parties have given expression. At the national convention held in 1912 the Republicans characterized our duty toward the Filipinos as a national obligation, and declared that it should remain entirely free from partisan politics. At several of their national conventions the Democrats have waved the flag of freedom. In 1912 they were especially declamatory. They denounced what they described as an experiment in imperialism as an inexcusable blunder and favored an immediate declaration of the Nation's purpose to "recognize the independence" of the islands.

This purpose was debated at a caucus held in Washington last night. It has the "unqualified indorsement" of the President, who has written a letter hoping that the pledge of the party will be redeemed without a dissenting voice, which hope will not be realized. More than 30 dissenting voices were raised, and the Democrats have only about that number to spare in the House of Representatives. Efforts to coerce the so-called traitors into submission will be made, but as not a few threaten to bolt, there is anything but smooth sailing ahead.

For the pledge the party is indebted to William Jennings Bryan. In one of his canvasses for the Presidency imperialism figured as his paramount issue, with the customary consequence. It shared the fate of 16 to 1, though the candidate warned his countrymen that imperialism in the Sea of China would result in despotism here. In the interval our form of government has not changed, and recent reports from the Archipelago are to the effect that conditions there are steadily improving, which reports come from officials who are Democrats. If they are contradicted at all, it will be by Republicans.

So much for the passing of one Bryan bugaboo. That the Filipinos are ready for self-government is affirmed and denied. The question thus raised will remain a question. There is, however, no question that in the matter of religion we have guaranteed freedom to the Filipinos in perpetuity, this being one of the obligations we contracted with Spain. How we are to fulfill it should we withdraw from the Archipelago has not been explained. Nor is it easy to understand why we should in one and the same breath grant freedom to the islanders and compel them to become prohibitionists. This looks like a plain case of drowning sovereignty in grape juice.

There are cases in which it may be more or less justifiable to crack the party whip. The fate of the Philippines is not one of them. It is one in which freedom of action should be reserved to every Member of the House of Representatives. It is not one in which pressure should be brought to bear from the White House or from any other base of operations. The proposition is now to commit the country to action which is to be taken from two to four years hence. Never was time less opportune for taking such a plunge in the dark. So may conditions change in the interval that what may now seem to be rational to plan may then be lunacy to execute. The time to cross a bridge is when it is reached.

—

[From the Brooklyn (N. Y.) Standard Union, Apr. 28, 1916.]

TAMMANY'S DEFIANCE OF THE PRESIDENT.

The bolt of 28 Democratic Congressmen from the caucus on the Philippine scuttle bill, apparently insuring the defeat of that measure in its present form, is a most gratifying evidence of sanity and independence in the House.

This action will be accepted as proof that the Representatives have paid close attention to the sentiment of the country on the proposition to give the Filipinos unconditional independence at the expiration of four years. They have learned that the plan meets with overwhelming disapproval, is considered premature, and fraught with the gravest danger to the islanders themselves.

Of almost equal importance to dealing a death blow to the independence feature of the bill is the political significance of the revolt. It means that White House domination is broken for the present, at least, and indicates that Democratic Representatives will no longer submit to outside dictation.

This bolt seems to be closely related to the refusal of Senator Wagner to accept the postmastership in Manhattan. Fourteen of the 28 bolters were Tammany men. It was a Murphy slap at the President, just as was the Wagner refusal a formal notice that Tammany is not willing to shake hands with Mr. Wilson and forget the past. The President is said to have written a letter urging the Democratic Congressmen to pass the Philippine bill, and the answer was given at last night's caucus.

How far-reaching will be the Tammany hostility, assuming it is to be persisted in, is a fair subject for speculation. It can not, of course, affect the decision at St. Louis in June, but it may cut quite a figure in Congress. If the smoldering resentment of Tammany has really broken out into a flame, as indicated by the caucus bolt, the President may be seriously embarrassed in carrying out his legislative program. It is a situation which will be watched with interest.

On May 3, 1916, the Philadelphia Public Ledger contained the following editorial:

NO SCUTTLING IN THE PHILIPPINES.

Various objections might still be raised to the Philippines bill as passed by the House, but the elimination of the Clarke amendment relieves it of its worst feature. By the action of 30 Democrats in joining with the Republicans the responsibility solemnly assumed by the United States will not be repudiated and the islands will not be cut adrift before their people are fit for self-government. Why the administration so urgently desired to ignore these particular obligations of the "humanity" to which it is constantly professing allegiance there is no need to inquire. It has passed the policy of scuttle upon the Democratic Party in the most persistent and eager fashion. This makes the revolt of so considerable a section of that party in Congress a serious affair. The President committed himself to the defeated amendment by exercising every kind of personal pressure, and for that reason his prestige suffers in proportion. But this is not the main point. A shameful sacrifice of national honor, a cowardly evasion of plain duty, has been averted by those Members of the House whom even the demands of party harmony could not intimidate.

On February 4, 1916, the Philadelphia Inquirer carried this editorial:

AN ACT OF CRUELTY TO THE FILIPINOS.

By the casting vote of Vice President Marshall the Clarke amendment to the Philippine bill has been adopted by the Senate. While this amendment is not absolutely explicit in its promises, since the next Congress may repeal its provision, there is no doubt that the Filipino agitators of Manila will consider that we have pledged ourselves to give them complete autonomy within four years. The bill is vicious and pernicious so far as the Filipinos themselves are concerned and is an abandonment of a sacred trust imposed upon the United States by the treaty of Paris.

There are about 8,000,000 of Filipinos in the archipelago, which would mean about 1,600,000 adult males. Not one-fifth of that number are permitted to vote under any circumstances. Such political power as is now exercised by Filipinos is almost exclusively confined to Visayans and a few others, while most tribes are not considered at all. When we recollect that about one-half of the people of the islands are either savages, semisavages, or wholly ignorant, it must be admitted that we are taking great chances in casting them adrift to shift for themselves.

Among the advocates of Filipino freedom are those who hold that the islands are a nuisance and an expense to the United States, if not a menace, and who want to get rid of them on any terms. Such persons strangle every thought of humanity and of duty.

There are others who seem actually to believe that any set of human beings are capable of self-government just because they are human beings. Such are to be pitied for their ignorance.

The Filipinos have never governed themselves. To set them up in business as an independent country before they are prepared for independence would be to hand them over to just such revolutions as have devastated Mexico and have made of Haiti a shambles. What is more, it would lay them open to invasion. Any day that Japan, for instance, felt like doing so, she could and would annex the Islands, and then what would become of the freedom which Congress is apparently about ready to grant them?

The bill is an act of cruelty to the Filipinos. The world is on fire, as President Wilson has said, and yet we are going to cast these Islanders into the flames. They need preparation for independence. They need to know how to govern themselves, and they need to be assured by the world powers that their independence will be respected. Such assurances at the present time and for some time to come would be utterly worthless. Treaties are scraps of paper and international law is a farce. Sanity has got to return to the world before we can expect anything but insanity.

By holding out the promise of independence to the Filipinos under existing conditions, Congress is but adding to the prevailing insanity.

May 3, 1916, the Pittsburgh Dispatch carried the following editorial:

THE PHILIPPINE BILL.

Things have undergone somewhat of a change in the administration direction of Congress since the passage of the Panama Canal act, when the Philippine bill, on which the White House had set its heart, is decisively defeated in the House. The final vote was 213 to 165 on the proposal to give the islands independence in four years; but the rebuke to the administration went further than defeat of this, the House rejecting every suggestion coming from the administration forces looking to independence within any definite period.

It was on the Philippine measure that Secretary of War Garrison split with the President, the difference finally leading to his retirement from the Cabinet. The Secretary had termed the Clarke amendment a cowardly abandonment of the islands, and pleaded with the President to oppose it. Instead, the Chief Executive indorsed it fully and continued his indorsement to the end. Despite the temper of the House he insisted that the measure should go through as it was submitted. In a letter presented to the Democratic caucus he declared his unqualified approval of the bill and urged it be passed without amendment.

The solid Republican vote of the House was augmented by the vote of 30 Democrats. The majority of the Democrats were under the direction of House Leader CLAUDE KITCHIN, whose leadership in this instance was on a par with his leadership since he got the place. Perhaps it is not without significance that the measure was rejected on the anniversary of the day on which Admiral Dewey gained the victory that brought the Philippines under the American flag. Much as some may not be inclined to believe it, there is a deal of sound sentiment throughout the country regarding the admiral and his exploit in Manila Bay, and the declaration of a majority of the House of Representatives on the anniversary of the raising of the flag in the Orient that it will not come down yet awhile, and certainly not under conditions like the present, will not be lost sight of by the possessors of that sentiment.

The administration obsession that the Philippines should be given their independence right away is another of those things that can be explained only on the theory that the White House works in a mysterious way its wonders to perform. The measure has been condemned by friends and opponents of the President alike. Some of the strongest administration supporters have termed the policy in this regard one of "scuttle." Adherents of the President as well as those not in accord with his policies have agreed that the interests of the islands demanded the deferring of final independence until such time as a stable government could be assured, and that time is not yet. It is hard to see where the administration can get any comfort from the action of the House or where conference developments are likely to make pleasanter reading for it. Perhaps it would do no harm to give idealism a respite for a while.

May 3, 1916, the Boston Post had the following to say:

OUR PHILIPPINES.

The problem of administration of our exterior possession acquired through the War with Spain surely demands time for its solution. This is secured by the action of the House of Representatives at Washington in refusing to consent to the so-called Clarke amendment fixing a period of four years for the continuance of our sovereignty. The measure now goes to the Senate for agreement as a substitute proposition.

What is the difference between the two legislative bodies? It is simply that of foresight as to the development of conditions of autonomy in these islands. The Philippines form an obligation forced upon us

through our conflict with Spain: there is no definite term of years in which they may acquire the capacity of self-government as we understand it. Their ultimate independence must depend upon the success of their experiment in free government as we have directed it.

How can we tell when this qualification will be reached? The bill, as it now stands, omits the declaration of any date when success in this endeavor shall be regarded as attained. In other words, it reiterates the promise of ultimate independence when the Filipinos shall demonstrate their capacity for self-government. We must be the judges of this.

What more can safely be pledged by the United States?

The Chicago Herald, May 3, 1916, gave the following as its opinion:

NOT ASHAMED OF 1898!

The defeat of the Jones-Clarke "buck-passing" Philippines bill on the anniversary of Dewey's victory may have been merely a coincidence. The motives of the Democratic caucus bolters who struck the blow may not have been those of high-souled patriotism. Nevertheless, some Americans will see in the result, regardless of the instruments, an insurrection of the American spirit against the craven theory that we ought somehow to be ashamed of 1898.

In that theory the Jones-Clarke bill was conceived. It is a belated birth of the Bryan antiimperialism campaign of 1900. We thought then we had voted that folly down. We knew we had no intent to oppress the Filipinos. We believed we could make them American, or, at least, deal so well with them that in time they would be as unwilling to cease to be under our flag as we would to see it give place to another in our own land.

However, the neurotics kept nagging on, and politicians under no delusions about the capacities for independent self-government of less developed races nearer home lost themselves in mazes of abstract theory about the Philippines. They have never been the home of a real "nation" and are merely a miniature India. As the withdrawal of the British overlordship from India would be followed by the domination of stronger castes and tribes and the subjugation of all the rest, so our withdrawal from the Philippines would result either in a selfish native oligarchy or in a foreign conquest.

With such a future so visible, two courses were logically open to us: One was to keep steadily on along the lines for which we apparently decided in 1900. The other was to regard that decision as wholly reversed in 1912 and frankly abandon the islands, confessing that we had been all wrong in the daring of our soldiers and the devotion of our teachers and the outpouring of blood and the years of toil through which we had brought peace and order and were starting the islanders up the long hill to liberty, safeguarded by law and all that we mean by an established civilization.

The Jones-Clarke bill took neither of these courses, both logical and both honest, however cowardly the latter must be regarded by all who hold that the more fortunate have a duty to help the less fortunate, nationally as well as individually. It was a miserable shuffle between them, granting what the common sense of the man in the street rightly termed "independence with a string." Moreover, it was based on the assumption that we ought to be ashamed of 1898.

The instincts of the American people seem to have rebelled against a confession so base and so false. Whatever our errors, and they have been many, though chiefly in lack of fixedness of purpose, we are not ashamed of 1898 and of what we did for peoples long oppressed in that glorious and memorable year.

The Chicago Daily News, May 3, 1916, contained this editorial:

WISE ACTION ON THE PHILIPPINES.

In refusing to give its approval to the Philippine bill with the amendment promising complete independence to the Philippine Islands within four years the National House of Representatives has acted wisely. Independence for the Philippine Islands is the goal toward which both the islanders and the United States should be working, but nothing is to be gained by setting a fixed date at which the United States will withdraw from the islands. On the contrary, much harm might result from enacting such a promise into law.

Powers of self-rule for the islanders should be enlarged from time to time so far as this can be done wisely. When the people of the Philippines shall actually manage their own affairs in a reasonably satisfactory way with only nominal direction from the Washington Government the time will be at hand for the formal recognition of the republic in the Pacific. To fix a time limit on American authority before the islanders have learned to walk alone would be unjust to the Islanders themselves and to all legitimate interests in the Philippines.

Cuba was given its freedom by the United States, but it was set adrift prematurely. Conditions in that island soon darkened into civil war. Interference by the United States was necessary in 1906. Again in 1912 United States marines were landed on the island and intervention was threatened. Since that time Cuba has so conducted itself that it has not required outside interference for its own good. The United States can not afford to set the Philippines adrift prematurely.

Congress should reiterate its intention of giving the Filipinos their independence ultimately and should assist in the work of preparing them to receive their independence as soon as that heavy and complex task can be completed.

February 7, 1916, the Detroit Free Press carried this editorial:

THE SENATE VOTES TO SCUTTLE.

The Senate of the United States, once a clear-seeing and patriotic body, has gone on record for a scuttling policy in the Philippines. It has passed a bill that ought to make the country first hide its head in shame and then rise in a storm of indignation.

The Senate has defied decency, and it has defied the plain and emphatic mandate of the voters as expressed in the national election of 1900, when Bryan anti-imperialism was snowed under. It has lent itself to a long-denied but now amply proven plot. The protestations of those who declared last session that there was no idea of deserting the Philippines now stand out in their true character. Those protestations were deceptions. This monstrosity which the Senate has fathered was the real plan all along.

Of all the outrageous schemes concocted for turning the Philippines adrift to shift for themselves, rudderless, guideless, and unprotected, the one just approved by the upper House is the most despicable.

If Congress finally takes the course now indicated, and as we are informed approved by the Chief Executive, this country will stand out among the nations as a shirk. It will be in the position of having callously repudiated a solemn obligation. After having taking the archipelago from a protector—for Spain was a protector, even if a poor one—it will be leaving it to become the victim of the first greedy, land-grabbing exploiter that happens along. For in the bill as it stands there is not even the pretense of a scheme to watch over the islands once they are cut loose. They are to be left as a public prey, their only heritage a lot of hypocritical moral admonitions.

Inevitably, all the good accomplished in the first years of the American occupation will be undone. Peoples just beginning to understand the meaning of justice, of freedom without license, and of enlightened civilization will be condemned to sink back into their age-long barbarism. And why?

We know the specious cry has been raised that the inhabitants of the Philippines ought to be given political separation because they have a right to rule their own land if they wish to. We know all about the dishonest assertion that the islanders are being held in wicked bondage. We know there is an element in the islands, composed mostly of persons greedy for power or position or money who are working tooth and nail to get rid of the wholesome restraints imposed by the United States. But the attempt to create an impression that the independence proposed for the Philippines is to be a real freedom, that it will be for the good of the peoples of those islands, that these peoples are capable of taking care of themselves, is an attempt to spread a lie. Every honest and unprejudiced person with first-hand knowledge of the conditions in our East Indian possessions testifies to this effect.

The real reason for the effort to pass the Philippine scuttling bill is cowardly fear. Those behind the plot are afraid they may be called upon to assert the American principles of which they love to orate in campaign times and of which they discourse in their political platforms, but which they carefully avoid practicing whenever there is danger practice may call for courage or self-sacrifice. Chiefly they dread Japan, and they want to give up the Philippines beause they cravenly fear that otherwise they may be forced to fight for the islands' protectection from Nipponese greed. They are afraid of their own inefficiency, and rather than try to repair it they insist that the Nation no longer bear what once was proudly called "the white man's burden."

The worst of it is they try to disguise their cowardice by calling it "faithfulness to principle." Well, we all know what are the principles of a man who, having agreed to protect and educate a child, tires of his bargain, turns the child out on the street on the plea that the child doesn't like restraint, and leaves it to become the prey of white slavers, thieves, and murderers.

The Washington Post of May 3, 1916, published the following letter of Mr. Hearst, which that day also appeared in the New York American:

PHILIPPINE BILL'S DEFEAT—LOYALTY TO FUTURE INTERESTS OF COUNTRY MORE IMPORTANT THAN PARTY TIES, SAYS FAMOUS EDITOR—CRIME TO ABANDON ISLANDS.

To the EDITOR OF THE WASHINGTON POST:

The 28 Democrats who bravely strove to save the Nation from the disgrace of abandoning its duties and from the mistake of sacrificing its opportunities in the Philippines are as much national heroes as the men who fought to save the country from the evils of conquest in the Revolution or of dismemberment in the rebellion.

The sacrifice of high purpose and high principle would hardly have been greater had we failed in the Revolution, the sacrifice of territory and essential integrity would hardly have been severer had we lost in the rebellion than the sacrifice the Nation would suffer to-day in prestige and possessions through a timid and stupid abandonment of its obligations and opportunities in the Philippines.

DESERVE GRATEFUL REMEMBRANCE.

These 28 men, who refused to be bound by a party caucus to do a traitorous act of national danger and dishonor, were patriots before they were partisans, and deserve the grateful recognition and remembrance of patriotic citizens of whatever party.

They have rendered a great service to their country—a service for which they should receive their reward not only in the approval of their own conscience, but in the universal consideration and esteem of a grateful people.

Surely these broad-minded, far-seeing statesmen will be remembered and respected when the little spineless, spiritless followers of a timorous and traitorous administration are forever forgotten.

These courageous Democrats who saved both their country and their party from injury and ignominy will be denounced as disloyal by party bigots, but there is no disloyalty in refusing to follow disloyal leaders.

LOYALTY TO COUNTRY ALL IMPORTANT.

Benedict Arnold was an American general, but those would be pronounced traitors to-day who would have followed him into the camp of the enemy while those who refused to follow him are esteemed patriots.

Loyalty to the present and future interests of our beloved country is more important in the minds of sincere citizens than loyalty to any individual or to any party policy.

The abandonment of the Philippines would mean more than mere loss of wealth and territory and power and prestige to the United States.

It would mean the betrayal of this island empire to Japan and would make Japan that much more populous and powerful and bring her frowning forts and formidable fleets that much nearer to our defenseless shores.

PROTECTING THE PHILIPPINES.

What nonsense to say that we would protect the Philippines as our wards when the island fortifications would be left to the lazy neglect and childish incompetence of the Filipinos—our fleets withdrawn from their harbors, our soldiers recalled from their shores.

Is it not easier to defend the Philippines as our possessions, fully fortified with our ships and guns, than it would be to defend them as wards, without our armament and without authority?

Yet the same unwise and insincere demagogues who say we would protect the Philippines as our wards advocate the abandonment of the Philippines because we would be unable to protect them as our possessions.

WOULD BE COLOSSAL CRIME.

The abandonment of the Philippines would be the colossal crime of our history, the crowning folly of our career as a nation.

It would be an indictment of Democracy and impeachment of our republican form of government; a reflection upon the capacity and patriotism of our people; a slur and slight upon the intelligence and efficiency of our citizenship.

It would be a first and fatal step toward the relinquishment of American supremacy in the Pacific.

It would mean a final disaster to American trade in the Orient and a dull and despicable repudiation of America's duties and destinies.

The abandonment of the Philippines would be moral, political, and economic high treason.

The party which would commit such an act of moral obloquy, political treachery, and economic stupidity should be tried and convicted and forever expelled from the councils of the nations by the American people.

UNITED STATES AT A CRISIS.

The United States stands at the crisis of its career.

It has become the greatest of modern nations.

It has grown not merely through natural national development but through legitimate expansion and immigration.

It has increased through the extension of its territory and the absorption of other peoples into its population.

At first our Nation was but a line of liberated colonies strung along the Atlantic coast.

Then, after due and dogged opposition from the tories of the time, the Floridas were added.

Then, to our glory and Thomas Jefferson's immortal memory, the immense Louisiana Territory was acquired.

Then, in spite of the trepidation of the timid, our title to the far northwest was substantiated.

Then Texas was admitted and California, Arizona, and New Mexico were absorbed.

All of which the reactionaries resented and the petty Americans opposed.

One statesman went so far as to say that California would never be a fit habitation for anything but horned toads—California, which now could supply gold and grain and flowers and fruit and oil and soil and homes and harvests for the world.

Then Alaska was bought and pronounced worthless by the stupid and shortsighted until its hills were found to be sheathed with copper and its river beds paved with gold.

All the time those who lacked imagination to see the possibilities in new lands and larger developments dignified their dullness by the name of conservatism and stood stolid in the path of progress.

DESIRE OF TRUE AMERICANS.

Still our country grew.

It was our destiny.

Still the glowing star of our extending empire took its western way.

We fought the Spanish War and won the Philippines.

Of course, history repeats itself.

Of course, the reactionaries rise to-day to repudiate our opportunities and obligations there as they did in Florida, in Louisiana, in California, in Alaska.

Of course, the miniature Americans want the Nation to shrink to their small size, and the shortsighted politicians and pedagogues want the confines of our country's greatness to contract to the radius of their limited vision.

But the true Americans, the big Americans, the Americans with soul and sense, with intelligence and imagination, the Americans who have made the country the great country that it is, want the Nation to grow ever greater and fulfill to the full its duties and its destinies.

Greatness is a matter of soul, not census.

To be truly great our people must possess national pride and patriotic purpose—not merely population.

We must have the spirit of our fathers, the energy and ambition of our ancestors.

We must devote ourselves to our national development, our territorial enlargement, our moral and material improvement.

We must consecrate ourselves to the extension of our civilizing influence, of our beneficial and benign activities, of our uplifting and inspiring ideals.

CENTER OF THE WORLD'S ACTIVITIES.

The United States is located at the focus of the world's attention, at the center of the world's activities.

On the one side is the Atlantic Ocean, the great commercial highway connecting us with Europe.

On the other side is the Pacific Ocean, the great thoroughfare of trade uniting us with Asia.

On the south lie the rich and rising Republics of South America.

Such a commanding and controlling location should make our country as it made Venice in former times and under former conditions, the center of the world's commerce, the custodian of the world's wealth.

But something other than mere location, as well as something more than mere poulation, is needed for true greatness and glory.

We must have enterprise and imagination, courage and confidence, the ability to understand and the energy to exploit the advantages which surround us.

God's work of civilizing the world must be done and will not lag for lack of willing servants.

NATION MUST DO ITS FULL DUTY.

If we fail to do our full duty other nations will be found to supplement or supplant us.

We must not be dependent upon the past, content with the achievements of our ancestors.

We must work out our own salvation, perform our present-day obligation.

A professor of ancient history is not the best leader for a modern constituency.

He is likely to be so intent upon the incidents of the past that he is indifferent to the occurrences of the present and inaccessible to the opportunities of the future.

A nation is like an individual.

It lives and labors, it plans and performs, it conceives and achieves.

It passes through its successive ages of majority, of maturity, of seniority, of senility.

It grows and develops.

It declines and dies.

In all its course no nation stands still.

It either advances or recedes, progresses or retrogresses.

We have not yet reached the point where we must disintegrate and deteriorate.

PATRIOTIC OBLIGATIONS TO BE MET.

The red blood of enthusiasm is still warm in our veins, our minds are still alert to our labors, our hearts are still strong in our faith.

We have set our hand to the plow, let us not turn back until we have reached the end of the furrow.

We have enlisted for the fight, let us not desert or desist until the victory is won.

We have accepted the responsibility of the Philippines, the duty of their development.

Let us neither repent nor retract.

Let us perform our complete patriotic obligation and make the Philippines a progressive and potential part of our country and of our civilization, the foremost buttress of our safety, the furthermost bastion of our enlightenment and liberty.

WILLIAM RANDOLPH HEARST.

January 22, 1916, the Washington Post spoke, editorially, as follows:

ARE THE PHILIPPINES TO BE ANOTHER MEXICO?

There is an evident determination on the part of Democratic leaders in the Senate to push through an amendment to the Philippine bill which will grant independence to the Islands and commit the United States to a guaranty of their independence. It is proposed that the President shall negotiate treaties with the powers that may be concerned, under which the "neutrality" of the Philippines shall be recognized and their independence guaranteed. If no such treaties can be concluded, then the United States alone is to guarantee the independence of the islands.

Thus it is proposed to relinquish authority over the Philippines, while retaining responsibility for them.

Of course, treaties guaranteeing the independence of the Philippines would not be worth the paper they were written upon. The ink is not yet dry upon Japan's formal declaration that Kiauchau would be turned over to China. The neutrality of Belgium, guaranteed by the great powers meant nothing. The independence of Serbia and Montenegro having been destroyed, Greece is in process of destruction. All sorts of treaties prohibit these acts of national extermination, but they have no effect.

If the United States were to turn the Philippines loose it would be compelled to extricate them later on from their difficulties. If insurrections and revolutions occurred, they would have to be put down. If a foreign power assailed the islands, it would have to be beaten off.

The people of the Philippines have no common language, and the tribes are deadly enemies. The moment the restraining hand of the United States is removed anarchy will begin. Even if no foreign power should then seize its opportunity to take the islands the United States would be compelled to do the work of 1898–1901 over again at great cost of life and money.

The cost of American government in the Philippines is used as an argument for withdrawal. Yet the cost of returning to them and again reducing the people to order is not regarded as a liability by some Senators.

If the United States were not in the Philippines no one would now advocate acquiring them. But we are in and that makes all the difference in the world.

Let the cost of acquiring and maintenance of the Philippines be compared with the cost of reoccupying and pacifying them anew, and also with the cost of a possible war with Japan in preventing that Empire from extinguishing the independence of the Philippines.

The Philippines are a liability and not an asset. But the question is, Shall the liability be made greater by taking away a stable government and leaving them to anarchy and foreign conquest?

In no way can the United States evade its responsibility toward the Philippines. If it could, then it would be well to relinquish authority also. But it would be a blunder, eventually culminating in a gigantic national crime, to relinquish authority and retain responsibility. That way lies bloodshed of Americans in defense of the unfounded belief that the Filipinos are capable of self-government.

Mexico is far more advanced than the Philippines and the people have a common language, yet that country is unable to extricate itself from anarchy without the help of the United States. This Nation must help Mexico to establish a government, and the sooner it does so the sooner Americans as well as Mexicans will be safe. The present administration hopes to be able to keep American forces out of Mexico. What hope could it have of keeping American forces out of the Philippines?

Cuba, a small, compact, homogenous island at our very doors, was unable to maintain self-government, and the United States used its forces to restore order and reestablish stable government. The cost of that operation was insignificant compared with what it would cost to reoccupy and pacify the Philippines; to get back, in other words, to where we are at present.

The Washington Times, May 3, 1916, carried the following editorial:

PHILIPPINE FOLLY ENDED.

The Senate, in passing the Philippine government bill, provided for the islands a larger measure of home rule, and then wrote into the measure a promise of independence, under certain conditions, at the end of four years. There is almost no doubt that had this become law, and had President Wilson been reelected next November, the islands would have been turned loose four years hence.

This is one platform pledge that ought not to be regarded as sacred, because of the revolutionary changes of conditions since it was made. The Filipino people look out to-day upon a mightily different world than that of June, 1912, when the independence pledge was made. The world of to-day is one of turmoil, uncertainty, and acute crisis. No minor nation dares feel itself secure in the rage for conquest that has taken possession of a great alliance of powerful nations. The Filipinos, given their liberty, could not have been assured against aggression. Indeed, the effort to give them this assurance might easily have involved both them and the United States in most unfortunate complications.

It is therefore entirely for the best interests of all concerned that the House of Representatives has killed the independence provision in the Senate bill and given its conferees very specific instructions that at this point they are not to yield anything to the Senate. The Republicans of the House voted solidly against independence, while a goodly group of independent Democrats broke away from the administration and stood against the untimely execution of a promise that in the circumstances might well have been regarded as canceled by the new conditions which have arisen.

## The Stop Watch and the Human Scrap Heap.

EXTENSION OF REMARKS
OF
HON. WILLIAM P. BORLAND,
OF MISSOURI,
IN THE HOUSE OF REPRESENTATIVES,
*Friday, August 25, 1916.*

Mr. BORLAND. Mr. Speaker, the stop watch used to be a symbol of the race track, but at this date it is seriously proposed to make it the symbol of Government service. Its use on the race track is perfectly natural and proper to record the result of an unusual, overstimulated and noneconomic test of speed and endurance where everything must be sacrificed to the victory of the moment. It has no legitimate place, however, in industrial life, and especially in those pursuits where training, intelligence, and experience are the valuable elements. I am opposed to the stop-watch system and can not believe it will produce a permanently higher standard of efficiency.

As I understand it, it amounts to a speeding-up process, by which the youngest, quickest, and most active worker is to set the pace for all the rest. Those who exceed this pace, while securing some temporary and inadequate compensation therefor, are doing so at the cost of a nervous strain out of proportion to the benefit to the service, and certainly not justified by any permanent benefit to themselves. Those who fail to come up to the mark set by the pacemaker suffer humiliation and loss of earning power, which destroys their ambition and weakens their determination for useful and permanent service. The system will have a bad effect in overstimulating those who try to excel the record. It will certainly have a bad effect of shortening the industrial life of thousands of workers who have lost their first quickness and precision. One of the greatest blights on our civilization to-day is the shortening of the industrial life of human workmen. In some occupations and trades the period in which a man can earn the normal wage is pitifully short, and even in the skilled trades, where intelligence and experience ought to be the main factor, it is much shorter than it ought to be. Human beings go into the scrap heap too soon. Men are not made for commerce and industry, but commerce and industry are made for men. What we ought to study, from the standpoint of statesmanship, is some means of lengthening the industrial life and prolonging the maximum earning power of intelligent workers. This is especially true in those occupations like the postal service, in which study, experience, and careful preparation are necessary to enable the employee to reach the length of service entitling him to a living.

The stop watch, in my mind, savors entirely too much of turning men into machines. The great trouble about such a plan is that we can repair or renew machinery, but we can not restore the abused faculties of the human worker. I can not but believe that the experiments which are now being tried to adapt the stop-watch system to intellectual employments will show that such a plan is utterly inapplicable.

## The Real Issues and the Democratic Hurdy-Gurdy.

EXTENSION OF REMARKS
OF
HON. FRANKLIN F. ELLSWORTH,
OF MINNESOTA,
IN THE HOUSE OF REPRESENTATIVES,
*Friday, August 25, 1916.*

Mr. ELLSWORTH. Mr. Speaker, the United States is but little more than a century and a quarter old, and yet within the comparatively brief space of her history there have been more momentous political questions raised in the public forum than in any nation of Europe since the days when religious creeds were the underlying principles of governments—more than 200 years ago.

This was but the natural outcome in a great, compact expanse of territory so richly endowed with natural wealth, and with the consequent divergent interests of different peoples of different sections.

If all men were equally endowed, and each were ready to sacrifice unselfishly his own to the general good, the history of a republic might well be written in a few short pages; but in America, with our virile, concentrated, gigantic interests and institutions, where the very spirit of America breathes progress and incites ambition, these great political struggles are inevitable.

And in a Government of political parties, as this and every great Republic of the world must be, it is well that there come at a stated period an adjustment time, and that the people take into consideration their public affairs and delegate the powers of the Government to one or the other of the great political parties.

PATRIOTISM AND MOTIVES.

As we approach the contest the air is surcharged with an insidious and deep-seated feeling of suspicions of the motives of citizens and classes of citizens. Patriotic Americans are impatient of the expressed sympathies of adopted American citizens and children of adopted citizens who came from other lands whose hearts go out to their former kinsmen across the waters in their struggles. Some entertain a deep solicitude for this Government's acts as they may affect the struggle between the great nations of Europe, which is but natural. Before I condemn I want to place myself in the position of him whom I propose condemnation of. If we to-day, American citizens, were to take up our abode and later our citizenship in a new and adopted land beyond the seas and after our citizenship there had become complete were to be compelled to follow the fortunes of America struggling for her existence with a foreign power, I wonder would we look indifferently on or would we be solicitous of her fortunes. Would we be interested in the course of our then adopted country toward and affecting the belligerents? Would we hope and pray for the success of America? And if we did, and hoped for our adopted government's favor to America, would we be disloyal?

By this I do not undertake to excuse or palliate any real offense against our country. We have no room for any disloyal citizen here. America is big and broad enough for all Americans. It is too big to tolerate a single other one.

The other day I heard through my office window the martial strains of a band. As it approached I perceived the music to be a funeral dirge. Looking from my window, I saw a gun caisson draped in mourning, on which was mounted a casket containing the mortal remains of an American soldier, enlisted in the volunteer service as a member of his company of the National Guard. He was being borne to his last rest by the regimental band and the full membership of his company of Infantry, marching in close formation, with heads bowed. It was an inspiring sight—the band and company and comrades in khaki uniform of the United States Army. As the cortège passed a bystander inquired who the departed soldier was, and upon being told inquired of his military rank, and upon learning that he was a private in the ranks, remarked that he thought it was a pretty big fuss to make over a private. I was interested to learn who this bystander was, and, as I saw him frequently, inquired, and finally learned, to my great satisfaction, that he was not an American citizen, and I thanked God for it.

America is a nation of privates. There is no honor to the memory of an American citizen disproportionate to his station in life. There is no station above that of a true, loyal country-loving American citizen, and the gravest charge that can be laid at his door, graver than indictments of homicide or theft, are those which impugn his patriotism.

There is hope for the vagabond and the beggar that they may reform; there is hope for the thief that he may see the error of his ways; there is hope for the gossip and trouble maker that he may experience humiliation; there is hope for the murderer that he may yet repent; but there is but little hope when you find a man whose heartbeats do not quicken at the sound of the bugle which calls his countrymen to the defense of his country.

Some may feel that there is a danger to our free Government and institutions; some may feel that our national honor is not zealously enough guarded; some may feel that we must have larger armies and larger navies than all the world; but while American political parties fight it out at election time; while American Congresses wrangle over the construction of battleships and American candidates for President charge and countercharge on foreign policies, I feel that the country is safe.

I am willing to forego any comparisons of patriotic motives and grant at the outset that of our 100,000,000 people 99,999,900 are patriots, and this includes Charles Evans Hughes and the President of the United States.

CONGRESS AND THE PRESIDENT.

Before I go further I want to speak of a condition which has grown up and which has been accentuated by the present Chief

Executive. It is the interference with the legislative by the executive branch of the Government.

When our fathers formed this Government, knowing the lessons of too great a concentration of power, they very wisely provided for the three coordinate branches of the Government, the executive, legislative, and judicial. I need not detail to you their separate and distinctive powers and duties, but suffice it to say that should any of these departments encroach upon either of the others to the extent that such department is hampered and ceases to retain its original character, our representative Government is threatened. And especially is this true as to the legislative branch, which is the real safeguard of a truly representative Government. If this free and independent Government does not remain representative in fact and in truth as well as in form and in law, then surely the work of the framers of our Constitution was in vain, and those men who fought and bled and died upon our hundred battle fields won but fleeting victories.

The judiciary with profound regard for the makers of the Constitution, and with the dignified demeanor and exalted ideals which have marked its deliberations, from John Jay to Charles Evans Hughes, has preserved its ethical poise.

The Congress is content, and has always been, to maintain a strict adherence to its duties and responsibilities.

There is, however, a growing tendency to personalize and individualize political parties in the advocated declarations of their leaders, and parties in power are prone to heap credit and blame upon the President. The President serves as the residuary legatee of errors of local statesmen and politicians, and correlatively the shining mark of the adulation of the people who are pleased at beneficial legislation of the Congress. The President serves as the stationary party pillar, the weather vane of popular opinion, and the trumpeter of party slogans. This is the tendency. It is a dangerous omen to popular government.

A single act or word in encouragement of this tendency by the President goes further to break down representative government than numberless pernicious acts of Congress. A vicious law may be repealed, but once the Nation's viewpoint is perverted the injury is irreparable.

Party men, and especially of a party that has long hungered for power, hanker for a titular head upon which to fasten the veil of its mortal fabric to give a seeming stability to its shifting organism.

The people, busy with their work and play, have no quarrel with delegation of powers, and accept the visible signs of exercise of official acts as the constitutional prerogative of the actor.

The condition presents fallow ground. An Executive politically inclined and self-absorbed can easily encroach upon the legislative sphere.

President Wilson, from his acts, appears to have been no respecter of the prerogatives of the people's representatives.

He has not hesitated to dictate the raising of revenue to the House of Representatives, and has specified when and how much, and even that it should be raised in a specific way and upon specific amounts and specific articles. He has even gone so far as to suggest in his message to the Congress—December 7, 1915—that the exemption should be changed in the income tax; that gasoline should be taxed by the gallon and at the rate of 1 cent; that the horsepower of automobiles and internal-explosion engines should be taxed, and that the tax be 50 cents per horsepower; and that bank checks, pig iron, and fabricated iron and steel be taxed, and how much.

He has suggested, urged, planned, and proposed increases, changes, schemes, and complements for the Army and Navy, directly or indirectly, through administrative departments and public speeches, ranging from nothing, which "excited" and "nervous" people thought they wanted, to the "Navy second to none," which he thought once that he wanted, and kept Congress and the country in a turmoil.

He picked from its feathered bed in committee room in the House of Representatives a simple and harmless resolution, suggesting, but mildly, that American citizens refrain from traveling upon vessels which his Secretary of War, with his undoubted approval, in a note to belligerent powers, had declared were reasonably "auxiliary cruisers," and asked that the Congress lay aside its business, adopt a special rule, and table the troublesome resolution which Congress itself was almost a stranger to, and thereby raised the most monstrous and spurious cry of national disloyalty since the accusations against the Hartford convention.

It followed upon a signal speech by Elihu Root in New York. It marked a complete change of the administration's foreign policy. It was retroactive and settled gratuitously an academic question for England and France, which nations long had given up their contention and whose nationals had not touched an American port with an armed merchantman for months before. It left the *Lusitania* case in the metaphysical jargon of a hazy past of diplomatic negotiations, and the case of Belgium was fodder for the mental gyrations of future generations, but it would have been "a good enough Morgan until after election" if the election could have come before an astounded people had had time to open its eyes.

The result of it all has been that the people have been asking: Is the President going to declare war on Germany? And finally, after a long and tedious series of changes and interchanges, the slogan has been evolved that "the President has kept us out of war."

And the Democratic champions are crying up and down the land, "The President has kept us out of war," "The President has kept us out of war," when at no time since the sinking of the *Lusitania* has there been a time when any man in the Republic would say, "this day" Congress ought to declare war against any particular European nation.

Because, then, of the Democratic President's seeming determination to absorb the legislative sphere and take credit, if credit be due, the discussion of the issues necessarily involves a discussion of President Wilson's acts. The campaign is a campaign of Woodrow Wilson versus the Republican Party and the Republican Party versus Woodrow Wilson.

REVENUE RAISING AND FUTURE POLICIES.

As the time approaches for the people of the United States to choose between the two political parties, it is significant that there was never a presidential election year when, seemingly, the issues were less definitely marked.

But, as a matter of fact, it seems to me that there never was a time when the real issue was as outstanding as in the present campaign.

The administration's policies in foreign negotiations will receive their share in the discussions, and well they may, for in these we discover the inherent qualities which make for the success or lack of success of the leaders of the administration party; the Mexican situation will receive its attention, as it is still an unsettled case; administration of civil service, national defense, labor legislation, Government-service management, social-welfare laws, and economy and extravagance will come in for discussion, and many other questions; but the real outstanding question and the grave concern of the people of these United States ought to be to provide for the adoption of a policy now as a permanent future policy to meet the condition which we know will come when the European war is ended.

Our concern is not with an academic question or an abstract policy. It is of a condition which we know will actually exist and will come upon us even more suddenly than the now existing condition has come about. The present condition, the heaping of the wealth of a stricken continent of nations at our doors, has brought about a condition in which statesmanship has been as little needed to care for the economic welfare of the people and business management of the Government as a carrier pigeon needs a compass. The real question—regulation of our import and export trade—is in practical abeyance, for which Democracy can thank an all-wise Providence, and the skill required to raise revenue for the Government is tantamount to the business acumen employed by the boy who picks an apple from an orchard or the street faker who passes the hat. There was but one way to get it—to take it directly from the man who had it. It required no skill, knowledge, experience, or statesmanship. A college glee club could frame a revenue bill providing for men to contribute so many dollars out of every thousand above a certain number, and for dead men to pay a percentage of their abandoned estates, and munitions makers a part of their profits. I do not criticize the Democratic Party for raising money as they have done. I would, however, have changed many items in percentages or amounts of exemptions; but, in the main, I do not criticize. I only protest that the Democratic Party should take absolutely no undue credit. They had to have the money to run the Government. They went where it was to get it. They could not have done more. They could not have done less. The degree of skill exhibited in the application of their science bears the same relation to statecraft as the amputation of a leg to surgery or justice court pettifoggery to law. The mildest condemnation or the faintest praise would be too extreme. Outside of the petty larceny from the Republican Party of the Tariff Commission and the dyestuffs measure of protection, it was all just a plain, simple, commonplace, everyday act. It heralds no prophet, marks no historical incident, nor broods any imminent disaster. Neither does it furnish the first mile indicator of a thousand-

mile journey on the route over which that party, if it were chosen to pilot the American omnibus, would travel to reach its destination. It means little as to future course in the all-important questions to come. As to its containing the ingredients from which to analyze a prospective mixture, it is as indefinite as a drink of water. It has appealed to the Democratic sage in geometric progression. To a Republican protectionist its augury for the future approaches zero by infinitesimal increments. Let the Democratic Party hitch its chariot to a star and bask in the mazes of a metaphysical party unction. The Republican Party and the people are getting down to cold, hard business.

PLATFORMS NOT PROPHETS.

First, the platforms. What must the people expect? Not much. Not much because of platforms. In 1912 Mr. Wilson said, "Our pledges are made to be kept when in office * * *." He probably meant it when he said it. They have been and they have not been. Other platforms have been kept sometimes and sometimes not. Republican pledges have not always been kept.

And while platforms have not always been kept, they have their use. They are a necessary implement of political parties. Give political parties and politicians of both parties credit that while they make their platforms to get in on, and construct them along practical lines, with an eye to their attractiveness, in the main they are a fairly honest embodiment of the intended governmental policies to be applied if election brings success.

But keep in mind that platforms are not prophets, and no platform ever anticipated the future. The framers of the Constitution itself could not anticipate that before the first regular session of Congress was called it would be necessary to call an extra session to submit 10 amendments to the Constitution. When Washington was made President a contest over assumption by the Federal Government of States' debts was not anticipated. Reelected in 1792, the outstanding issues, ending in the proclamation of neutrality between England and France and Genet's recall, were not dreamed of. Adams did not anticipate the alien and sedition laws or the Virginia and Kentucky resolutions. Jefferson at his second election could not foresee the embargo of 1807 or Napoleon's decrees of Berlin and Milan; Madison did not anticipate the declaration of war against Great Britain, or Monroe, elected 100 years ago, the acrimonious debate and the Missouri Compromise.

For the most part the questions which rise out of our dealings with other nations of the world involving national pride and patriotism are not anticipated in party platforms.

On the other hand, the questions which really distinguish between the parties are those which involve banking and finance, Government regulation and internal improvements, and tariff making.

These are the questions which are always present. When there are no spectacular questions to be discussed in the campaign they hold the center of the stage, but only then as a general proposition. The result therefore is that platforms and campaigns fought out on spectacular issues are settled without reference to financial questions which afterwards really demand the attention of the Government. And likewise campaigns fought out on business lines are sidetracked for new issues which arise.

The 1912 platform and campaign accentuated tariff legislation, cost of living, trust legislation, extravagance, and many things which were lost almost complete sight of in legislation which was in complete antithesis to all of them. Instead of cutting cost of living, it has gone up; instead of trust legislation, we are talking of the allowance of forming a trust to control world trade; instead of tariff legislation, there was none offered, except upon the schedules for dyestuffs, the one on which tariffs had not been before, and the very opposite—direct taxation—was put into effect, and instead of cutting down extravagance we have been the most extravagant of any time in the history of our own or of any other nation.

These things were crowded off the stage by a changed world condition which completely absorbed the attention of Congress and the country, and in the present campaign they are talking about Americanism, the European war, Mexico, and national defense.

THE PROBLEM WHEN WAR IS OVER.

And when the next administration settles down to business; when the Mexicans throw down their guns and turn to work, and the only evidences left of the European war is the canvassing agent ringing the doorbell with the big red volume, which some people buy and nobody reads; when war heroes, with lost limbs and relatives in Michigan and Indiana, "would like to come to America to find work," we will have the very prosaic but complicated task of preserving in America an industrial condition high above the level of the shambles of Europe. We will be confronted with the most serious question in our history. It is a problem which will require foresight, steadfastness, fortitude. It must be approached with a cool determination, an unalterable purpose, and a definite object. There can be no wavering and no vacillation. There is no halfway station. It will not be a business for men of a party whose leaders represent all shades of one side of the very fundamental principle involved, from the abolition of customs duties to "a question of adopting means to ends," but for a party whose very first principles are the foundation upon which the legislative superstructure must be builded.

If you want pledges as earnest, it is business for the party which has advocated the application of the remedy and put it in practice for half a century, not of a party which after 50 years of opposition to the principle mildly asserts that it "reaffirms" its old revenue doctrine and "unreservedly indorses the Underwood tariff" in exemplification of it.

It is not the business for a party whose platform maker and leader proposes for revenue taxes on gasoline, automobiles, bank checks, and steel, and whose leaders in the Congress tax almost anything other than gasoline, automobiles, bank checks, and steel.

It can not be expected that a party not able to agree in methods of application of principles consonant with their traditional party faith could for one minute abandon that ingrown party faith upon a great vital question and all of them, going over to the opposite view, agree harmoniously upon the exact shade of it to adopt.

Why, if the American people should choose the Democratic Party in the coming election, and they settle down to make a tariff after the war in Europe is over, I should expect to see the worst wrangle since the debate on the Kansas-Nebraska bill. The result would necessarily be worse than any tariff we have ever had. And if our standing with the other nations is impaired now by reason of a vacillating policy, the Lord only knows what the condition would be when in 1921 the Republican Party would be called upon to reverse a disaster to America and place it upon the shoulders of Europe by closing our doors to unrestricted trade.

I do not think the American people will make this mistake. They will not, unless they mistake the issue.

THE HURDY-GURDY MAN.

I have in my possession a little sketch about the hurdy-gurdy man. I am not at liberty to give the name of the author, but it seems to me to be a very good portrayal of the Democratic campaign this election.

As I know the sketch to be written in the most kindly spirit and without intent to reflect on either the Democratic campaigner or the hurdy-gurdy man himself I give it here.

The hurdy-gurdy man is coming. He is coming to play sweet music to the free and independent denizens of the cities and towns and valleys. He is tuning his hand organ with the finest strings and with a variegated repertoire to give excruciating ecstasy to the soul of the proletaire. His shillalah is in hand, the chimpanzee is tugging at the leash, and the autumnal chapeau is off the hook to garner capricious votes.

The Democratic hurdy-gurdy is tuned to the finest points. It is concert pitch. It has the chromatics, the upper and lower registers, the forte, the double forte, and the soft pedal for double "p." It is set with the low bass, the coloratura, the traps, double snares, the tambourine, the tinkling cymbal and sounding brass. It produces the bell sound, the vox humana, vox populi, and fluke and picayune. Its melodies are many and varied, and among others it produces, with delicate shade and accurate tempo, the Good Roads March, the Rural Credit Tango, the Child Labor Lullaby.

"She play de Merika Merika Tom Tom, de Revenue Avenue Ragga, de Hyphena Hugga Mugga, and de Huert Hoka Poka. Som time she play, buut note so muuch, 'De Intermezzl de Cavilleria Huert,' 'de Carranz Symphona de Fact,' 'de Pancho Veeya Francisk,' and som time she play dat grande overture 'de Storma de Vera Cru'; buut note so muuch.

"Buut de nica de t'ing ees, de hurdy-gurdy she knowa de hurdy-gurdy man anda de hurdy-gurdy man she knowa heem, anda wheena de hurdy-gurdy man he hoolda da hurdy-gurdy to de streekt accountabil, dea hurdy-gurdy he ees note too proud to play. An' the hurdaga man he can turna de organ botha way, and som time at once botha way togeth an aila de same way, too. An' dees hurdaga man he halafa nica tune for a differa stree, an' he play heem hees hurdaga een Mennesot and fur Nebrask and goa to Dakot and Menneap he play heem a differa tune, likka de tune to makka de road goo, to borra de farm de mon, to makka de keed stoppa work, anda dees leetl nica tune to takka de cara de workka man ven he ickka de toe. Ven heem play moosic een Chicago an' Philadelf heem play on de bom bom string and makka de noise likka de war; heem puuta de

soift peedel on de makka de road goo, de borra de farm de mon, alla de same likka he puut de bigga soift peedel on de bom bom streeng in Nebrask Menneapol.

"De hurdy-gurdy man he no likka som tunes. De hurdy-gurdy man no likka De Watcha Waita Walse and de Nerva Excita Polka; and he no likka de Meloda of Johnna Leen, de Persona Representa1 to Mixa Mex. In dees circumstansa de hurdy-gurdy man he no play some nica tune so much. And the hurdy-gurdy man takka some nica tune out from the hurdy-gurdy wot he no likka de hurdy gurdy to play. He takka out from the hurdy-gurdy de nica sweet tune 'De Republica Hurdy-Gurdy He no Play de New Tune for Thirty Year.' He no likka when he hear Republica hurdy-gurdy play 'Democratic Hurdy-Gurdy She Makka de New Tune Differa Evera Day.' De Democratic hurdy-gurdy man he takka out too from de hurdy-gurdy de Tarriff Protectsha Tune and he brakka de record up and smasha de piece and burna de dust and wink hes eye, and put in the hurdy-gurdy de tune of the Tariff Com-mish, and he say, 'We foola de workka man.' And de hurdy-gurdy man he takka out alla de leetle ping-ping notes to de Breetesh Man and the Duetch; he no likka de sound. He try tuna dem up to makka dem play 'Woodra Wilsa Keep Merica Out from War,' but de little ping-ping notes she come so queeck out of de hurdy-gurdy he sound likka De Uropa War He Keep Away froma Woodra Wilsa.

"And when close to 'lection day come de hurdy-gurdy man play alla de time de America Merica Tom Tom and for to borra the farmer de mon, to makka de good road, to makka the child no work, and de tune to takka de care of the workka man when he die.

"And the hurdy-gurdy man he play and play,
And he turna de organ botha way.
He can turna de same way alla way thro,
And som time, at once, botha way togeth
And alla the same way too."

PLAYING CUTTLEFISH ON TARIFF.

The Democratic Party is making desperate effort to obscure the real issues—the tariff and the future foreign policy of America.

They want to talk about "achievements" in good roads, rural credits, child labor, compensation, and like legislation upon which every citizen is agreed, and which but mark the natural course of a Congress yielding to the demands of a great progressive Republic of the twentieth century. The Sixty-third and Sixty-fourth Congresses would have passed such laws regardless of parties or party politics. In these things the Democratic Party has followed, not led; they have yielded, not urged; they have bungled, not builded. To adopt these measures—which the country demanded—they have ruthlessly abandoned the very time-honored fundamentals upon which their political texture rests—State rights and opposition to the centralization of power in the Federal Government—and have wrenched the distorted makeshifts through the lesions of their political hearts.

Now they hold them up to an admiring people and ask American citizens to judge from these "achievements" whether or not they as a party are best suited to solve the momentous problems to be met when the millions of men in Europe stop fighting and start working for employers who will reach out for world markets.

They ask the American people to choose them for the task of providing against the oncoming onslaught of Europe for trade; to say to them that in the face of the dire and absolute necessity of a real, effective, and genuine protective tariff, the people of these United States should choose the party of the gospel of tariff for revenue and free trade.

They are playing the cuttlefish on tariff and the hurdy-gurdy on roads.

UNDERWOOD BILL THEIR FAITH.

I believe that they are sincere in their belief that the tariff is not the real issue. I believe that they are sincere when they say that they believe that the Underwood bill is a good bill and that it has brought about prosperity. I have watched them in the House of Representatives when they have made speeches about the Underwood bill and wondered if I could discern from the glint of their eyes and the vehemence of their gestures whether or not they were sincere when they said that the Underwood bill has brought prosperity and was the best tariff bill ever framed, and the more I have watched them the more I have come to the conclusion that they are obsessed with the idea of the beneficence of that measure, and that it is their faith, their hobby, and the quintessence of their very political existence.

But American industries can not thrive upon Democratic sincerity or upon blind faith in the schedules of the Underwood bill. The conditions after the war will parallel those before the war, except that all Europe will enter into a keen strife for American markets.

The present industrial independence of France and the protective policies which Bismarck taught Germany will not be a circumstance, and without question Great Britain will have totally abandoned her former free-trade policies.

What were conditions before the war and during the Underwood tariff law? What will they be after the war? Those are the questions. The interim is not a criterion, as abnormal conditions prevail.

From October 4, 1913, to August 1, 1914, when the war broke out, with the Underwood law in partial operation, a period of 10 months, imports increased over the previous corresponding period by $101,977,779 and exports shrunk by $158,888,363, a loss of trade balance of nearly $57,000,000.

April, before the Underwood bill, found 67,498 railroad cars idle; the April after there were 212,869—three times as many. Steel rails used to be said to be the barometer of trade; idle freight cars are a better indication.

All this was before the beginning of the war. In the second year under the Underwood law millions were out of employment in the larger cities, a condition that became so aggravated that a department of the Government began to act as an employment agency.

Within two months after the war started—September 21, 1914—the Secretary of the Treasury appealed to Congress for the "war-revenue" act.

AMERICA STORM CENTER AFTER WAR.

With these conditions before the war, what now must we expect when the war is ended and all of the great nations of Europe, saddled down with billions of debts, turn to industrial channels to recoup their losses?

The industrial storm center of the world will be America, with its hundred-odd millions of people and its two hundred billions of wealth, its financial mart the most powerful, its territory compact and gigantic, its natural resources unlimited, its trade commandeering the seas of the hemispheres, an industrial system with a potential magnitude to defy human prophecy, and with a free citizenry enjoying the greatest benefactions ever bestowed upon a nation.

America's opportunity will be then—when the war is ended. Then will be established the governmental policy which must determine the real future of America.

Two ways lie open—two ways as diametrically opposed as the signs of the zodiac.

A FREE-TRADE HUGGER-MUGGER.

One is the regulation of foreign trade through customs duties calculated primarily to bring revenue to the Government by an adjustment based upon the theory that the tariff schedules should practically, or almost, equal the difference in the cost of production at home and abroad, but so shaved below the crucial point as to sharpen the wits of American business against the world, and allowing for a measure of the disparity in the standard of living, a new-fangled free-trade hugger-mugger, based upon a mistaken assumption that it will regulate and not destroy and that a direct benefit will accrue to the individual. It is an evolution of twentieth century political expediency, an abandonment of the form of free trade which preserves the spirit. It is the utmost that the American people could expect from the party whose progenitors were anti-Federal, for State rights, against centralized government, and strict constitutionalists.

The application of this plan would call for a perpetual and intermittent shifting of tariff schedules in the wake of a rising and falling industrial condition, and under it we would suffer sporadic spells of industrial activity. Business would be hampered, markets made unstable, steady employment uncertain, and the United States of America would struggle along for a place in the sun, performing a doubtful service for the other nations of the world.

GENUINE PROTECTION.

The other way which will lie open to America after the war in Europe is ended is the regulation of foreign trade by the imposition of customs duties for the straightforward and avowed purpose of regulation of imports to amply protect American industries, based upon a clear-cut fixing of the schedules to equal the difference between the cost of production at home and abroad, allowing in the home cost the full differential for the American wage earner in recognition of the standard of living of a sovereign citizen of a free republic. This is exactly what the voters of the United States may expect and will get at the hands of a party of which this principle is the very foundation. It will be a thoroughgoing protective tariff without quibble, artifice, or hocus-pocus. There will be no embarrassments, no heartburnings, no necessity for conciliations, if, when the war in Europe is ended, the people have intrusted their lawmaking

to the Republican Party and the Congress settles down to make a tariff.

The application of this plan will insure for America the supremacy which her natural advantage demands. Instead of sharing our benefactions piecemeal with the people of Europe in Europe, we will build up our industries to a scale in keeping with the magnitude of our place in the sun, reenergizing our population as conditions warrant from the blood and brain of our sister nations.

This will give America its place in the world and make for the steady and permanent progress which becomes a free and independent people.

MIXING MEXICO.

In Mexico the President demanded the retirement of Huerta, who had been recognized by the leading nations of the world. He demanded that Huerta salute the flag, which Huerta did not do. To enforce the demand he sent an American army and war vessels to Vera Cruz. A battle was fought there, just as a battle was fought at Manila Bay in 1898, although war had not been declared. The President then withdrew after 19 were killed and many wounded, the flag sullied and unsaluted. Early in 1914 the President lifted the embargo on arms to Mexico and furnished Villa and Carranza with the implements of war. Early in 1915 he abandoned interference in Mexican affairs, and said that it was none of his business and none of the American people's business how the Mexicans settled their affairs. In June he changed his mind and warned Mexico that the United States would not stand indifferently by, and called upon the Mexican leaders to get together and save Mexico from revolution or the United States would do it. Our President then called the A B C council, who sent an invitation to Mexican leaders and generals with an R. S. V. P. in 10 days.

THE R. S. V. P.'S TO THE A B C'S.

The R. S. V. P.'s were forthcoming, Villa answering "Reserve seat, very pleased," and Carranza answering, "Refuse to sit in with vacillating politicians," and the A B C council "Read the sentiment of the vox populi," and "Reserved sleepers for various places."

About two months after this, on the 19th of October, 1915, the President extended recognition to Gen. Carranza. The turbulent state continued in Mexico, and March 9 Villa raided Columbus, United States of America. Then the President sent the expedition to Mexico to get Villa. The army penetrated Mexican soil 300 miles. Carranza demanded their retirement and made threats of attack if our columns moved other than north, and the President admonished him that carrying out such threats would lead to the "gravest consequences." Immediately following was the attack upon our American Cavalry by Carranza troops at Carrizal (June 21), where Capt. Boyd and several men were killed and 17 American soldiers taken prisoners. Carranza had made the attack which entailed the "gravest consequences." The consequences were a request by our President for the return of our prisoners. They were returned.

GOING TO MEXICO OR COMING HOME?

More American soldiers and citizens have been killed by Mexicans in the last few years than in the Spanish-American War. Embargoes have been placed and raised; battles have been fought; ultimatums have been issued; salutes ordered; withdrawals demanded; and to-day, with the militia preparing, going, and gone to the border, and the Regular Army backing gradually out of Mexico, the American people do not know whether we are going to Mexico or coming home.

The American people to-day do not know what the foreign policy of America is, so muddled have been the acts of the administration. Foreign nations do not know. One thing is certain: The United States has but few friendly nations in either the Eastern or Western Hemisphere. We have lost prestige from our dealings with the nations of the world, and we must pay the penalty. It takes a firm, stanch, straightforward leadership to redeem our lost prestige. Then America will take her allotted place in the sun.

PERTINENT OBSERVATIONS.

Wealth is but a comparative term. Money is an accepted medium for buying. Credit is fiscal fixation of faith, belief, esteem, honor, reputation. Debt, especially war debt, is a trespass upon credit; it is the advantage of the past crystallized into the disadvantage of the present.

When the world war is ended there will be no triumphant marches into conquered cities, and not a single nation will gain an acre or a lot on which to build a house or a factory or to raise a spear of grain where there were not more houses and more factories and more fields before the war.

Ten nations will have more debt, less money to pay debts with, more dependents, fewer to depend on, less men and less to do, and infinitely less for each man to do. Each nation will consume less, and where each sold to nine before the war, it will be generations before they will either buy from or sell to all of the others the things they raise and make or ought to make and sell if they are ever to pay their creditors.

It is a war for expansion with no place to expand to; for a new place in the sun with none under the sun; to conquer nations which can not be conquered.

Every man in every nation now at war will work for less when the war is over than he received before. For millions there will be no work to do. Buying will be less; selling will be less; making will be less.

America has grown richer, has greater credit, and comparatively less debt than ever before.

America's problem is to help herself and help Europe. There are two ways to help Europe; one way to help herself. One way is to help Europe in Europe; the other way is to help Europeans in America. One course is to open our markets and impoverish America to enrich Europe; the other course is to regulate our markets and open America and enrich the European in America. One course adopts the European standard for Americans in America; the other the American standard for all in America. One will make America a symposium with Europe; the other make an asylum for Europe. One will make America a Nation of 130,000,000 in 30 years; the other will make America a Nation of 300,000,000 in 30 years. It will lie within the power of America to reconstruct Europe in Europe or resuscitate Europeans in America.

The two methods are as opposed as night to day; they are diametrically and irreconcilably opposed.

One of the two methods will have to be chosen by America when the war is over.

It will have to be done by the Congress of the United States. It will be done by regulation of imports; by fixing customs duties. It can not be done in any other way.

It can not be done by the President of the United States. He has no such power.

It can not be done by a tariff commission. A tariff commission can procure data for Congress—facts, figures, and conditions. Congress will have to adopt one or the other of the two principles. A slight shade of difference in duties will establish one condition or the other. There is no halfway station. The schedules will be just below or just above the crucial point. When they are in force imports will flow in or they will not. If they do flow in we will start on the reconstruction of Europe. If they do not we will proceed with the construction of America. We will start to choose between manufacturing for the world or having the world manufacture for us.

The Ways and Means Committee of the Congress of the United States will have as much to do with construction in America after the war is over as the combined field staffs in Europe to-day have with the destruction of Europe.

There is not one chance in a million that a Democratic President and Congress which did not agree on a single article on which revenue was to be raised when foreign nations and Democratic principles were not involved could agree, when every nation of Europe and the very fundamental principles of their party are at stake.

The principle involved is the very fundamental principle upon which the Republican Party is founded, and the one vital principle upon which every Member of Congress, every voter, and every President who ever professed the faith of Republicanism is thoroughly in accord.

This is the one question before which our present diplomatic triumphs or mistakes, Army and Navy construction, extension of governmental spheres, and economy of domestic and internal affairs pale into a helpless insignificance.

It is the determination of the very future of American supremacy and stability and influence and independence.

It is the sine qua non of a great Republic.

---

## National Guard in Camps—Why?

### EXTENSION OF REMARKS

OF

### HON. GEORGE HUDDLESTON,

OF ALABAMA,

IN THE HOUSE OF REPRESENTATIVES,

*Tuesday, August 29, 1916.*

Mr. HUDDLESTON. Mr. Speaker, under leave to extend my remarks I desire to print in the RECORD a letter that I have just received from a member of one of the batteries of the Alabama National Guard, now mobilized at Montgomery, Ala.

This letter was written by an intelligent young lawyer. It is typical of many letters which Members of Congress are receiving from their constituents. I have received many such letters myself. The boys of the National Guard want to know why they are kept in camps, when the occasion for their having been called into service has evidently passed. These boys also want to know how long they are to be kept from home. They have duties at home, callings which they wish to pursue, jobs that they want to hold, and they are becoming impatient with the situation.

I wish I were in position to give the soldiers of the National Guard some satisfaction along these lines. I regret that I am unable to do so. The letter in question is as follows:

AUGUST 24, 1916.

Hon. GEORGE HUDDLESTON,
*Washington, D. C.*

DEAR MR. HUDDLESTON: We have numbers of young lawyers and other professional and business men in our battery, who are suffering great sacrifices by being here. I am one of the number. We do not feel like staying here, when the only advantage we get is sleeping out in the open air and teaching our stomachs that we can live on fat sowbelly and peas. We get no military training here. As a matter of fact, it is impossible to get it. We have no horses and there is no prospect of getting any, and everybody knows a man can't learn and practice artillery without horses. Of course I have to be careful what I say, but I feel that I can say to you it is the greatest comedy of errors I have ever seen. Shakespeare would turn over in his grave in disgust if he could get a vision of it, and if he were here he would lower his head in chagrin and jealousy and order every volume of his famous Comedy of Errors burned up. You can't imagine the great hardship it is to the fellows. Several of them think it would help if you would make a speech in Congress before it adjourns, setting up facts above outlined and showing what a great injustice a supposedly democratic Government does to its young men, citizens who have spent years and money in college training for life by herding them up like cattle and training them in military science by having them pull the triggers of empty guns. We think we are men who can think and reason. None of us can see either the justice of it or the wisdom of it, either politically or economically. We certainly would appreciate your help.

On July 27, 1916, I introduced in the House the following resolution:

House Resolution 357.

Whereas many members of the National Guard who have been called into the service of the United States and who are now under arms have families and relatives requiring their attention and support and have business interests which are jeopardized by their absence so that the industrial, social, and business life of the Nation is being seriously interfered with, and the public welfare calls for their return to their homes; and

Whereas the emergency for which such persons were called into service is no longer urgent, and the necessity for those who may be needed at home remaining under arms no longer exists: Therefore, be it

*Resolved*, That it is hereby suggested to the President of the United States that furloughs for indefinite absences be granted to all members of the National Guard, including officers, who were called into service and are now under arms who may apply for same, such persons when furloughed to be returned to their homes at public expense and to receive no pay or allowances for the time during which they are absent.

I did not expect this resolution to be acted on or even considered by the Committee on Military Affairs. However, it seemed the most emphatic way in which I could express my opinion. I have been a civilian soldier myself and I know how anxious the members of the National Guard are to go home and take up their civilian pursuits. They are willing to serve in the field when there is occasion for service. They are willing to fight if there is fighting to be done, but they are unwilling to lie in camp indefinitely and march back and forth and uselessly twiddle their thumbs.

## The Eight-Hour Day.

## EXTENSION OF REMARKS
OF
# HON. FRANK BUCHANAN,
OF ILLINOIS,
IN THE HOUSE OF REPRESENTATIVES,

*Friday, August 25, 1916.*

Mr. BUCHANAN of Illinois. Mr. Speaker, I ask unanimous consent to insert in the RECORD the proceedings of a conference held between the representatives of the railroad employees of Illinois and a number of the Members from that State, on August 22, in the Labor Committee room, relative to the employees' demand for an eight-hour day:

INFORMAL CONFERENCE BETWEEN MEMBERS OF THE ILLINOIS CONGRESSIONAL DELEGATION AND REPRESENTATIVES OF THE BROTHERHOOD OF LOCOMOTIVE ENGINEERS, ORDER OF RAILWAY CONDUCTORS, BROTHERHOOD OF LOCOMOTIVE FIREMEN AND ENGINEMEN, AND BROTHERHOOD OF RAILROAD TRAINMEN.

WASHINGTON, D. C., *Tuesday, August 22, 1916.*

The conference was held in the room of the House Committee on Labor, in the Capitol, at 11.30 a. m., and was arranged for by J. A. Cain, of the Brotherhood of Railroad Trainmen.

Present: Representatives CANNON, TAVENNER, BUCHANAN, WHEELER, and RODENBERG, of Illinois

Mr. A. F. Whitney, vice president of the Brotherhood of Railroad Trainmen, Oak Park, Ill.

Brotherhood of Locomotive Engineers: C. E. Filbert, Villa Grove, Ill.; W. B. Combs, Chicago, Ill.; F. J. Smatts, Chicago, Ill.; A. L. Reeves, Chicago, Ill.; A. O. Smith, Chicago, Ill.

Order of Railway Conductors: D. W. Marshall, Salem, Ill.; F. L. Howard, Kankakee, Ill.; George Lyons, Decatur, Ill.; O. L. Stacy, Bloomington, Ill.; E. Moales, Chicago, Ill.

Brotherhood of Locomotive Firemen and Enginemen: S. A. Boone, Oak Park, Ill.; C. F. Thomas, Decatur, Ill.; S. R. Schaner, East Dubuque, Ill.; J. M. McQuaid, Chicago, Ill.; H. Dennis, Bloomington, Ill.; J. M. Banser, Chicago, Ill.; C. Dalbey, Villa Grove, Ill.; H. N. Hotchkiss, Chicago, Ill.; J. O'Toole, Chicago, Ill.

Brotherhood of Railroad Trainmen: J. A. Cain, Chicago, Ill.; John Delano, Chicago, Ill.; J. W. Rickert, Chicago, Ill.; D. S. Coughlin, Chicago, Ill.; J. F. McCarty, Chicago, Ill.; S. T. Clark, Kankakee, Ill.; J. A. Clements, Springfield, Ill.; J. P. McFarland, Chicago, Ill.

STATEMENT OF MR. A. F. WHITNEY, VICE PRESIDENT OF THE BROTHERHOOD OF RAILROAD TRAINMEN, OAK PARK, ILL.

Mr. WHITNEY. Mr. Chairman and gentlemen, we have the honor to represent the engineers, firemen, conductors, trainmen, and yardmen in the State of Illinois, and will for a moment speak for them. Some of our boys came to the Capitol Building yesterday and got in touch with 15 or 16 Congressmen. We regret that there are not more of you here this morning, but from what we have learned business and other matters have precluded the possibility of a better attendance. We are here to explain to you the eight-hour day and time and a half for overtime propositions, which the enginemen and trainmen have demanded of the American railroads. We have made these demands in the interest of 400,000 of these employees, who represent approximately 2,000,000 people. The principle of an eight-hour day is fundamentally right. It is one that has been recognized by Congress and by many of the State legislatures. We have the eight-hour day in the District of Columbia for Government employees, and in many other parts of the country. It is now in effect on 23 per cent of the mileage of the railroads. It seems to us that a fundamental principle which is recognized by 100,000,000 people, or at least by all of the people whose minds are not prejudiced by reason of commercial affiliation, is not a proposition for arbitration. That is the reason that we, as representatives of these labor organizations, have declined to arbitrate the principle of the eight-hour day. The eight-hour day is in effect in the building trades and many other industries throughout the country, and as practical railroad men we can assure you gentlemen that it is practicable and can be operated on the American railroads. The railroad managers have said to us and to the people, through the press, that we are not sincere in our demand for an eight-hour day; that we are asking for an eight-hour basic day, which means more compensation. As a matter of fact, the exigencies of the railway business demand that certain crews should be on the road longer than eight hours. I mean by that that there are accidents over which no manager has control, and there are times when it is necessary for crews to remain on duty longer than eight hours in order to get their cargo into the terminal. But the principle that we seek is the eight-hour basic day.

We believe that a large percentage of the trains moved can be moved from terminal to terminal over divisions of ordinary length in eight or less than eight hours, and that the granting of an eight-hour day to our men will not materially increase the operating cost.

Mr. BUCHANAN. What is the average mileage of the freight divisions?

Mr. WHITNEY. The mileage of the freight divisions varies from 90 to 200. There are very few divisions that are 200 miles in length.

Mr. RODENBERG. What would be a fair average?

Mr. WHITNEY. One hundred and fifteen to 120 miles. Some of the people are under the impression that our proposition means that we shall tie up at the expiration of eight hours, or that the railroads must pay overtime after eight hours. I want to say to you that such is not the case. On a division 125 miles in length, under our proposition, overtime would not accrue until the crew had been on duty 10 hours. In other words, 100 miles and eight hours are synonymous. We measure the day by eight hours or by 100 miles. On a division 150 miles in length the crew must be on duty 12 hours before overtime accrues. So that a railroad that operates a division 150 miles in length is not penalized on account of the eight-hour day any more than the railroad that operates a division 100 miles in length. The principle is simply this: That the freight train, from the time it leaves the terminal until it arrives at the opposite terminal, must make an average speed of 12½ miles an hour. If it does that there will be no penalty attached; there will no overtime accrue. We believe that it is in the interest of the shipper, in the interest of the public, that the commerce of this country be moved at a speed of at least 12½ miles an hour, and when you take out the delays that are bound to accrue at terminals the average speed will actually be much less. We believe if the people understood that our demand for an eight-hour day merely meant a little closer supervision on the part of the operating officers of these railroads and that it meant more rest and greater efficiency, there would not be a voice against it. But those things we have been unable to get before the public, because of our limited means in the way of publicity. The railroads have the advantage in many respects of the use of the press. They have more money to spend for advertising than we have. We have been told that in this campaign they have spent several million dollars in advertising. We have not had the money to spend.

The very best we can do is to go before the business men at the various terminals where we live; we meet a few of the traveling public, and call upon representative gentlemen like you to tell our story. We feel that if the facts are known, the people of this country and the legislative bodies here in Washington will be with us and will not censure us for refusing to arbitrate the fundamental principle that has been recognized for a good many years in many classes of service.

Mr. CANNON. You touched a point about which I want to ask you a question. Would it interrupt you if I did?

Mr. WHITNEY. No; go ahead.

Mr. CANNON. Because I am not clear about it. Now, as I understand it, there are two factors. If you run 100 miles a day and run 12½ miles an hour, you would have the eight-hour day?

Mr. WHITNEY. Yes, sir.

Mr. CANNON. There would be no extra pay?

Mr. WHITNEY. Correct.

Mr. CANNON. Now, then, the 100 miles is one factor. Suppose you run less than 100 miles; if you run at all, you get the day's pay?

Mr. WHITNEY. Yes, sir.

Mr. CANNON. I have seen it so stated. I did not know whether it was true or not.

Mr. WHITNEY. Yes, sir.

Mr. CANNON. If you run six or seven hours you get that just the same?

Mr. WHITNEY. We get that now. The railroads demand the exclusive right to all the time of engine, train, and yardmen, regardless of whether they have work for them, and only pay them for days actually worked; it is reasonable and right, therefore, that when they utilize their services for less than eight hours they should compensate them for at least one day's pay. This principle has been recognized by the railroads for years and is not an issue at this time.

Mr. BUCHANAN. That is the condition now.

Mr. CANNON. That is the condition now?

Mr. WHITNEY. Yes, sir.

Mr. CANNON. Well, that is the proposed condition, too?

Mr. WHITNEY. Yes, sir.

Mr. CANNON. Then I want to ask you another question. Your demand is that if you run over eight hours, or over 100 miles, then you get time and a half for the extra run. That is to say, you would get paid for an hour extra plus a half hour?

Mr. WHITNEY. If we run—let me put it this way——

Mr. CANNON. All right.

Mr. WHITNEY. If we are more than eight hours running 100 miles or less, we demand that the excess time be paid for at the regular rate plus one-half of that rate.

Mr. CANNON. For the excess?

Mr. WHITNEY. Yes, sir.

Mr. CANNON. I judge from what I see in the papers that the President's proposition is that you get prorata for the extra day?

Mr. BUCHANAN. I don't think it is made clear to you. I think there is a question that very many do not understand. For example, if they run 125 miles in 10 hours they do not get this time-and-a-half overtime, but they get paid for the extra mileage.

Mr. CANNON. That is prorated.

Mr. BUCHANAN. They get paid pro rata on the same rate of mileage. That is something that a great many do not understand. If they run 125 miles in 10 hours they do not ask for overtime. It is in the way of a piece system.

Mr. CANNON. If you run 125 miles you get the eight-hour pay plus 25 per cent more?

Mr. WHITNEY. No.

Mr. BUCHANAN. No; they get the same rate of mileage. If they run 135 miles in 8 hours they would be paid for 135 miles. We are on the mileage basis in most lines of the service.

Mr. CANNON. That is, if you run the 135 miles in 8 hours?

Mr. WHITNEY. Yes, sir. We will be paid the mileage. Now, bear in mind that we have two ways of figuring time.

Mr. CANNON. I want to get that clear in my mind.

Mr. WHITNEY. Under our proposals 100 miles is synonymous with 8 hours; 1 hour is synonymous with 12½ miles.

Mr. CANNON. Yes.

Mr. WHITNEY. Consequently when we run 100 miles in 8 hours we have simply earned a day's pay. But if we run 100 miles in 9 hours, then we have earned a day's pay and 1 hour overtime under our proposal.

Mr. RODENBERG. Exactly.

Mr. CANNON. Which you want time and a half for?

Mr. WHITNEY. Yes, sir.

Mr. CANNON. You want time and a half for the extra hour?

Mr. WHITNEY. Yes, sir.

Mr. CANNON. But if you run only 90 miles you still get the day's pay?

Mr. WHITNEY. Yes, sir. We have been getting that for years. That is a guaranty, a minimum guaranty.

Mr. CANNON. Then, if there was an acci²ent on the road and you were out 10 hours you would get paid a day and a quarter?

Mr. WHITNEY. Yes, sir; 1 day and 2 hours overtime.

Mr. CANNON. Yes; I wanted to get that clear.

Mr. WHITNEY. Now, there is another point, Uncle Joe, that we want you to understand, and that is that there will be no penalization upon the railroads who operate long divisions, because as the division is lengthened our day is lengthened, for the reason that 12½ miles and 1 hour are synonymous. In other words, on the 150-mile division we must work 12 hours before we earn overtime, because we will have to work on a speed basis of 12½ miles an hour.

Mr. CANNON. And you run 50 miles farther?

Mr. WHITNEY. Yes, sir.

Mr. CANNON. Do you get a day and a half for that?

Mr. WHITNEY. Yes, sir; we get a day and a half for that, and we give the railroads four hours more of our time.

Mr. BUCHANAN. The same rate per mile.

Mr. CANNON. I see.

Mr. WHITNEY. Now, the railroad managers have tried to befog the mind of the public on this very issue. Our proposition is not a demand for an eight-hour day but for an eight-hour basic day. The reason we put it that way is because we realize that the emergency will arise when it will be necessary for crews to remain on duty more than eight hours. Now, the demand for time and a half pay is closely related to the eight-hour demand. In the first place, we believe tha⁴ eight hours is long enough for men to toil. We feel that it was ordained that man should have eight hours for work, eight hours for rest, and eight hours for relaxation. If we reach that ideal we must put a penalty upon extra time, because some of the operating officers think it is more economical to keep a crew in service 12 or 14 hours than to release it and call another one.

Mr. BUCHANAN. Don't you think they are mistaken about that?

Mr. WHITNEY. Yes, sir; I think so.

Mr. BUCHANAN. I know I do.

Mr. WHITNEY. Because the men who are on duty long hours become tired and exhausted. They are not as alert.

Mr. RODENBERG. They are not as efficient.

Mr. WHITNEY. They are not as efficient. Consequently the railroads do not get the high class of efficiency that they get under other conditions. We want to say to you gentlemen—and we hope you will be with us in this—that we are absolutely opposed to what some may term compulsory-arbitration laws. Of course, the labor organizations take the position that a compulsory-arbitration law would not be constitutional. The railroad managers have a right to discharge these men, and we believe that we have a right to quit. We think those are principles that have been pretty well established, and we rely upon the strength of our organizations to keep our men employed, provided they do not violate the rules of the companies. We have had but very little difficulty in doing that. We are willing to take our chances with the railroads in that respect. We do not feel that Congress should interfere by enacting so-called arbitration laws. We think it would be very detrimental to the people, the working people representing more than 90 per cent of the population of this country. We want our freedom; we want our rights; we want to be able to go to the railroads and deal with them over the table; and when we can not do that to deal with them in the next best way.

The organizations that we have the honor to represent are conservative and have been so recognized by the public for many years. As a matter of fact, we have been so conservative that we are trailing along about the last car in the train. Many other organizations that have come up years since our organization came into existence have enjoyed the blessings of an eight-hour day and payment of time and a half for some time. But in the interest of harmony and in the interest of conservatism we have been put off from time to time on these questions. We think that the time has now arrived when we ought to have the eight-hour day, and we are very much in earnest. We are going to have it if it is possible for us to get it in any honorable way. We believe that it is in the interest of society and that society demands it.

Mr. CANNON. Now, let me ask you a question there. The passenger people—the train conductors, engineers, firemen, and so forth—get better pay than you do?

Mr. WHITNEY. Well, they have a better basis than we have; their hours are shorter. The passenger engineers and firemen are on duty approximately five hours and the conductors and brakemen approximately seven hours a day.

Mr. CANNON. But you are not representing them?

Mr. WHITNEY. We represent all of them, but this movement will not affect their basis of compensation.

Mr. CANNON. That is what I wanted to get at.

Mr. WHITNEY. Yes, sir.

Mr. CANNON. But all other employees except those who handle freight—that includes the switchmen?

Mr. WHITNEY. Yes, sir; this includes switchmen.

Mr. CANNON. All other employees except those who handle freight are not included in this movement?

Mr. WHITNEY. There are the switchmen, engineers, conductors, firemen, brakemen, flagmen, and hostlers. They are all included in this movement.

Mr. CANNON. That is about 400,000 out of 2,000,000?

Mr. WHITNEY. Yes, sir.

Mr. CANNON. You see, what little I get about this matter I get from reading. Now, I read a telegram that was sent to the President, and what the President has given out—it is due to myself as a Member of Congress, and, I suppose, to all Members of Congress—and I have been somewhat guarded in what I have said pending these negotiations, not wanting to say anything that might embarrass the President, because he is trying to make peace——

Mr. WHITNEY. Exactly.

Mr. CANNON (continuing). Between the 400,000 on the one hand and the railroad managers on the other hand. Of course, with 100,000,000 people, peace is vital.

Mr. WHITNEY. Yes, sir.

Mr. CANNON. Now, take somebody in New York, for instance, I don't know who, but I read in yesterday morning's paper that he was challenged about arbitration, and the President said in substance that he stood for arbitration but that there was no machinery by which arbitration can be had now, and that this is an exceptional condition, with the intimation that he is going to apply to Congress for the proper machinery, looking to the future. Now, what he means by that we have only to guess. There are certain basic principles about the rights of an American citizen that I need not voice. I have been asking questions and listening because I wanted to get as near as I could to what your demands were and what the claims of the other people were. I think, Brother RODENBERG, under these circumstances, a Member of Congress ought to be tolerably careful, because it is not now up to him what Mr. President may desire for the future by way of legislation. He has demanded of these railroad people that they concede an 8-hour day with 10 hours' pay, and pro rata time for extra mileage or hours, or both. Then, there are probably 1,600,000 other railroad employees, counting telegraphers and everybody else, connected with railroads, station agents, etc., who are said to favor arbitration and that the President has got to do something. Well, he is the President, and you boys, representing the people that you do, are all naturally playing for public sentiment. The railroads are playing for public sentiment, and the President—I read in between the lines—is playing for public sentiment. I am not criticizing any of his views, or him, or anybody, but I will just be entirely candid, speaking for myself. It is an awkward time for a Member of Congress, Mr. BUCHANAN, to butt in, as Members of Congress have no power in the premises now.

Mr. BUCHANAN. Now, you can sometimes do some good by butting in. You know, if you had not butted in at some time or other you would never have been in Congress. I agree with you in the main, Uncle JOE.

Mr. CANNON. That is what I am getting at. I do not know what Mr. President will put up to Congress later after this dispute is settled, as I hope it will be.

Mr. WHITNEY. Well, we hope you will know when it comes to you and that you will handle it as those matters have been handled heretofore.

Mr. BUCHANAN. I want to say this before you get away from some of the things you have been asked about: Now, you represent here, in part, 400,000 men out of 2,000,000 men, which leaves a balance of 1,600,000. Do you know what part of the balance of those men are organized in trades-unions?

Mr. WHITNEY. I can not answer that. The machinists and boiler makers are organized. The trackmen are well organized on some lines. In connection with your statement, Uncle JOE, that some million other employees are petitioning the President to take steps toward the enactment of certain legislation in favor of compulsory arbitration, I want to say this: We deny that those who have petitioned the President to take steps toward the enactment of legislation in favor of compulsory arbitration represent the unorganized railway employees. When we meet that issue we will be prepared, if I am not mistaken, to show you gentlemen that a very large number of the employees who signed these petitions did so under duress; that they were compelled to do so with their jobs threatened; that we know of men in this city, who are on our committee, who have come in personal contact with a lot of the men who have signed these petitions, and some of our men have letters to the effect that the roadmasters, train masters, superintendents, and other officers have called employees into their various offices and have said to them: "You can sign the petition or go and look for a job elsewhere." Many of the employees who signed these petitions have been enjoying the benefits of the concessions for years.

Mr. CANNON. Now, there is one other matter I want to call to your attention. I do not believe in bulldozing anywhere. I believe in settling a dispute on a fair and equitable basis if it can be ascertained. You say you have heard somebody say: "You do so and so or you will lose your job." So much for that. Now, there are a hundred million people in the United States, and I am very glad of this opportunity to tell you what is running in my mind. The settlement of the question of the wages paid these 400,000 of the 2,000,000 men who operate the railroads may involve the question of increased freight and passenger tariffs. The Interstate Commerce Commission fixes the freight tariffs and the public pays, or should pay, enough for service to maintain the roads, including fair dividends to the owners and a fair wage to those who operate the roads. Any settlement that does not accomplish this can not be permanent. Now, whether the passenger and freight tariffs in the United States are too low, I do not know. If any reliance can be placed on the reports of the Interstate Commerce Commission, the passenger and freight tariffs in the United States are about one-half what they are elsewhere in the world.

Mr. BUCHANAN. I do not believe you answered my question, Mr. Whitney, as to whether you knew what percentage of the men on the railroads outside of your brotherhood are organized.

Mr. WHITNEY. Oh, I could not give you the figures. I stated that the machinists and boiler makers are largely organized.

Mr. BUCHANAN. Yes, I know they are; and the painters and carpenters.

Mr. WHITNEY. And the trackmen.

Mr. BUCHANAN. I want to ask you further whether you have ever heard any protest on the part of the organized workers that are working for the railroad companies against this movement?

Mr. WHITNEY. No, sir; there has been no protest. I will venture this opinion: That from our information the protests have come from the railroads themselves.

Mr. BUCHANAN. Well, I have nothing definite or accurate on this end of it, but my information leads me to believe that 60 per cent of the workers in the railroad industry outside of your brotherhood are organized.

Mr. CANNON. Right on that line, I don't know how much you boys get, but I am sorry for the fellows who do not get enough. I am not saying that you are getting too much, because I do not know; you will have to calculate that yourselves; but I am at times sorry for the employee who is not getting enough.

Mr. WHITNEY. Gentlemen, the wages of our men are very low. A true index is the rate per hour. Let us compare the wages per hour of railway employees in the Chicago district with those of the building trades in Chicago. Any other city would do as well. Chicago comparisons are typical of them all.

The standard rates of wages per hour now paid in Chicago are as follows:

| | |
|---|---|
| **Building employees:** | |
| Bricklayers, portable and hoisting engineers, inside wiremen, plasterers, plumbers and gas fitters, steam fitters, stonemasons, and tile layers | $0.75 |
| Lathers and marble setters | .719 |
| Elevator constructors | .688 |
| Structural iron workers | .68 |
| Composition roofers | .65 |
| Laborers in tunnels, wells, and caissons | .575 |
| Laborers on windlass, trench, and scaffold work | .50 |
| Plaster laborers | .50 |
| Composition roofer's helpers | .45 |
| Elevator constructor's helpers and tile layer helpers | .438 |
| Marble setter helpers | .425 |
| Excavating laborers, hod carriers, and steam fitters' helpers | .40 |
| **Railway employees:** | |
| Locomotive engineers | .425 to .44 |
| Switching foremen | .38 to .40 |
| Switchmen | .35 to .37 |
| Locomotive firemen | .27 to .275 |

The hourly rates for conductors and brakemen in through-freight service on railroads operating under the 10-hour-day basis are:

| | |
|---|---|
| **Western territory:** | |
| Conductors | $0.418 |
| Brakemen | .278 |
| **Southern territory:** | |
| Conductors | .41 |
| Brakemen | .275 |
| **Eastern territory:** | |
| Conductors | .40 |
| Brakemen | .267 |

Mr. RODENBERG. There is a plain discrepancy between the statements of the railroad managers and the railroad employees as to the additional expense that will be entailed on the railroads by this proposal. I see the managers say it will cost $140,000,000 extra a year, and I have seen the statement made on behalf of the employees that it would not be more than $25,000,000 at the outside. Have you any figures on that?

Mr. WHITNEY. We have made up some figures as best we could. Of course, it is impossible to arrive at anything accurate. We assume that the railroads have based their figures on past operating conditions. We know that when the eight-hour day goes into effect there is going to be a closer supervision, from an operating standpoint, and that they are going to get these trains over the road on a speed basis of at least 12½ miles an hour. It is an easy thing to move a freight train over 100 miles in eight hours. Twenty years ago the freight trains of this country were moved over a freight division in four, five, and six hours. In 1895 and 1896 the railroads introduced what they were pleased to term the "tonnage system," and the average freight train haul has increased more than 200 per cent since that time. On account of the increase in tonnage the movement has become slower. If we secure the eight-hour day, we will go back to a system that is not as good as we had 20 years ago, but which will be an improvement upon present conditions. We did at one time have a speed basis. Now, in connection with the point raised by Uncle Joe, the railroad employees are not here to lay a stone in the way of the railroads securing an adjustment of freight or passenger rates.

Mr. RODENBERG. In fact, the railroads have always had your hearty cooperation on that line?

Mr. WHITNEY. Yes, sir; absolutely. But the reports of the Interstate Commerce Commission indicate that they have passed through 10 months of unprecedented prosperity, and that their net earnings, if I am not mistaken, are something like $150,000,000 more in the past 12 months than in any preceding 12 months.

Mr. BUCHANAN. They have increased much more than that.

Mr. WHITNEY. Well, I am glad to hear it; but the $100,000,000 that they talk about, of course, has a tendency to invite the farmers and the other shippers over to the side of the railroads. One hundred million dollars, in our opinion and according to our estimate, is $75,000,000 more than it will cost the railroads to put our demands into effect. Now, I do not say this in any spirit of criticism of the people who represent the railroads and who have been dealing with us, but I want to say that, according to reports, a few bankers in Wall Street grabbed more than $100,000,000 from the New York, New Haven & Hartford Railroad, and the road did not go into the hands of receivers, and the public has not been very much concerned. According to a statement made by Judge Priest, of St. Louis, Mr. B. F. Yoakum and some of his friends mulcted the Frisco out of something over $75,000,000. I want to tell you, gentlemen, that if the railroads are sincere on the question of operating cost as applied to our proposed eight-hour day they and the owners of these railroads will get into the game and undertake to have legislation brought about or undertake to have the present laws enforced so that a repetition of these apparent grafts will not be possible. It is not necessary for us to go into that feature of it. You gentlemen perhaps know something about the financial affairs of the Louisville & Nashville and the Chicago Great Western. In 1908 the president of the Louisville & Nashville undertook to reduce the wages of trainmen, enginemen, and yardmen, and when he was brought face to face with a governmental investigation he withdrew his order and said that the schedule then in effect should continue undisturbed. The same was true of the Chicago Great Western, which in 1908 was capitalized at $175,000 a mile. We are in sympathy with the people who own railroad stock. They are entitled to a fair return on their investment. But we are not in sympathy with any men or group of men who manipulate the American railroads to the advantage of the few and the detriment of the American people, including the 400,000 employees that we represent. Now, as a matter of fact, 23 per cent of the mileage of the railroads that have operated for years under the eight-hour-day basis are not operating under receiverships. There are fewer receiverships on those railroads than on railroads operating under the 10-hour-day basis. It is our opinion that there is not a railroad on this continent that will be forced to a receivership by the application of our demands, including time and a half; that this talk about receiverships, this talk about the railroads' inability to pay, and all that, is done for a purpose, and up to this time it has served that purpose well. I am sure that the Interstate Commerce Commission, having the power to fix rates, will make any reasonable adjustments that are fair and right, and that the railroads have nothing to fear in that connection. But, as a matter of principle, wages and conditions and the elements that go to uplift society come ahead of dividends, and we ought to recognize them as such.

Mr. BUCHANAN. As a matter of fact, don't you men know that after this eight-hour day is applied it will cost very little, if any, more, which will be made up by the increased efficiency; that even if there is a little more money laid out they will receive it back in increased efficiency?

Mr. WHITNEY. Yes, sir.

Mr. BUCHANAN. You know that as practical men?

Mr. WHITNEY. Yes; we know that to be the case.

Mr. BUCHANAN. That has been the case with about every change that has been made in the past.

Mr. CANNON. I am very glad you made that statement, because I am learning something. I have learned a great deal this morning.

Mr. BUCHANAN. I am seeking all the information I can.

Mr. CANNON. About $66,000 a mile is the average capitalization of the railroads of the United States, according to the reports of the Interstate Commerce Commission?

Mr. WHITNEY. Yes, sir.

Mr. CANNON. I suppose that would apply to one-half of the railroads of the world—somebody said only one-third, but that does not make any difference. Of course if one-half is true about Yoakum and one-quarter is true about the people on the Rock Island and about the Alton it is very bad, but yet, taking the whole mileage, I apprehend that is not true as to most of the roads; the average capitalization being about $66,000 per mile. Now, a man is a great fool, as a Member of Congress or a member of a State legislature, if he does not try to represent justly the whole constituency.

Mr. WHITNEY. That is right.

Mr. CANNON. Because if he does not do so his time will be short and some other fellow will come along and take his place.

Mr. BUCHANAN. I suppose that each and every one of you gentlemen subscribe to the statement made by Mr. Whitney? Unless you make a statement to the contrary we will have to take it that you do so.

All concurred in Mr. Whitney's statement.

---

## The Case Stated.

---

## EXTENSION OF REMARKS

OF

# HON. S. D. FESS,

OF OHIO,

IN THE HOUSE OF REPRESENTATIVES.

*Tuesday, August 22, 1916.*

Mr. FESS. Mr. Speaker, the two parties will soon go to the country for its decision upon the issues now dividing us. In reality the contest is on already. In every campaign since the war, save that of Cleveland in 1888 and the present one, the Republican Party went to the country and presented its claim upon its policy then in vogue, a distinctly protection policy.

In 1888 the Democrats took the lead, making their paramount issue tariff reform. Likewise to-day the same party stakes its position in defense of the administration as now in power, and especially the Underwood bill. The Republican Party holds to-

day, as it has held in every campaign when it was in power, and also in 1888, when out of power, the real issue is the integrity of American enterprise to promote the investment of capital and employment of labor. Its dominant note is to give to every man his best opportunity to make the most out of his talents, whether a producer or a consumer.

Industrially it means to make it possible for the man who has capital to invest it so as to employ labor at its best standards. What the laws should do is to create a market in which every man may exchange what he has for what he has not, but needs. If it is money he has, make it possible to find a market for its investment. If it is goods, it is a market he needs where he can exchange them for what he wants. If it is farm products he has, make a market for them. If it is labor he possesses, make it so the toiler may employ himself at good wages under steady employment and under the best conditions, so as to enable him to live the life of a desirable citizen. The real life of a nation depends upon the ability of its citizens to realize upon capital, whether it be producer or consumer. This is the realm of legislation to which government should respond. No nation of history has done more in this direction than the United States.

REPUBLICAN PROTECTION AGAINST DEMOCRATIC FREE TRADE IN HISTORY.

Mr. Speaker, the period of industrial greatness in our country marks the stretch from the close of the Civil War to the present. During that half century of wonderful progress the administration of the affairs of the Government has been intrusted to the Republican Party four-fifths of the time, or 40 years. Democracy has been in power but 10 years of that period. During this period of Republican administration we have witnessed a growth in every possible direction. Although the Nation is but slightly older than men now living, we are double the wealth of the next wealthiest country of the earth, and that country is 2,000 years old. We to-day possess double the population of any other English-speaking nation. We possess two-fifths of all the banking resources of the earth, including our own. We own two-thirds of all the telephone and telegraph lines of the globe. We have double the miles of railroads of the next two greatest countries of the earth. We are the world's richest agricultural country, our yearly crop amounting to the fabulous sum of $10,000,000,000. We produce 28 per cent of all the wheat produced in the world, 70 per cent of all the corn produced in the world, 60 per cent of all the cotton produced in the world, 40 per cent of all the coal, and 43 per cent of all the iron ore produced in the world. We here have the material to build, to clothe, to feed the world. This wonderful rank has been reached under an administrative policy which proceeds upon the basis that it is wise to make two blades of grass grow where before but one grew. This wealth is more generally distributed here than in any other country of the world. That has from the beginning been the dominant note of the productive system under the Republican Party. Prosperity of one is not inconsistent with prosperity of others.

TIN AS AN OBJECT LESSON.

When every pound of our tin used in this country was purchased abroad the Republican Party, and especially men like McKinley, protested against this dependence upon a foreign country and declared it a patriotic duty to enact such legislation as would enable our own people to produce it. We had the capital, the labor, and the raw material. To this claim the Democrats offered two kinds of contention—one was ridicule at the thought of making tin and the other was vitriolic disgust against what was called by the opponents special interest. With the country under the control of the Republicans, a duty was placed upon tin against the most persistent and determined opposition of the Democrats. What was the result? We inaugurated the industry. Soon we boasted of having the first, second, and third largest tin mills in the world. Our production went by leaps. Europe's product soon fell off. We soon reached the stage where we produced not only all the tin we consumed but we became an exporting Nation. This was Republican policy in action.

Instead of sending American money abroad to purchase an article made by European labor, in plants in which was invested European capital, we made it possible to invest American capital here and employ American labor here, and thus keep not only our own men employed, but at the very best standard of wages, and in addition produce a product of universal use among the American people. The opposition contended that such legislation is inimical to the consumer in an increased price. On the contrary, the consumer benefited in that he purchased the article cheaper than when dependent upon foreign importer. This was due to the highly developed industry. The same was true in the case of certain brands of carpets and certain fabrics of silk. The time was when we were wholly dependent on Europe for carpets and silks.

THE BEET-SUGAR INDUSTRY.

The same thing would be true in the case of beet sugar if we would but insure the American beet grower against the European grower. It is well remembered how McKinley urged protection of sugar, so as to begin its production here. The suggestion was ridiculed and bitterly opposed. He first urged the payment of a bounty. This was the signal for unbridled Democratic abuse. Then, finally, after a prolonged struggle, the sugar duty was levied upon a protection basis and the industry began. It takes at least a million dollars of capital to equip a well-equipped sugar mill. Capital naturally hesitated, knowing full well the animosity of Democratic policy and the uncertainty of American elections. But an uninterrupted period of Republican rule for 16 years produced confidence and the industry spread until the country could boast of 73 mills at the time of the election of Woodrow Wilson, a consummation reached by virtue of a split in the ranks of the friends of protection.

When the Underwood bill was under consideration the Democratic leaders did not intend to place sugar on the free list, but the President insisted upon both sugar and wool being placed on the free list, stating he wished to test and prove his theory with these two items. Obedient to this wish, which in this administration is equivalent to a command, the blow was struck.

The first response to this disastrous decree was the closing of 12 of the 73 mills. That meant one-sixth of the sugar-producing capacity closed down. That would mean not less than 100,000 tons of sugar less than the year before, since the annual production had been 600,000 tons. Naturally the reduction of the product with no falling off of the demand would in time increase the price to the consumer. This stage has been reached already. Former Secretary Wilson, of the Agricultural Department, asserts that we have in this country 278,000,000 acres of land that will grow the sugar beet. If we would but insure an uninterrupted period of protection, we would soon reach the stage where we would not only produce all the sugar we consume, but become an exporting country, as in the case of tin.

The only obstacle against this position is the Democratic Party, notwithstanding their suspension of the Underwood bill on the item of sugar, under the guise of needed revenue but really to appease an outraged people for the loss of an industry, as well as an attempt to correct the evils of a revenue law.

This policy of protection does not limit values to those employed in the mills. It benefits the beet raiser, the farmer, to the amount of millions of dollars. It not only enables him to utilize naturally the beet for sugar, but also certain by-products for forage, in addition to augmenting the fertility of his soil by the root crop, as shown in the beet production of Germany.

Sugar is but one item of scores of others that display the difference between the policies of the Republican and Democratic Parties. The situation of the dyestuffs emergency is a good example of the price we pay for Democratic theories.

"REVENUE-ONLY" POLICY ALWAYS A FAILURE.

The Democrats refuse to admit the soundness of the protection argument. They hold that all duties must be limited to revenue only. The weakness of this position in practice is proved by mere citation of Republican administration. The Democratic theory in practice is a failure. It does not, and never will, raise sufficient revenue to run the Government.

In 1895, under the Wilson "revenue-only" law, the Democrats were compelled to issue $262,000,000 bonds one year after the law took effect in order to raise the necessary revenue to run the Government. This is simply conclusive. No such emergency had arisen under Republican protection. Note the similar situation to-day. This present law increased alarmingly our imports but decreased our revenues. In the first seven months it amounted to $250,000,000 loss to us. The free list under Republican measures reaches less than 50 per cent. Under this present law it amounts to 70 per cent. Imports greatly increase, but revenues seriously decrease.

Compare July, 1914—the month before the war and the first year of the Underwood bill—with July, 1913, the last year under the Payne law:

| | |
|---|---|
| *Imports.* | |
| July, 1914 | $160,178,133 |
| July, 1913 | 139,061,770 |
| Imports gain, 15 per cent, or | 21,116,363 |
| *Customs receipts.* | |
| July, 1914 | 22,988,465 |
| July, 1913 | 27,806,654 |
| Loss of duty, 17 per cent, or | 4,818,189 |

The loss of duties in August was 37 per cent. This trend has kept up. Increase of imports, decrease of revenue. At the present time our imports are vastly greater than in 1913, but our custom duties are much less. I gave the figures on this subject on the 21st of July. Had the rates of the Payne law been in vogue to-day the customs duties would be vastly more, and the necessity for stamp taxes and an enormous bond issue would be avoided. Here is the failure of Democratic legislation.

DEMOCRATIC SUCCESS MEANS DIRECT TAXATION.

The Democratic Party destroys an industry at home by going to Europe for its product, which it allows to come into the country duty free or at a lower than protection rate. It thus displaces capital and labor here at home in order to purchase at a temporarily lower price abroad, but fails to secure the necessary revenue to run the Government, which makes necessary either a bond issue, a stamp tax, or both, as in the present case. This is now and has been the character and history of Democracy on this question.

Take the item of sugar. We had it on a protection basis. That insured profit here for the capital, the labor, and the farmer. The rate was sufficiently high to raise nearly $60,000,000 revenue to aid in the expenses of the Government. Under Democratic free sugar the industry is here crippled, capital closes out in part, labor is thus proportionally displaced, the farmer's market is lost, the Government loses $60,000,000 revenue, and the consumer is compelled in time to pay more for his table use, because by crippling the industry at home the home production is reduced and the price to the consumer is increased.

The same is true of wool. Free wool in 1913 induced American wool growers to at once dispose of their sheep. The experience under the Wilson bill in 1894–1897 was fresh in mind. Within a year the fleece decreased one-eighth and the flock one-ninth, and naturally with reduction of supply without similar reduction of demand the price to the consumer is not lessened, but increased; and, in addition, the Government loses $15,000,000 revenue.

The present law prior to the opening of the war is a comment upon Democratic legislation on the tariff question. It helps no one, but hurts every one. It fails to raise revenue enough and makes up the deficit by stamp taxes and an issue of bonds. It hurts domestic trade, lessens our export trade, increases our import trade, all at the expense of the American consumer as well as the producer.

PROTECTION NOT ONLY ENCOURAGES AMERICAN INDUSTRY, BUT AVOIDS THE NECESSITY OF DIRECT TAX OR BOND ISSUE.

On the other hand, the Republican theory of protection stands in sharp contrast with this Democratic policy. It does not only upbuild American enterprise by inviting capital to invest in American industries in the employment of American labor at an American standard, but it never fails to collect the necessary revenue to run the Government.

Under the Payne law, a law that protected our labor, we did not only raise enough revenue to run the Government but we paid out of the current expenses for the construction of the Panama Canal. Protection hurts no one, but helps every one. It stimulates business at home—business of field and factory, of mine and mill—and makes possible the highest paid labor and the highest standard of living of any country in the world. It not only makes possible the producer, but gives power to the consumer. It at the same time supplies the needed revenues for the Government without resorting to the hateful methods of direct tax, to which the Democrats are committed.

THE REAL ISSUE.

Whatever other issues may come before the country for its verdict our people will not lose sight of this one great issue of protection. In it the people of every State are more vitally interested than in any other that will call for a decision. The two parties stand in sharp conflict, notwithstanding the recent utterances on dyes, antidumping, and tariff commission by the administration.

"WATCHFUL WAITING'S" SHAMEFUL HUMILIATION.

The Mexican situation is far-reaching in its hurtfulness to American honor and dignity. The present policy of "watchful waiting" is, to say the least, most unfortunate, and can not be condoned from whatever angle viewed.

The President's choler against Huerta led him into diplomatic blunders hard to relieve. He declared in his address before Congress he had no contention against Mexico, but our cause was against Huerta. He persisted in his contention that Huerta must go. For that purpose he first laid an embargo and then lifted it. While thus contending not to interfere with Mexican affairs he forced out of Mexico the only man who had made any semblance of order, and even declared the people should not be allowed to vote for him for president in a future election.

From every standard of international conduct, if he destroyed the only government known in Mexico, he became responsible for what followed its destruction. The future historian will certainly hold this Nation responsible for the present state of anarchy in that unhappy country.

Note the orgy of blood since the going of Huerta. Shall we say no one shall interfere with this bloodletting? Why the act of war in landing our fleet in Vera Cruz, where 19 of our marines were killed and many others wounded and many fatalities among the Mexicans? Shall we call this the first war? If not against Mexico, can it be against one man?

Note the President's statement to Congress of his demand for a salute of our flag by a Mexican head which he refused to recognize as the head. Is there such a thing known to international law as a declaration of war against a man? Note the humiliating withdrawal of our fleet with every day bringing worse conditions to light. Had the fleet accomplished the purpose of its landing? The world will not answer until the purpose is made known. History will deal with results. Note the refusal of our authority to go to Tampico to rescue American citizens who were literally abandoned by our Government, and who had to take refuge under the German and British flags, under the flimsy pretext of our Government that to have offered protection might have inflamed the Mexican people.

DISGRACEFUL ABANDONMENT.

Think of the orders of Admiral Mayo as he withdrew the *Dolphin*, the *Des Moines*, and the *Chester* from Pennco River against the protest of Consul Miller, and at the very moment when the Americans were collected in the Southern Hotel, surrounded by a howling mob of Mexicans, which had choked the streets and which attempted to batter down the doors until the German commander of the *Dresden* declared if the American authority would not clear the streets he would act at once. He ordered the mob to disperse, when he conducted men, women, and children—American citizens—to the water front and the English commander of the *Hermione* conducted men to the English ship. Witness these American citizens taken out to sea under foreign flags to be transferred to other ships to be landed in Galveston destitute. Witness these Americans weep at the sight of the German and English flags as they came into the American harbor. Then ask the pertinent question, What is the value of American citizenship under this administration? Can any real American avoid the blush of shame in the presence of such national humiliation?

Note the shameful flirtation with the bandit murderer Villa and our assistance by lifting the embargo on arms that he might be supplied. We first laid it to cripple Huerta, and then lifted it to aid Villa, and so placed our fleet to make sure Huerta would not secure it and Villa would.

Note the massacre of Santa Ysobel, where 19 Americans were shot. Here they killed with bullets that bore our trade-mark! The next scene is the murderous raid at Columbus. Our own soil invaded, and our citizens shot down by Villistas. Then the never-to-be-understood punitive expedition into the mountains of Mexico to capture a man—the second war with Mexico. The inevitable clash at Carrizal followed, and the death of our soldiers wearing the uniform. Our National Guard hastened to the border to joint the Regulars, for what purpose?

Here is a succession of events all inevitable in a policy of "watchful waiting" that this country will demand corrected. It is not a question of what would you have done. It is a matter of what was not done. There was not a single step in the entire program that did not spell humiliation and consequent national sorrow, a consequence that should have been foreseen from the beginning.

American citizenship under such régime becomes a byword and a mockery. Such a policy insures attack, murder, and assassination, simply because it invites it. To avoid such a situation upon the border only requires a clear understanding that we will not tolerate it. That is all. It would cease immediately.

"HE KEPT US OUT OF WAR."

In the face of this chapter of national humiliation our people are constantly regaled by Democratic press and speaker with, "God bless Wilson; he has kept us out of war." If we have been kept out of war, why the landing at Vera Cruz and the death of a score of marines wearing the uniform—a greater fatality than was suffered by our Navy in the Spanish-American War? If that is not war, what is war? If he has kept us out of war, why the murders at Columbus and the crossing of the border by Gen. Pershing with an invading force? An armed force on a sovereign soil spells war. If he has kept us out of war, why the battle of Carrizal, where our soldiers in line were

mown down by machine guns and where a score more were taken prisoner. He has not kept the country out of war, but has simply abandoned American citizens to the murderous assaults of bandits, some of whom once enjoyed our Government's favor and invited humiliation which has been delivered at the hands of murderous leaders and which we have accepted with apologies to Mexico.

The chapter which details this most humiliating fawning, this most shameful vacillation, this most wicked abandonment of our own citizens, will smell to heaven when our people come to read it as it has been written in these days of shameful resignation to the "watchful waiting" fetish of the "too proud to fight" brand.

It will count for very little to our Democratic brethren to shout, "He has kept us out of war" at the very moment when our troops are on Mexican soil and no way open to return except by some proposed commission the President hopes may find a way for him to let loose. Does any American hope that any finding of any commission will be respected by any of the bandits now on the warpath?

"He has kept us out of war" may serve as a campaign slogan to quiet the people's aroused and enraged conscience, but it will never be a recompense to the mother whose son died in Vera Cruz as the price of a salute which was never given nor to the Nation whose defenders perished at Carrizal. It will not be a satisfaction to the friends of American citizens who were murdered in cold blood at Santa Ysobel, nor the friends of American women who were inhumanly assaulted by the pirates of the plains.

"He has kept us out of war" has an ominous sound at the moment when 100,000 of our National Guard are weltering on the hot sands of the Mexican border, while the administration is playing hide and seek with the bandits it once courted awaiting the decision of a commission not yet in session.

The country will most certainly demand and receive an accounting for this "watchful waiting" régime, whose price is (1) hatred in Mexico of the detested gringoes, as we are called, (2) sacrifice of prestige and dignity in every foreign country with which we have diplomatic relations, and (3) loss of security of life, liberty, and property of American citizens both at home and abroad for want of a real policy—a price too costly for the mere sake of winning an election.

THE KOTZA AND "VIRGINIUS" CASES.

The day was here when a Martin Kotza, a European refugee who had sought our shores and had taken steps to become an American citizen, but who had returned to the Mediterranean waters before the expiration of time to complete his citizenship, and was taken off the vessel by his former countrymen, when Capt. Wilkes, of the *San Jacinto*, flashed the order, "Deliver Kotza at once or I will fire upon your vessel." It is needless to say he was delivered. The majesty of American honor and power in those elder days backed the rights of a man foreign born and not yet a citizen of our country.

The day was when a Spanish captain was about to shoot American citizens taken off a vessel in Cuban waters against our protest as expressed by our consul when the majesty of American honor and power wrapped about the victim as he was draped with the flag of the country, and when the consul said "Shoot if you will, but take the inevitable consequences." The shot was not fired.

It is a far cry from the days of Fillmore protecting Kotza and Hayes defending the Nation's honor in Cuba to the days of "watchful waiting." Then it was honor and dignity readily recognized as the price of protection. It never failed and war was averted. To-day it is destruction of life and property, murder of men, women, and children, invasion of our border, assassination of helpless victims of treachery, death-dealing machine guns in action against our invading soldiers—all not only tolerated but invited, because of our timid fear that we might be regarded by the oversensitive bandits as militant, if, when we perform acts of war such as landing our marines and soldiers on a foreign shore, we should demand at once that order shall obtain or we will establish it. To say the least we should either refrain from steps of war or else make them effective in security of life and property which needs but to abandon the miserable "watchful waiting" régime to be assured.

THE REAL TEST OF AMERICANISM.

While the loss of national dignity is a high price to pay, the most critical item in this Mexican problem is the adjustment with Europe when the war closes. Then we shall be brought face to face with our policy written in the Monroe doctrine, which we have ignored, so far as the rights of citizens of these European countries have been concerned in Mexico. Will we care for them or abandon the Monroe doctrine and allow Europe to adjust it? We certainly will do one or the other. Most certainly the people of this country will not consent to continue the administration in power to make the adjustment, when that administration could have avoided in the onset the critical situation by a decisive policy, to which it was pledged in Baltimore in the following words:

The constitutional rights of American citizens should protect them on our borders and go with them throughout the world, and every American citizen residing or having property in any foreign country is entitled to and must be given the full protection of the United States Government both for himself and his property.

These words, written in 1912 for the purpose of getting votes, have a strange significance in the light of what has taken place since that day. Did Democratic platforms mean anything as of yore this pledge would be significant.

MALIGNANT NEUTRALITY.

This vacillating policy is not confined to our relations with Mexico. It extends to our attitude toward belligerent Europe. The "correspondence school" which revealed such numerous diplomatic notes between us and Germany on the one hand and between us and England on the other not only endangered the Nation every step but left relations strained to a dangerous point. While the one country endangered American citizens by the death-dealing submarine, the other violated every right known to international law and practice. The violations are still going on, and will continue. Why not? But the adjustment must come in time. Where is the citizen who would feel safe in having that adjustment left to those now in power?

What the country demands in our relation to foreign countries is an American policy built upon a truly neutral basis, the foundation of which is a genuine Americanism. It can not be safely guided by impulses stirred by national prejudice.

Mr. Speaker, I am confident that the country will condemn this administration not only for its Underwood bill and its Mexican folly but for its inefficiency, its extravagance, and its bald partisan bias.

THE JACKSON SPOILS SYSTEM REVIVED.

The raids upon the civil service or merit system are simply astounding. There are no less than 10 specific legislative acts which expressly exclude from the operations of the merit system the appointees. These acts are among the star performances of the administration, such as the Federal reserve and interstate trade acts. The exclusion by Executive order has been notorious. This feature best reflects the real animus. The merit system, which had been constantly growing since Cleveland's days, has been assaulted upon every hand and under the party leadership of Woodrow Wilson, once the vice president of the United States Civil Service League, an association organized to further the cause of the merit system throughout State and Nation. The additional pay roll of this administration will be at least 30,000 employees, at an annual cost of at least $36,000,000.

The viciousness of this policy is worse felt in our Diplomatic Service, especially in South and Central America, where a trained and efficient corps of men was displaced to pay political debts of "deserving Democrats," whose chief merit was their support of Mr. Bryan in his many unsuccessful campaigns for preferment. It is not possible to estimate the national loss by this prostitution of efficient service on the spoils altar.

HYPOCRISY OF DEMOCRATIC LEADERS.

Mr. Speaker, the insincerity and hypocrisy of Democratic leaders are shown in their claim that the present state of business activity is due to Democratic legislation. When the country was in distress, due wholly to Democratic legislation, they were insistent it was all due to the war. When through war orders, when all Europe called upon us to supply the needs of 30,000,000 soldiers in field and trench, and our exports increased in many cases over 1,000 per cent, then the demagogue asserted that the Democrats had brought great prosperity to the people of the country. These opportunists go upon the assumption that the American electorate is too ignorant to connect effect with cause. Apropos to this idiotic pretension is that other equally absurd claim that the Federal reserve act averted a world-wide financial crisis at the opening of the war. The idiocy of such a pretension is established by the mere citation of the historic fact that the war opened on July 31, 1914, and by August 5 all Europe was in arms, and the Federal reserve act was not put in operation until November 16, three and one-half months later. The crisis was averted by the administration's embrace of the Republican Aldrich-Vreeland Act of 1908, together with the closing of the New York exchange by the board of control, and a similar action

in Europe to avoid unloading American securities upon the market.

Not a single item here is any credit to the Democratic Party save their seizing the opportunity to employ in the face of impending crisis, a measure which they had pronounced as the sum of financial heresies when it was passed over their united opposition in 1908.

The Federal reserve act as is well known was framed upon the plan of the Aldrich bill. The only features of value in it were taken from a Republican proposal. It received some Republican support after Republican amendments such as that which preserved the gold standard were accepted.

The same may be said of the rural-credits bill, a bill which in operation will afford no assistance whatever save in certain sections which are of peculiar regard to this administration. It will not be overlooked that the Federal Loan Board is now in Maine—just three weeks before the election. Is this board to become another Government campaign agency like the Post Office Department to assist in the election of Wilson? Will the country overlook this bald campaign method of these modern uplifters?

This partisan bias is quite pronounced in the President who purposely ignored the Republicans in his appointments of commissioners under the law. This was true in the Federal reserve act, also in the interstate trade act, and of course will be true in the proposed tariff commission. When the reserve act was under discussion Chairman GLASS replied to my charge that it would be made partisan that such a thing was unthinkable, in any President; yet the first announcement contained all Democrats.

The baldest prostitution of appointing influence for partisan purposes ever called to the public attention is the summoning of the postmasters of the country to meet in Washington where they were addressed by the President as his own appointees, specifically so styled and openly so designated, and told by the Postmaster General in his public address as their head that "the best service they could render to the country was to go home and work from then until election day for the reelection of Woodrow Wilson." At first the announcement was doubted, but later inquiry confirmed the accuracy of the report.

Such official utterances were simply impossible until this administration came to power. It is well known that postal employees have lost their positions for partisan action when unfriendly to this administration. The American people have generally looked upon the appointments in the department of the post office as a political perquisite, but it was left to this administration to use the department as a partisan campaign organization to attempt to continue itself in power. This one case of prostitution of Government agencies condemns this administration if nothing else will. It stamps it as the most bitterly partisan since Jackson. It will throw a flood of light upon the recent efforts of the department to displace 43,000 rural carriers in the name of economy and efficiency to make room for the hungry horde of deserving Democrats, a raid only averted by Republican exposure and an organization led by Ohio Republicans who succeeded in a movement which aroused the country from one end to the other. The failure to accomplish the partisan reorganization makes the attempt no less heinous. The notorious attempt to prostitute a great service is the issue.

It may be asked, Did not the Democrats give the country an increased Army? Not until driven to do so by the Republican minority. Did not the Democrats give an enlarged Navy? Not until driven to adopt the Republican program. An examination of the RECORD, which records the debates and the votes, will show the source of national defense. The President declared to Congress that we were well defended and warned us against becoming nervous. Within a year he had changed front and declared we were not prepared, and demanded a Navy of first rank. He first declared to Congress for the continental Army; then, when the specter of the votes of the National Guard arose, against it, which induced Secretary Garrison to leave the Cabinet. He first declared the abandonment of the Philippines unwise, then within a month urged the adoption of the Clarke amendment of abandonment.

To-day, when a mighty contest is on, he summons the contestants to Washington and demands that one side of it surrender its position of arbitration, which we supposed was a fair method of adjustment. The influence and votes of 400,000 men are most desirable at the opening of a campaign. Should it appear later that there is a greater vote influence on the other side, will any man doubt that a change of front will be taken at once?

These are but items in this régime of the country's greatest example of the opportunist in action.

DEMOCRATIC EXTRAVAGANCE.

The extravagance of this administration is astounding, especially in the light of the charge of the Baltimore platform of "profligate extravagance" against the Republican administration. Yet in the very first session of the Sixty-third Congress, the first Democratic Congress when the country was under the full control of the Democrats, the appropriations were over $100,000,000 more than any prior session of any Republican Congress of our history. The fulfillment of their promise of economy in 1912 was added appropriations of over $100,000,000 in 1914.

This present session has lost all sense of proportion. Its excess will reach almost a half a billion dollars over any Republican Congress. The appropriations of the present session are over $1,500,000,000, a sum greater by one-half than Reed's famous billion dollar Congress, which included appropriations for both sessions instead of but one, as in this case. Much of this is not necessary.

When the revenue bill was under discussion it was pointed out that this extravagance was vicious. Upon that occasion, among other things, I said:

"You voted $50,000,000 on a ship-purchase bill that I opposed.

"You voted $45,000,000 to be dumped into the mouth of the Mississippi for flood control, that I opposed; $43,000,000 for rivers and harbors, that I opposed; $20,000,000 for a nitrate plant—a vicious proposition—that I opposed; $11,000,000 for a munition plant, at the very moment when you were offered its manufacture at the Government's own price, a measure that I opposed; $36,000,000 of an increased pay roll, that all Republicans opposed. You voted, with your eyes wide open to what you called emergency situations $205,000,000 of extravagant expenditures, not a dollar of which should have been authorized at this time, if at all, and you only ask to raise $197,000,000 here, eight millions less than you wasted. [Applause on the Republican side.] If you would save on your wasteful expenditure, you would not need to saddle upon the country this sort of a bill, and even if you did need it there is a better way to do it. Rewrite your broken-down, concededly mistaken, dismally disappointing revenue-producing tariff; rewrite it by the protective system, that always raises enough revenue and starts the business of the country in the employment of labor. [Applause on the Republican side.] This proposed scheme expresses not alone your desire to meet a condition of deficient revenue, but it is to fix a system of taxation that prompts this moving appeal of Democratic leaders to silence our opposition. It is the same old Democratic wail against an American system of protection on behalf of an English free-trade scheme. I will not vote for your measure. But after March 4 we will restore the protective system and these other Republican measures you offer as a sop will be cared for."

PROMISE AND PERFORMANCE.

These examples of abandonment of platform are not strange under the present leadership of Democracy. If there is one pledge not violated, I know it not. The motion-picture performance of the titular head of the party in his kaleidoscopic changes of position upon every issue save that of reelection is a sufficient justfication of his party playing leap frog with its pronouncements. Who could, if he would, "stand by the President"? Many a member of his party, without the agility to make the turn, experiences embarrassment. No man will deny the right of another to change his views. But neither will anyone seriously contend that the public should pretend to know to-day what a man will do to-morrow if there is no constancy of policy in his practices. To talk about standing by such leaders is asking one to become an animated registry machine.

Four years of such vacillation is quite sufficient. I do not believe that the country will hesitate long in coming to a decision. It will, in my judgment, indict the Wilson administration as destructive to American enterprise, humiliatingly weak in its foreign policy, shameful in its abandonment of our citizens in Mexico, inefficient in its administering of law, extravagant in its appropriations, inequitable and class discriminating in its legislation, bitterly partisan in its practices, notoriously sectional in its laws, and piteously vacillating in its every detail of public policy. Such an indictment will insure its repudiation and compel a return to Republican administration at the earliest moment. That event will not be deferred beyond November 7, when the leadership of Mr. Wilson, the schoolmaster, will give way to a different type of leadership, the leadership of the jurist, so well typified in the personality of Charles E. Hughes, who, I am confident, will insure the country a revival of a real Americanism, not only in our foreign but in our domestic policies.

**Remarks of Secretary McAdoo on the Occasion of the Induction Into Office of the Members of the Federal Farm Loan Board.**

EXTENSION OF REMARKS

OF

## HON. THADDEUS H. CARAWAY,

OF ARKANSAS,

IN THE HOUSE OF REPRESENTATIVES,

*Friday, August 25, 1916.*

Mr. CARAWAY. Mr. Speaker, under the leave granted to me to extend my remarks in the RECORD I include the remarks of Secretary McAdoo on the occasion of the induction into office of the members of the Federal Farm Loan Board, August 7, 1916. The remarks are as follows:

REMARKS OF SECRETARY M'ADOO ON THE OCCASION OF THE INDUCTION INTO OFFICE OF THE MEMBERS OF THE FEDERAL FARM LOAN BOARD, AUGUST 7, 1916.

Gentlemen of the Federal Farm Loan Board, I congratulate you heartily upon the opportunity the President has given you to render a service of inestimable value to the farmers of this country by establishing the Federal land banks and the general system of rural credits provided for by the act of Congress approved July 17, 1916.

It is a statement of an old and recognized truth to say that the farming industry is the very basis of the life and prosperity of the Nation, and this statement is more particularly true of the United States, because of its agricultural development, which, although great, can be made vastly greater if our farmers are provided with the long-time credits at low rates of interest which are so essential to the further development of the farming industry. There is no inducement to greater farm development unless it can be made profitable, and it can not be made profitable unless the necessary capital is available always to farmers upon reasonable terms.

It is amazing that since the establishment of our Government until this time, a period of 127 years, absolutely nothing has been done by way of legislation to assure abundant farm credits on reasonable terms to our farmers. On the contrary, they have been the preferred sufferers from a scarcity of money for farm development and agricultural purposes, and have been, as a class, particularly oppressed by high, and oftentimes extortionate, rates of interest and shadowed constantly by the fear of mortgage foreclosures. The farm-loan act, or rural-credits bill, which it is your privilege to administer, will emancipate the farmer from the disadvantages he has so long endured. It will, when fully established, unquestionably provide an abundance of credits, available at all times, to farmers in all parts of the country upon long-term mortgages at low rates of interest, with a provision for repayment of the principal in easy annual installments. In fact, under the new system, the farmer ought to be able to pay the interest on his mortgage and the principal of his debt through annual installments which will be less than the straight interest charges he has been paying on his mortgage under the old system.

This is an act of long-delayed justice. We must see to it that those who are entitled to its benefits get them with the least possible delay. The establishment of this rural-credits system means not only more profitable farming, but a life of greater comfort and prosperity for the farmer; it means destruction of the nightmare of foreclosure and loss of property for the farmer; it means security and independence, thrift and self-respect for the farmer.

It will reattract to the farms vast numbers of our people who have been unable to engage in agriculture, because it has been impossible to secure money on farm obligations. It means for all the people of the country unlimited benefits, because they will prosper in direct proportion to the prosperity and strength of the farming industry of the country.

I am proud to be associated with you in this great piece of constructive work and assure you of my cordial cooperation in the inspiring tasks that lie ahead of us.

**Hughes Proving an Effective Campaigner.**

EXTENSION OF REMARKS

OF

## HON. WILLIAM S. GREENE,

OF MASSACHUSETTS,

IN THE HOUSE OF REPRESENTATIVES,

*Friday, August 25, 1916.*

Mr. GREENE of Massachusetts. Mr. Speaker, availing myself of the privilege granted me to extend my remarks in the RECORD, I first desire to call the attention of the Members of the House and the country to the following article published in the New York Times of August 27, 1916 (and the New York Times may easily be classed as a supporter of the administration of Woodrow Wilson). This article was written by the New York Times correspondent who accompanied Mr. Hughes on his recent western trip. My purpose in presenting this is to show the views of Mr. Hughes by one who has an opportunity to meet him, and thereby to offset some of the prejudiced views of Mr. Hughes and his work on the stump expressed by Democratic Members of the House who absolutely know nothing of the Republican candidate for the Presidency, Hon. Charles E. Hughes.

The article in the New York Times of the 27th instant had the following heading:

HUGHES PROVING AN EFFECTIVE CAMPAIGNER—HIS VOTE-GETTING METHODS COMPARED WITH THOSE OF WILSON AND ROOSEVELT BY ONE WHO HAS SEEN ALL THREE IN ACTION.

Those who saw the Republican nominee for President run along the uncertain platform of the railroad station at a ranch town in North Dakota recently to shake hands with a youthful cowboy mounted on a fiery little mustang found it difficult to conjure up the picture of a solemn-visaged Justice of the United States Supreme Court with the name "Charles E. Hughes" beneath it.

It was for Mr. Hughes himself to provide the key to the situation, to explain the mystery surrounding the change which had come over him since he left the bench to journey forth into the country and win a place among political orators and campaigners such as Roosevelt, Wilson, and Bryan.

"When I was a judge," he said, "I was 100 per cent judge. When I am a candidate for office I am 100 per cent candidate."

Certain it is that no candidate has developed with more rapidity into a 100 per cent campaigner than the Republican nominee. Men talked of him as an effective orator when he was sent into doubtful States of the Middle West in 1908 to turn the tide in the proper direction for William Howard Taft. Lately many have recalled the Hughes of 1908 in order to compare him with the Hughes of 1916. The Hughes of to-day has not suffered by that comparison. In fact, it is conceded pretty generally that, after two weeks among the people, he is running at top form.

The explanation for this is simple. It is not supplied by the nominee, although he may realize it. Mr. Hughes is playing in a bigger game than ever before in his career, and he has come into closer touch with the American people—closer, probably, than he believed he could come. He admits with the utmost frankness that he has found the sturdy and uninflated cheering of the people of the Middle West and West, when directed at himself, inspiring. Mixing with them—and Mr. Hughes has actually mixed—has done him a world of good.

Mr. Hughes has arrived at a happy medium between the methods employed by Col. Roosevelt and President Wilson when those skilled campaigners go out upon the stump. In other words, he is a bit more spectacular than Wilson and less spectacular than the Colonel. He nearly stole the Colonel's style soon after the opening of his western tour when he jumped upon the concrete roof of the players' bench at the baseball park in Detroit, after announcing, unprompted, that he wanted "to shake hands with the boys." All that was lacking to complete the picture was a certain vigor of action and vocal eruption on which the Colonel has a corner. The well-known "How are you?" spoken with a rising inflection on the last word, was the best Hughes could do.

The surprising thing about it to everybody who witnessed the picture was that Mr. Hughes could do it at all without appearing ridiculous. And he didn't; he just looked for all the world as if he were enjoying himself to the full for the first time in his life. Onlookers felt like shouting, "Hey, that stuff belongs to Teddy!" But after they watched Mr. Hughes for a time and saw him pose for a picture with Ty Cobb, the Georgia peach, who, by the way, was easily the more embarrassed of the two, the inclination to call out derisively passed by. Then everybody felt like saying, "Gee, look at Hughes!"

And so it has developed that in this campaign, unless the jovial Mr. Taft may be listed as an exception, Mr. Wilson is the only political orator of the first magnitude who is cleaving to the line of absolute decorum. According to the dope sheet, and working from the most spectacular in deeds, if not in words, down the scale, they ought to run about this way: Fortissimo, Roosevelt; forte, Hughes, piano, Taft; pianissimo, Wilson.

Mr. Hughes finds himself sorely handicapped in any effort to out-Roosevelt Roosevelt. To begin with he does not possess the colonel's tremendous physique and vitality, which send that doughty political warrior hurtling about the country like a runaway locomotive that has solved the secret of perpetual motion. Whiskers also count heavily against him, as they assume a certain measure of dignity in action. Then, too, the nominee's vocabulary, while comprehensive and capable of handling almost any situation that arises, lacks a certain explosive power that none except a Roosevelt could attain. Hughes can be vigorous in both word and action—this campaign has proved that much—but he never can be picturesque.

The mixture of Hughes and Roosevelt, which is to be put before the American public during the remainder of the campaign, ought to prove an effective one. Roosevelt proved himself the same vigorous campaigner as of yore in his recent fight in behalf of preparedness and Americanism—there wasn't a detail lacking—and Hughes has developed beyond the hope of his most ardent admirer. Where Roosevelt is needed to take the voters by the scruff of the neck and shake the ballots out of their systems into the Republican melting pot he has promised to go. The campaign as conducted by Hughes himself lacks little in vigorous utterance, biting sarcasm, and systematized attack upon Democratic policies and Democratic leaders from the President down to the Tammany leader—the nominee has been a surprise to himself in that regard. It will be Roosevelt's job to add the final touch in the Roosevelt sections where that touch is needed.

Anyone who thinks of Mr. Hughes as the quiet type of orator has drawn an entirely inaccurate picture. Hughes, in action as a political orator, is as far removed from Hughes the Supreme Court Justice as Bryan is from the Presidency, a simile employed because it relieves the mind of all doubt as to the nominee's present status.

Where the President seeks to get home his point by persuasive utterance and graceful gesture, the Republican nominee waves eloquent arms or smashes one open palm against another, ending with a vigorous body movement which gets head, shoulders, arms, and hands into the sentence along with his voice. All of the calmness of thought, all the restraint which the first glance at the man suggests, are put aside once he is under a full head of steam.

President Wilson, in his trip last January in behalf of his preparedness program, made extemporaneous speeches and was then at his best. Many who heard him expressed the belief that the enthusiasm of the crowds carried him away; that in some utterances he went further than he would have gone had he prepared his manuscript in advance. But he got nearer to the people then than ever before, and in watching them seemed to sense what they wanted to hear.

Mr. Hughes went into this campaign without a word prepared on paper except his address of acceptance. That address was a disappointment from the viewpoint of the finished orator, because he read it and stuck relentlessly to the text. The concentration of mind attendant upon such a delivery robbed the orator of much of his power.

Once out upon the stump, free to think as he went along, free to build his talks to the American people as the situation demanded, Hughes was a different man. The first volley of applause at Detroit awakened him to the full sense of the power of words to stir. He forgot all about the years spent upon the Supreme Court bench; he forgot restraint; he forgot that it was nearly seven years since he had raised his voice to win approbation—he let loose his faculties and powers.

There had been some talk of advance manuscripts for several of the speeches after that. It was dropped. In his mind he sometimes sketched briefly what he was going to say, and sometimes many of those thoughts were forgotten in the exhilaration of delivery. Mr. Hughes found his brain working rapidly as of old, his gift for the selection of words coming back with renewed power. After one brilliant bit of oratory in a western city he was asked how he came to frame the declaration.

"I don't know myself," he replied.

Perhaps Col. Roosevelt, of the three, is the most accomplished orator in that regard, although both Mr. Hughes and Mr. Wilson are close upon his heels. One of the best illustrations of Roosevelt's activity of mind was found in an address he made in a middle western city during his preparedness campaign in May.

He had read that President Wilson had said he was in favor of universal training which was not compulsory. In his address delivered, perhaps 15 minutes later, the colonel coined the expression 'weasel words," to describe the President's utterance.

"What made you think of that expression," he was asked later.

"It's hard to explain what made me think of it," he replied. "Thirty years ago I knew an old guide and he told me about the habits of the weasel. If you placed a weasel alongside of an egg, he told me, the weasel would bore a hole in it and suck out all the meat. That was exactly what President Wilson did. He favored universal training for military service, but not compulsory training. He used words in favor of a good thing but he sucked all the meat out of them by the words which followed his declaration. I don't know what made me think of it at the moment; it just popped into my mind."

Mr. Hughes presents a distinguished appearance on the platform. He dresses plainly and wears his clothes well. His physique, while by no means ponderous, is that of a sturdy American citizen. He stands erect, with shoulders well back. His smile is cordial.

While in action these qualities are at their best. He never forfeits dignity, but rather mixes it with vigor. His voice is full chested and far reaching. He puts everything into his voice when he is endeavoring to make a point tell with his audience. He jumps into a breach at full tilt and keeps hammering away until he snaps off his sentence and awaits the applause with a set to his head and shoulders which predicts another outburst.

Mr. Wilson more often begins his argument in persuasive tone, building it up skillfully until the moment for the final smash, and his style has proved effective in all addresses where the situation was one to his liking. He uses words with a cunning and nicety that mark him as a master at his trade and obtains unquestioned forcefulness of utterance by the style of oratory he has chosen.

There have been some unwarranted attacks on the labor record of Hon. Charles E. Hughes. I wish to call the particular attention of the House and the country to the following article published in the Boston Herald, of which paper Robert L. O'Brien, long the Washington correspondent of the Boston Evening Transcript, is editor, and I also wish to call the attention of our Democratic friends to the fact that Mr. O'Brien was private secretary to President Cleveland.

HUGHES'S LABOR RECORD.

When Mr. Gompers, remembering only that he is a Democrat and forgetting that he is a leader of organized labor, ventured to assert that Mr. Hughes is unfriendly to labor because he concurred in the unanimous decision in the Danbury hatters' case, he ventured on very thin ice. The Chicago Tribune promptly reminds him that an honest judge must apply the law as he thinks it is, not as he thinks it ought to be; and asks him to tell those who look to him for political advice something about the record of Mr. Hughes as governor. Read what the Legislative Labor News, the official organ of the New York Federation of Labor, said editorially when Mr. Hughes left the governor's chair at Albany for his place on the Supreme Court. Here it is:

"Now that Gov. Hughes has retired from politics and ascended to a place on the highest judicial tribunal in the world, the fact can be acknowledged without hurting anybody's political corns that he was the greatest friend of labor laws that ever occupied the governor's chair at Albany. During his two terms he has signed 56 labor laws, including among them the best labor laws ever enacted in this or any State.

"He also urged the enactment of labor laws in his messages to the legislature, even going so far as to place the demand for a labor law in one of his messages to an extra session of the legislature.

"Only 162 labor laws have been enacted in this State since its erection, in 1777—in 133 years. One-third of these, exceeding in quality all of the others, have been enacted and signed during Gov. Hughes's term of three years and nine months."

Let organized labor take to heart what the Chicago Tribune says on this point: "Mr. Hughes is no demagogue and no visionary. He is a man of courage and conscience, and if labor can not confide its cause to his rock-bottom Americanism there is something wrong with its cause."

The following is an article taken from the New York Sun:

WHERE MR. HUGHES IS.

"Where," asks our neighbor the World, sorrowfully repeating the question asked by our uptown friend, the Times, "is Hughes gone?"

To relieve the anxiety of our coworkers, we urge them to examine with care the editorial page of the World on which this interrogatory is printed. They will find that Mr. Hughes is in one editorial article a column and a quarter long, double leaded to advertise its importance, in six editorial paragraphs, in five letters to the editor, and in one extract from another newspaper.

On the same page three editorial articles, nine editorial paragraphs, four letters to the editor, and three extracts from other papers measure the World's interest in all subjects, discussion of which does not necessitate the use of Mr. Hughes's name; and some of these squint at that gentleman and his activities.

In whatever spot Mr. Hughes may not be, he certainly is in the World's editorial page.

---

WILSON HIT LABOR IN 1909, SAYS BOURNE—EX-SENATOR DIGS UP ALLEGED SPEECH OF PRESIDENT AT PRINCETON.

The Republican Publicity Association, through its president, former Senator Bourne, to-day recalled in a statement that President Wilson in 1909, in an address to the students of Princeton, criticized trades-unions, and said the standard for the employee was "to give as little as he may for his wages."

These and other remarks of the President about labor at the time are recalled by Senator Bourne, who says labor will have its own "jury service" to perform as between the two candidates, Hughes and Wilson, in November.

Senator Bourne says:

HUGHES'S ATTITUDE.

"Justices of the United States Supreme Court are not charged with the duty of molding public opinion. According to press reports, President Samuel Gompers, of the American Federation of Labor, proposes to attack the record of Candidate Charles Evans Hughes toward labor, and to plead the case of President Woodrow Wilson in the coming campaign. President Gompers will offer as evidence in support of his attack the judicial attitude of Mr. Hughes in the Danbury hatters' case. For the passage of those statutes he was in no wise responsible. It was his sole function to determine their legal application to the cases at bar to the best of his ability. The attitude of Mr. Hughes while on the Federal bench, as of all members of that august tribunal, was and should be 'the cold neutrality of an impartial judge.'

"Any deviation from that position would subject the highest court in the land, and rightly so, to the suspicion of all classes and sections of the country. Failure on the part of our Supreme Court judges to interpret statutory legislation without fear or favor would render that bulwark of our constitutional liberties a hothouse for the propagation of class control and destroy our republican form of government. For this reason President Gompers's attack on Mr. Hughes for his holding in the Danbury hatters' case will make no appeal to the intelligent laboring men, union or nonunion.

WILSON'S 1909 SPEECH.

"On the other hand, we have, as a matter of record, the baccalaureate sermon of Woodrow Wilson, delivered to the students of Princeton University June 14, 1909:

"'You know what the usual standard of the employee is in our day. It is to give as little as he may for his wages. Labor is standardized by the trades-unions, and this is the standard to which it is made to conform. No one is suffered to do more than the average workman can do. In some trades and handicrafts no one is suffered to do more than the least skillful of his fellows can do within the hours allotted to a day's labor, and no one may work out of hours at all or volunteer anything beyond the minimum. I need not point out how economically disastrous such a regulation of labor is. It is so unprofitable to the employer that in some trades it will presently not be worth his while to attempt anything at all. He had better stop altogether than operate at an inevitable and invariable loss. The labor of America is rapidly becoming unprofitable under its present regulation by those who have determined to reduce it to a minimum. Our economic supremacy may be lost because the country grows more and more full of unprofitable servants.'

"Labor will have its own jury service to perform in considering the merits of the two candidates for the Presidency, and this is part of the evidence against Woodrow Wilson."

THE UNFORTUNATE SHIPPING BILL.

The following is from the New York Times:

FRANKLIN ASSAILS THE SHIPPING BILL—MERCANTILE MARINE RECEIVER SEES EVIL IN GOVERNMENT OWNERSHIP FEATURE—SAYS IT WOULD CURB TRADE—BELIEVES FEAR OF FEDERAL COMPETITION WOULD KEEP CAPITAL OUT OF THE BUSINESS.

P. A. S. Franklin, receiver of the International Mercantile Marine Co., said yesterday in his office at No. 9 Broadway that the New York shipping men were not opposed to a bill that would encourage the upbuilding of an American mercantile marine.

The objection to the pending shipping bill, Mr. Franklin continued, was that its effect would be more of "a clubbing down" of shipping than a constructive help. "I do not think it will pass in that form," he added. "There never was a better opportunity than the present for Americans to enter the foreign trade, but if they know that they may have to compete with Government owned and operated vessels, it will be impossible to interest capital.

"The present war has shown the necessity for having a fleet of fast steamships under the American flag in the Atlantic trade for the conveyance of passengers and mails. The only regular weekly service maintained between the United States and Europe was performed by the American line.

READY TO BUILD FOUR SHIPS.

"The four ships which have done such good work during the last two years—the *St. Louis, St. Paul, New York,* and *Philadelphia*—are getting along toward the stage where they will have to be replaced by new steamships on the most modern lines.

"The International Mercantile Marine Co., I can say, is prepared to construct four passenger and mail liners, equipped with quadruple turbines, to make an average speed of 25 knots and to have from 32,000 to 35,000 gross tonnage to be operated in the American line service between New York and Liverpool or Southampton if the Government will give us some kind of a mail contract that will help toward the expenses, such as the Cunard Co. receives from the British Government.

"If a part of the appropriation of $50,000,000 was devoted to this purpose, it would be more practical than using it for the purchase of second-hand vessels, as the Government would have the first call on four first-class liners which would be kept up by the International Mercantile Marine Co.

"Two of these liners could be built in the United States and the other two at Belfast, which would equalize the cost of construction.

"At present the American line steamships are carrying mails, which, if paid for by poundage, would be far in excess of the annual mail contract. This is since the commencement of the war in Europe.

PUBLIC WOULD FOLLOW FLAG.

"There is a demand for fast liners by the traveling public, which was demonstrated by the success of the *Maurctania, Lusitania,* and *Olympic,* and I am confident that if these four liners are constructed for the Atlantic trade, the public have sufficient patriotism to follow the flag."

Referring to the shipping bill again, Mr. Franklin said he had outlined his objections to it in a letter to Senator GALLINGER, which was read before the committee in Washington.

"I have always considered," he continued, "that all that part of the bill which authorizes Government ownership and operation is exceedingly unwise, as it neither deals with the present emergency nor does it establish any sound principle for the upbuilding of the American merchant marine in the foreign trade. Therefore I think if passed it will be prejudicial to the best interests of the American merchant marine in the foreign trade.

"I have never been opposed to the shipping board, but that board should be one created with the object of helping to develop American shipping in foreign trade by carefully investigating the whole situation, and then making its recommendations to Congress as to what is necessary to be done in the way of relieving and assisting shipping.

"This board should have under its jurisdiction everything pertaining to administering the shipping laws of this country and the rules and regulations governing shipping similar to the Board of Trade of Great Britain.

"This board should consider that it is responsible for the upbuilding of the American merchant marine, through the encouragement of private owners and operation, which is the only proper, healthy, and lasting manner in which the American flag can expect to compete in foreign trades with foreign flags. This board should not be created as a club to be held over the heads of shipping before the country has any shipping of its own for foreign trade, but should be created with a view of fostering, encouraging, and assisting American individuals and corporations to invest their capital in steamships for foreign trade and commerce."

THE SHIPPING BILL.

The following article on the shipping bill is taken from the Marine Journal, of New York City, one of the oldest maritime papers published in the United States. When the returns from the presidential election are read on the "morning after" will not our Democratic friends wish they had given more attention to the suggestions of the men who had made the subject of our merchant marine a life study? The article referred to follows:

American maritime men have tenacious memories, and they will not soon forget that on the proposition in the new shipping bill to put foreign-built vessels, owned or operated by or purchased from the Government, in the coastwise trade of the United States, all of those Senators who voted in favor were Democrats and all who voted against it were Republicans.

This is making a party issue of the coastwise law exactly as for many years the protective tariff has been a party question. The Marine Journal has not been hitherto and does not desire to be a partisan newspaper, but in the interests of truth and accuracy it must set down a significant fact like this. Not only did the Democratic majority of the United States Senate vote solidly in favor of putting foreign-built ships owned, operated, or sold by the Government in the general coastwise trade, but Hon. OSCAR W. UNDERWOOD, of Alabama, late the Democratic leader in the House, declared that he would like to see foreign-built ships of foreign registry, as well as foreign-built ships of American registry, entirely free to engage in the coastwise carrying. Of course this would speedily mean the end of American shipowning as well as American ship construction.

Votes and words like these from the Democratic side of the Senate Chamber are a declaration of war on the American merchant marine and nothing else. All American shipowners, shipbuilders, officers, engineers, mechanics, and seamen will take due notice and govern themselves accordingly. Unless the Marine Journal misses its calculations, Democratic votes in the forthcoming election in all the maritime communities from Eastport to the Rio Grande will be fewer and further between than they have ever been in American history.

The administration shipping bill, as we said last week, is worse than worthless as an expedient to upbuild American shipping in the foreign trade. The attack upon the coastwise law in that same measure, which does not go so far as Senator UNDERWOOD and others would have it go if they dared, is an outrageous attack upon what shipbuilding and shipowning are still left to us. If this present national administration were inspired directly by wires pulled from London and Liverpool and Hamburg and Bremen and Havre and Yokohama its course could not well have been otherwise than it has been.

This is something that interests not only shipowners, shipbuilders, officers, engineers, mechanics, and seamen directly engaged in the building or repairing of American ships, but also the very great number of American citizens employed in the production of supplies, materials, and equipment. This present national administration in the White House, in the Senate, and in the House of Representatives has persistently and vindictively been doing all it can to strike the American flag off the seas and to deprive all American maritime men of a livelihood.

Our people are not worthy of the name of Americans and have no red blood running in their veins if they do not, every man of them, set themselves to work between now and the 1st of next November to muster and register all their relatives, all their friends, on our thousands of miles of seacoast, and particularly in every debatable congressional district and every doubtful State, to roll up a patriotic vote that will overwhelm the politicians who have betrayed their country.

More facts on the shipping bill. The following article from the New York Times is worth reading:

LEGAL DEFECTS OF THE SHIPPING BILL.

The shipping bill, having passed the Senate, now goes to conference. It is not the old bill; it may be harmless, because futile, but it is still open to a multitude of objections, some of which have been pointed out by Mr. Carman F. Randolph in a brief published by the National Marine League. He argues that the measure is as unsound legally as it is in its economic theory. He remarks that the regulation of common carriers by water, the declared object of the bill according to the title, is more baffling than the regulation of land carriers. It would be difficult enough to regulate liners, but impossible to regulate the tramps which roam the world looking for cargoes wherever they can be found. The bulk of the world's freights is carried in chartered ships or in "company ships," which carry for the industrial companies which own them. It would be impossible to command the services of such independent vessels on terms unacceptable to them. The Interstate Commerce Commission has trouble enough in regulating railways, which are subject to no such irresponsible and uncontrollable competition. It would be swamped with duties imposed upon a false analogy. The objection is so unanswerable that it exposes the entire bill to the objection made by the harbor craft on similar grounds. The clauses relating to the harbor craft were dropped, and it is difficult to see how the common-carrier regulation of independent ships can be retained and made to work.

By another false analogy the antitrust laws are applied to shipping. Our trusts are within our jurisdiction, but our trade is carried by shipping which is not within our control. We can to some extent regulate foreign shipping when it enters our ports, but we can not compel it to expose itself to prejudicial statutes. English sea laws are liberal, because England well knows that if they are not liberal English shipping will seek shelter under other flags. A great merchant marine is the proof of suitable legislation and the basis of an effective jurisdiction. When illiberal laws take effect upon a small marine, the situation is fatal to growth or to control of the seas. Not only would the bill be suffocating at home; it would expose our marine legislation abroad, which would be retaliatory in effect if not in form.

The governmental status of these ships would give them advantage only at the cost of entangling the Government itself. International law knows only public and private ships. For ships owned by a Government corporation, operated through an official board, there is no classification. In peace and in war their position is anomalous, if not dangerous, for reasons apart from economics. The duties of neutrality would exclude them from practically every port in the commercial world under conditions like the present. The contingency of a belligerent seizing either such a ship or its cargo, innocent or contraband, is disquieting. The alternative that our private shipping should enjoy its present prosperity grows more alluring as the comparison is extended. Respecting both trusts and shipping, we are seeking regulation and stimulation by methods unknown to any other country at any time, and upon false analogies, through ignorance of the conditions. The shipping bill was not drawn by legislators with experience of shipping. It was drawn by those with prejudices on the trust question, and is equally unsuitable for regulation of either the trusts or shipping.

The following article is taken from the editorial columns of the New York Times of August 26, 1916. This paper is one of the supporters of the present administration, but it speaks out in no uncertain tone upon this infamous shipping bill, which should be buried in oblivion:

MAINE VIEWS ON THE SHIPPING BILL.

Notwithstanding the uncontrollable demand of the country for the immediate passage of the Government shipping bill, the lack of a quorum prevents action. The interval is useful as affording an opportunity to remark the bearing of the bill upon the campaign. The overwhelming boom in the shipping industry makes the recently deserted New England shipyards resemble a stampede to a new diggings in the Klondike. The promoters of the bill would be happy, indeed, if they could claim proprietorship of the shipyard boom. They are so unfortunate as to be thought responsible for a threat to its continuance.

While they were not looking somebody slipped into their bill a clause enabling the ships bought with the Government funds to ply in the coastwise trade, hitherto sacrosanct against competition from foreign ships. A Government marine to compete with the merchant marine "going foreign" is bad enough, but Government competition with foreign ships, perhaps in the coastwise trade, is anathema. All alongshore, not alone in Maine, wherever ships and the sea are known, the Government shipping bill is thought of not as something useless for its purpose but as something surpassingly useful when used by Republicans as a club upon Democrats. Thus the Boston Transcript remarks that Government funds may supply the cash to purchase ships built with pauper labor and use them or enable their use to take the bread from the mouths of the American mechanics who build or the Yankee sailormen who use the product of the New England shipyards.

The threat is bad enough. The lack of a quorum prevents it being more than a threat. Next month the Democrats will know what the New England electorate thinks of their proposal. If they are wise in their day and time, they will take good care that no quorum is provided for the shipping bill's enactment until November.

The article entitled "Maine views of the shipping bill," together with several other references, show very distinctly that I was fully justified in raising the question of a quorum on the attempt to have the House accept the amendments made by the Senate to the shipping bill without any consideration by the House or the Committee on the Merchant Marine and Fisheries.

FINANCE, BANKING, AND POLITICS.

I commend the following letter to the earnest attention of the thick and thin supporters of the present administration. All bankers do not agree with the political backers of the Wilson administration:

SAYS COMPTROLLER KEEPS STATE BANKS FROM MONEY SYSTEM.

J. J. Earley, president of the Bank of Valley City, N. Dak., and former treasurer of the North Dakota Bankers' Association, has made public a letter written July 10 to John Skelton Williams, Comptroller of the Currency, of which the following is a copy:

"Your 12-page pamphlet, entitled 'Decision of the Comptroller of the Currency on the Application for a Renewal of the Charter of the Riggs National Bank,' bearing your official seal, printed at the Government Printing Office, distributed at public expense under your franking privilege, and addressed to the president and board of directors of this bank, has been carefully read and considered by the undersigned.

"As this bank is organized under North Dakota law, and is accordingly not under your jurisdiction or control, I assume that a copy has been mailed at Government expense to all the banks of the country,

State as well as National, and that therefore in mailing it to us, no special favor was intended. I assume, moreover, that your real intention in giving your labored explanation of what you call your 'decision' in such liberal dimensions, notwithstanding the scarcity and high cost of ink and paper, is in the nature of a stump speech, setting forth ex parte your side of the legal controversy between your office and the Riggs Bank, recently terminated in the bank's favor.

"I also understand that your so-called 'decision' to grant a renewal of the Riggs Bank charter was the direct result—in fact, the necessary sequel—to the more important decision of Mr. Justice McCoy in the legal controversy referred to. Although the decision last referred to must have been highly satisfactory to the officers and directors of the Riggs Bank, as it was to bankers generally throughout the country, I do not anticipate that they will deem it necessary to circularize the banks of the country, as you have done, even though you might offer them the free use of the Government printing press and the mails for the purpose of placing their side before the public. They are not in politics and you are

"They can assume that the bankers of the country and the people generally are sufficiently informed at present as to the respective merits of the controversy. If any lingering doubt remained of your personal and political animus in the matters in controversy between your office and the Riggs Bank, your pamphlet, distributed so widely at the expense of the taxpayers, would remove such doubt. Moreover, it furnishes final and conclusive proof that the decision of Mr. Justice McCoy was a full and clear reflection not only of the laws and the equities in the case but of public opinion as well.

"The bank of which I am president is one of the few State banks in North Dakota with sufficient capital to be eligible under the law for admission into the Federal Reserve System. In banking capital, less investments in real estate, it is in third place among the more than 650 banks now operating under our State law. The officers and directors of the Federal reserve bank of the ninth district have repeatedly invited and urged us to join and have frequently asked our objection to joining. We are fully conscious of the great benefits to trade, industry, and investments, as well as the business of banking specifically, that are possible as a result of the Federal Reserve System if administered wisely and kept free of personal and political influences, and we would gladly pay our pro rata share of the expense of maintaining the system, which is now being borne by the national banks exclusively.

"We are conscious, too, as all must be, including yourself, that the reserve-bank system will not reach its full measure of usefulness while more than three-fourths of the country's banks remain outside, and we look with misgivings, as you must, on the numerous conversions of national banks into State banks now taking place throughout the country, which must result in a further weakening of the Federal Reserve System. There must be good and sufficient reasons for these numerous conversions that are taking place, and there must also be reason why eligible State banks, except in a very few isolated cases, are not joining.

"The writer of this letter is a Democrat, his predecessor in the office of president was a Democrat, and four of our nine directors are Democrats, which is a larger proportion than is usual in this overwhelmingly Republican State. We give full credit to the present Democratic administration for placing the Federal reserve law on the statute books and for the honest and patriotic intention of President Wilson to make the system a success.

"But we have no present intention of joining the Federal Reserve System, nor of converting into a national bank, and our principal reason for deciding to remain outside and of continuing to operate as a State bank is John Skelton Williams, the present Comptroller of the Currency, from whose authority we are now happily and wholly free, and we intend to remain so."

THE DEMOCRATIC LEADER, MR. KITCHIN, OF NORTH CAROLINA.

The Members of the House of Representatives who heard the Democratic leader tell the story of how there was an attempt by the Democratic administration to force him to change front on the naval appropriation bill, really enjoyed his vigorous protest. But when they were given the opportunity to read his revised remarks as published in the CONGRESSIONAL RECORD, many days afterwards; after his indignation had been somewhat assuaged, the conclusion was that he was simply "bombastes furioso," like "sounding brass and a tinkling cymbal," or "great cry, and little wool."

The following article taken from the New York Sun entitled "Criminal perfection of virtue," shows how the intelligent press of the country views the weakness of the position of the Democratic leader from North Carolina:

CRIMINAL PERFECTION OF VIRTUE.

The Hon. CLAUDE KITCHIN, whose smile is like the May day sun wooing the violets to bloom, can frown too, aye, and bite. He withheld from the RECORD for purposes of cooling his speech on the Senate amendments to the Navy appropriation bill, yet after several days he printed as part of that speech this hot stuff:

"I believe I said it was criminal for this House to vote upon a proposition that would take hundreds of millions of dollars needlessly out of the Treasury through the proposition presented by the gentleman from Pennsylvania [Mr. BUTLER]. And yet in two short months the chairman of the Committee on Naval Affairs, the Secretary of the Navy, and the President and most of my fellow Democrats want me to get up now on this floor and eat my words and say that the program of the gentleman from Pennsylvania and the Republicans, which they induced me then to denounce as criminal recklessness, is now the very perfection of virtue and patriotism."

Well, well! How much longer than two months does this hotspur from Scotland Neck expect the White House and the Navy Department to maintain that what was "criminal" had not yet become "the very perfection of virtue"?

THE TARIFF.

The tariff views of the President seem to have changed. But I have not determined that he is a sincere protectionist. But I am of the opinion that the President regards the Underwood tariff law as a failure as a revenue producer.

Believing that the views of the New York Sun upon a recent colloquy between Representative LONGWORTH and Representative KITCHIN, the Democratic leader, would be interesting, I append the same:

Representative KITCHIN, Democratic leader in the House, vainly resents Representative LONGWORTH'S assertion that Woodrow Wilson has become a protectionist. Why should Mr. KITCHIN doubt it? Was not Mr. Wilson elected on a tariff for revenue only platform? Does not this constitute for him a valid reason for espousing the principle of protection?

The Baltimore platform pledged Mr. Wilson to the principle of a single term. He is a candidate for a second term. The Baltimore platform indorsed the principle of discrimination in favor of American ships using the Panama Canal in the coastwise trade. Mr. Wilson made it his high duty to put American ships, in this respect, on a plane with all other ships. The Baltimore platform denounced extravagance in Government expenditures, and promised economy. Mr. Wilson has tolerated, encouraged, and fostered every extravagant proposal that has been made.

Mr. LONGWORTH is unquestionably right. Mr. Wilson has abandoned the Democratic faith on the tariff. By what other means could he demonstrate that very frank and very sincere nature he so fondly exhibits to his countrymen?

CANADIAN RECIPROCITY WHICH EVERYBODY THOUGHT WAS DEAD WAS GIVEN LIFE AND LIFE ABUNDANTLY BY THE UNDERWOOD TARIFF ACT.

I append herewith statements showing imports of Canadian products competing with products of American industries and American labor. This table is from official sources, and was taken from Foreign Commerce and Navigation for 1915, one of the recent compilations made by the officials of the Wilson administration. The Canadian Government rejected reciprocity as proposed by the United States. But the Underwood tariff law, with its free-trade provisions, gave to the Canadian Government a better opportunity to capture our markets than even the rejected reciprocity act proposed.

I call the attention of the Democratic Members of the House and the country to these very suggestive figures. Does the Underwood tariff act defend and protect American farmers and American interests? I answer emphatically, "No."

*Imports of Canadian products competing with products of American industries and American labor, fiscal year ending June 30.*

| Articles not enumerated | 59,429 | 96,348 | 442,667 |
| Total | 60,648,356 | 100,980,282 | 102,415,998 |

NOTE.—Of the 120,571,180 worth of imports from Canada in 1913, $64,006,573, or 53 per cent, came in free of duty. Of the $160,689,709 worth of imports in 1914 (nine months Underwood law), $115,040,442, or 71.5 per cent, were admitted free. Of the $159,571,712 worth of imports in 1915 (Underwood law—war period), $135,784,408, or 86 per cent, were admitted free. In 1916 we imported from Canada $204,018,227 worth of products, and at the rate the percentage of free goods was increasing it is safe to say that $185,000,000 worth of these goods paid no revenue whatever to the Government. In other words, our imports from Canada of duty-free goods during the fiscal year 1916 was over 50 per cent greater than the total value of our imports from Canada, both dutiable and free, during the fiscal year 1913, under the Republican law. Total exports of Canada to Great Britain for the Canadian fiscal year ending in March, 1916, were $452,000,000, compared with $187,000,000 the year before. With the establishment of peace Canada can direct her enormously increased energy toward extending the market for her products in America.

*Imports from and exports to Canada.*

[Fiscal years.]

| | 1913 (Payne law). | 1914 (9 months Underwood law). | Underwood law. | |
|---|---|---|---|---|
| | | | 1915. | 1916. |
| Imports | $120,571,180 | $160,689,709 | $159,571,712 | $204,018,227 |
| Exports | [1] 415,449,457 | 344,716,981 | 300,686,812 | [2] 466,884,415 |
| Trade balance | 294,878,277 | 184,027,172 | 141,115,100 | 262,866,188 |

[1] Peace products. [2] Large proportion, war products.

Forty millions dollars increase in our imports from Canada, 1914 over 1913, and $71,000,000 loss in exports; $39,000,000 increase in imports, 1915 over 1913, and $115,000,000 loss in exports; $83,500,000 increase in imports, 1916 over 1913; exports $51,000,000 greater; large proportion of them being munitions of war. The fact that shipping was tied up by the war had relatively little, if any, effect on Canadian trade with us.

## Naval Appropriation Bill.

## EXTENSION OF REMARKS

OF

## HON. WILLIAM S. VARE,

OF PENNSYLVANIA,

IN THE HOUSE OF REPRESENTATIVES,

*Tuesday, August 15, 1916.*

Mr. VARE. Mr. Speaker, I have been strongly in favor of the present naval bill and have worked for it and now vote for it because I believe it to be the longest step forward ever taken by any nation in the history of the world. In normal times perhaps it would not have been possible to bring about the almost unanimous support of a naval bill of such large proportions.

The present naval bill provides for the largest naval budget in the history of the United States Government, but I believe that history would condemn the judgment of the present Congress were anything less given in the way of naval preparedness. It has been said here that the present program for the construction of 16 capital ships within three years, including the construction of 4 dreadnaughts and 4 battle cruisers in the immediate future, will put the United States in second position among the naval powers of the world.

It is the belief of the naval experts that this Nation now is in fourth position. Certainly, there is not the slightest doubt that we were in fourth place on July 1, 1914, the last date on which accurate statistics were available. At that time the total tonnage of Great Britain, built and building, was 2,713,756; Germany, 1,304,640; France, 899,915; United States, 894,889.

As a result of the European war, no official information regarding the naval status of belligerents has been obtained since July 1, 1914. All the world knows the strength or weakness of the United States, but we to-day know little of the strength of the European belligerents on the seas. We know that, from the admission of Lloyd George, 1,000,000 men are now actually engaged in British naval construction work. We know that Germany has turned her vast energies toward the upbuilding of her navy as well as the upbuilding of all other war resources.

Japan's methods have been secret, and her announced program for the next two years means very little. It would still leave her far behind the United States if we take into consideration the present program which Congress will authorize. We know, however, that Japan is not relying solely upon the program which she publicly announces, for we have it from our own naval officers, appearing before the committees of Congress, that the plan always has been for the secret substitution of modern vessels for discarded vessels. These substitutions are made without announcement, and Japan's program probably will remain secret unless she becomes involved in war, when she would spring a surprise as great as the one sprung when she matched her strength against the strength of Russia.

UNITED STATES WILL BE NEXT TO ENGLAND.

The loss of ships in naval battles doubtless has partially balanced the abnormal efforts of Great Britain and Germany to add quickly to their naval strength. The best we can do is to take into account the losses of Germany and subtract from them her normal building program. The United States nevertheless will, with the enactment of this program, take its place next to Great Britain among the naval powers of the world. For this all patriotic Americans must rejoice.

The Navy is the first line of defense, and it is absolutely necessary for us to protect both our coasts. We have invested more than $400,000,000 in the Panama Canal, and I regard the present bill as national insurance, not merely for the canal but for the lives and property of American citizens. It will be an insurance against war, an object lesson to foreign nations that they can not encroach upon the rights of the United States without running the risk of a strong nation. It is an evidence of what the United States can do, and such a mobilization of strength should have a large moral effect upon the world and give additional security to the Monroe doctrine.

Without a firm foreign policy the moral influence of a great navy, such as we are now striving to obtain, would be minimized, but with a firm and definite foreign policy such a navy as we are now likely to have within the next three years will be a guaranty for national peace.

No one will question the moral influence and force of President Roosevelt's action in sending the American Navy on a friendly visit around the world at a time when foreign nations were casting jealous eyes toward America. If there had been any intention at that time of provoking a quarrel with the American people, the intention quickly was abandoned at the sight of the American fleet steaming into foreign harbors.

I believe with Washington and most of the early Presidents of the United States that the best assurance of peace is always to be prepared for war. There was a time when life insurance policies were actually considered an incentive to murder. The theory in that unenlightened period was that selfish persons seeking to obtain money might be led to the taking of human life. I believe that those who say that military and naval preparedness lead to war are making a similar argument.

The American Colonies were not prepared for a war with Great Britain. There were no preparations of any kind. Yet the Colonies fought for their freedom. The United States Government was not prepared for the Civil War, yet that war came. This country admittedly was not prepared even for the War with Spain, yet that war came. This has been the history of the world. Germany, with all her military preparation, remained out of war for 40 years, while Great Britain, without preparation except on the seas, had one war within that period. Right and justice and firmness at the right time alone can pre-

vent aggression. Without military preparedness a nation is a temptation to the selfishness of jealous enemies.

PHILADELPHIA BENEFITS.

The city which I have the honor to represent in Congress has been especially interested in this bill because of its possession of the navy yard at League Island, which has offered the Government its best opportunity for naval preparedness. As long ago as December 7, 1914, five months after the European war began, I urged that Congress immediately authorize the Secretary of the Navy to ascertain without delay the types of aeroplanes and hydroplanes, dirigible balloons, and submarines which had demonstrated their superiority in the naval warfare which had taken place at that time. In the bill which I introduced at that time it was suggested that there be an appropriation of $2,000,000 to defray the expenses and expenditures of the establishment of a real air fleet, and I have particularly welcomed the present naval bill because of its provision for an appropriation of $3,500,000 for aviation under the direction of the Secretary of the Navy.

At various times I have introduced measures whose provisions are now included in this naval bill, and I believe that these provisions can not fail to be of benefit to the Nation. There is no question of the fact that it was to the benefit of the Nation as a whole that there should be a large dry dock at the Philadelphia Navy Yard. It was with a view to bringing this about that a bill was introduced for a dry dock at League Island, and after a long wait provision is now being made for this most necessary facility.

Under the terms of the present bill there will be ample authority for the Secretary of the Navy to enlarge the shipways for the construction of battleships at Philadelphia. There could be no better preparedness for an emergency. The private shipyards of the country admittedly have more work, and in an emergency it is essential that the Government should be prepared to do much of its own work.

It was with no sectional motive that I proposed, in the bill introduced immediately after the Edison Board suggested the establishment of a scientific research laboratory, that this plant should be located at the Philadelphia Navy Yard. I advocated the location of the plant at Philadelphia because it seemed to me to be the best location from a national standpoint, fulfilling all the requirements of the recommendations of the board, which were to the effect that the plant be located near, but not at, a large city and on tidewater, where experiments could be made with submarines and other war devices. It was with the same motive that I advocated that the Government armor plant be located at the Philadelphia yard, as it seemed to me to be logical that the Government should plan to manufacture at a point where experience had taught there would be the greatest economy and efficiency.

LAND AT PHILADELPHIA A PLENTY.

It was no accident that led all three of the private armor-plate manufactories to locate in Pennsylvania. They went there because of favorable surroundings and conditions. Plentiful raw materials and the good labor market led them there. The same reasons, I believe, should enable the United States Government to establish both the armor-plate plant and the scientific research and experimental laboratory at the Philadelphia Navy Yard, where ample land is now available on the 900 acres which were turned over to the Government by the city.

It is a matter of pride to the city of Philadelphia to know that this bill, giving national insurance, will measurably increase the importance of the Philadelphia Navy Yard, not merely because this means additional employment for the working people of Philadelphia, but because they wish to contribute their share to national preparedness.

In the present naval bill there are provisions for an investigation of fuel oil and gasoline adapted to naval requirements and for the extension of a naval fuel oil and equipment plant at League Island, for which allowance of $60,000 is made. There is provision for the erection and equipment of a plant for the manufacture of projectiles on a site to be located by the President, for which $705,611 is made available.

There is to be an armor-plate plant for which an expenditure of $11,000,000 is to be made and the site of which is to be selected by the General Board of the Navy. There is a provision for the purchase of ground adjoining the quartermaster's depot at Philadelphia and for the erection thereon of an addition to the depot at a cost not to exceed $175,000. There are provisions for a ventilating system, dredging in the back channel at League Island, and a dry dock, the dry dock to cost not exceeding $3,500,000, and for the beginning of all these improvements there is made available immediately the sum of $583,000.

There is provision made for a research laboratory with a limit of cost fixed at $2,000,000, and of this sum $1,500,000 is to be immediately available. The site for this laboratory is to be selected by the President, and I submit that when such selections for this and other agencies of preparedness are made, the location and facilities of the Philadelphia Navy Yard should be given most careful official inquiry and consideration.

There is no question of the advantage that would accrue to the Navy from the construction of dreadnaughts at the Philadelphia Navy Yard. It has been frequently charged that the construction of ships at Government yards is more expensive than construction at private yards, but the Philadelphia Navy Yard recently kept well within the estimates submitted for the construction of a transport there, which has been launched. The enlargement of the shipways at League Island will enable the Government to make the necessary changes and provide the necessary equipment for battleship construction.

SHIPWAY ENLARGEMENT NATIONAL NECESSITY.

Inasmuch as the Navy Department is anxious to see one of the next dreadnaughts built at the Philadelphia Navy Yard, I believe that the enlargement of the present shipways has become a national necessity. I do not think this proposition has anything to do with the general question of Government ownership. The Nation should be in a position, however, to build its own battleships and should have the necessary equipment for such a purpose. If the United States were plunged into war to-day, it would be difficult to get private yards to leave unfinished all the work now on their ways in order to construct new transports and warships. The Government should be fully equipped to do at least part of the work.

There is no longer any doubt that there will be need not merely for the proposed Government armor-plate plant but for all the existing private plants as well. The present naval program, calling for 157 ships, at a conservative estimate will require four times as much armor plate as has been needed in previous years. The Government plant will merely take care of the surplus. There will be such large requirements that I anticipate all the existing plants will be kept working at full capacity.

Pennsylvania is the home of the armor-plate industry. All of the present factories have found their present locations in that State good and profitable ones, due to the many natural advantages found in that section. A commission, composed of Chairman PADGETT, of the Naval Affairs Committee; Senator TILLMAN; and Admiral Joseph Strauss, of the United States Navy; in their report mentioned Philadelphia, and Philadelphia alone, as the logical site for the proposed plant.

I believe the Government plant, located at Philadelphia, under the same conditions as to labor market and nearness to the source of supplies, could establish a fair rate of comparison of cost price. There is ample room at the Philadelphia yard for this plant, necessitating no expenditure for a site.

The Bethlehem, Midvale, and Pennsylvania plants are located in Pennsylvania. These are the three plants making all the armor plate for the Government at the present time. There is no intention on my part to hurt this or any other industry, and the part of the supply which I would have the Government plant manufacture would be that in excess of the present output of the private corporations.

The present bill, I believe, provides adequate naval preparedness not only on the sea but at the naval stations on land. It will be of immeasurable importance in preserving the peace of the Nation, and I think that the price we are paying for this national insurance is insignificant in comparison with the wealth of the Nation and the honorable results that will be secured. [Applause.]

**Revenue.**

## SPEECH

OF

## HON. CLAUDE KITCHIN,

OF NORTH CAROLINA,

IN THE HOUSE OF REPRESENTATIVES,

*Thursday, July 6, 1916.*

The House in Committee of the Whole House on the state of the Union had under consideration the bill (H. R. 16763) to increase the revenue, and for other purposes.

Mr. KITCHIN. Mr. Chairman, the pending measure is a product of the best labor and the best thought and judgment of the Committee on Ways and Means. I am happy to say that

we have been able to frame and present to-day a bill to raise revenue which is an absolutely nonpartisan bill. [Laughter on the Republican side.]

The necessity of this bill is recognized by every Member in the House, Democrat and Republican, Socialist and independent. I said it was nonpartisan, because there is not an item of revenue in the bill that has ever been made a partisan question or a partisan issue.

We tax incomes. That has never been a partisan question. While the Democratic Party is the author of income-tax legislation, yet there has never been an issue made on that question. When the income-tax provision of the Underwood bill was under consideration in the House, or, rather, in the Committee of the Whole, every Democrat and at least two-thirds of the Republicans favored it.

We have levied a tax upon the transfer of estates, commonly called an inheritance tax. An inheritance tax never has been an issue between the parties or a partisan question. Republican State platforms as well as Democratic State platforms have approved and indorsed inheritance taxes. Why, the first inheritance tax ever put upon the statute books of this country was put there by the solid vote in Congress of the Republican Party in 1898. To supplement custom duties, as he knew no tariff would be sufficient to produce the increasing needs of the Treasury, Mr. Taft in his inaugural address advocated a Federal graduated inheritance tax. The Payne bill as it was reported to and passed by the House contained an inheritance-tax provision. It was stricken out in the Senate. So, gentlemen, an inheritance tax is not, and ought not to be, a partisan question. You can make it so by your vote on the pending bill.

We levy a tax upon the manufacture of munitions of war, specifying what the munitions of war are. That is not and ought not to be a partisan question. But no doubt there will be some Republicans here who will vote against this bill on account of the munitions tax because they fear that some munition makers will protest or criticize them for helping to put a tax on the manufacture of their products.

The special taxes which we raise are taxes similar to those contained in two Republican statutes, one during the Civil War and one in the Spanish-American War tax act. So they ought not to be made a partisan question.

We have a tariff commission provision in this bill. Now, certainly no Republican can vote against a bill with a tariff commission in it. [Laughter and applause.] Two Republican platforms have demanded it, and when the Underwood bill was under consideration the Republicans of the House offered a motion to recommit with instructions that nothing be done with the tariff until a tariff commission had reported. So the Republican Party is committed to a tariff commission. I must confess that until about two or three months ago the Democratic Party, so far as my learning and information went, was opposed to it. [Laughter.]

Mr. HILL. Mr. Chairman, will not the gentleman kindly explain further and inform us what brought about the change?

Mr. KITCHIN. Why, the gentleman has not read the Democratic platform adopted in St. Louis. [Laughter and applause.]

The bill contains a dyestuffs proposition, really a protection to the dyestuffs industry of the United States, reported out by a Democratic committee [laughter]—a temporary protection that neither loses revenue to the Government nor affects the ultimate consumer, the two concerns of the Democratic theory of the tariff. Then there is an unfair competition provision in this bill which ought to be good Republicanism and good Democracy. The Republican Party, in all of its 50 years of tariff writing, never had the wisdom and the judgment and the patriotism to incorporate in any of its legislation an unfair competition proposition. We believe that the same unfair competition law which now applies to the domestic trader should apply to the foreign import trader.

No Republican can afford in good conscience to vote against this bill. He ought to indorse it. I mean every Republican except the old-time reactionaries like my friend from Connecticut [Mr. HILL], and my friend from Michigan [Mr. FORDNEY], and my friend from Pennsylvania [Mr. MOORE]. Outside of these three gentlemen, and just a few who gravitate to them, not a patriotic Republican on that side can afford to vote against this bill, and before this debate closes I am going to show you why. But I can see some reason why a good, old-fashioned tariff-reform Democrat like some of us can object to some features of the bill. In spots there is just a little too much Republicanism in it. [Laughter.] Seriously, now, gentlemen, it was the thought and the hope and the effort of the Democratic members of the Ways and Means Committee to present a bill here that was nonpartisan and that would command the support of a majority in both parties on this floor, because we recognize the fact, which every intelligent man here recognizes, and which every honest man will acknowledge, that the necessity for this extra revenue legislation was created by the joint action of both Republicans and Democrats in advocating and voting for the huge increase of appropriation for "preparedness."

If we had not made the fabulous increases in the Army, Navy, and fortifications bills, for which Republicans and Democrats alike voted, we would not be compelled to raise an extra dollar by this or any other bill. The present revenue laws would have yielded every dollar necessary to take care of every appropriation passed by this Congress. [Applause.] If a majority of the Republican Members had had their way and the Congress had adopted the military and naval program for which a large majority of them voted, it would have required over $100,000,000 more than is provided for in this bill. If a majority of the Republicans in this House had had their way and the proposition which they submitted to the House and for which they voted was enacted into law, the Army and Navy appropriations alone for which we would have had to provide would have amounted to over $50,000,000 more than has ever been collected in any one year in the history of this Government from all sources of taxation. [Applause on the Democratic side.]

The total appropriations for all purposes now in sight, exclusive of what may hereafter be appropriated for any Mexican eventualities, amount, in round numbers, according to the Treasury Department's estimates, to $1,579,000,000. In that amount there is included, according to these estimates, $125,000,000 made necessary by the Mexican situation. To take care of this $125,000,000 included in the total amount which I have just mentioned, we propose to do what this Nation and all other nations have always done under similar circumstances—issue bonds. We could not provide in a revenue bill for any appropriation made necessary for hostilities or threatened hostilities with any country, for the reason that instead of the $125,000,000 included in the appropriation on account of the Mexican situation it may be unnecessary to expend one-third or one-fifth of that amount. If peace and the prospect of permanent peace are restored, we will not have to expend that. So, then, it would be unwise, unnecessary, and an unjust burden upon the taxpayers if we should levy and collect $125,000,000 of taxes by this or any other bill for that purpose, when if peace is fully restored and all complications are removed we may not have to expend more than $25,000,000 of that. In that case there would be $100,000,000 of unnecessary burden. On the other hand, if we should, unfortunately—I hope, as every other patriotic man in and out of this House hopes, that we will never have any real hostilities with Mexico or any other nation [applause]; but if we should, unfortunately, be brought to hostilities, then there is no possible way to provide for them in a revenue bill, because we will not know whether hostilities will last two months, six months, or years, and we will not know whether it will take $125,000,000, $250,000,000, or $1,000,000,000. Such contingencies could not be taken care of in a revenue bill.

We propose, therefore, as I said before, to finance any possible trouble with Mexico or any other nation as this nation and all other nations have always financed such emergencies—by the issue of bonds.

Mr. HILL. Will the gentleman yield for a question? It is a very important question for the financial situation of the country and for the question of revenue. Am I trespassing if I ask the gentleman if he speaks authoritatively in regard to the bond-issue proposition?

Mr. KITCHIN. What does the gentleman mean by "authoritatively"?

Mr. HILL. I mean is it approved by the administration? I think it is a fair question, but if the gentleman does not wish to answer, of course he need not.

Mr. KITCHIN. I have never talked with the President about this matter. In fact, he does not talk with me much, anyway, nowadays; he is too busy with bigger things. [Laughter.] But I can say that I have talked with somebody that does talk with the President almost daily, and I can say that this is the position of the administration. It could not be otherwise, and it would be the position of a Republican administration or a Progressive administration. I feel justified in asserting that that is the purpose and position of the administration, and I would say of Congress, the Senate, and the House, the Republicans and Democrats.

The inquiry now is, How much additional revenue is required to be raised, and how does this bill raise it? In estimating the actual disbursements it is proper to deduct the sinking-fund requirement included in the permanent appropriations at $60,727,000 for the fiscal year 1917, and also the postal appropriations estimated at $324,723,000, payable from postal rev-

enues. It is also safe to deduct, as is the custom in making such estimates of expenditures from the total estimated appropriations remaining after these deductions, an amount equivalent to 5 per cent of such total, as experience shows that about 5 per cent of the appropriations calling for the payment of money is unexpended at the end of each fiscal year. It has been the custom in making estimates of amount of required revenue to make the sinking fund and the 5 per cent deductions, as explained. This was done by the committee that reported the Payne bill in making estimates under that bill.

We have prepared a statement showing these deductions, including the estimate of $125,000,000 to be met by bond issue, the estimated ordinary disbursements for the fiscal year ending June 30, 1917, and the estimated receipts under existing laws, together with the estimated additional revenue required to meet the ordinary disbursements for the year, which I shall read:

| | | |
|---|---|---|
| Total estimated appropriations for the fiscal year ending June 30, 1917 | | $1,579,000,000 |
| Deduct amount, included in the estimate of total appropriation, because of the Mexican situation, to be financed by bonds | $125,000,000 | |
| Deduct sinking-fund requirement | 60,727,000 | |
| Deduct postal appropriations, payable from postal revenues | 324,723,000 | |
| | | 510,450,000 |
| Balance | | 1,068,550,000 |
| Deduct 5 per cent of the balance, the amount estimated to be unexpended | | 53,428,000 |
| Amount for which it is necessary to provide revenue | | 1,015,122,000 |
| Estimated revenue under present laws: | | |
| Customs | $230,000,000 | |
| Internal revenue— | | |
| Ordinary | 303,000,000 | |
| Income tax | 120,000,000 | |
| Emergency | 41,000,000 | |
| Miscellaneous | 54,200,000 | |
| | | 748,200,000 |
| Estimated excess of disbursements over receipts | | 266,922,000 |

We will need, therefore, to meet the fiscal year's appropriations $266,922,000 more than the present revenue laws will produce.

This bill raises first by the income tax, extra I mean, $107,000,000; by the inheritance or estate tax for the first year, $17,000,000; and after that it is estimated that it will raise $54,000,000 annually; from the tax on the manufacture of munitions of war it is estimated that we will raise $71,000,000; and from miscellaneous taxes, additional $2,000,000, which total $197,000,000, leaving $69,922,000 necessary to make good the $266,922,000 for which we are to provide.

Now, instead of levying a tax in this bill for this remaining $69,922,000, we propose to take that amount from the general balance fund, which was the largest on the 30th of June, 1916, of the last fiscal year by many million dollars than it has been on the 30th day of June of any year for the last eight years. [Applause on the Democratic side.] We can take this $69,922,000 from the general balance fund, and then leave in the disbursing offices to their credit, $60,000,000 as operating balances, and still have left over $100,000,000 in the general balance fund.

What makes necessary this large extra tax levy? Your votes, gentlemen on the Republican side, and your votes, gentlemen on the Democratic side. We have appropriated, or will appropriate, $274,000,000 extra for preparedness, taking the bills as the Senate has reported them—and it has been my observation during this session, and I am afraid it is going to be my observation during many more sessions, that when you holler "preparedness," when you begin to shout that deceptive euphenism, there is no prospect of reducing a single dollar of appropriation in a single bill that comes from the Naval Committee or the Military Affairs Committee or the Fortifications Committee, either in the House or the Senate. Now, these extra appropriations for which revenue will be raised by this bill are exclusive of the $125,000,000 appropriation that is carried in the Army bill, the urgent deficiency bill on account of the Mexican situation. The increase in the naval bill over that of last year, which was the largest appropriation ever made by Congress, is $165,000,000. Now, that is the increase in the naval bill as reported out of the Senate, and which will pass there and pass here, although it will pass over my vote. I shall not vote for such an enormous increase. [Applause.] The increase in the military bill over last year, even as it left the House, is $80,000,000, and inclusive of the Mexican trouble appropriation the Senate put on over $10,000,000, making it over $90,000,000.

The fortification bill as it passed both Houses increased the appropriation over last year $19,000,000 and some hundred thousand, the total amount being three times as large as that of last year, when our experts told us that we then had the best fortifications in the world. That makes $274,000,000 extra appropriations, exclusive of the Mexican situation appropriation. Now, think of it, gentlemen, here is $274,000,000, $88,000,000 more than the amount raised by this bill and the $69,922,000 to be taken from the general balance fund added. In sane moments this would seem alarmingly reckless. Four-fifths of all the Republicans voted not only for these increases, but for at least $150,000,000 more. Now, gentlemen of the Republican side, after you have voted for these enormous, these fabulous increases, for military, naval, and fortification purposes it seems to me unpatriotic and unmanly for you to refuse to help finance by a wise, equitable bill like this such appropriations. [Applause on the Democratic side.]

Where would you gentlemen get the money if you were in power, and how would you raise the necessary cash? If the Republicans in this House know a better way and a wiser way and a more patriotic way to get this $274,000,000 extra appropriation for which they have voted, then it will be their duty, as it ought to be their pleasure, to make a motion to recommit with instructions to put their measure into the bill and let it go into the RECORD, so that all the people can know their method of levying and producing this extra amount of taxes. [Applause on the Democratic side.] If you gentlemen of the Republican side will offer an amendment or a motion to recommit, setting out a specific method as a substitute for the method of the pending bill, I pledge you no point of order will be made against it, and you shall have the right of going on record for it.

If you do not do that, but quibble and protest and complain and vote against this revenue bill, you exhibit a weakness and a want of manliness that are unworthy of the Republican Party in the House or in the country. Can you raise it by the tariff? Let us see. Let us assume for the sake of argument that the Payne-Aldrich Act, instead of the Underwood Act, were on the statute books and that this war had prevented not a dollar of importations less than came in the last year of the Payne Act—that is, that we had the same amount of importations. What would be the result? The amount of tariff customs the last year of the Payne Act was $318,000,000, the amount of corporation tax collected under the act was $35,000,000. Both together produced a total of $353,000,000. Under the Underwood Act we will raise from customs $210,000,000 for this fiscal year ending June 30, 1916, during the war, and $124,000,000 from the income tax, or a total of $334,000,000—only $19,000,000 less under the Underwood Act this fiscal year than was raised the last year of the Payne Act unhampered by war. Since this war our customs duties fell from $292,000,000 for year ending June 30, 1914, down to $210,000,000 for this fiscal year. The Payne Act, customs receipts, and corporation tax would have raised, even if it produced the same amount of revenue during the war as it did before, only $19,000,000 more than the Underwood Act did. Give the Payne Act, therefore, the benefit of the assumption that dutiable importations under it would not have been hampered to the extent of a penny by the war, then you would have to raise over $255,000,000 extra, and how could you raise it? Oh, yes; even in the face of these facts they say, "Let us get it by increasing the tariff." No Republican heretofore has ever desired to increase the tariff for the purpose of raising revenue, but for the purpose of keeping goods out of this country, so that they could not pay any revenue at all. [Applause on the Democratic side.] They have always claimed that with a low so-called "free-trade" tariff like the Underwood Act, our country would be flooded with foreign goods, and yet under the Underwood tariff during the war the dutiable imports have fallen off over $125,000,000 a year, decreasing thereby the customs revenue. They would have the country believe—they are not trying to fool us, they have too much sense for that, they do not even try to fool themselves, but they want to fool somebody else—they would have the people believe that if you increase the tariff and make importations more difficult and more costly more goods would come in, and therefore you would have more customs.

You would not collect a dollar more by any increase in the tariff such as has heretofore been enacted by the Republicans.

The imports this fiscal year will be about $400,000,000 more than the last year of the Payne Act.

The increase was in articles on the free list. The importation of dutiable articles largely decreased. I call attention to the fact, which my Republican friends always forget in speaking of the big increase of imports under the present tariff act in spite of the war, that the increase is owing largely to the advance in values on account of the war, rather than to an increase in quantities, and to the further fact that of this increase of imports $200,000,000 are of articles which were on the free list in the Payne Act and retained in the Underwood Act.

If the Payne Act had been on the statute books during this war and even if it had produced as much revenue annually as it

did in 1913, the last and best year, it would amount to $353,000,000, $318,000,000 from customs and $35,000,000 from the corporation tax. This is only $19,000,000 more than the Underwood Act, customs, and income tax will yield this year, ending June 30, 1916. You would then lack $250,000,000 of having enough to finance these extra appropriations, which you would have to raise from other sources than the tariff. How would you do it? The truth is, with your higher tariff rates we would have a much larger decrease in the dutiable articles, and therefore a much smaller amount of customs receipts.

As I some time ago on the floor demonstrated, the Payne Act, with its corporation tax, if on the books during the war, would have yielded forty millions less revenue a year than the Underwood Act, with its income tax, is now yielding.

We all know that my friend from Pennsylvania, Mr. MOORE, and my friend from Michigan, Mr. FORDNEY, make statements here that would go as far to sustain a high protective tariff as any two men on earth, and yet neither one of them would dare to point out how they could raise $50,000,000 or even $10,000,000 more to supply this $274,000,000 by any kind of tariff legislation written upon any theory of the Republican Party.

Mr. JOHNSON of Washington. Mr. Chairman, will the gentleman yield?

Mr. KITCHIN. Yes.

Mr. JOHNSON of Washington. Would it not raise a little more revenue if about $3,000,000 a month in value of Japanese notions that come in duty free at the Puget Sound district were subject to customs duties?

Mr. KITCHIN. Oh, Japanese notions! Does the gentleman know how much the difference is between the Underwood tariff and the Payne tariff on the great bulk of articles—at least 80 per cent—that are imported from Japan?

Mr. JOHNSON of Washington. What is the difference?

Mr. KITCHIN. Not a bit; not a bit. Practically all Japanese imports are on the free list in both acts. [Laughter and applause on the Democratic side.]

Mr. JOHNSON of Washington. Does the gentleman mean to say that there is no difference in the duty on shirts made in Japan and shipped in under the Underwood bill?

Mr. KITCHIN. Why, there has not been a shirt shipped in here from Japan.

Mr. JOHNSON of Washington. Or caps?

Mr. KITCHIN. Nor caps. I have heard this Japanese import-flood question——

Mr. JOHNSON of Washington. I have one, purchased here.

Mr. KITCHIN. You have one? Well, why in the name of thunder did you ever have one brought in to the detriment of American industry? [Applause and laughter on the Democratic side.]

Mr. JOHNSON of Washington. Will the gentleman yield further?

Mr. KITCHIN. I will tell the gentleman what is a fact. If, like the gentleman from Washington, I was willing to sacrifice the interests of a hundred million Americans by a protective tariff, and make them pay a billion dollars extra to a few thousand favorites in the name of American industry, I would be blessed if I would be so close and stingy as to go and buy a little 10-cent Japanese cap and deprive our home industry of the sale and profit. [Applause and laughter on the Democratic side.]

Mr. JOHNSON of Washington. Will the gentleman yield for one more question?

Mr. KITCHIN. The gentleman gets me off my subject.

Mr. JOHNSON of Washington. Does not the gentleman think it would be a good thing to shut off the importation of Chinese eggs?

Mr. KITCHIN. Do you buy Chinese eggs, too? [Laughter.]

Mr. JOHNSON of Washington. No.

Mr. KITCHIN. Let me tell you where to buy your eggs. [Laughter.]

Mr. JOHNSON of Washington. Since the passage of the Underwood Act, we have endeavored to control the matter by State law.

Mr. KITCHIN. I know something about eggs. [Laughter.] I have studied the egg question. I used to call my friend from Iowa the "hen-egg statesman of the West," for he has studied the hen egg and the chicken business more than anybody in the House except myself. [Laughter.]

Mr. JOHNSON of Washington. One thing. The bulk of the imports at the Puget Sound district are running along month after month 96 per cent free of duty and about 4 per cent paying duty, not enough to pay for sweeping out the customhouse.

Mr. KITCHIN. Is the gentleman talking about eggs?

Mr. JOHNSON of Washington. About every form of oriental imports.

Mr. KITCHIN. Chinese eggs?

Mr. JOHNSON of Washington. Not entirely eggs, but enough Chinese eggs were imported to make a big dent in the egg business of the western country.

Mr. KITCHIN. When the gentleman refers to the large percentage of free imports from Japan, let me again set him straight by reminding him that practically all articles coming in now under the Underwood Act free of duty came in under the Payne Act free of duty. The free lists of both acts contained them. At least two-thirds of all the imports from Japan for this fiscal year alone consisted of two articles—raw silk and tea—both of which have been on the free list in all tariff acts of both parties for the last quarter of a century.

I tried to show the gentleman from Washington several months ago that the State of Washington was more prosperous under a Democratic administration than ever before in the history of the country.

I really did not intend to get to a little subject like eggs, but the gentleman reminds me of it. I see the gentleman from Iowa here. When the Underwood bill was under consideration the gentleman from Iowa led the fight for a high tariff on eggs. Why, he said if we put eggs on the free list it would run out of Iowa all the hens, roosters, and chickens. [Laughter.] He said that they could not lay eggs in Iowa under the Underwood bill in competition with the Canadian hen; that the Canadian hen would be inspired by the hope of a monopoly, get a hip on her, and lay more eggs than ever before and flood this country with them, and the farmers in the egg business in Iowa, the greatest egg State in the Union, would just all go into bankruptcy. Well, you knew and I knew it was the same old Republican prophecy of disaster and ruin. Remembering this prophecy, I watched the statistics, and the year following the Underwood Act more eggs by nearly 20 per cent were laid by the American and Iowan hen than in all the history of egg production. [Applause.] Just like we Democrats said, if you put on a little competition to spur any industry, even in the hen-egg industry, you are going to have a success. [Applause on the Democratic side.] As soon as we put a little spur on the hen in Iowa and the other States she went to work, and the old Canadian hen, before the year was out, swore that the American hen had found a way to lay two eggs a day. [Laughter.] And my friend from Iowa [Mr. GOOD] has not had the audacity to mention hen eggs this whole Congress. [Laughter.] He put it off on the gentleman from Washington [Mr. JOHNSON]. [Laughter and applause on the Democratic side.]

Mr. JOHNSON of Washington. I asked the gentleman something about imported Chinese eggs.

Mr. KITCHIN. The gentleman says Chinese eggs——

Mr. JOHNSON of Washington. Yes.

Mr. KITCHIN. Why in the mischief do you Republicans eat old, stale Chinese eggs out there on the Pacific coast instead of the good, fresh Iowa eggs? Help the hens of Iowa, an American industry! [Applause on the Democratic side.] Do you know that no one in China or America can sell a Chinese egg in the State of Washington unless somebody in Washington wants to eat that Chinese egg and prefers to buy that Chinese egg rather than the Iowa egg or the Washington egg? You good protective-tariff Republicans in Washington can stop fostering the Chinese egg industry, if you wish, without any law by Congress.

Mr. JOHNSON of Washington. Will the gentleman let me answer?

Mr. KITCHIN. I have answered it.

Mr. JOHNSON of Washington. But let me answer it.

Mr. KITCHIN. The gentleman takes up too much of my time. The gentleman is going to have some time.

Mr. JOHNSON of Washington. No; I have none, and I think it is only fair.

Mr. HELVERING. Will the gentleman let me answer the question? There is no way the gentleman from Washington could receive his share of those eggs, because the importation is only two eggs to every five people——

Mr. JOHNSON of Washington. That is two more than there should be.

Mr. HELVERING. And unless the housewife scrambled the eggs the gentleman would be cut out.

Mr. JOHNSON of Washington. Just one other question——

Mr. KITCHIN. Go ahead.

Mr. JOHNSON of Washington. Take another industry, that of butter. Does not the gentleman believe the people of the north Pacific coast should be protected from butter from New Zealand coming into their markets?

Mr. KITCHIN. Now, the gentleman wants a tariff on butter to enable the big butter interests, known as the Butter Trust, to send the price of butter up higher. Does not the gentleman think the price of butter is high enough now? Why in the world does the gentleman from Washington and other protective-tariff Republican gentlemen in his State persist in and insist on fostering the business of the foreigner and refuse to patronize and help build up and maintain American home industry? [Applause on the Democratic side.]

You buy Japanese caps, you buy Chinese eggs, and now you are buying New Zealand butter. [Laughter.] Do like a tariff-reform revenue Democrat—like me—buy American caps, American eggs, American butter. Patronize home industry, like I do. [Laughter.]

But I doubt if a pound of New Zealand butter has come into the United States this year. I do not understand how the gentleman got it into his head that New Zealand is flooding the Pacific coast people with butter. There is absolutely no truth in the idea.

I notice one thing, that since the gentleman and I had a little discussion two or three months ago on the lumber business in the State of Washington he has not mentioned lumber since. He jumped from lumber to eggs. [Laughter on the Democratic side.]

Mr. JOHNSON of Washington. I will be glad to talk about lumber at any time.

Mr. KITCHIN. And now, gentlemen, back to the subject. You could not raise the necessary revenue by the tariff. You know that. How would you raise it? I know how it was raised in the Spanish-American War. You raised it by putting a stamp on mortgages, on notes, on deeds, on grants, on assignments, on gifts, on every possible method of transferring property, on contracts, on checks, on bills of lading, on telegrams, on telephones—stamps on every conceivable thing. If we were to re-enact that stamp act, we would collect over $60,000,000 of the needed revenues and relieve the munition makers and war traffickers of this country of that amount which this bill proposes to make them pay. Do you favor that?

Now, you will not dare to do it. If so, make a motion in Committee of the Whole to substitute the stamp tax of the old Republican act for the munition tax or the increase of income or the inheritance tax. All you could produce by it would be $60,000,000. You would then have over $200,000,000 more to raise. If you believe you could produce sufficient revenues in any other way just as well and wisely as the way we point out, it is your duty and as I said before it ought to be your pleasure to offer such an amendment or to make a motion to recommit with such instructions. But you dare not do it.

It has been suggested by some clever Republicans that Congress should put a tax on coffee and tea. Oh, well; we did not want to do it. It is not the right thing to do. Prices on these articles of food are high enough. But if any Republican wishes to do so, we will give him the privilege of offering an amendment to put a tax on coffee and tea, by which you can raise $30,000,000 of revenue.

How else can you provide this money other than by this bill? You can get it by the issue of bonds. There may be half a dozen Republicans here who will favor in a stand-up vote raising the money by bond issue. This will help Wall Street. This will entirely relieve the munition makers, income-tax payers, and big inheritances. If we issue bonds we will not have to tax them an extra penny. No doubt many of you would like to see somebody else do this, but there will not be more than half a dozen of you who will dare stand up here and go on record that we should raise this $274,000,000 by the issuance of bonds. If so, make your motion to recommit with instructions, or offer it as an amendment, and let the country know how you stand on it. [Applause on the Democratic side.] Were I a betting man, I would bet any amount—and give my winnings to an orphan asylum, or I will give them to the gentleman from Washington [Mr. JOHNSON] to buy American home-laid eggs [laughter]—that there is not a Republican on that side that has the courage or audacity to offer an amendment to put a stamp tax in the bill and raise the $60,000,000 with it, or to put a tax on tea and coffee, or to get the needed amount by issuance of bonds.

Now, gentlemen, how would you raise it? You would not secure it by the method which you employed in the Spanish-American War Act. You can not do it by any Republican revision of the tariff, as I have shown. You would not do it by the issue of bonds. Every Republican here, except possibly half a dozen, knows it would be wrong to get it by bonds, and every Democrat in the House and every patriot in this land knows that it would be cowardly and unpatriotic for this generation to make future generations pay this burden, which is ours and not theirs. [Applause.] It would be a crime for us to put upon our children and our children's children the burden of paying the price for our hysteria. [Applause.] The future, with the help of the war traffickers and jingoes, will furnish oncoming generations plenty of occasions to bear the burdens of their own militarism. Each generation will have its own hysteria to finance. The shipbuilders and munition makers and their hired and interested press will see to this.

Mr. FESS. Will the gentleman yield? This is purely for information.

Mr. KITCHIN. Certainly.

Mr. FESS. The program for the Military Establishment and the Naval Establishment is that it is to be continuous, that in the future years it will not be less; that is what I understood.

Mr. KITCHIN. It will not be less. I am sure it will be more each year, unless Congress will either permit its hysteria to subside or it will have the courage and nerve in the future to stand up against assaults of the crowd of munition makers outside of the Capitol that is beating us black and blue to make provision for them.

Mr. FESS. The question I wanted to ask is: There is a certain amount of this to be raised from munition makers. That would be a great deal more during the war in Europe than after the war closes. Have you made any estimate as to what would be the probable amount to be collected after the war closes?

Mr. KITCHIN. That is a very pertinent question. I think it will be comparatively little. We will, of course, lose a greater portion of it. I will say to the gentleman that two propositions, one in this bill, will more than take care of that loss. After the war ends, within a few years—it perhaps would take several years—normal importations will return, and therefore the customs receipts would increase. I think we would begin to have some increase of dutiable imports within a few months. Instead of receiving $17,000,000, as is estimated for the first year, from the inheritance or estate tax provided for in the bill, we will raise at least $54,000,000 annually thereafter. The return of customs receipts after the war, or the increase in the inheritance tax after the first year, would compensate for the decrease in the amount from the munitions tax. Let me say a word in this connection with reference to the expected yield of the munitions tax. The best experts in the Treasury Department say that we will raise $71,000,000 by it. While others differ with me, I have no idea it will be as much as that. I would say $40,000,000 or $45,000,000. I would say it would not exceed $45,000,000. I think it will be under that. But even if it fell below the estimate of the experts or my estimate, we will have $100,000,000 balance fund untouched to go upon to make it good for the first year. Should we lose all the munition tax after the first year, which we, of course, can not, the increase in the amount of inheritance-tax collection and the gradual increase in customs receipts would more than make good the loss.

Now, gentlemen, as I said, you could not raise the large amount required by any kind of a tariff. You would not raise it by stamp taxes. You would not raise it by bond issues. You would not raise any of it by a tax on tea and coffee. I believe that four-fifths of the intelligent people in the country, Democrats, Republicans, Socialists, or of any other party, would approve the way we propose by this bill to raise it, by an increase of the income tax and by an inheritance tax and by a tax on munitions of war.

You may question, you may doubt, you may say that we have not a proper income tax; that it is too low in some instances, and too high in others; that the exemptions are too high. You may say that our inheritance tax is not just the kind of an inheritance tax you would have written or that somebody else would have written. You may say that the provisions of the munition tax is not framed exactly as you would have framed them or that somebody else would have framed them, but I believe that four-fifths of the rank and file of Republicans in this country would say that these extraordinary taxes to pay for this extraordinary, radical increase in the preparedness appropriations should come mainly from these three sources. If you think any changes should be made that would better or perfect any of the provisions relative to these taxes, we welcome your suggestions and your amendments.

What is the income-tax provision? The present income tax is 1 per cent on net incomes for the normal tax. We double that. We make it 2 per cent. We could not do without it. We had to do it. I did not want to make it anything. I did not want to put a dollar more on the income tax. I did not want to put in an inheritance tax or even a munition tax. Nor did I wish to reenact any of the special or miscellaneous taxes. I was opposed to these enormous appropriations making necessary these extra taxes. But after the administration and Congress, Republicans and Democrats, committed this Government to such appropriation, then it was my duty as a member of the

Committee on Ways and Means, and as a Member of this House, to do the best I could in presenting to this House what I believe to be a wise and just and patriotic measure to finance them. As said, we double the normal tax, which, as in the present law applies to individuals and corporations. The present law imposes a surtax, an additional tax, on the net incomes of individuals like this:

1 per cent additional on incomes over $20,000 and not exceeding $50,000.
2 per cent additional on incomes over $50,000 and not exceeding $75,000.
3 per cent additional on incomes over $75,000 and not exceeding $100,000.
4 per cent additional on incomes over $100,000 and not exceeding $250,000.
5 per cent additional on incomes over $250,000 and not exceeding $500,000.
6 per cent additional on incomes over $500,000.

We changed the rates of that surtax——

Mr. BURNETT. Mr. Chairman, will the gentleman yield?

Mr. KITCHIN. Certainly.

Mr. BURNETT. Does the gentleman mean that he has increased the corporation tax and the income tax, too?

Mr. KITCHIN. Yes; both corporation tax and individual tax. But the surtax does not apply to the corporations; only the normal tax of 2 per cent applies to them. We made no changes in the substance, no material changes in the present income tax law except in the rates. We increased them in order to get the necessary amount of revenue. I will now give the rate of the surtax or additional tax provided in the bill:

One per cent additional on incomes over $20,000 and not exceeding $40,000.
Two per cent additional on incomes over $40,000 and not exceeding $60,000.
Three per cent additional on incomes over $60,000 and not exceeding $80,000.
Four per cent additional on incomes over $80,000 and not exceeding $100,000.
Five per cent additional on incomes over $100,000 and not exceeding $150,000.
Six per cent additional on incomes over $150,000 and not exceeding $200,000.
Seven per cent additional on incomes over $200,000 and not exceeding $250,000.
Eight per cent additional on incomes over $250,000 and not exceeding $300,000.
Nine per cent additional on incomes over $300,000 and not exceeding $500,000.
Ten per cent additional on incomes over $500,000.

This bill leaves the income exemption at $3,000 for unmarried persons and $4,000 for married persons or heads of families. No return of incomes not exceeding $3,000 will be required, as provided in the present law.

We will raise by this increase of the income tax, normal, and surtax $107,000,000 additional. The inheritance or estate tax provided for in the bill is a new proposition so far as the Federal Government is concerned, but there are 42 States in the Union that have some kind of an inheritance tax. The total amount collected by the estates was only $28,217,000 last year, and I believe the year before $26,000,000. We tax the transfer of the estate. We propose to allow as deductions from the gross value of the estate all the debts and expenses of administration, and in addition an exemption of $50,000. No returns are to be made if the estate does not exceed $50,000 after the deduction for all valid claims and expenses is made. While I am giving the rate of this tax, keep in mind that net estate in the bill means the estate after deducting all valid claims and expenses, and also the $50,000 exemption. Here are the rates:

One per cent of the amount of the net estate not in excess of $50,000.
Two per cent of the amount by which the net estate exceeds $50,000 and does not exceeed $150,000.
Three per cent of the amount by which the net estate exceeds $150,000 and does not exceed $250,000.
Four per cent of the amount by which the net estate exceeds $250,000 and does not exceed $450,000.
Five per cent of the amount by which the net estate exceeds $450,000.

Mr. MILLER of Minnesota. Mr. Chairman, will the gentleman yield?

Mr. KITCHIN. Yes.

Mr. MILLER of Minnesota. Are not these rates abnormally low as compared with the rates in other countries?

Mr. KITCHIN. They are lower than the rates in some other countries.

Mr. MILLER of Minnesota. Will the gentleman state why they are not made larger?

Mr. KITCHIN. Because most of the States, 42 in number, levy an inheritance tax, and that is one of the sources of the States' income, and we did not desire to go any higher. And another reason the rates would produce the amount that we thought would be necessary to collect by that tax, and we did not wish to burden estates more than was necessary.

Mr. MILLER of Minnesota. If the gentleman will permit me, I will say my recollection is that in England, France, and Germany, prior to the outbreak of the war in Europe, when I took occasion to study this question, I found the taxes increased as they got up in sums to as much as the gentleman just named as high as 15 or 20 or 25 per cent. That really met with my cordial and hearty approval. I wondered why the committee did not propose to increase the rates on the inheritance tax rather than increase them so high upon the income tax.

Mr. KITCHIN. I will say to the gentleman that while I do not now recall the exact rates, he is right in saying that the other countries levy a higher rate than is proposed by this bill. The British inheritance or "death duties" is considerably higher than this. For its fiscal year which ended March 31, 1914, Great Britain raised $132,000,000 from such taxes. With half the population and half the wealth that we have, she collected that amount of taxes, while we will raise only $54,000,000. That is all we needed. Perhaps in the future, when the gentleman's party or my party writes another revenue bill to finance further increased appropriations for preparedness, we will have to raise it higher and impose many additional taxes. But in Great Britain, of course, the subdivisions of Government do not raise any inheritance tax like the States in our own country.

Mr. MILLER of Minnesota. But they do in Germany.

Mr. KITCHIN. I think the gentleman is correct, but the general tax is smaller than in Great Britain.

Mr. MILLER of Minnesota. If you add together what we might call the State taxes in Germany and the imperial taxes, the two combined will make many times more than what we raise in this country in that way.

Mr. KITCHIN. I have seen it stated by a magazine writer that it ran up sometimes to 10, 11, 12, or 15 per cent. They change these laws every two or three years there, somewhat like our States do, as to their revenue acts.

Mr. COX. Mr. Chairman, will the gentleman yield?

Mr. KITCHIN. Yes.

Mr. COX. Does the gentleman recall how his tax rates compare with the inheritance tax rates in the State of New York?

Mr. KITCHIN. No; I do not know. We levy an entirely different system of inheritance taxes. We levy the tax on the transfer of the flat or whole net estate. We do not follow the beneficiaries and see how much this one gets and that one gets, and what rate should be levied on lineal and what on collateral relations, but we simply levy on the net estate. This also prevents the Federal Government, through the Treasury Department, going into the courts contesting and construing wills and statutes of distribution.

Mr. COX. Of course, I agree entirely with the gentleman, but it looked to me as though those enormous estates might stand a little heavier rate of taxation.

Mr. KITCHIN. I remember distinctly that that was one objection to our last income tax. It was said by some we ought to raise more, but we felt that the time would come when we would need more, but we should await that time to make the extra levy. The time has come. Preparedness brought it. We levy by this on the transfer of estates what is now needed from that source. If our colleagues continue to make these increasing Army and Navy appropriations, you will have the opportunity, and so will my friend from Minnesota [Mr. MILLER] have the opportunity, to vote for a much larger inheritance tax and, perhaps, many other heretofore unheard of methods of taxation.

Mr. DENISON. Will the gentleman state what, in his judgment, will be the total appropriations by this Congress, so far as he can tell now?

Mr. KITCHIN. Assuming that this House will agree to the full amount reported by the Senate Committee on the Army and Navy bill, and it will, the total estimated is $1,579,000,000.

Mr. DENISON. Is any part of that for permanent improvements to the Army and Navy that will be enjoyed by the next generation?

Mr. KITCHIN. Of course, the next generation will benefit by what we are doing here, whether we appropriate for Army or Navy or for the courts or for the expenses of Congress, because if we did not make any appropriations now there might not be any government for the next generation; but the expenditures for the Army and Navy are current expenditures, like those for any other necessary part of the Government. I am glad the gentleman called my attention to this. Whenever we add $100,000,000 extra for the Navy, it is certain that for the following years it will call for still further increased appropriations for construction and enlargement of the Naval Establishment, and so forth. Let me give you a little bit of

naval appropriation history since I have been a Member of Congress. I remember when the naval appropriation bill amounted to nearly $100,000,000 everybody on both sides of the Chamber—I believe my friend Foss, who was the excellent chairman of the Naval Committee when his party controlled the House, will bear me out—said, "It will never reach $100,000,000. Hereafter we are going to begin to cut it down, because we are spending too much on the Navy." But some of us did not believe that. Some of us contended that if you make an increased appropriation this year, that very increase will call for an increase next year, and that increase will call for another increase the following year, and so on. When the appropriations in the naval bill got up to $100,000,000 the House seemed amazed, but they said that it had reached the limit. Then it went up to $120,000,000, and then up to $130,000,000, and then $135,000,000, and then $140,000,000, and at each session as these appropriations increased they would tell us that the limit was reached and hereafter we would retrench. It continued to go up and up, so that during the last two or three years no man has been big enough fool to predict that it would ever go down any more. It went up to $150,000,000 last year, the largest in our history, and now it is up to $315,000,000, according to the Senate bill just reported out and which the House will finally accept, but against my vote, however. If we appropriate $315,000,000 this year for the Navy, it will be over $350,000,000 next year and $400,000,000 the following year, and unless there is a radical revolution in both parties you will find at the end of 5 years, or certainly at the end of 10 years, we will be expending on our Navy alone more than the total amount of taxes, from all sources, collected last year or in any year in the history of our Government. It never decreases.

Mr. DENISON. Will the gentleman yield for another question?

Mr. KITCHIN. I will.

Mr. DENISON. Does the gentleman recognize any difference at all between appropriations for the Army and Navy that are for current expenses and those that might be called for the future good of the country—permanent improvements?

Mr. KITCHIN. What would the gentleman call permanent improvements for the Navy? We appropriate for the men to man the ships, and for building of ships, for guns, and for ammunition, and so forth. The ships, according to our experts, become obsolete in 20 years, and some in 10, and every time you put out a new ship it calls for sister ships. Every few years the naval experts say that the ships we are building are obsolete, that some other kind of a ship has been invented, and we have got to build another one to replace that, and another one and another to match the new kind some other country in Europe or Japan is building. Improvements for the Navy are of the most temporary character. I think I catch the bond-issue idea in the gentleman's question. Why does he want to issue bonds now to take care of appropriations made by us and for us and for our generation? Does the gentleman want to put it upon future generations, when they will have their burdens increased more by reason of these very appropriations and for which they must tax themselves? Are not these immense appropriations for the Army and Navy to take care of us and to protect us and defend our country? Why should we not pay for it? Why does the gentleman want to saddle it upon our children and grandchildren? It is to protect him and us now. It is going to protect him as long as he lives; and yet he wants to issue bonds, running for 40 or 50 years and more, so that he will pay nothing as long as he lives, and after he is dead his children and children's children will be paying them—paying for his protection. Let us protect ourselves and our families and our property and pay for it ourselves. This is the right, manly, patriotic thing to do. The gentleman should be manly enough to finance his own fright, and not put it off on his children.

Mr. DENISON. Of course, I have not said anything about a bond issue.

Mr. KITCHIN. That is the only inference from your question.

Mr. DENISON. Are there any expenditures for the Navy that could properly be said to be for permanent improvements, that will be enjoyed by the next generation?

Mr. KITCHIN. The Navy and Army, like the judiciary, executive, Congress, and other departments of the Government, are necessary to maintain and perpetuate the Government and transmit it to coming generations; but appropriations for the Navy or Army are not, and in the nature of things, can not, be for "permanent improvements" in the sense all of us except the gentleman understand by the terms "permanent improvements." For instance, the Panama Canal is a permanent improvement. It was built for us and future generations, and we have paid for it a part out of the current expenses and a part by a bond issue. It endures. We build it but once. We do not build it anew every year or every 5 or 10 years as we do ships. If we are going to build a nitrate plant or an armor-plate factory, I should say that those would be permanent improvements which generations afterwards can specifically enjoy. Congress has provided in another bill for a nitrate plant and that it should be paid for by bonds.

Mr. DENISON. The gentleman thinks that the $1,579,000,000 should be paid for out of current expenses?

Mr. KITCHIN. Yes; except the $125,000,000 for the Mexican trouble. Is the gentleman in favor of issuing bonds to pay for increased appropriations for the Navy and Army, exclusive of appropriations for the Mexican situation?

Mr. DENISON. If the gentleman can tell me what part of the total appropriations is for the benefit of the next generation, I will say that I am in favor of issuing bonds to pay for that.

Mr. KITCHIN. But I can not tell the gentleman. The gentleman can not know. Suppose he can not find out; is he going to take it in the dark and put the burden on posterity any way and escape all of it himself?

Mr. DENISON. I would go to somebody who could tell.

Mr. KITCHIN. Nobody can tell what part of such appropriation is for the benefit of the next generation any more than he can tell what part of the appropriations to maintain the executive, the judiciary, or the Congress, which we make annually, is for the benefit of the next generation. We have to have a judiciary, an Executive, a Congress to maintain and protect the Government and hand it down to the next generation. It is an indirect benefit to future generations. But they are for us also and when we transmit it we transmit it with the same burden of protecting and maintaining by them. The naval bill this year in character is the same as last year and other years, and why did not the gentleman want to issue bonds to pay the expenses of the naval appropriation a year or three years or five years ago?

Mr. DENISON. Let me ask the gentleman another question. Are there not abnormal increases in this naval bill and fortifications bill which are for the benefit of future generations?

Mr. KITCHIN. Yes; abnormal and fabulous and wild and reckless increases in the naval bill. They are all intended for the present and the future as are the appropriations for other functions of the Government as I have tried to explain. The nitrate plant and the armor-plate factory are in the nature of permanent improvements.

The gentleman has asked me many questions. Now, I wish to ask him some. Does he think there is any way to raise this increased amount of appropriations by a tariff? How would the gentleman raise the $274,000,000? Does he think he could increase the tariff so as to raise that amount?

Mr. DENISON. That question I have not made a study of——

Mr. KITCHIN. Is the gentleman in favor of putting a tariff on tea and coffee and, generally, on consumption in order to raise or help to raise it?

Mr. DENISON. I think an increase of tariff when the war closes——

Mr. KITCHIN. Oh, we are talking about now and not about the future. We do not know when the war will close. Is the gentleman willing to put a tax on tea and coffee now? Is he willing to relieve the big estates of the inheritance tax and the war trafficker's business of the munitions tax and put the tax on tea and coffee, on the man's breakfast table—would he do it?

Mr. DENISON. As soon as the results of the next election are ascertained, and we can change the complexion of the Ways and Means Committee, we will show the gentleman how to do it. [Applause on the Republican side.]

Mr. KITCHIN. Oh, you will not have a right to vote at that time; the gentleman will be left at home. [Laughter and applause on the Democratic side.] But the gentleman can vote now, and now is the time to take the responsibility, when he has the opportunity. [Applause on the Democratic side.]

Well, now, here is a gentleman who would levy a tax on tea and coffee [cries of "No!" "No!"] to relieve the war traffickers of the munitions tax. Put a tax on the breakfast table of every man——

Mr. DENISON. The gentleman misunderstood me. I did not say a tariff on coffee and tea.

Mr. KITCHIN. But the gentleman refused to say he would not and evaded the direct question. I took it that he would. I ask the gentleman again the direct question would he tax tea and coffee?

Mr. DENISON. No; I would not.

Mr. KITCHIN. He would not do it. He knows it would be an outrage on the laboring man, the farmer, the merchant, and the people generally to tax his tea and coffee in order to relieve

the munitions makers. [Applause on the Democratic side.] Now let me ask the gentleman a further question. Would he put a stamp tax on checks, or notes, and so forth?

Mr. DENISON. Well, I would like to ask the gentleman a question.

Mr. KITCHIN. No; answer my question. Would the gentleman put a stamp tax on checks, and notes, and so forth?

Mr. DENISON. Not in a time of peace. But let me ask the gentleman a question.

Mr. KITCHIN. Would you do it at this time?

Mr. DENISON. No.

Mr. KITCHIN. Well, the gentleman and I agree. I will make a good Democrat out of the gentleman soon. [Laughter.]

Mr. DENISON. When did the gentleman change his opinion about the stamp tax?

Mr. KITCHIN. Personally I think it an outrage, except in time of war or extraordinary emergencies. It would not have been put in the emergency act of October, 1914, if I had had my way.

Mr. DENISON. Then the gentleman admits that the Democratic Party committed an outrage?

Mr. KITCHIN. Yes; as you did in 1898.

Mr. DENISON. But that was during the Spanish War.

Mr. KITCHIN. Oh, does the gentleman call that a war, that little skirmish? Why, Mr. Roosevelt and two or three cowboys did all the fighting. Nobody else fought at all. Col. Roosevelt and six other cowboys, with Gen. Wood, licked the whole Spanish Army, and the gentleman talks about a war. [Laughter and applause on the Democratic side.]

Mr. DENISON. Will the gentleman allow me to ask him one question more?

Mr. KITCHIN. Certainly.

Mr. DENISON. The President recommended a tax on gasoline; what does the gentleman say about that?

Mr. KITCHIN. I did not agree with the President; does the gentleman agree with me?

Mr. DENISON. I do; and the gentleman from North Carolina does not agree with his President?

Mr. KITCHIN. I do not agree to a tax on gasoline; there are a whole lot of recommendations with respect to taxation in that message that I did not agree with the President on, and not a man in the Ways and Means Committee agreed with the President. But the President only suggested the ways in which the revenue could be raised.

Mr. HILLIARD. And they are not in the bill?

Mr. KITCHIN. They are not in the bill. Does the gentleman not think we did right in repealing the stamp tax?

Mr. DENISON. Yes.

Mr. KITCHIN. Then is the gentleman going to vote for this bill that repeals that, or is the gentleman going to vote against the bill and let the stamp tax of over $40,000,000 remain on the books? What is the gentleman going to do about that? [Laughter on the Democratic side.]

Mr. DENISON. I will state very clearly that I have never been in favor of this iniquitous stamp tax enacted by the Democratic Congress.

Mr. KITCHIN. What is the gentleman going to do? Is the gentleman going to vote for those taxes by voting against this bill which repeals them?

Mr. DENISON. I have stated to the gentleman that just as soon as we get in control we will show you what we will do.

Mr. KITCHIN. Oh, but the gentleman will be very old before his party gets in control. [Laughter.] We need the money now and next year. He will be called on to vote now—not 2 years or 10 years hence. What is the gentleman talking about? Did anybody ever hear of a gentleman before who wants to put off his responsibility to a day when the people are not going to let him have any? [Laughter and applause on the Democratic side.] Are you going to vote against the income tax in this bill which will raise $107,000,000 from wealth, from ability to pay, to help finance these appropriations for which you voted—and you have tried by your vote to make them more? Now, honor bright, are you going to vote against that income tax? Are you? [Applause on Democratic side.]

Mr. DENISON. I do not know yet how I am going to vote on this bill.

Mr. KITCHIN. I am going to tell you how to vote. If you let me tell you instead of the minority leader, you will vote right. [Laughter.]

Mr. DENISON. I will reserve that question to myself. I will put my vote in the RECORD, and I will state my reason for it.

Mr. KITCHIN. Then, the gentleman is not decided. Do you mean to say that a man as intelligent as you look to be—and I know that you are intelligent—has not been convinced by my argument and by the facts which I have presented? [Laughter.] Why, it is a reflection on the gentleman's intelligence. [Laughter.]

Mr. DENISON. I have not been convinced.

Mr. KITCHIN. Will you vote against the inheritance tax or the munitions tax, the tax on the war traffickers?

Mr. DENISON. Does the gentleman want me to state all of my views now?

Mr. KITCHIN. The gentleman asked me a great many questions, and I want to ask him some. Will you vote against the munitions tax?

Mr. DENISON. If the gentleman wants to yield the floor to me and allow me make my remarks on the bill now, I will state how I stand.

Mr. KITCHIN. Why does the gentleman wish to make any remarks, when he has just admitted he does not know how to vote? But the gentleman started this thing first.

Mr. BURNETT. And he is willing to quit, too. [Laughter.]

Mr. KITCHIN. Yes. Now, I shall come back to the munition tax. We levy a tax on the manufacture of munitions, but measure the tax by the amount of gross receipts. We specify what munitions of war are. We aim at the instruments of human destruction. Of course wire fencing and mules and wagons and dozens of other kinds of articles are munitions of war in a sense, but we do not extend the tax to them. We extend the tax to guns, rifles, cannons, projectiles, torpedoes, shells, explosives, and so forth. Because of exceptional circumstances we deemed it wise and proper to put a special tax on the smelting of copper ore, refining and alloying copper. Excepting the business of manufacturing the munitions of war specifically mentioned in the bill, no business has derived so much benefit and profit directly from the war as the copper industry. A larger per cent of its product goes into instruments of war than that of any other large industry.

The rates of this tax are:

Gunpowder or other explosives, excepting blasting powder and dynamite: Five per cent of the amount of the gross receipts not in excess of $1,000,000 and 8 per cent of the amount of the gross receipts in excess of $1,000,000.

Cartridges, loaded or unloaded, and caps or primers; projectiles, shells, or torpedoes of any kind, including shrapnel, loaded or unloaded, or fuses; firearms of any kind, including small arms, cannons, machine guns, rifles, and bayonets, or any parts of any of the articles above mentioned: Two per cent of the amount of such receipts not in excess of $250,000; 3 per cent of the amount by which such receipts exceed $250,000 and do not exceed $500,000; 4 per cent of the amount by which such receipts exceed $500,000 and do not exceed $1,000,000; and 5 per cent of the amount by which such receipts exceed $1,000,000.

Copper ore, metallic copper, or copper alloys: One per cent of the amount by which such receipts exceed $25,000 and do not exceed $1,000,000; 2 per cent of the amount by which such receipts exceed $1,000,000 and do not exceed $10,000,000; and 3 per cent of the amount by which such receipts exceed $10,000,000.

It is provided, however, that if the net profit derived from the sale or disposition of the articles above mentioned is less than 10 per cent on the amount invested in the production of the articles no tax will be levied. If the payment of the tax would reduce the net profit below 10 per cent, the tax levied will be only the amount, if any, in excess of 10 per cent profit.

Mr. JAMES. Mr. Chairman, will the gentleman yield?

Mr. KITCHIN. Yes.

Mr. JAMES. Does the bill provide for the payment of a tax on copper of a mining company that does not sell copper for purposes of the manufacture of munitions?

Mr. KITCHIN. Yes. The gentleman will see that copper has gone up in price over 100 per cent, I would say. There is no injustice done in this bill, though the tax rate may seem high, for this reason. We have a proviso that the Government gets not a penny until the copper smelter or the copper refiner or the munition maker gets 10 per cent clear net profit both on the amount invested as capital stock and on the amount invested in the production of the product. That is, he gets 10 per cent upon the actual capital stock, the amount invested in the plant, and then 10 per cent on the further amount invested in the production of his output—invested for raw material, wages, salaries, and the whole current expenses in the turnout of the product.

Mr. MOORES of Indiana. Mr. Chairman, will the gentleman yield for a question?

Mr. KITCHIN. Yes.

Mr. MOORES of Indiana. Is there any exemption on munitions sold to the Federal Government?

Mr. KITCHIN. No.

Mr. MOORES of Indiana. Ought there not to be?

Mr. KITCHIN. No; and I will tell the gentleman why. This munition provision relates back to January 1, 1916. Comparatively little of such munitions have been sold to our Gov-

ernment so far. We are taxing the manufacture of munitions when sold to our Government as well as to others. Of course, the munition makers will get together and put the price to our Government up just plus the amount of the tax, and the Government in this event would be paying the amount of the tax it collected. But there is this saving feature about it. When the Government deals with these munition plants now there is no possible way, by statute or otherwise, by which it can find out how much such munitions cost, or whether the prices charged are exorbitant or not. Under this bill, in order to ascertain their net profits, they must show by their books and other satisfactory evidence the actual amount invested in the plant, exactly what their raw material costs, the amount of wages and salaries paid, and their overhead charges, their insurance and everything, and the Government therefore will have the right to ascertain and the means of ascertaining what the costs are, whether prices charged are excessive, and it can then be in a position to make fair and reasonable bargains and protect itself against excessive prices.

Mr. PLATT. Will the gentleman yield?

Mr. KITCHIN. I will.

Mr. PLATT. Is it expected the inheritance tax can be collected through the regular collectors of internal revenue in the districts?

Mr. KITCHIN. I think so.

Mr. PLATT. In the State of New York we have the transfer-tax appraisers in every county to appraise estates.

Mr. KITCHIN. That will be of great service in ascertaining the value of the estate. This will be an easy tax to collect because all the States have administrators or collectors or trustees who must make returns to the State under oath. This will greatly aid the Government's collectors.

Mr. PLATT. If they cooperated with the State officials, it would do; but ought not there to be something in the bill to permit that to be done?

Mr. KITCHIN. They can do it. There is a general law authorizing the Treasury Department to make rules and regulations for the collection of these and other taxes. They collect them in the regular way and they can——

Mr. PLATT. It does not appear here in this bill.

Mr. KITCHIN. Under the general law the Treasury Department can make rules and regulations which would render easy such cooperation.

Mr. SLOAN. Will the gentleman yield?

Mr. KITCHIN. I will.

Mr. SLOAN. The gentleman has information, I assume, concerning the relative proportion of munition products in 1915 that were produced and sold to foreign Governments and our own Government, and the same for the portion of 1916 which has lapsed, produced for foreign sale and for use in this country?

Mr. KITCHIN. Is that a question or a statement? I did not get it.

Mr. SLOAN. Has the gentleman information as to what is the relative proportion of our munitions in this country produced for foreign Governments——

Mr. KITCHIN. Compared to our own? Oh, I would say much over 80 per cent.

Mr. SLOAN. That was in 1915.

Mr. KITCHIN. In 1915 we did not export anything like as much as we will in 1916; two or three times as much in 1916, I would say.

Mr. SLOAN. The fiscal year or the calendar year?

Mr. KITCHIN. I am talking about the calendar year.

Mr. SLOAN. The calendar year fixes the time for the taking of the tax, January 1——

Mr. KITCHIN. The increase for this calendar year will be, perhaps, 200 per cent, and of our total production our exports would be more than 90 per cent.

Mr. SLOAN. Ninety per cent foreign and 10 per cent home? How about the calendar year 1915?

Mr. KITCHIN. For the year 1915 I would say over 80 per cent. Our Government purchased practically nothing in comparison with the purchases by other Governments and their citizens who are manufacturing for their Governments.

To give the gentleman and the House some idea of the large increase in our exports of the direct munitions of war during this year over the calendar year of 1915, the statistics show that for the entire year of 1915 we exported $24,808,000 worth of cartridges, while for the five months of this year—from January 1 to June 1—we exported $20,486,000 worth. Of gunpowder and other explosives, for the calendar year 1915, we exported $155,247,000 worth, but for the first five months of this year we exported $233,258,000 worth.

Mr. DAVIS of Minnesota. Will the gentleman yield for a question?

Mr. KITCHEN. Yes, sir.

Mr. DAVIS of Minnesota. I notice section 201 reads as follows:

That every person manufacturing gunpowder or other explosives shall pay for each taxable year an excise tax equivalent to the following percentages.

Beginning on page 61. What is meant by the words "taxable year" when it is taken?

Mr. KITCHIN. It means the calendar year. The bill specifies that the first taxable is the year beginning January 1, 1916, and ending December 31, 1916.

Mr. DAVIS of Minnesota. So far as this language is concerned it is retroactive?

Mr. KITCHIN. Yes; we catch them, as it were, going and coming.

Mr. RUSSELL of Missouri. Will the gentleman yield?

Mr. KITCHIN. I will.

Mr. RUSSELL of Missouri. I see in the report that the taxes that are proposed to be raised under this bill are divided into four classes—income tax, inheritance tax, munition tax, and the fourth division by reenacting a certain law. What I wanted to ask is, Is there any tax under the fourth division that is not already imposed by the law?

Mr. KITCHIN. There is no tax under that on any new subject. We revise the wine tax by which we will collect about a million dollars more, although we reduced the tax on some classes of wine. It was claimed that it was so high on some wines that it prevented production. The wine production in 1915, after the passage of the emergency act, fell from 47,000,000 to about 27,000,000 gallons. I doubt, however—in fact, I do not believe that the tax caused this big reduction.

Mr. RUSSELL of Missouri. So, practically, there is no new subject of taxation in the fourth division called "Miscellaneous taxes"?

Mr. KITCHIN. No. We changed the rate and method of taxation of tobacco—that is, the license tax—to equalize such tax; also the rate and method of the tax on theaters—motion-picture shows—for the purpose of equalizing the tax.

Mr. RUSSELL of Missouri. Now, there is a part of that fourth division enacted two years ago that has been wiped out?

Mr. KITCHIN. Yes; much of it, and especially the stamp taxes. I am going to get to that in a moment, however.

Mr. WM. ELZA WILLIAMS. Will the gentleman yield?

Mr. KITCHIN. I will.

Mr. WM. ELZA WILLIAMS. I notice the gentleman spoke about raising necessary funds to conduct operations on the Mexican border and in Mexico by an issue of bonds upon the theory that they are not current but extraordinary expenditures. What does this bill contemplate in the way of raising revenue to build fortifications?

Mr. KITCHIN. Although fortifications might last for years appropriations for their construction are always considered a current expense, and we so treat it. They change with the change of guns on the ships or with the fancy or invention of our military experts.

Mr. WM. ELZA WILLIAMS. These changes are supposed to be substantial and permanent.

Mr. KITCHIN. We are going to modify and change and improve our fortifications, although we have the best in the world, according to experts' testimony last session. But this war has convinced the experts that they will not do, but that we must make changes and improvements, and we will continue to take down and put up and add every year. Does the gentleman think the fortification bill is going to be less next year than this year?

Mr. WM. ELZA WILLIAMS. I do not know, but fortifications ought to be of a substantial and permanent character.

Mr. KITCHIN. No more than any other defensive or offensive instrument of war——

Mr. WM. ELZA WILLIAMS. I think fortifications would be a legitimate subject, to be provided for by the issuance of bonds.

Mr. KITCHIN. I regret to differ with the gentleman. Our committee—that is, the majority members—considered that, and they unanimously differed with him, and it was put up to the administration, and it took this view. If Congress should take the gentleman's view and consider all the fortifications permanent military improvements to be paid for by bonds by our children, it would take care of only $19,000,000 out of the $74,000,000, as the increase of appropriation for fortifications is $19,000,000.

Mr. CLINE. Will the gentleman yield?

Mr. KITCHIN. I will.

Mr. CLINE. I want to call the gentleman's attention to section 201, the following language:

That every person manufacturing gunpowder or other explosives shall pay for each taxable year an excise tax equivalent to the following percentages of the gross receipts during such year from the sale or disposition of such explosives manufactured in the United States, except blastings, powder, and dynamite.

Is that section 201 taken and considered in connection with section 203, which refers to the net profit derived from the manufacture?

Mr. KITCHIN. Yes; and it shows how the net profits are to be ascertained.

Mr. CLINE. Otherwise I do not understand the language in reference to the gross receipts in section 201.

Mr. KITCHIN. The tax is an excise tax on the manufacture of the munitions specified, measured by the gross receipts, or, as is commonly said, a tax on the gross receipts. But before the Government gets a penny the manufacturer must get at least 10 per cent clear, or net, profit. If he fails to make over 10 per cent net profit the Government gets nothing. The bill sets out how this net profit is to be ascertained, by deducting running expenses, wages, salaries, costs of the materials, insurance, taxes, and other overhead charges, and so forth.

Mr. CLINE. The percentage they pay is based on the net receipts?

Mr. KITCHIN. No; upon the gross receipts; but the deduction of 10 per cent for the manufacturer is based on net profits.

Mr. CLINE. And that is to be deducted?

Mr. KITCHIN. Yes; 10 per cent net profit must first be deducted for the manufacturer. If by collection of the tax on gross receipts his net profits would be less than 10 per cent, the Government collects nothing. In other words, the Government can only collect its amount of taxes on gross receipts out of the excess profit over 10 per cent. If such excess is sufficient to pay the whole tax on gross receipts, the Government gets all of its tax. If such excess profit is not sufficient to pay the whole tax, the Government gets the profit in excess of the 10 per cent.

The profits may be, and in most cases will be, large enough for the Government to get its full tax on gross receipts and the manufacturer to receive much more than 10 per cent.

Mr. MANN. If it is 15 per cent profit the full tax would be levied and collected.

Mr. KITCHIN. That is about correct. The manufacturer would first get his 10 per cent. However, the remaining 5 per cent would not quite be sufficient to pay the full 5 per cent tax on gross receipts, which rate applies to the receipts of a manufacturer in excess of $1,000,000.

The bulk of the contracts are for amounts exceeding $1,000,000. The 15 per cent net profit would be enough to give the manufacturer his 10 per cent and to pay the Government its entire tax at the rate of 3 and 4 per cent, respectively, on gross receipts exceeding $250,000 and not exceeding $500,000, and on gross receipts exceeding $500,000 and not exceeding $1,000,000, as is provided in the bill.

If the manufacturer makes 25 per cent net profit, he will have enough out of his profits to pay the Government the full amount of the tax of 5 per cent on gross receipts and then have a little over 18 per cent clear profit.

Mr. OGLESBY. The levying of this tax might leave the manufacturer 40 or 20 or 11 per cent, but it must leave him 10 per cent.

Mr. KITCHIN. The gentleman from New York states it correctly. Now, be it remembered that this 10 per cent net profit which the manufacturer must have before the Government gets a cent is not simply 10 per cent on the capital stock of the company or individual, sufficient to make 10 per cent dividend, but is 10 per cent on the capital stock invested (which is usually put into the plant), plus 10 per cent on the further amount invested for operation of the plant; for instance, money invested in purchase of supply of raw material, payment of wages, salaries, in supplying heat, light, power, and so forth.

The bill declares "such net profit shall be computed on the amount actually invested in the United States in the manufacture of such articles," and so forth.

Mr. SLOAN. Answering the inquiry of the gentleman from Illinois [Mr. WM. ELZA WILLIAMS], the gentleman said that this proposition was considered in the committee, but I do not recollect all that proposition being considered in the Ways and Means Committee.

Mr. KITCHIN. Oh, yes. The gentleman is mistaken. That was considered for weeks, and we discussed that time and time again in the committee.

Mr. SLOAN. With the committee in session?

Mr. KITCHIN. Yes; a majority of the committee.

Mr. SLOAN. It was not in session.

Mr. KITCHIN. I will say to the gentleman that we gave the gentleman and the other minority members full opportunity to discuss and offer any amendment, if that is what the gentleman is getting at.

Mr. MOORE of Pennsylvania. Some of the minority side of the House have asked for a minority report. Is it not a fact that the majority report was first handed to the committee in a confidential way yesterday, and it was first printed for the use of the House this morning?

Mr. KITCHIN. The gentleman is mistaken. The majority report was given or sent to every member of the Ways and Means Committee Monday.

The gentleman may not have been here at that time, but the other members of the committee who were here were told by me that morning, or the day before, that they could have the bill at 4 o'clock. The bill was sent to each minority member at 4 o'clock—just as soon as it was printed—and the ranking member on your side [Mr. FORDNEY] received his, and I think the gentleman from Ohio [Mr. LONGWORTH] received his. I am sorry the gentleman from Pennsylvania [Mr. MOORE] did not receive his; and the report was sent to each minority member of the committee Monday. Members of the committee had from Saturday until to-day to study the details of the bill, and from Monday until to-day—Thursday—to go over the report.

Mr. FORDNEY. I received mine by special messenger at 10.30 Saturday night.

Mr. MOORE of Pennsylvania. May I say to the gentleman that I did not receive this report, or even see it, until it was handed in a confidential way to the Members yesterday, and I received the printed report, numbered, for the first time to-day. I want this to go into the RECORD. I apologize for putting it in the gentleman's speech, but I want it to go in, so that the minority Members will know why they did not receive a minority report. It has been impossible to prepare one since receiving the majority report.

Mr. KITCHIN. I believe the gentleman was out of the city on Saturday, Sunday, Monday, and Tuesday.

Mr. MOORE of Pennsylvania. I will answer the gentleman. They were all holidays except Saturday, but I had the situation covered. I arranged with one of the most careful attachés of the House to look for this bill and report until late Saturday night. My own secretary, in addition, was looking after it; but no copy of the bill came to me until Monday morning and no copy of the report until yesterday.

Mr. KITCHIN. Oh, if the gentleman had told me about his anxiety, I would have given him my copy, because the gentleman, by not getting a copy, missed on Sunday and the Fourth of July the best reading and the best argument he ever saw. [Laughter.] I am sorry the gentleman did not get it, because if he had he would probably have voted for this bill.

Mr. MOORE of Pennsylvania. Holidays came along and some of the members of the minority did not receive the bill until Monday morning; the Fourth of July intervened, and then came the committee meeting yesterday—Wednesday—and the general debate to-day. The majority report did not reach some Members who were diligent in their search for it until yesterday, when the committee met.

Mr. KITCHIN. If so, it was their fault. Of course the gentleman may not have known the details, but the gentleman from Pennsylvania knew, in substance, everything that was going into that bill—income tax, munition tax, and inheritance tax, and special or miscellaneous taxes—30 days ago or more.

Mr. MOORE of Pennsylvania. I read it in the newspapers but, as the gentleman knows, that is an uncertain way to legislate. It is fair to say to the gentleman and his committee who had this bill under consideration many months that no man, no ordinary human, could thoroughly comprehend this bill and make comparisons with the existing law, due to the changes in this bill, covering 101 pages, in the time given to certain members of this committee.

Mr. MANN. Mr. Chairman, will the gentleman yield?

Mr. KITCHIN. Yes.

Mr. MANN. I understood the gentleman to say that he submitted the report of the committee to some minority Members some time Saturday?

Mr. KITCHIN. I told the Clerk to send one copy to each one just as soon as he got it.

Mr. FORDNEY. I got mine Monday night.

Mr. KITCHIN. No; Saturday night.

Mr. MANN. May I ask when this bill was first considered by the full membership of the Committee on Ways and Means?

Mr. KITCHIN. Yesterday morning, by both the majority and minority members.

Mr. MANN. And when was it reported to the House?

Mr. KITCHIN. It was reported yesterday afternoon.

Mr. MANN. So that the report of the committee was sent out several days before the committee met to act upon the bill? [Laughter.]

Mr. KITCHIN. Yes; the majority of the committee, as has always in all Congresses been the custom, prepared the report in advance of the full meeting; but there was not a member of the committee who could not have had it on Monday, at least if he was at his office.

Mr. MOORE of Pennsylvania. It was not so in my case.

Mr. KITCHIN. If it was not so, it was because of the fault of the mails. Every minority Member was told that he could get the report Monday, and he could, had he desired or tried to get it.

Mr. MANN. I did not interrupt the gentleman. I would like to pursue my inquiry as to what chance there was for the minority to make any amendments to this bill in committee, considering the fact that the report on the bill had been prepared and sent out before the committee met? [Laughter on the Republican side.]

Mr. HILL. I want to say that I got my bill at 4 o'clock Saturday afternoon.

Mr. KITCHIN. Saturday afternoon.

Mr. HILL. Yes; at 4 o'clock. On Monday I received the report with instructions——

Mr. KITCHIN. The report did not go out until Monday to the committee members.

Mr. HILL. With instructions that it was confidential and that it might not be the final report that might be submitted, because changes might be made in it. Consequently I treated it as confidential.

Mr. KITCHIN. The gentleman from Connecticut is correct. We gave the report to the minority Members in advance, so that they would have opportunity to study it before the committee met and make any suggestions they desired. And the committee at its full meeting could amend it, if it desired, before presenting it to the House.

Mr. SLOAN. The report on the bill was not sent out until Saturday.

Mr. MANN. The gentleman does not mean the report.

Mr. SLOAN. I meant the bill.

Mr. MANN. The report was sent out Monday, was it?

Mr. KITCHIN. Yes; to the committee members.

Mr. MANN. That was two days before the committee met. [Laughter.]

Mr. SLOAN. I will say my copy was delivered to me at my office in the course of mail this morning at 9 o'clock.

Mr. KITCHIN. Oh, well, if a man does not attend to his mail better than the gentleman from Nebraska, as appears by his statement, of course he would not get it earlier. [Laughter.] Now, is there any other Republican member of the Committee on Ways and Means or of the House who wants to ask me a question or make a complaint about this matter? If so, get it in now, as I want to answer all in a bunch at one time. [Laughter.]

Mr. DILLON. I want to call the gentleman's attention to the income feature of this bill. Did the committee consider the power of Congress to make this retroactive, to make this effective from January 1, 1916?

Mr. KITCHIN. Yes, sir.

Mr. DILLON. In the face of the law now on the statute books?

Mr. KITCHIN. Yes.

Mr. DILLON. The law on the statute book provides for 1 per cent on incomes, and that is the existing law. That is right, is it?

Mr. KITCHIN. Yes.

Mr. DILLON. Now, you propose in this act to go back and make it 2 per cent, when there is an existing law on the statute book. Do you believe Congress can do that?

Mr. KITCHIN. There is no doubt about that.

Mr. DILLON. Upon what theory?

Mr. KITCHIN. Do you know we retroacted in the income tax of 1913? The act was passed October 3, 1913. It levied on incomes received from March 1, 1913, the date when the income-tax amendment to the Constitution was proclaimed.

Mr. DILLON. There was no existing law on the statute book at that time. Here is a law on the statute book, and has been for six months, affecting this year, that says 1 per cent.

Mr. KITCHIN. The tax the gentleman speaks of as 1 per cent is for the calendar year. I think the gentleman, upon reflection, will agree that we have the right to increase the income tax and make it applicable to incomes received this calendar year as well as for the years succeeding the passage of the bill.

Mr. JAMES. As to the munition tax, is it a permanent tax or only during the war in Europe?

Mr. KITCHIN. It is permanent; but when the world is restored to normal conditions we will collect comparatively little from it, and its repeal would not cause us to lose any considerable amount of revenue.

Mr. JAMES. Is there any tax on iron or steel?

Mr. KITCHIN. No. There are so many thousands of uses among the people generally, in their daily lives, of iron and steel that we did not impose a tax on them.

Now let me reply to the questions and insinuations of some of the minority Members of undue haste and unfairness on the part of the majority in introducing the bill, presenting the report, and taking the bill up for consideration in the House.

Gentlemen, such insinuations are pure political buncombe. What are the facts? Every man on the committee knew more than a month ago, from the papers and from talking with me, what was going to be done. I told them a month or two months ago—every Republican and Democrat, in the House as well as in the committee, that asked me—that we were going to levy taxes on munitions of war, increase the income tax, and provide an inheritance tax, retain the miscellaneous taxes that are in the bill, and repeal the stamp taxes. Every newspaper in the United States has stated that a dozen times in the last two or three months. I have given out interviews to this effect. I have talked with the minority members of the committee for the last month or two and told them what was going in the bill. They knew that the Rainey tariff-commission bill would be put in. This has been introduced in the House for over two months. They knew the dyestuffs provisions were going in. I spoke to the ranking Republican Member on the committee and told him that we would call a meeting of the committee on Monday or Tuesday, as would best suit his and his colleagues' convenience; but the gentleman said it was just before the Fourth of July, and that Members wished to be away, and that it would be all right to wait until Wednesday. I told him that the bill would be introduced Saturday; that I would have it printed that day and give copies to minority Members that afternoon, which was done. I told him, further, that the tentative report of the majority would be printed and given them Monday. This was done. He made no complaint of undue haste or unfairness on our part. He, I am glad to say, makes none now. He knew the custom that had existed heretofore. He knew what happened when the Payne-Aldrich bill was introduced—a bill that raised $350,000,000, covering nearly 200 pages and 4,000 items. The gentleman knew how that legislation was introduced and reported, and there is not a Republican here who, even if he believed we had ten times more of the sense of fairness than they had, would have expected us to have presented the report until yesterday.

Gentlemen, you talk about undue haste, and not giving the minority Members more time to consider in the committee this bill, what did you do with your Payne bill and report? Why, you introduced the bill on March 17, a bill raising $350,000,000, covering over 4,000 items and 200 pages. It was not printed until the following morning. Mr. Payne, by direction of the Republican members of the committee, on March 18 called the Democratic members of the Ways and Means Committee together and in 12 minutes by the watch rammed it down their throats. [Applause on the Democratic side.] He did not permit them to offer an amendment; did not permit them to make a suggestion; but just as soon as they got in the committee he said, "Gentlemen, we have met here to report out this bill. All in favor of a favorable report of the bill make it known by saying 'aye.' Those opposed 'no.'" All the Republicans answered "aye" and all the Democrats answered "no." Then they called the roll, and after the roll call they made a motion for immediate adjournment and adjourned. Not a Democrat had the opportunity or the privilege of reading a line of the bill or the report until after the committee had adjourned—until the next day. They did not even produce the report there. They took up the bill in the House for consideration the very next day. The Democrats had no time or opportunity to even see the report until it was presented on the floor of the House. Yet the stand-pat Republicans now begin to wrap around them the cloak of fairness and say, "You did not play us fair, because you broke the custom and gave us three or four days to consider the bill and report before taking it up in the committee and the House, while we gave you 12 minutes. [Laughter and applause on the Democratic side.]

We gave you from Saturday until Wednesday—before the full committee met—to read and study the details of the bill, and from Monday to Wednesday to go over the tentative report, three or four times longer than was ever before given to the minority in all the history of revenue and tariff legislation.

We were not responsible, if some Member did not open his mail, or if some Member left the city and depended upon some attaché of his to secure for him the bill and report.

As I said, I told the gentleman from Michigan [Mr. FORDNEY], the ranking minority member of the committee, that the committee would meet Monday and fully consider the bill and proposed report, if he and his colleagues desired, and he said it would be all right to meet Wednesday. We met Wednesday. We offered the minority the privilege which had never been given before in the whole history of the 50 years of Republican revenue and tariff legislation to offer any amendment to the bill from beginning to the end, and consider it in the committee as long as they wished.

We told them we would stay there till midnight to do it, but they said no. They only took three hours, while when the Payne bill was being considered in the committee the then majority gave the Democrats only 12 minutes to come in and get out. [Laughter.]

The minority did suggest some amendments to the pending bill which I shall ask the House to adopt. Gentlemen, it is not right to try to make anyone believe that we have acted with undue haste or unfairness in presenting to the House either the bill or the report.

Mr. RAINEY. May I call the attention of my colleague to the fact also that this bill contains 101 pages, and that only 24 pages of it are new matter?

Mr. KITCHIN. Yes.

Mr. RAINEY. The tariff-commission bill was introduced four months ago, and the only absolutely new matters are the dyestuffs items, containing 4 pages; unfair competition, containing 3 pages; the munitions item, containing 7 pages; and the tax on estates, containing 10 pages—24 pages in all.

Mr. KITCHIN. Yes; and, as I have said, the minority members of the committee, as well as Members of the House who have been interested in the revenue legislation, knew a month or more ago substantially everything which the bill would contain. Neither the protest of undue haste nor the plea of ignorance on the part of some gentlemen is fooling anybody.

Now, coming down to the special or miscellaneous taxes. We repeal all stamp taxes. [Applause.] The biggest change from the present law we make is that of the wine schedule, which change will raise a million dollars more revenue and be more easily collectible. It is not satisfactory to the wine makers and not satisfactory to many people, but we believe it is a fair, square measure that will not materially injure the wine makers and at the same time will produce more money for the Treasury. I do not believe it will prevent the making of an extra gallon of wine. We retain the bankers' tax, the stock brokers, the pawnbrokers, and the $1.50 on beer, ale, and so forth. We repeal the tobacco tax of $4.80 that every little tobacco dealer throughout the country had to pay. We repeal the merchandise brokers' tax. We changed the method of taxing theaters and moving-picture shows. Instead of making a flat tax according to the seating capacity, as under the present law, whereby a theater or motion-picture show taking in $200,000 a year pays no more than the little one taking in perhaps $5,000 a year.

We make it $10 for towns not exceeding 1,000; $15 in towns having a population in excess of 1,000 and not in excess of 2,000; $20 in towns or cities having a population in excess of 2,000 and not in excess of 3,000; and a tax of one-half of 1 per cent on the gross receipts from admissions in towns or cities having a population in excess of 3,000. I believe that is fair, and a just tax. It is not unreasonably high. Out of every $2 of receipts the Government gets a penny. The theater and moving picture show have been one of the efficient factors in creating a sentiment favoring appropriations for preparedness and consequently for high taxes—for the necessity of a new revenue bill. They have exploited the propaganda of the munition makers. Although the tax rate is small, it will produce about $1,000,000 more than the present method.

As to tobacco, cigar, and cigarette tax: This tax under the present law, of 1914, and in the pending bill, is in the nature of a license or privilege tax. We do not interfere with the general internal-revenue tax on these articles, which will yield for the fiscal year ending June 30, 1916, on cigars, in round numbers, $22,800,000; on cigarettes, $26,400,000; on other manufactures of tobacco, such as plug and smoking tobacco, $33,400,000.

The privilege or license tax in the present law and in the pending bill is an additional tax. We, by this bill, change the method or rate of this tax from that in the 1914 act in order to equalize its distribution. The distribution of the present tax is most unequal and inequitable. By its operation the larger manufacturers pay the smallest rate and the small manufacturers the highest rate. We have equalized the rate, making a flat rate for all, except for the very small producer, giving him a little lower rate, through a specific tax.

For instance, under the operation of the present law the largest manufacturers of cigars paid a rate of only 2½ cents per thousand, while some of the smaller manufacturers paid from 5 to 10 cents per thousand. We provide a flat rate of 5 cents per thousand each, big or little, producing over 400,000 cigars a year.

Take cigarettes; under the present act the four big companies paid at the rate of from about one-half to one-third of a cent per each 10,000, while little fellows paid all the way from 12 cents to 40 cents. We put a flat rate of 2½ cents—I call attention to an error in the print of the bill. It is printed 25 cents; it should be 2.5 cents. We shall ask, however, for an amendment making a flat rate of 3 cents. By this change we will collect a few thousand dollars more than under the present act, but the four big manufacturers, by paying the same rate as the small manufacturers, as in this bill, pay most of the tax. The Lorrillards, Liggett & Myers, the R. J. Reynolds Tobacco Co., and the American Tobacco Co., instead of paying each a tax of $2,496, or a total of $9,984, under the present law, will pay under the pending bill about $40,000. Liggett & Myers, instead of paying $2,496, will pay about $16,000.

Mr. CANNON. The gentleman speaks of repealing all stamp taxes. The stamp tax act is in force and will be until this passes.

Mr. KITCHIN. Yes.

Mr. CANNON. What do you do about the special tax upon cigars? Do you repeal it back to the 1st of January?

Mr. KITCHIN. No; it is in force up to December 31, or until the 1st of January, when this takes effect.

Mr. CANNON. You do not refund anything?

Mr. KITCHIN. No; except stamps unused and on hand. The present law remains in force until the passage of this bill, but the stamp provisions are repealed at once upon its passage.

Mr. CANNON. You do not pay anything back except refund of unused stamps?

Mr. KITCHIN. That is correct. It was stated by the department that it would take a thousand extra clerks to keep the accounts if we did. That is one of the virtues of the rule we have passed; we want to get it into the Senate as quickly as possible, so that you will not have to lick stamps any longer than you have to. As has been said, you do not want to lick a stamp any more than you have to, for it might cause some fellow to lick a Republican or a Democrat some time. [Laughter.]

Mr. RUSSELL of Missouri. Will the gentleman from North Carolina yield?

Mr. KITCHIN. Yes.

Mr. RUSSELL of Missouri. If I understand the inheritance provision, there is $50,000 exempt.

Mr. KITCHIN. Yes.

Mr. RUSSELL of Missouri. And all indebtedness.

Mr. KITCHIN. Yes.

Mr. RUSSELL of Missouri. If a man dies worth $100,000 and he owes $60,000, there would be no inheritance tax?

Mr. KITCHIN. No tax at all.

Mr. REILLY. Will the gentleman yield?

Mr. KITCHIN. Yes.

Mr. REILLY. What do you propose to raise on taxing amusement places?

Mr. KITCHIN. About $2,000,000.

Mr. REILLY. And on bowling alleys?

Mr. KITCHIN. We do not change that either. Between $700,000 and $1,000,000 a year is collected on those and billiard tables.

Mr. REILLY. Is that an increase over last year?

Mr. KITCHIN. Last fiscal year ending June 30, 1915, we collected from those $791,414. This was from October 22, 1914, date of the emergency act, to June 30, 1915. This fiscal year we will collect about $950,000.

The bill, as every Member knows, contains a provision creating a tariff commission, known as the Rainey tariff-commission bill. My Democratic colleagues of the committee and the House will pardon me for being perfectly candid. I do not favor such a commission. From every viewpoint of the Democratic theory of the tariff, for the maintenance and promotion of the principles of revenue legislation which Democracy has been preaching throughout the country for more than a half century, in my judgment, a tariff commission is neither necessary nor wise nor expedient.

Standing alone, as a separate and distinct measure, I would oppose it. Surrounded as it is by and connected with so much other needful and beneficent legislation in this bill, and in deference to the judgment of a majority of my colleagues on the committee and in the House, who do not share my fears as to the results of its creation and operation, I shall support it.

I believe that the Ways and Means Committee, made up of Democrats and Republicans, is a good enough tariff commission.

There is no sacrifice of principle involved in the adoption or rejection of such a commission. It is simply a question of

necessity or wisdom or expediency; though every Democrat must confess with some degree of humiliation that its advocacy now by the Democratic Party is a sudden and complete change of its position and crossing of its policy.

My fear is that such a commission will prove the most efficient device ever conceived by protectionism for the promotion of its cause.

The tariff-commission promoters and propagandists were the National Tariff Commission Association, an organiaztion headed and officered and controlled by lifelong Republican protectionists. Their sole object was to reinstate protectionism and make it permanently the fixed policy of the Government. They have been most potent in working up public sentiment in favor of such a commission. How much this sentiment prevails throughout the country or how strong it is I do not know. I do know, however, that within two short months the mind of the administration and the Democratic Congress has been changed from a most persistent opposition to a most insistent advocacy of a tariff commission.

I expect to hear in the next few years—yes, in the next few months—more protection sentiment from Democrats than I have heard in all my life heretofore.

I fear, too, after the organization of the tariff commission, the next tariff-reform fight the Democratic Party makes—if it ever makes another—will be against the combination of the Republican Party and the membership of the tariff commission. I have heard some Republicans of the House express the fear that the President will pack the commission in favor of a "free-trade" tariff. I know there is no ground for such a fear. My fear is that even if every member when first appointed should be a rank free trader, in a few years he will be a rank high protectionist. From the time he is appointed until his term ends he will be environed only by protection. He will be asked to do nothing except in the interest of protection. Every complainant and every petitioner that will come before him will be a protectionist. Every lawyer—Democratic lawyer under a Democratic administration, Republican lawyer under a Republican administration—or other representative of a client will argue to him for protection. Every witness called will be a protectionist. Every factory or plant investigated will be protected plants, and every owner a protectionist. He will see nothing but protection and breathe nothing but protection. From one year's end to the other he will hear nothing but protection, until, finally, he will know and speak only the language of protection. The clever and cunning authors of the tariff commission conception anticipate such operation and results.

There is no doubt a large sentiment in this country, cleverly created by protectionists, that believes that the present abnormal situation has so revolutionized the industrial and economic conditions throughout the world as to justify the establishment of a nonpartisan, disinterested tariff commission that will give Congress and the public disinterested, unbiased information and disclose facts regarding tariff legislation in this country and in other countries, and industrial conditions in this and other countries. There is also a reasonably large sentiment in the country, and was before the war, worked up by this association of lifelong Republican protectionists, among the merchants, the bankers, and other business men that if we had a tariff commission, a nonpartisan commission—and I do not believe much in this nonpartisan talk—it will take the tariff out of politics; that it will stop all tariff agitation, which, they say, hurts business. My friend from Illinois, Uncle Joe, and my friend from Michigan, Mr. FORDNEY, as well as I, certainly have sense enough to know that the tariff is never going to be taken out of politics as long as Members of Congress can vote on it, as long as the Constitution gives the House the sole power to initiate legislation raising revenues. Just as long as a large portion of the people, on the one side, believe and insist that tariff taxes are a blessing—the higher the taxes the larger the blessing—that the tariff should be levied on all the people for the especial benefit and enrichment of a few of the people, and a large part of the people on the other side believe and insist that tariff taxes, like other taxes, are a burden which the people must bear and pay, that the tariff should be levied, in the interest of all the people, for the benefit and support of the Government, just so long will the tariff be in politics, and just so long will there be agitation here and agitation on the stump and agitation through the press and elsewhere throughout the United States. And that condition is going to continue, because most of the people on each side are honest in their belief, and they believe that their particular theory is for the general welfare of the people.

Now, let us take up the dyestuffs proposition. If I were as good a Democrat as I used to be [laughter], I would be fighting the dyestuffs provision, but I am going to take this bill with that dyestuffs proposition and tariff commission in it like I used to take a bad pill when I was a boy. [Laughter.] I would take it down all at once. If I began to nibble around it, and pinch off one piece at a time, I could not get it down to save my life. [Laughter.] So, gentlemen, if this dyestuffs proposition—although I helped to fix it myself—were standing alone, and were not sugar-coated by such palatable legislation around it, I could not swallow it to save my life. But I am going to do it. [Laughter.] I have been instrumental in fixing up this dyestuffs proposition, which is a compromise between the Hill bill and no bill at all. I can see some grounds why a Democrat can support it. I can see no grounds why a Republican should oppose it, provided it is all he can get. [Laughter.] You know, we have always heard Republicans denounced, and some of us have participated in the denouncing, as belonging to the big interests, as always bestowing favors upon the big fellows and kicking around the little fellows. I used to think that that was largely politics. I used to think the Democrats overdid that. But I never had the real truth of such charges demonstrated until I began to look into this dyestuffs proposition. The Republicans have been in power practically for 50 years, and during that time they have written practically all our tariff laws, swearing at all times that they were protecting and building up every single American industry, big and little. But we find that, after this long lease of power and tariff making for protection of American industry, at the beginning of the European war the United States was producing less than 15 per cent of the domestic consumption of dyestuffs. Why? Because the big textile industries in this country, the paint manufacturers, the wall-paper manufacturers, and the varnish and leather industries, and other big dye-using industries, whose capital stock sounded in the hundreds of millions, forbade the Republican Party placing a high-tariff tax, even in the name of protection, on products which they must purchase, and demanded free and untaxed dyes for themselves. When these little dyestuffs fellows came down to a Republican Congress and a Republican committee, begging for a little help, a little protection from the self-assumed friends of American industry, the Republican Party in Congress kicked them out of the Capitol, and then with a rush threw their arms around the big dye-using interests and said, "Oh, we are not going to exact one single penny from you to protect this miserable, little, contemptible dyestuffs industry up here in Buffalo and Brooklyn," and in the State represented by my distinguished friend Mr. HILL. [Applause on the Democratic side.]

Now, these same standpat Republicans come to us, a good old Democrat like me, stretch out their hands and say, "Please help remedy a wrong we have been committing upon these dyestuffs gentlemen for the last 50 years. We know we hugged to our bosoms these great big industries, like the silk industry, the woolen industry, the cotton textile industry, and pushed from up in contempt the little dyestuffs fellow. And we feel now we did them wrong. We feel that you Democrats will do the right thing, the fair thing." [Laughter and applause on the Democratic side.] Gentlemen, under the abnormal conditions and extraordinary circumstances we have done the fair thing, even from their standpoint, and we have made the bill so just and fair and efficient that three of the star witnesses who appeared before our committee in behalf of the Hill bill declared that this bill is all right, that while it does not give them as much as they wanted, it gives them all they needed. One of the biggest dyestuffs producers in the United States, Dr. Becker, president of the Becker's Aniline & Chemical Works, told me that with this bill on the statute books in five years he would make dyestuffs cheaper than Germany or any other country in the world. [Applause on the Democratic side.]

Now, what do we do?

Mr. MANN. Will the gentleman yield for a question?

Mr. KITCHIN. Yes, sir.

Mr. MANN. Does the gentleman think that Mr. Becker's statement is correct?

Mr. KITCHIN. Yes; I believe they can do it. His statement was substantiated by Mr. Wigglesworth, another Hill witness. It was corroborated by Mr. Waters, another of Mr. HILL's witnesses.

We make three groups: The first group contains raw materials, which are made free. Brother HILL believes in that. The second group contains the intermediates. Upon intermediates we put 15 per cent ad valorem. That is practically what it is in the Underwood Act. Group 3 contains the finished dyes and colors. Upon these we put 30 per cent ad valorem. Upon most of these we have now 30 per cent in the Underwood Act. It is not materially changed so far from the Underwood Act.

Now, here is where the Republicanism comes in, which I do not like. [Laughter.] But I am going to take it under all the

circumstances, and I give you some reasons why I take it. In addition to the ad valorem of 15 per cent on the intermediates and 30 per cent on the finished we put a temporary specific duty. On the intermediates, group 2, we add 2½ cents per pound in addition to the 15 per cent ad valorem, and in group 3, the finished product, in addition to the 30 per cent ad valorem we add a specific duty of 5 cents per pound. Brother HILL's bill added 3½ cents in group 2 instead of 2½ cents and 7½ in group 3 instead of 5 cents. Brother HILL's bill gives it permanently. Our bill gives this addition of 2½ cents and the 5 cents per pound for five years certain.

Then, if the manufacturers at the expiration of five years are producing as much as 60 per cent of our domestic consumption of dyestuffs, the specific duty of 2½ cents per pound on the intermediate and 5 cents per pound on the finished dyes are to be reduced 20 per cent each year for the succeeding five years, when all the specific duty goes off and only the ad valorem duty remains substantially what it is now in the Underwood Act. But if the manufacturer is not producing 60 per cent of the domestic consumption at the end of the first five years, the specific duties go off at once. You see, we make the manufacturer do something. He must build up the industry.

Mr. BRITTEN. Will the gentleman yield?

Mr. KITCHIN. Yes.

Mr. BRITTEN. What assurance did the gentleman's committee get that these businesses could be made effective in five years?

Mr. KITCHIN. No assurance, except that the biggest and wisest men in the business said they could and would.

Mr. MANN. Will the gentleman yield?

Mr. KITCHIN. Yes.

Mr. MANN. I understood the gentleman, in reply to my colleague, to say that he believed that a protective tariff imposed on dyes for 10 years would establish that industry?

Mr. KITCHIN. I said they said in five years, and I believe they can.

Mr. MANN. I have been preaching that for many years. [Applause on the Republican side.]

Mr. KITCHIN. In the present emergency I am advocating, or, rather, explaining or apologizing for this kind of protection temporarily. [Laughter.] I was and am against the stamp tax, but I voted for it as a temporary measure, an emergency. I am against the Government going into the marine-insurance business, but we all voted for it as an emergency. I am not in favor of issuing this "scrip" money, but in times of emergency I would vote for it. I am not in favor of the shipping bill, with its many objectionable features, but I voted for it as an emergency.

There are two objects the Democrat always has in mind in levying a tariff—one is the revenue and the other is the consumer. This bill does not affect the Democratic policy or principle of revenue or its interest in the consumer. We get no revenue at all now. It is all cut off, so that by this bill we do not lose any revenue.

Now, if conditions remain just as they are, we lose the revenues without the bill, because no revenues are coming in. Mr. HILL says this bill will not prevent a flood of imported dyestuffs when the war ends, but they will pour in upon us; if so, it will increase our revenue. The users of dyestuffs are not what we call the ultimate consumer, but they are the textile manufacturers, the leather manufacturers, the wall paper manufacturers. Dye is one of the little infinitesimal but necessary ingredients, which they must have, that goes into the manufacture of their products. Now, if a Republican had put this tax upon dyestuffs he would have gone to the textile schedules, the wall paper, paint, and leather schedules and put a higher tariff on the finished product to compensate the manufacturer of the finished product for the tax, and thus made the people—the ultimate consumer—pay the dye tariff. We do not raise the tariff a penny on the finished product that goes to the ultimate consumer. Who pays this tax? The textile manufacturer, the cotton, woolen, and silk manufacturers, the wall-paper manufacturer, the paint, varnish, and leather manufacturers pay it, and do not get one cent increased tariff on their finished product.

The consumers of these dyestuffs are the textile, wall paper, leather, and paint manufacturers; and these consumers come to us and say, "We do not want the Government to pay this for us; we do not want the Government to build this up for us; we do not want the ultimate consumers, the people to whom we sell, to pay this through an increase of the tariff on our finished product, but we ourselves are so anxious not to be caught again in war times with a dearth of dyestuffs, and be again so embarrassed in the manufacturing of our products, that we favor the dyestuffs provisions of the bill and are willing to be taxed and pay every dollar of the tariff increase it imposes."

So, gentlemen, have we violated any Democratic principle? We do not affect any revenue.

If Mr. HILL is correct, we will get more revenue. It will not raise the price of the finished products to the ultimate consumer a penny, because we do not increase the tariff on any finished product that he buys or consumes. For example, a suit of clothes like that worn by my friend here—on such a suit there is only about 2½ cents worth of dye used, so the tariff in this bill only adds to the cost of the suit about 1 cent. That tax or tariff must be absorbed and paid by the manufacturer before it gets to the consumer. The manufacturer tells us that he is willing to pay it. Even if he was not willing he would have to pay it, because we have refused to raise the tariff on the finished product into which the taxed dyes enter. So, gentlemen, after all we are not so far wrong even from an old-fashioned Democratic viewpoint.

In conclusion, we will have to-day and to-morrow for general debate and for general enlightenment. After that we are going to have two days under the five-minute rule to offer and consider amendments. Let us put our wits and our wisdom and our patriotism together, and if there is anything wrong about this bill from the real patriotic standpoint, let us correct it; let us perfect it. And then, following our good example a few months ago on the sugar tariff, let us Democrats and Republicans have one more genuine love feast of legislation, and all vote together for this bill, which affords you, my Republican friends, an opportunity, for the second time in your life, to cast a real respectable and patriotic vote. [Laughter and applause.]

---

## Revision of Newspaper and Magazine Postal Rates Will Make 1-Cent Letter Postage Possible.

---

### EXTENSION OF REMARKS
OF
### HON. CHARLES H. RANDALL,
OF CALIFORNIA,
IN THE HOUSE OF REPRESENTATIVES,

*Friday, August 25, 1916.*

Mr. RANDALL. Mr. Speaker, on May 31, 1916, I introduced the following bill in the House of Representatives:

"A bill (H. R. 16145) to establish rates of postage on second-class matter.

"*Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled*, That all newspapers, magazines, and other publications regularly admitted to the mails as matter of the second class shall hereafter be subject to the following rates of postage, the zone system now applying to parcel-post matter to be adapted also to second-class matter:

"Local, first, second, and third zone (under 300 miles), 1 cent per pound.

"Fourth zone (300 to 600 miles), 2 cents per pound.

"Fifth zone (600 to 1,000 miles), 3 cents per pound.

"Sixth zone (1,000 to 1,400 miles), 4 cents per pound.

"Seventh zone (1,400 to 1,800 miles), 5 cents per pound.

"Eighth zone (over 1,800 miles), 6 cents per pound:

"*Provided*, That free-in-county circulation provided by law shall continue as at present: *And provided further*, That no discrimination in rates of postage on account of frequency of issue shall be permitted in the city or town where a publication is mailed or otherwise."

Mr. Speaker, this bill is designed to remove several serious evils or discriminations from which the American people suffer in the administration of the postal affairs of the country, namely:

1. An annual net loss of $80,000,000 in postal revenues is caused by the grossly inadequate postage rate of 1 cent per pound, which is charged for carriage in the mails of publications of the national and magazine class.

2. Universal 1-cent letter postage can not be enjoyed by the people until the losses on newspaper and magazine mail are recouped to the post office. The sale of 2-cent stamps and stamped envelopes in 1915 aggregated $150,000,000, while the second class or newspaper postage loss exceeded one-half that amount. One-half of the postage paid on every letter therefore went to subsidize the publishers of national magazines.

3. Publishers of local newspapers, daily and weekly, suffer enormous losses of advertising revenues by the discrimination in postal rates in favor of publications of national character located many hundred miles from the local field, but enjoying the same postal rate which the local papers pay in their restricted fields.

The time has come when the Postal Service must be put on a business basis. Discriminations against the man who buys the 2-cent stamp and against the publisher of the newspaper in the local field must cease. The postal rate of 1 cent per pound, which is granted as a practical subsidy to the national papers of the magazine class, has resulted in fabulous fortunes for private interests, and to which the Postal Department is giving a plain contribution of more than $80,000,000 annually.

To make this more definite in the mind of the public, let me give the startling illustration of the workings of this mail subsidy feature as applied to three magazines published by one company in Philadelphia. They are regarded as among the highest class publications in America. One of the three has a circulation of over 2,000,000 subscribers, receiving $5,000 and upward per page per issue for advertising which appears in its columns.

The company owning these periodicals pays the Government annually from $600,000 to $650,000 for mailing same, and which is based at 1 cent per pound. The cost for the above service, according to the testimony of the Second Assistant Postmaster General, Hon. Joseph Stewart, and given before the hearing of the House Committee on the Post Office and Post Roads, was over 8 cents per pound, thus showing that the cost of the distribution of the above was from $4,800,000 to $5,200,000 per annum, and that there was a loss of over $4,000,000 on the publications of this company alone.

This is the application of our mail subsidy to only one publication. The same abnormal policy is pursued with many like publications, until to-day, as has been said, the net loss to postal revenues is in excess of $80,000,000 annually.

ONE-CENT LETTER POSTAGE.

Mr. Speaker, I have to-day introduced a bill to establish immediately upon its passage the 1-cent rate on "drop" letters for local and rural delivery at every post office in the United States, with the object ultimately, though not far in the future, of securing universal 1-cent letter postage for the people.

If Congress will revise the second-class or newspaper postal rates, this great reform, for which millions have petitioned this body, can be secured.

With the permission of the House, I will incorporate in my remarks the following:

1. The letter of Frank E. Noyes, president of the Wisconsin Daily Newspaper League, indorsing the proposed zone system for newspaper postage.

2. The letter of the Cleveland Electric Illuminating Co., stating that 64 per cent of the monthly customers' bills of electric lighting companies are delivered outside of the mails, because it can be done more economically than by paying the present 2-cent rate for drop letters, thereby depriving the Government of large revenues.

3. Table showing the number of pounds of second-class matter—newspapers and magazines—mailed during the fiscal year ending June 30, 1915.

4. Editorial comment of the Pittsburgh (Pa.) Sun and the Redondo (Cal.) Reflex upon the proposed zone system for newspaper postage.

LETTER OF WISCONSIN DAILY NEWSPAPER LEAGUE.

JUNE 17, 1916.

Hon. CHARLES H. RANDALL,
*House of Representatives, Washington, D. C.*

MY DEAR SIR: My attention has been called to the fact that you have introduced a bill in the House to change the postage rates paid by newspapers and magazines and which adapts the parcel-post zone to second-class mail matter. I am much interested in the subject and would be glad to have you send me several copies of the bill in question.

If I can do anything personally to aid a rational movement along this line, I will be glad to do so, and also offer assistance through the Wisconsin Daily League, of which I am president; and I am sure that the president and secretary of the Inland Daily Press Association, as well as the Wisconsin Press Association, will be glad to further the movement. Hoping to hear from you in the near future, I am,

Yours, very truly,

FRANK E. NOYES, *President.*

PUBLIC UTILITIES NOT USING MAILS.

THE CLEVELAND ELECTRIC ILLUMINATING CO.,
*Cleveland, June 10, 1916.*

Hon. CHARLES H. RANDALL,
*House of Representatives.*

DEAR SIR: Answering your letter of inquiry dated June 8, we undoubtedly would mail our consumers' bills if we could do so at a 1-cent rate. This is not because we do not believe we can do the work cheaper, but because we would be glad to be relieved of the responsibility for making the deliveries.

In this connection it may interest you to know that most of the electric utilities are also delivering consumers' bills, and that the number is growing annually. The result of a canvass recently made shows that of 144 electric utilities, having from 5,000 to 300,000 consumers each, over 64 per cent were delivering all or a part of their bills. As most of the larger companies deliver bills, the per cent of bills delivered by these 144 companies, in my judgment, would considerably exceed 64 per cent of the total. All of these companies make bills at least once each month.

It may be of interest to you to know that our distributors, for which work we employ men between 50 and 60 years of age, at wages of $2.50 per day, have averaged this year 480 bills each per day, and that their instructions are to either hand the bill to a member of the household, place it in the mail box, or return it to the office. The figure 480 represents actual deliveries.

We will be pleased to give you any further information we can on this subject.

Very truly, yours, J. H. SCOBELL, *Auditor.*

*Number of pounds of second-class matter mailed during the fiscal year ended June 30, 1916.*

| Wisconsin | 2,210,618 | 17,213,152 | 297,632 | 17,510,784 | 19,721,402 |
| Wyoming | 131,570 | 425,058 | 2,999 | 428,057 | 559,627 |
| Shanghai, China | | 17,633 | | 17,633 | 17,633 |
| U. S. S. South Dakota | | 123 | | 123 | 123 |
| Vera Cruz, Mexico | | 8,467 | | 8,467 | 8,467 |
| Total | 62,141,511 | 1,035,867,846 | 11,276,428 | 1,047,144,274 | 1,109,285,785 |

According to the estimate of Hon. Joseph Stewart, former Second Assistant Postmaster General, the cost of handling the above mail was 8 cents per pound, entailing a net loss to the Post Office Department of 7 cents per pound, or $77,650,004.95 on the 1,109,285,785 pounds carried. No wonder we can not have 1-cent letter postage!

[From the Pittsburgh (Pa.) Sun.]

ZONE SYSTEM POSTAGE.

Another revision of the postal rates is contemplated by some of the leading Members of Congress, who have been giving the subject of revenues from this branch of the Government careful study, as is evidenced by the bill recently introduced by Representative RANDALL, of California. The subject was revived recently by the agitation provoked by the Government's system of sending magazines by freight. The zone system, upon which individual transportation charges are based by common carriers, is being advocated.

It is contended that on second-class matter rates should be proportionate to the distance the bundle or package must be transmitted, just as it is with the parcel-post charges. As it is now, the users of first-class mail pay yearly a large sum to cover the deficit occasioned by the carriage of cheaper matter.

Second-class mail matter, it is held, does not pay a fair proportion of the expenses of the service. Last year, for example, 2-cent stamps and stamped envelopes to the value of $159,395,250 were sold, and yet, according to the estimates of the Post Office Department, the loss in carrying second-class mail was $80,000,000. In the bill introduced by Mr. RANDALL in the House this inequality is sought to be corrected by establishing zones for second-class matter, the first three up to 600 miles to be charged for at the present rate now in force of 1 cent a pound, and from that to 6 cents a pound for the longest distance.

This would naturally throw upon the magazines, with their nation-wide circulations, the necessity of paying their proportion of the cost of transporting and distributing their publications. The rate now charged is discriminating and unfair. The newspaper, with a comparatively local circulation, within the 300-mile radius, is compelled to pay just the same as is the magazine with a nation-wide circulation. It is figured by the department that it loses 7 cents for each pound of second-class matter carried.

That the bill will meet with vigorous opposition is a foregone conclusion, especially from those monthly publications that are now being carried from coast to coast at the same rate that a newspaper pays to be transported a few hundred miles. But the general tendency is to recognize the justice of the zone system, with increases that are reasonable. The short haul is objecting to paying more than a fair share of the cost of maintenance for the long haul.

---

[From the Redondo (Cal.) Reflex.]

TO EVEN UP POSTAL RATES.

Congressman RANDALL at Washington is not forgetting the trials and troubles he had as a newspaper editor and has introduced a bill into Congress rearranging the schedules for the shipment of second-class mail matter, which includes newspapers, magazines, and other periodicals. Mr. RANDALL shows that whereas magazines are getting rich, small newspapers are barely making a living. And one reason is because magazines are carried by the Post Office Department at the second-class rate of 1 cent a pound all over the country, even though in many cases it costs the Post Office Department 8 cents a pound to transport them. And small newspapers have to pay the same rate, even though nearly all their papers are delivered at home, without any transportation. Mr. RANDALL advocates the establishment of a zone system for second-class mail under which all publications taking advantage of the system would pay graded rates for the different zones in which their publications are delivered, similar to the parcel-post zone system. In this way he believes that the deficit in the Post Office Department could be eliminated and country papers could get fairer treatment as compared with the large magazines.

## The Catastrophe of Error.

### EXTENSION OF REMARKS
OF
### HON. GEORGE S. GRAHAM,
OF PENNSYLVANIA,

IN THE HOUSE OF REPRESENTATIVES,

*Tuesday, August 29, 1916.*

Mr. GRAHAM. Mr. Speaker, under the leave granted by the House I insert in the RECORD the following able and timely editorial from the Albany Evening Journal of August 21, 1916, entitled "The catastrophe of error," which I hope will be read by everybody who heard or will read the President's address to Congress to-day:

THE CATASTROPHE OF ERROR.

The attitude of mind of the President of the United States, and of the people generally, toward the threatened railroad strike is added evidence of the confused condition of thought pervading this country, to which the Evening Journal has regretfully alluded on numerous occasions.

The will to avert a calamity frequently leads men into action worse than calamity. Thus it may be possible that the misfortune of the railroad strike may be averted, but a greater misfortune, though not so obvious, may be entailed.

The citizen who has no direct financial interest in the outcome, as employee or stockholder, but who has a vital financial interest as a traveler or shipper, jumps immediately to the conclusion that difficulties of this character ought forever to be made impossible by law. When the appalling effects of a general railroad strike are contemplated—the closing down of industry so that hundreds of thousands will become idle, and the impossibility of providing food for the people of the cities—it is natural that the mind should accept any solution of the problem, no matter what. The difficulty, however, is deep seated. It lies in the thought, which has been gaining currency the last few years, that any form of contractual relations in which one person pays another for service is in reality a form of human slavery. As a consequence of this doctrine those who believe it advocate, pending the destruction of the entire social system, that the one who is paid for service has the right to do anything he pleases to compel a greater stipend for such service, no matter what that service may be deemed to be worth in times past. His right not to work, if he does not desire to do so, is good democratic doctrine. His right to combine with others to prevent work being done is distinctly a combination in restraint of trade, which is violative both of the common and statute law. But if he is in sufficient numbers, together with those affiliated with him, to control the Government through the franchise, then the power to inflict upon him the penalty for violation of the principle involved in the common law becomes nugatory.

This impasse leads the careless thinker to separate public-service corporations, such as railroads, from other industries, and to argue that they should be governmentally owned in order to avoid the danger to the public involved in strikes. But what are known as public-service businesses are not fundamentally different from other industries, although they appear to be because of owning a franchise. The farmer who produces milk serves the public just as the New York Central Railroad does. This plea leads logically toward Government ownership of everything, which means a socialistic state administered by the will of the majority. Furthermore, the remedy is inadequate. Employees do not change their status because of a change in ownership. A few years ago the governmentally owned railroads of France were tied up by a strike, and it was only through ordering out the employees as a part of the militia that M. Briand, formerly a socialistic agitator, but at the time minister of the interior, was able to restore order. His expedient, however successful for the moment, no more touched the root of the difficulty than Mr. Wilson's absurd and inept operations in the present situation in this country.

Out of the hundred million people in the United States there are probably not a thousand who would declare a man had the right to take the life of another. His belief in the right to his own existence involves belief in the right of another to his existence. On the other hand, those who believe that the contractual relation for wage between one person and another is fit and proper, do not represent nearly such unanimous opinion. They doubtless represent to-day the majority of opinion, but no such large majority of opinion as would have been the case 25 years ago. The younger generation has not been taught that each person is master of himself, and is the molder of his own fortunes, as he was taught a generation or two ago. He is practically taught that the State owes him a living, that those who are successful are stealing what belongs to him, and that the fact of his existence involves an obligation on the part of some agency to provide him with the means of life. This thought is not confined to those who work for wage. In fact, it is not held by thousands of those who do live through wage. It is a familiar theme of all social reformers. It is the rock upon which the Germanic state is built at the present time. It is contrary to the American spirit, the American Constitution, and American teaching. But it is here.

Mr. Wilson in a recent speech made the statement that labor was not a commodity, a doctrine which involves, of course, the denial to a man of the right to sell his labor at such price as he can get. It involves acceptance of the doctrine of labor leaders who in effect deny to an individual the right to earn his livelihood unless he is a member of organized labor. It is an acceptance of the Germanic theory that a man exists for the State, and the State therefore must provide work for him when he is able, and a pension for him when he is disabled.

There is no solution of this problem, again brought to the fore by the controversy between the owners and the employees of the railroads, until one or the other theory of human life is accepted. Any other solution is a makeshift.

That a makeshift will be the answer is probably certain. The railroads, deprived of their liberty in the interest of the public, are still at the mercy of their employees. They can not place upon the consumer of their products any increase in their rates. Great industrial concerns which have shown large profits have voluntarily increased their wage scale, notably the United States Steel Corporation, and the Ford Automobile Co., but they are not regulated. The price of their product is controlled by natural law. Thus the plan of governmental rate making should lead to governmental wage making, but this is repugnant to the American theory of life, hence the confusion, the discord, the enigma.

---

## Letters Requesting Information Relative to the Navy.

### EXTENSION OF REMARKS
OF
### HON. WM. ELZA WILLIAMS,
OF ILLINOIS,

IN THE HOUSE OF REPRESENTATIVES,

*Tuesday, August 29, 1916.*

Mr. WM. ELZA WILLIAMS. Mr. Speaker, under the leave granted to me to extend my remarks in the RECORD, I include a letter addressed by me to the Secretary of the Navy, asking information relative to the Navy, and the Secretary's reply.

The letters are as follows:

JULY 28, 1916.

Hon. JOSEPHUS DANIELS,
*Secretary of the Navy, Washington, D. C.*

MY DEAR MR. SECRETARY: I am in receipt of numerous requests from friends and constituents asking for certain information with regard to the Navy. The writers wish to know its relative position among the navies of the world during recent years and how and when our Navy was relegated to a place inferior to that it formerly held among other nations, if such is the case. What was the condition of the Navy when this administration entered upon its duties and what has since been done to provide an adequate Navy in ships, men, officers, and munition? They are interested also in what has been done to better the organization of both the Navy Department and the fleet, and any economies that have been effected. During the Sixty-third Congress, as a member of the House Committee on Naval Affairs, I kept in close touch with all proceedings to better the condition of the Navy, but on becoming a member of the Judiciary Committee of the Sixty-fourth Congress my immediate relations with the

Navy ceased, and I have been unable to keep in as close touch with it as I desired. Will you not therefore favor me with a letter, giving me full information along the lines suggested, that I may fully and correctly advise my constituents with respect thereto? I will appreciate your favor and courtesy in this behalf.

Respectfully, WM. ELZA WILLIAMS.

—

THE SECRETARY OF THE NAVY,
*Washington, August 23, 1916.*

MY DEAR MR. WILLIAMS: I am in receipt of your letter asking how it was and when it was that the American Navy was relegated to a place of inferiority to that it formerly held among other nations, what the Wilson administration has done to restore the Navy to its high place, and what economies have been effected in the naval administration. I have delayed answering your letter until the new naval appropriation act finally had passed both Houses, so as to give you the exact figures.

WHEN IT LOST SECOND PLACE.

The Navy of Great Britain has been surpassed in power only once in our history, and that was in the administration of President Pierce, when 18 steam vessels were added to the United States Navy, giving it the advantage for the nonce over the British Navy in actual sea power, as all of the ships of England at that time were wooden sailing vessels and the vulnerable side-wheel steamers. But that situation continued only for a short time. In answer to your question, when the United States lost second place, I quote the following statement made by the General Board of the Navy on May 2, 1916, in response to an inquiry by Representative BUTLER, ranking Republican member of the House Naval Affairs Committee:

"There is no known method of measuring accurately the relative power of two navies, as all elements must be considered, such as displacement, number and size of guns, muzzle energy of battery, thickness and distribution of armor, speed, and endurance. Displacement is a simple and convenient measure. Using displacement as the comparative measure of material and active personnel as the comparative measure of personnel, the following shows when the United States became second in size and strength and when the United States lost second position:

"(a) Considering displacement of ships built, the United States advanced from third to second place in 1907 and dropped to third place in 1911.

"(b) Considering displacement of ships built and building, the United States advanced from third to second place in 1909, held this place for a short time only, and dropped to third place again in the same year, 1909.

"(c) Considering active personnel, the United States advanced from third to second place in 1908, dropped to third place in 1911, and to fourth place in 1913. The United States advanced again to third place in the first part of 1914, and later that year dropped to sixth place, owing to the expansion of the naval personnel of belligerent nations."

The United States lost second place because Germany built ships rapidly, while the United States contented itself with a small program of naval construction. In 1903 the General Board urged the adoption of a program providing for the construction of two battleships a year. If that plan had been carried out, by 1919 we would have had 48 battleships and would have kept our place. But in 1905 the Secretary of the Navy (Mr. Bonaparte) asked for only one battleship, and in his message to Congress in the same year President Roosevelt said, in order to maintain and increase the then standard efficiency of the Navy, it did not "seem necessary, however, that the Navy should—at least, in the immediate future—be increased beyond the present number of units," and he advocated adding "a single battleship to our Navy each year." In his 1907 message President Roosevelt wrote to Congress: "I do not ask that we continue to increase our Navy. I merely ask that it be maintained at its present strength." At that time the General Board was insisting upon two to three new battleships each year, but their recommendation was carefully pigeonholed and not permitted to reach the public. Never until the Wilson administration was the recommendation of the General Board given to the public. "I never saw it," was the statement of the two ranking members of the Naval Affairs Committee of the House, when, in 1913, I printed the General Board's report as an appendix to my report. And yet, though successive Republican administrations had kept it as a sealed book, while I gave it circulation, certain critics declare I have suppressed reports. If former administrations had done as much for the increase of the Navy year by year as the Wilson administration did during its first two years, the American Navy would not have dropped from second to third place.

When Wilson was inaugurated the Navy was short of ships, short of men, short of officers, short of munitions, short of aircraft, and behind in target practice.

TARGET PRACTICE.

It was good up to 1900, at the short ranges then used, but had fallen off "between 1900 and 1913," to quote Capt. Sims, an expert in target practice. Admiral Fletcher says the recent practices were held at ranges of from 16,000 to 18,000 yards, which are the longest ranges at which firing has occurred in the present European war, and "it is believed that scores recorded are higher than ever before in the open sea." Capt. Sims says that the last target practice "came up about 40 per cent." Capt. Plunkett, director of target practice, says, "The records of the fall of 1915 indicate that we are advancing by leaps and bounds." Other experts in the Navy, including the commander in chief of the Atlantic Fleet, give like testimony, and the determination to make still greater improvement shows the splendid spirit that animates the Navy. I do not claim any credit for this except that I have sought the leadership of the best equipped experts and given them every opportunity and encouragement for practice and practice and still more practice.

FIGHTING CRAFT.

What has the Wilson administration done for this chief need? Three naval bills have passed. In the first two bills appropriations were made for five dreadnaughts, as against three in the last two years of Taft's administration. There were like increases in destroyers and submarines. The following is a comparative table showing the number of the various classes of vessels for which appropriations were made during the Roosevelt, Taft, and Wilson administrations:

| | Four years Roosevelt. | Four years Taft. | Three years Wilson. |
|---|---|---|---|
| Dreadnaughts | 6 | 6 | 9 |
| Battle cruisers | 0 | 0 | 4 |
| Scout cruisers | 0 | 0 | 4 |
| Destroyers | 23 | 26 | 32 |
| Submarines | 20 | 20 | 57 |
| Auxiliaries | 6 | 11 | 14 |
| Gunboats | 0 | 2 | 1 |
| Total | 55 | 65 | 121 |

But this does not begin to tell the story of the big things the Wilson administration has done to increase the Navy. For the first time in the history of the Republic a Chief Magistrate went before Congress and advocated the new policy of a continuing constructive program instead of the authorization year by year. As a result of President Wilson's policy, approved by Congress, a wide departure has been made and, by the authorization of a three-year program, the Wilson administration has authorized, in addition to the 121 ships enumerated above, the construction of 90 more ships, including 6 dreadnaughts, 2 battle cruisers, 6 scout cruisers, 37 submarines, and 30 torpedo-boat destroyers.

PRESIDENT'S PROGRAM POPULAR.

No such program has ever before been suggested by a President, and it passed Congress by a majority so large as to show that in his resolve we "should be strong upon the sea" President Wilson had the support of the overwhelming majority of the American people of all parties. Indeed, the President's continuing program, a new innovation, was so popular that both the Democratic and Republican conventions specifically demanded its adoption by Congress. It was his appeal to the people and their monster human and written petitions of indorsement which secured the big naval building program.

A CONTRAST.

The total amount for the construction of new ships authorized by the Wilson administration is $655,289,806. The total in Roosevelt's four years was $83,192,938, and the total during Taft's administration was $127,747,113. That is to say, Wilson in a little over three years has secured authorizations more than three times as much to increase the Navy as did both Roosevelt and Taft in their eight years. If his two predecessors had shown half as much interest in strengthening the Navy as Wilson has shown, it would not be necessary now, in a period of high cost of construction, to make such large provision as the Sixty-third and Sixty-fourth Congresses have been forced to authorize in order to make up for the lack under both Roosevelt

and Taft. There is not a defect in the Navy to-day that was not inherited from former administrations. I am glad to say that under the constructive leadership of Wilson most Republicans united with the Democrats in supporting the big Navy program, which will repair the deficiencies of former administrations.

Let us consider men. Not less important than fighting craft are men to man them. The Roosevelt administration added 7,500 men to the Navy. The Taft administration authorized 7,000 men, though Secretary Meyer asked for only 4,000; but only 3,000 were actually enlisted. In the first two years of Wilson's administration 5,824 men enlisted, and increase authorized is 27,500. In emergencies the President may make the enlistment 87,000, as against the 51,500 authorized when Wilson was inaugurated. This will be a sufficient number to man all ships, which has not been possible in this generation. The large increase at this time was made necessary because former administrations failed to enlist enough men to man the small number of ships they constructed. There was no organized Naval Militia, no provision for a reserve, and no civilian training when Wilson became President. Provision has been made for these, an indispensable adjunct to an efficient Navy.

PROOF OF IMPROVEMENT IN THE NAVY.

While the utmost care is exercised in accepting men for the Navy, causing the rejection of five out of every six applicants for physical, mental, or moral reasons, the fact that the Wilson administration has been able to fill and keep the quota of enlistments full, that reenlistments have increased from 52 per cent to 85 per cent, that desertions have fallen off from 216 to less than 90 per month, and that the number of prisoners has been reduced from 1,800 to 700 under improved penal systems, evidences the increased popularity and efficiency of the service.

SHORTAGE OF OFFICERS BEING REMEDIED.

The Navy was short of officers when Wilson came into office. Why? Because each Congressman was authorized to appoint only one midshipman to Annapolis. In May of 1913 Congress extended the law, which Republicans had let expire, giving two appointments to each Congressman. This year Congress has made an increase, so that each Senator and Representative has three appointments to Annapolis. This is an increase of over 831. If this had been done under Roosevelt and Taft, there would have been no shortage of officers.

PROMOTION OF ENLISTED MEN.

Doors heretofore closed are now open to bluejackets. Under new legislation 25 enlisted men can now be appointed annually to the Naval Academy and qualify to rise from apprentice seamen to admiral. Already 28 have been appointed, and this new recognition has had a salutary effect throughout the entire Navy and made it truly American in spirit. Fifteen enlisted men have been appointed as assistant paymasters and 64 to the position of pay clerk, which grade, numbering over 200, will henceforth be exclusively filled by appointments from the ranks instead of by the personal appointments of pay officers. Thirteen enlisted men have been promoted to ensign from the ranks during Wilson's three years, as compared with three in Taft's four years. Enlisted men are also eligible to the Aviation Corps, and new schools have been enlarged, giving opportunity for the best training to ambitious enlisted men who come into the Navy, with a chance to those of superior ability to earn promotion.

EXPANSION IN AIRCRAFT.

The present Congress has also appropriated $3,900,000 for aeronautics and the aviation station, continuing the wise policy of the Sixty-third Congress, which made the first specific appropriation—$1,000,000—for aeronautics. The appropriation by the Sixty-third Congress has permitted the development of naval aeronautics so that an aviation ship is now in the fleet, and the Aviation Corps has been increased to 18 machines and 160 officers and men, as compared with 4 machines and 4 officers in March, 1913. The larger appropriations by the Sixty-fourth Congress will insure a larger expansion. Under Taft $61,888.06 was provided for aviation. Under Wilson $5,217,278.57.

MINES INCREASE FOURFOLD.

When the Wilson administration undertook the regeneration of the Navy it was found that there were no mining division and that there were few mines. Contracts were made at once to purchase mines abroad—none could be had in this country—but the European war made it impossible for the contractors to fill the orders. Fortunately, the Navy Department had in its contract obtained the right to manufacture mines in this country, and it is doing so in its own plant. A mining division has been organized completely. Now, for the first time in the history of the American Navy its position with regard to mines and mining is satisfactory. Moreover, the mines manufactured in this country have been produced at a cost of between $175 and $200 less than the price contracted for their purchase abroad, and a large saving has been effected. For every 100 mines the Navy had when the Wilson administration came into office, there are now 400—that is, four times as many—and the number is being multiplied daily.

TORPEDOES INCREASED AND PLANT ENLARGED 433 PER CENT.

A like shortage in torpedoes has been remedied and for every hundred torpedoes we had on hand in 1913 we now have 158 more, and the Navy Department is constructing torpedoes in its own plant at a saving of over $1,000 on each torpedo. It has also increased the capacity of the torpedo works 433 per cent. Not only are more torpedoes provided for less money, but the Navy Department has won its suit to prevent a private company from selling its torpedoes to foreign nations, thereby disclosing Navy secrets. In rendering his decision, Judge Cox made the following wise declaration, which indorses the policy of the Navy Department under this administration: "This case illustrates the importance of the United States having a manufactory of its own for the manufacture of torpedoes and other implements of war, which are improved and changed from time to time by the addition of ingenious mechanism, which should clearly be kept secret unless our enemies are to profit equally with ourselves in every improvement which the ingenuity of our Army and Navy officers may suggest."

INCREASED PRODUCTION OF POWDER AT DECREASED COST.

As the Navy Department increased its production of powder the private manufacturer decreased the prices from 80 cents to 53 cents a pound, by direction of Congress, after an investigation into its cost. The Navy manufactures powder for 34 cents a pound, including all overhead charges, and this administration has increased the capacity of the powder factory from 3,000,000 to 6,000,000 pounds per annum, insuring an adequate supply at minimum cost.

ARMOR PLANT WILL MAKE ARMOR PLATE CHEAPER.

For years the manufacturers of armor plate had been charging the American people excessive prices for armor plate. All three companies manufacturing armor plate offered bids of identically the same price. Such bids were not accepted, and more than $1,100,000 were saved on three ships by insisting upon competition. But this large saving still left the price far above a reasonable sum. The Sixty-fourth Congress has appropriated $11,000,000 to build an armor-plate plant where armor plate can be manufactured at a price of $230 a ton, as against $454, the price which was being paid when the Wilson administration was inaugurated. In addition to cheapening the cost of production an additional advantage of a Government armor-plate plant would be to encourage and give opportunity to its experts to steadily improve the quality of the armor to be used on naval craft. No process is perfect, and study and experiment will produce superior armor. Secrets of production discovered by Government experts will belong exclusively to the American Navy.

TO MANUFACTURE PROJECTILES.

Congress has also appropriated $705,611 toward a projectile factory, to cost double that sum, insuring an adequate supply of superior ammunition, not now obtainable, at cost price. By obtaining competition $1,077,210 was saved on a single contract for projectiles. A Government factory guarantees competition with private manufacturers and the best quality of projectiles.

EVERY YARD EQUIPPED TO BUILD SHIPS.

The private shipbuilding yards have not the facilities to construct the large program authorized. It was the practice, before the Wilson administration, to build no ships in any except two navy yards, and their facilities were limited. The Wilson administration has equipped, or provision has been made by the Sixty-fourth Congress to equip, every navy yard to construct naval craft, and it will be possible in the future to secure more rapid construction of new ships for the Navy in both private and public yards. The fact that the Government can build in its own yards will, in normal times, insure competition in building and secure prices more reasonable than would be possible if it depended almost entirely upon private shipbuilding yards, as the Republicans did.

BEST AIRCRAFT GUNS.

The ordnance experts of the department have designed and completed and placed on the latest dreadnaughts the best anti-aircraft gun in the world.

BEST LARGE-CALIBER GUN IN THE WORLD.

They have also produced a large-caliber gun that will shoot straighter, shoot farther, and hit harder than any gun now in use in any foreign navy. Sixteen-inch guns are to be placed on the new dreadnaughts. A portion of guns of various calibers

are manufactured by the Navy. Based upon former and current prices, we have saved $682,555.21 upon guns we manufactured since Wilson's inauguration.

MOBILIZING AMERICAN INDUSTRY.

The invaluable services, given without compensation, of the Nation's foremost engineers and chemists have been obtained for the Government in the organization of the Naval Consulting Board, of which Mr. Thomas A. Edison is chairman. Their counsel and cooperation and initiative, not enlisted in the past, are now made readily available to aid in the solution of the many complicated problems always before the department. A committee of the consulting board has already completed the first census ever made of the country's industrial resources for war. This information and the contemplated work of this committee in the new laboratory to be erected under recent legislation places the unsurpassed facilities of American industry at the service of the country in the event of war.

For the first time, American industry has been mobilized. Industrial preparedness, never before attempted in this country, is not a promise of the Wilson administration, it is an accomplishment, needing only to be extended and more perfectly organized.

BEST NAVAL ORGANIZATION.

The unworkable organizations of both the Navy Department and the Atlantic Fleet, in which is centered the chief strength of the American Navy, have been supplanted by better ones. Without violating the American ideal of subordinating the military to the civil power, the fleet and the department are now so organized as to effect the most successful operation afloat and ashore. Writing of the naval organization as it exists to-day, Admiral Dewey, in a letter to Chairman PADGETT, of the House Naval Affairs Committee, recently said the United States Navy has "I think, the best General Staff in the world."

WAR COLLEGE NOW REACHES THE FLEET.

In no administration of the Navy Department has the training of officers or the preparation of the fleet for battle been cared for so jealously and efficiently. The Naval War College, where high-ranking officers are taught and practice problems in the science of strategy and tactics, had under Republican rule been permitted to degenerate until in 1913 it had a class of five students and nine instructors. Two courses at the college were established in April, 1914, and now 32 officers are taking the regular course, while the new correspondence course is being taken by 499 officers. This new course brings the instruction and study of the War College into close touch with the officers of the fleet. In his hearings before the House Naval Committee in February, 1916, Admiral Knight said: "The recent development of the War College, which has been rather striking, has been due in large measure to the interest which has been taken in it by our present Secretary of the Navy. The War College has been in existence since 1885, and during a large part of that time it has had to struggle for existence. Its ideals have always been high and its methods of work have always been admirable, but never until this present administration has it found any active aggressive support from the Navy Department. Very early in his administration Mr. Daniels came to the War College. He saw at once what it was and what its possibilities were, and he said, 'I am a friend of the War College.' From that time on he has done everything possible to support the War College and strengthen it, and the work that we are doing there now is very largely due to him."

GENERAL ECONOMIES EFFECTED.

Economy has been the watchword of this administration of the Navy, and its purpose has been to concentrate expenditures to the widest extent possible upon the Navy afloat, to which the country must look for protection in case of attack. Insistence upon competition among armor plate manufacturers saved $1,110,084, and $600,000 of this was on one ship alone, the *Arizona*. The same policy amongst the projectile manufacturers saved $1,077,210, and the Navy, by increasing the capacity of its powder-making plant at Indianhead, reduced the cost of powder from 53 to about 34 cents a pound, including overhead charges, while the capacity of the plant was raised from 3,000,000 to 6,000,000 pounds annually. The saving on this additional powder per year will be $570,000. The cost of manufacturing torpedoes was reduced from $4,202 apiece to $3,245, a reduction which has easily saved $300,000. In other words, five torpedoes can be manufactured for the $20,000 which must be paid for torpedoes purchased. The Navy makes all its own mines, at a saving of $145 on each. In smaller economies of various kinds $2,000,000 was saved, of which, in 1915, $1,000,000 was reappropriated by Congress for aeronautics and $800,000 for submarines. The old "misfit" battleships *Mississippi* and *Idaho* were sold, after about six and one-half years service, for $12,535,275.96, the original cost price of both together, and, with $2,000,000 additional appropriated by Congress, a modern new dreadnaught, the *Mississippi*, now building at Newport News, was added to the Navy. As the result of carefully watching the transportation expenses of the enlisted men between naval stations and ships, a saving of $176,643.56 was effected. Smaller savings have been effected elsewhere.

ECONOMIES AT SEA.

By care and vigilance in utilizing naval colliers to bring from distant ports articles used in large quantities by the Navy, such as hemp for auxiliaries, sodium nitrate for powder, tin, shellac, and the like, and for the transportation of coal to west coast stations and to the Philippines; by insisting on competition in the purchase of steaming coal; in the saving by remelting of scrap metal; and in the purchase of provisions, the department has effected economies at sea amounting to $1,342,595. The amount thus saved has been available for obtaining stocks of other supplies or making repairs to vessels of the Navy. In other words, were it not for these economies the current working appropriations would have suffered to the value above mentioned, or Congress would have had to appropriate the above additional sum to meet the needs of the naval service.

INCREASED WAGES AT NAVY YARDS.

The number of employees in the navy yards of the United States is 7,485 more than when the Wilson administration came into power. The increased amount of pay to navy-yard employees is $27,063.77 per day more than in 1912. The average pay per diem for employees in 1912 was $2.723, as compared with $2.997 in 1916, an average increase of pay of $0.274 per day. The increased pay of skilled workers is much larger.

EPOCH-MAKING YEARS.

These three years have been epoch-making years in the history of the Navy. In addition to what I have touched upon, it may interest you to recall that during the year, for the first time, the Secretary of the Navy, by the use of the wireless telephone, has given orders to a ship 75 miles at sea; radio stations that put us in touch with Hawaii and Manila are being constructed; new 16-inch guns have been devised for new dreadnaughts, marking a wide departure from the 14-inch guns; electrical propulsion, not used by any other navy, is being installed on new ships; the increase in the number of chaplains will provide a spiritual leader for every ship; opportunity to civilian aviators and engineers to come into the Navy has been offered; the most perfect organization (put into effect last year) known in any navy has received the approval of Congress and the naval service; the policy of promotion of officers by seniority, which was a reward for mediocrity, has been replaced by a wise system of selection where nothing but merit counts to secure high rank. These are some of the measures of improvement and progress, due to the President and Congress and the earnest spirit of the officers and men in the service, which justify the pride of Americans in their Navy. There is no single unit of the Navy, whether of material or personnel, which has not been improved under the Wilson administration, and provision has been made to overcome the defects and shortages which it inherited from 16 years of Republican administrations.

I congratulate you upon the important part you had in the early additions and improvements authorized during your service on the Naval Affairs Committee in the Sixty-third Congress, and also upon your interest and cooperation which, with that of other patriotic Members of Congress, made possible the passage of the biggest and best naval program ever authorized by any legislative body in the history of the world. It may interest you to know that whereas the naval act just passed carried an appropriation of $313,000,000, the largest appropriation ever made by Great Britain prior to the present war was $260,714,275, which was for the English fiscal year ending March 31, 1915.

There may be criticism by some of the large provision made for the Navy, but those who believe in a strong and well-proportioned Navy will rejoice that at this period in our history the country was blessed with the good fortune of having in the White House a man resolved to secure a powerful Navy, and with a Congress in sympathy with the demand of the American people for an adequate Navy, a Navy large enough to defend the coasts of this country and to uphold the policies and honor of the Republic.

Very truly, yours,

JOSEPHUS DANIELS.

Hon. WM. ELZA WILLIAMS,
*House of Representatives, Washington, D. C.*

## Statement of the Employees' Side in the Controversy Between the Railroads and Their Employees.

EXTENSION OF REMARKS

OF

# HON. WARREN WORTH BAILEY,

OF PENNSYLVANIA,

IN THE HOUSE OF REPRESENTATIVES,

*Tuesday, August 29, 1916.*

Mr. BAILEY. Mr. Speaker, under the leave granted me to extend my remarks on the subject of the pending controversy between the railroads and their employees, I beg the privilege of submitting the following statement of the employees' side of the case, believing that it will be of interest to the American people, a proper recognition of a great body of workmen, and a valuable contribution to the literature of this momentous episode in the industrial life of the Republic:

THE THREATENED RAILROAD STRIKE.

REASON FOR STRIKE—RAILROADS HAVE PERSISTENTLY REFUSED TO ACCEPT THE PRESIDENT'S PLAN—NO COUNTER PROPOSITION WAS RECEIVED.

The real and ultimate reason that the present railway strike will be declared was the refusal of the railroads to accept the plan of settlement proposed by the President of the United States. When it became evident that no adjustment could be reached through the Federal Board of Mediation and Conciliation at New York President Wilson requested the employees' committee and the committee of managers to come to Washington, where it was his purpose to accomplish an agreement if possible. After conferences with representatives of both the railroads and their employees the President proposed the following basis of settlement:

"Concession of eight-hour day.

"Postponement of the other demand as to payment for overtime and the counter suggestions of the railway managers until experience actually discloses the consequences of the eight-hour day.

"In the meantime the constitution, by authority of Congress, of a commission or body of men appointed by the President to observe, investigate, and report upon these consequences without recommendation.

"Then such action upon the facts as the parties to the present controversy may think best."

The foregoing plan of settlement was submitted to the employees' committee on August 17 and was accepted by them the following day, and the President notified to that effect.

Notwithstanding the fact that the same proposition was submitted to the presidents and general managers of the railroads, they persistently declined to accept such proposition or to submit a counter proposition which could be considered by the employees' committee. This condition existed from August 17 until August 27, during which 10-day period the employees' committee anxiously awaited some counter proposition on which a settlement could be based. Realizing that the railway managers were simply utilizing the time to create a public opinion against President Wilson and against the railway employees by soliciting and paying for thousands of telegrams from farmers, merchants, and manufacturers, the employees' committee adopted the following resolution on August 27 and left for their respective homes:

"The resolution to quit work adopted by us in accordance with the vote of the members at our meeting in New York on the 13th day of August, 1916, and the authority then conferred upon our chief executives and the instruction to them to fix the day and hour and to transmit notice of the same to the chairmen and then to the members are hereby confirmed, approved, and reenacted to take effect unless prior to the day and hour so fixed notice shall have been received that the proposal of the President of the United States, accepted by us on the 18th day of August, 1916, has been accepted by the representatives of the railroad companies."

—

SPECIAL PRIVILEGES.

A special privilege granted to railroad companies by the present Federal arbitration law, known as the Newlands Act, is that of administering any award reached in an arbitration. For instance, a railroad and its employees may submit to arbitration under the Federal law, a complicated wage dispute. The award may be intended to benefit the employees, but immediately, and almost invariably, the railroad officials on that road interpret the award to mean a wage reduction instead of a wage increase, and thus railway employees have been educated to look upon arbitration as a gross injustice.

So long as operating officers of the railways are permitted to interpret the language of an award to suit themselves, compelling the employees to accept such interpretation, with the full knowledge that the board of arbitration did not intend its language to be distorted, the employees are justified in refusing arbitration.

Can you imagine one of the parties to a suit at law being permitted to interpret the court's decision to the extent of compelling the other party to the suit to accept such interpretation?

Experience has taught the employees that it requires many months, and often years, to secure the enforcement of an award as intended by the arbitrators.

—

MANUFACTURING PUBLIC OPINION.

While the presidents and the general managers of the railroads were trying to make President Wilson believe that they were sincerely endeavoring to agree among themselves on some basis of settlement of the present eight-hour movement, they were busily engaged in creating a "public opinion," at an enormous expenses to the railroads, as will be indicated in the following telegram, which was sent to all station agents by the officials of one of the most prominent western railroads:

"It is highly important to get trainmen question discussed by farmers, stock raisers, dairymen, and merchants. Please get as many of these classes as possible in your town and vicinity to send telegrams rush to President Wilson, at Washington, D. C., urgently requesting him to settle the controversy by arbitration. Telegrams should show business of the sender. These telegrams are to be paid for from station funds and statement sent me for voucher your credit. I want you to send copies these telegrams to me by wire soon as transmitted to the President, using our own wires for this. Might be well to have some of the most prominent signers send messages to their Congressmen and Senators in Washington in addition to those sent to President Wilson. This is very important and must be given preference over normal business to-day."

Information came from other roads that similar efforts to deceive the President and Members of Congress were being vigorously pressed by convincing farmers and merchants that if they would send telegrams of this character to the President and Members of Congress it would not only prevent a strike, but prevent an increase in freight rates.

Thus by the use of their surplus earnings railway companies "manufacture public opinion."

—

FRENZIED FINANCE—THE DISSIPATION OF THE REVENUE GAINS OF THE RAILROADS HAS COST MORE THAN LABOR.

As a result of the methods of financing or selling securities through the banking institutions which control the railroads, enormous bonuses to stockholders have been granted. During the period 1900–1910 alone 18 representative railroads, traversing all sections of the country, gave away in bonuses to their stockholders the huge sum of $450,414,992. More than $250,000,000 was also distributed in this way during the same period by eight representative western railroads. Large underwriting and banking commissions have also been paid which have been without justification. By way of illustration, the recent investigation of the St. Louis & San Francisco Railroad by the Interstate Commerce Commission showed that discounts and commissions were paid to banks and syndicates which aggregated the enormous total of $32,152,602 during the period 1896–1913. These are typical instances. By the sale of securities at much less than their market value, the railroad companies have been deprived of cash resources which they should have had and at the same time they have issued fictitious capitalization which became a drain on operating revenues.

One banking house received a fee of $500,000 for reorganizing the Chicago Great Western in 1909, and in addition made a profit of $6,000,000 for the syndicate which it represented. In the reorganization of the Northern Pacific Railroad in 1896 the same banking firm received a commission of one-fourth of 1 per cent upon the par value of all the securities deposited under the reorganization plan, the only reservation being a stipulation that the total fee to this firm should not be more than $1,000,000.

Syndicates of bankers and financiers made enormous profits in connection with the stock manipulation and transactions of the Chicago & Alton and the Union Pacific Railroads. The total amount of the funds or resources diverted from the treasury of the Chicago & Alton Railroad during the period 1899–1906 amounted to more than $24,000,000. The same syndicate made more than $21,000,000 in the sale of the stock of the Southern and Northern Pacific and the Chicago & Alton Railroads to the Union Pacific Railway, over the finances of which they had control. A banking firm which represented the syndicate received profits on these transactions also which were estimated to be more than $2,000,000. Large syndicate profits were also received in connection with the sale to the Rock Island Railroad of some of its subsidiaries.

As the result of this reorganization the Atchison stock issues were inflated without adding anything to the value of the property or to its earning capacity, to the amount of $166,093,095. More than $112,000,000 has already been paid in dividends upon these fictitious securities, which constitute a liability against the property but do not represent any contribution over made in any way to its earning capacity. The annual dividends now paid upon these stock issues amount to $9,167,456.

The New York Central & Hudson River Railroad was formed by consolidation, dated December 15, 1869. The total par value of the stock of the two companies entering into the consolidation was $44,815,800. This amount was arbitrarily increased without adding one cent to the value of the property by an increase in the capital stocks of the consolidating companies of $44,428,330; or, in other words, a stock dividend of practically 100 per cent was declared. Prior to this consolidation the capitalization of the two constituent companies had been increased at a conservative estimate $12,500,000 without any tangible increase in the properties. As a consequence, at the time of the consolidation in 1869, $56,928,330 of the constituent companies did not represent any value paid in. The cash dividends upon this watered stock for 45 years, 1870–1914, inclusive, aggregates 266 per cent. This is equivalent to an increase of $3,387,319 per year, or a total of $151,429,357 in dividends for the 45 years actually paid out by the company on stock which was issued prior to or at the time of the consolidation and which did not represent any addition to the physical property of the company.

By the terms of the consolidation of the Chicago & Alton in 1906, $39,000,000 of railroad company securities were given for $22,000,000 of railway securities; or, in other words, more than $17,000,000 of "water" was injected into the capitalization of the new company.

In the consolidation of the Missouri Pacific properties in 1909, $22,000,000 in fictitious securities, which represented the capitalization of the previous financial mismanagement of this railroad, were carried forward into the capitalization of the new company.

A further illustration of stock manipulation and improper financial practices is furnished by the financial history of the St. Louis & San Francisco Railroad Co. since its organization in 1896. On this basis of a most conservative calculation at least $100,000,000 in unwarranted capital liabilities has been created by this railroad in the payment of discounts and commissions to banking interests and in the acquisition of subsidiaries and other properties. Out of a total outstanding stock of $50,000,000, $46,000,000 is estimated to be fictitious and to have already absorbed in dividend requirements $6,000,000 from the productive efficiency of capital and labor engaged in the operation of this railroad. As a result of a recent exhaustive investigation by the Interstate Commerce Commission, it was officially declared that the indefensible financial policy of the Frisco within recent years had resulted in the improper diversion of net revenue of the railroad to a sum "which approximates between $3,500,000 and $4,000,000 per annum."

Examples of the improper use and dissipation of railroad resources could be multiplied. The foregoing are typical and representative.

RAILROAD PROSPERITY.

During the past year the railroads have enjoyed great prosperity. According to statistics just issued by the Interstate Commerce Commission for the fiscal year 1916, 155 large roads, representing more than 90 per cent of the mileage of the country, showed gains in gross operating revenues over last year of $445,702,634. Net operating revenues in 1916 were $278,361,824 more than in the preceding year. The gain in net revenue in 1916 over 1915, according to operating districts, was in round numbers as follows:

| | |
|---|---|
| Eastern district | $139,000,000 |
| Southern district | 42,600,000 |
| Western district | 91,700,000 |

The extreme solicitude on the part of the railway presidents for the "80 per cent of unorganized employees" and their rights, when, in fact, it is a dischargeable offense for any of such employees to make an attempt to organize for the purpose of bettering their wages or working conditions, is amusing.

WHY NO ARBITRATION—RAILROADS KNOW WHO TO FIGHT AND WHO TO ARBITRATE.

It is true that the railroad employees engaged in engine and train service have declined to submit their 8-hour demand to arbitration—on any railroad or for any class of employees.

It is just as true that the railroads have refused to include in their proposed arbitration 75 of the smaller railroads where they believe a strike for the 8-hour day can be defeated.

The railroads also have refused to include the colored brakemen, firemen, and hostlers in their arbitration, because those railroads that employ negroes have never recognized that they had any rights in the matter.

And on 18 of the railroads on which they propose to arbitrate the 8-hour day the railroads have refused to include the white hostlers in their arbitration.

The railroads refuse to arbitrate wherever and whenever they feel strong enough to defeat a strike and only insist upon arbitration where they fear they can not defeat the strike.

By just such methods the railroads plan to deceive and cajole the public and at the same time defeat the demands of their employees.

PACKING THE JURY.

In courts of justice it has always been considered unfair to include on a jury persons who have been prejudiced, either by personal knowledge or by rumor, as to the merits of the case. The purpose of the railroads seems to have been, first, to prejudice the public mind against their employees and then force an arbitration influenced by this prejudice.

The railroads have conducted a publicity campaign at an enormous expense for the purpose of producing a public opinion (1) that the demands of the employees for an 8-hour day are unjust, (2) that the public will be penalized to the extent of $100,000,000 per year if the 8-hour day is granted, and (3) that no arbitration board should award the 8-hour day.

In this effort to create a public opinion against the demands of railroad employees for an 8-hour day, these railroads have enlisted in their publicity campaign nine great advertising agencies, who in turn have selected 14,000 weekly newspapers and between 2,500 and 3,000 daily newspapers with which to bias public opinion. In each of these newspapers a series of large display advertisements have been published at an enormous expense to the railroads. In connection with these efforts, hundreds if not thousands of editorials have been published in connection therewith, carrying the same thought as the advertisements. These editorials have been published in pamphlet form and thereby given greater publicity, thus demonstrating that so far as these 17,000 newspapers are concerned a public opinion already has been created.

With the belief that the public mind has been so prejudiced that a fair arbitration is impossible, these same railroads, in concert with other employers' associations, known as chambers of commerce, now demand that the 8-hour day be arbitrated.

QUESTION NOT ARBITRABLE—RELIGION, POLITICS, AND CLASS OPINIONS NOT ARBITRABLE.

The number of hours that an employee in any industry is required to perform labor within a 24-hour period is a class question. Concerning all class questions there are differences of opinion.

It requires no course of reasoning to convince any workingman that a reduction of hours of labor performed in any 24-hour period from 10 to 8 is economically correct.

A vast majority of the people who have invested their capital in an industry that requires the employment of other people in order that the industry may be profitable to the investor are fully convinced that the reduction of hours of employees from 10 to 8 is economically wrong.

In an engineers' arbitration they found the neutral arbitrator to be a retired railroad attorney—afflicted with old age, bad digestion, and acute prejudice to such an extent that he did not attempt to conceal his antipathy to the engineers. The railroads' representative in this arbitration was so much fairer than the neutral arbitrator that he conceded more than the so-called neutral arbitrator wanted to give.

In an arbitration of matters concerning conductors and trainmen ex-office holders, or "lame ducks," rendered a decision that made the victims say, as though they meant it, "Never again."

In the last arbitration of wages and working conditions of western engineers, firemen, and hostlers the board was dominated by a man who, as director or trustee, was directly concerned in the result of the award. Aside from any millions of dollars of other railroad holdings, much of which would be affected by the award, he was director of a trust company that owned one block of approximately $12,500,000 of first-mortgage bonds of one of the railroads, parties to the arbitration. When his railway financial connections were discovered and official protest made against his continuance on the board, the employees were officially advised that while it had not been known that he was thus connected, a "knowledge of that fact would have been favorable rather than otherwise to his appointment" and that "nothing has been brought to our knowledge since his appointment as an arbitrator which in our opinion disqualifies him as an arbitrator."

But, ignoring past experiences, let us presume that there was an arbitration of the eight-hour demand of railway employees and that in picking the jury every effort was made to appoint neutrals entirely free of prejudices. If the mental attitude of the men appointed is favorable to railway employees at the time of their appointment, it is a 2-to-1 chance that the employees will win. If the neutrals' past environment has been such that it would require much evidence to convince them of the justice of the men's demands, no eight-hour day would be awarded. If the president of the American Federation of Labor is selected as a neutral arbitrator, he will with perfect honesty and sincerity award railroad men the eight-hour day. If a president, director, or an attorney of some great employing corporation is appointed, with just as much honesty of purpose he will deny the eight-hour day.

GETTING THEIR WIRES CROSSED.

In their desperate effort to force a railroad strike in the present eight-hour movement those gentlemen upon whose strategy the railroads depend to secure $100,000,000 per annum in increased freight rates out of the strike have presumably convinced the public that the demands of the employees are unjust and exorbitant.

But when the individual general manager takes his own employees into his confidence, overlooking the strategy of those in charge of the movement, he does not hesitate to show his own men that the demands of the employees mean an actual reduction in their pay should their working time be limited to eight hours.

For instance, the Staten Island Railway, an auxiliary line to the Baltimore & Ohio, in fact, its New York City terminal, shows the following rule in their wage agreement with their firemen:

"Ten hours or less shall constitute a day in all yard service. The rate of pay shall be $2.60 per day, overtime pro rata."

The language in all the wage schedules is similar to the foregoing, and basing his statement on this rule, Mr. W. H. Averell, general manager of the Staten Island Railway Co., addressed a communication to his employees which had for its purpose the convincing of each employee that the demands now made upon the railroads would actually reduce their wages, and this is the language quoted from his communication:

"While the requests which have been made by the four organizations on the majority of the railroads in the United States may, if granted, result in freight train, engine, and yard men receiving each year the same or greater pay than at present received, because of the peculiar operating conditions on Staten Island, it is absolutely certain that by far the larger percentage of the men would, instead of receiving more money, actually receive less.

"For example, a yard engineer now working 11 hours at 41 cents an hour receives $4.51, or, assuming he works every day in the year, $1,645.15. On the basis proposed by you this engineer would receive 10 hours' pay at present rates, or $4.10, or $1,495.50. This means, therefore, that this engineer would receive practically $150 less per year than he is now getting; the equivalent of nearly a month and a quarter pay. The same thing would be true to a greater or lesser extent of the pay of firemen, conductors, and brakemen in yard and freight service."

Just how the general manager of the Staten Island Railway Co. figures out a loss of $150 per year for every engineer on that road by the application of the demands of employees, when the publicity managers of the railroads are demonstrating that it is necessary for increase in freight rates to compensate them for the increased wages of $100,000,000 per year, is only one of the many situations in which it is evident that some people are getting their wires crossed.

MEN MUST HAVE EIGHT-HOUR DAY.

During the 1915 arbitration of wages of engineers, firemen, and hostlers, the railroads presented names of switch engineers, one of whom earned $172.90 in "26 days." A subsequent investigation demonstrated that this man worked an average of 14 hours and 18 minutes per day for 26 days, an equivalent of 46½ days of 8 hours each. This investigation demonstrated that in order to make the $172.90 he was not only paid for all of these hours that he actually worked, but $5.85 in addition thereto as 26 penalties for working this engineer 14 hours and 18 minutes on each of these 26 days without at any time permitting him to stop to eat.

The same investigation proved that to earn the sum of $116.74 in "28 days" a fireman worked an average of 14 hours and 11 minutes each and every one of these 28 days and with no stop to eat on any day. This switch engine fireman's 28 days were made up of 397 hours, or an equivalent of 49⅝ days of 8 hours each, an average of 99¼ hours per week.

At this rate for 12 months this switch engine fireman would work the equivalent of 595½ days of 8 hours each. An employee in the building trades in this same city of Chicago worked only 44 hours a week, or an equivalent of 286 days of 8 hours each during a year. Thus this switch engine fireman works as many hours in one year as an employee in the building industries works in two years and one month.

REDUCED LABOR COST—INCREASED WORK AND PRODUCTIVE EFFICIENCY OF RAILWAY EMPLOYEE—RAILROADS PROFIT GREATLY.

During the period of 1900 to 1915 the average freight-train load increased 67 per cent. As a result the railroads were enabled to move an increase of 104 per cent in freight traffic with an advance of only 23 per cent in freight-train miles

These developments have been marked by a twofold effect upon railroad transportation employees.

In the first place, their labors and responsibilities have greatly increased. The engineer has found it necessary to operate a larger and more complicated piece of mechanism, and along with conductors and trainmen has had his duties increased by the responsibility of looking after much longer and heavier trains. The locomotive fireman has had more arduous physical work to perform because of the necessity of handling more coal for each locomotive mile traveled.

In the second place, the productive efficiency, or the volume of traffic handled by engine and train employees, has been greatly augmented. Measured on the basis of each $1,000 of compensation paid, freight engineers on 24 representative western railroads in 1913 handled 92 per cent more ton-miles than in 1890, and freight firemen, for each $1,000 paid them, transported 83 per cent more freight traffic in the year 1913 than in 1890. In the year 1912 each freight fireman in eastern territory handled on an average 29 per cent more freight than in 1902. Information submitted in arbitration proceedings during 1913 also showed that train crews transported, according to roads, from 15 to 67 per cent more freight in 1912 than in 1902.

This increased productivity of transportation employees has been attended by a decrease in costs to the railroad companies in terms of wage payments for each unit of traffic handled. Each 1,000 tons handled by representative western railroads in 1913 cost the companies in wages to engineers and firemen 33.1 cents less than in 1890. Taking all the

railroads of the United States as one system, the total labor cost of operation per 1,000 ton-miles decreased from $2.98 in 1895 to $2.40 in 1914. The decrease in cost to the railroads for the different classes of employees for each 1,000 tons hauled 1 mile was, during the same period, as follows:

| | 1895 | 1914 | Decrease, 1914 over 1895. |
|---|---|---|---|
| | *Cents.* | *Cents.* | *Cents.* |
| Engineers | 0.272 | 0.193 | 0.079 |
| Firemen | .155 | .118 | .037 |
| Conductors | .163 | .130 | .033 |
| Other trainmen | .251 | .246 | .005 |

The reduction in costs on individual railroads has in many instances been much greater. The revenue gains made by 24 representative Western railroads because of increased labor and operating efficiency during the period 1890–1913 were sufficient to offset all added costs of operation, whether arising from wages or other items of operating expense, and still leave a net gain in operating revenue of 27 cents for each train mile operated.

Transportation employees have had to work harder through longer hours, have had their responsibilities increased, have produced more, have cost the railroads less, and should have further participation in the fruits of their labor in shorter hours or increased compensation.

—

KIDDING THE PUBLIC—RAILROADS ARBITRATE WHERE EMPLOYEES ARE STRONG AND FIGHT WHERE WEAK—NOT SINCERE ADVOCATES OF ARBITRATION.

Presumably every man, woman, and child who has recently read the newspapers understands that the railroads honestly and earnestly advocate arbitration in all wage matters. The Washington Post, of Sunday, August 27, quotes one of the railroad presidents as saying:

"Arbitration for the settlement of the demands of about 350,000 men upon the railroads has been denied (by the employees' committee). The health, happiness, prosperity, and lives of the American people are in jeopardy because of this refusal to use the method of settlement found satisfactory in great international disputes."

And at the very same time that this railroad president was masquerading as a devout worshiper at the arbitration shrine the railroads collectively positively refused to arbitrate the eight-hour day on many railroads and for many employees, as is shown in the following statements:

Hostlers are excluded by the railroads from the proposed arbitration on the following railroads:

Eastern district: Buffalo & Susquehanna Railroad Corporation and Wellsville & Buffalo Railroad Corporation.

Western district: Atchison, Topeka & Santa Fe (proper); Rio Grande, El Paso & Santa Fe Railroad; Pan Handle & Santa Fe Railway; Chicago & Alton Railroad; Chicago & Western Indiana Railroad; Belt Railway of Chicago; Chicago Great Western Railroad; Colorado & Southern Railway; El Paso & Southwestern System; Fort Worth Belt Railway; Kansas City Terminal Railway; Louisiana & Arkansas Railway; Minnesota & International Railway; New Orleans, Texas & Mexico Railroad; Beaumont, Sour Lake & Western Railway; Orange & Northwestern Railroad; Northern Pacific Terminal Railway; Northwestern Pacific Railway; Oregon-Washington Railroad & Navigation Co.; St. Louis & San Francisco Railroad; Paris & Great Northern Railway; St. Louis & San Francisco of Texas; Fort Worth & Rio Grande Railroad; Southern Pacific (Pacific System); Union Stock Yards of Omaha; Wiggins Ferry Co.; East St. Louis Connecting Railway; St. Louis Transfer Railway Co.

Southeastern district: Atlanta, Birmingham & Atlantic Railroad; Atlantic Coast Line Railroad; Atlanta & West Point Railway; Western Railway of Alabama; Carolina, Clinchfield & Ohio; Florida East Coast Railway; Louisville & Nashville Railroad; Mobile & Ohio Railroad; New Orleans & Northeastern Railroad; Alabama & Vicksburg Railway; Vicksburg, Shreveport & Pacific; New Orleans Terminal Co.; Richmond, Fredericksburg & Potomac; Washington Southern Railway; Seaboard Air Line Railway.

White firemen are excluded by the railroads from the proposed arbitration on the following railroads:

Eastern district: None.

Western district: Yazoo & Mississippi Valley Railway.

Southeastern district: Atlanta, Birmingham & Atlantic Railway; Atlantic Coast Line Railroad; Atlanta & West Point Railway; Western Railway of Alabama; Central of Georgia Railway; Florida East Coast Railway; Louisville & Nashville Railroad; New Orleans & Northeastern Railroad; Alabama & Vicksburg Railway; Vicksburg, Shreveport & Pacific; and Seaboard Air Line Railway.

White brakemen are excluded by the railroads from the proposed arbitration on the following railroads:

Eastern district: None.

Western district: New Orleans, Texas & Mexico Railroad; Beaumont, Sour Lake & Northwestern Railway; Orange & Northwestern Railroad; and St. Louis, Brownsville & Mexico.

Southeastern district: Louisville & Nashville Railroad.

Exclusion of all colored railroad employees.

Because of the limitations placed upon employees represented by the national conference committee of the railways it is understood that in their proposed arbitration no colored railroad employees are to participate therein. For instance, should the railroad employees agree to arbitration in accordance with the proposal of the national conference commission of the railways, and through such arbitration the eight-hour day with present rate of pay be granted, the thousands of negro firemen, hostlers, brakemen, and yardmen now employed on the Southern railroads would be excluded from the arbitration award. This would result in the white firemen, hostlers, brakemen, and yardmen working 8 hours a day, while the colored firemen, hostlers, brakemen, and yardmen would work 10 hours a day on the same railroads. It is believed that with this difference in the working conditions and rates of wages the Southern railroads would soon eliminate all white firemen, hostlers, brakemen, and yardmen for purely economic reasons.

Names of railroads, most of which are owned by railroads proposing arbitration, but which railroads are excluded in the proposal of the national conference committee of the railways, for arbitration:

Eastern district: Akron & Barberton Belt Railroad (controlled jointly by B. & O., C. A. & C., N. O. & Erie); Baltimore, Chesapeake & Atlantic (affiliated in interest with Pennsylvania Railroad system through ownership of capital stock); Bath & Hammondsport Railroad (controlled by Erie, operated separately); Bridgton & Saco River Railroad (controlled by Maine Central); Chicago & Wabash Valley Railway (controlled by C. I. & L. Ry.); Cincinnati, Indianapolis & Western Railway (wholly—C. H. & D.); Cincinnati, Lebanon & Northern Railway (controlled by Pennsylvania Lines west of Pittsburgh); Cumberland Valley Railway (controlled by Pennsylvania Co., operated independently); Central Indiana Railway (controlled by Pennsylvania Co. and C., C. C. & St. L. Ry.); Detroit & Charlevoix and Chicago, Kalamazoo & Saginaw Railroads (controlled by Michigan Central); Detroit & Toledo Shore Line Railroad (controlled jointly by T., St. L. & W. and Grand Trunk Western); Greenwich & Johnsonville Co. (controlled by D. & H.); Lehigh & Hudson River Co. (independent property); Little Falls & Dolgeville Railroad (controlled by N. Y. C. east); Little Kanawha Railroad (operated by B. & O.); Louisville & Jeffersonville Bridge Co. (jointly C., C. C. & St. L. and C. & O.); Maryland, Delaware & Virginia Railroad (majority, Pennsylvania Co.); Montpelier & Wells River and Barre & Chelsea Railroads (controlled by Boston & Maine); Mount Washington Railway Co. and electric branches from Portsmouth, N. H., and Concord, N. H. (controlled by Boston & Maine); Napierville Junction Railway and Quebec, Montreal & Southern Railway (controlled by D. & H.); New Jersey & New York Railroad, including Wilkesbarre & Eastern Railway (controlled by Erie); New York, Susquehanna & Western Railroad (controlled by Erie); New York, Westchester & Boston Railway (controlled by N. Y., N. H. & H.); Ottawa & New York Railway (controlled by N. Y. C.); Ohio River & Western Railway (Pennsylvania west); Pere Marquette Railway (independent property); Prospect Park & Coney Island, Northport Traction Co., for all employees operating storage battery and electric-controlled cars who are affected by these propositions (Long Island controlled); St. Johnsbury & Lake Champlain Railway (controlled by Boston & Maine); Sandy River & Rangeley Lakes Railroad (controlled by Maine Central); Sandy Valley & Elkhorn Railway Co. (controlled by B. & O.); Sharpsville Railroad Co. (controlled by B. & O.); Schoharie Valley Railway (controlled by D. & H.); Staten Island Railway Co., Staten Island Rapid Transit Co., Baltimore & New York Railway Co. (controlled by B. & O.); Toledo, St. Louis & Western Railroad Co (independent property); Toledo Terminal Railroad Co. (controlled conjointly by Michigan Central, N. Y. C., Pennsylvania Co., Grand Trunk Western, T., St. L. & W., C., H. & D., Pere Marquette, Hocking Valley, and T. & O. C.); Washington Terminal Co. (controlled by P. R. R. and B. & O.); Waynesburg & Washington Co. (controlled by Pennsylvania west); and Wheeling Terminal Railway (controlled by Pennsylvania west).

Western district: Arizona Eastern Railroad (controlled by Southern Pacific); Arkansas Western Railway (controlled by Kansas City Southern); Chicago, Memphis & Gulf Railroad (controlled by Illinois Central); Chicago, Milwaukee & Gary Railway (independent property); Chicago, Peoria & St. Louis Railway (independent property); Davenport, Rock Island & Northwestern Railway (controlled by C., B. & Q. and C., M. & St. P.); Denver & Interurban Railroad (controlled by Colorado & Southern); Elgin, Joliet & Eastern Railway (independent property); Evansville & Indianapolis Railroad (recently reorganized); Galveston, Houston & Henderson Railroad Co. (independent property); Houston Belt & Terminal Railway Co. (controlled by T. & B. V., G. C. & S. F., B. S. L. & W., and St. L., B. & M.); Kansas City, Clinton & Springfield Railway Co. (independent property); Louisiana Southern Railway (operated under St. L. & S. F.); Morenci Southern Railway (controlled by E. P. & S. W.); Missouri & North Arkansas Railway (controlled by A., T. & S. F., K. C. S., and M. K. & T.); Peoria & Pekin Union Railway (controlled by Illinois Central, C., P. & St. L., T., P. & W., C. & N. W., C., C., C. & St. L., and L. E. & W.); Poteau Valley Railroad (controlled by Kansas City Southern); Quincy, Omaha & Kansas City Railroad (controlled by C. B. & Q); Rutland, Toluca & Northern Railroad (controlled by C. & A.); The Rio Grande Southern Railroad (controlled by D. & R. G.); St. Louis National Stock Yards Co. (industrial property); The St. Paul Union Depot Co. (controlled by N. P., C., M. & St. P., Great Northern, C., St. P., M. & O., C. G. W., C., B. & Q., M., St. P. & S. S. M., M. & St. L., and C., R. I. & P.); Southern Pacific Railroad of Mexico (controlled by Southern Pacific Co.); Toledo, Peoria & Western Railway (controlled by Pennsylvania Co. and C., B. & Q.); Weatherford, Mineral Wells & N. W. Railway (controlled by T. & P.); and Wabash Railroad (east of Detroit).

Southeastern district: Danville & Western Railway (controlled by Southern Railway); Knoxville & Augusta Railroad (controlled by Southern Railway); Knoxville & Bristol Railway (controlled by Southern Railway); New Orleans, Mobile & Chicago Railway (controlled by L. & N. and St. L. & S. F.); Louisville, Henderson & St. Louis Railway (controlled by L. & N.); Norfolk & Portsmouth Belt Line Railroad (controlled by N. & W., N. S., S. A. L., A. C. L., Southern, C. & O., and Virginian); Norfolk Southern Railroad (independent property); St. Johns River Terminal Railway (controlled by Southern Railway); Tallulah Falls Railroad (controlled by Southern Railway); and Tennessee & Carolina Southern Railway (controlled by Southern Railway).

RAILROADS PAY LOWEST WAGES.

A true wage index is the rate per hour. Let us compare the wages per hour of railway employees in Chicago switching districts with those of the building trades in Chicago. Any other city would do as well. Chicago comparisons are typical of them all. The standard rates of wages per hour now paid in Chicago are as follows:

*Building employees.*

| | Cents. |
|---|---|
| Bricklayers, portable and hoisting engineers, inside wiremen, plasterers, plumbers and gasfitters, steamfitters, stone masons, and tile layers | 75.0 |
| Lathers and marble setters | 71.9 |
| Carpenters, painters, and slate and tile roofers | 70.0 |
| Elevator constructors | 68.8 |
| Structural ironworkers | 68.0 |
| Composition roofers | 65.0 |
| Laborers in tunnels, wells, and caissons | 57.5 |
| Laborers on windlass, trench, and scaffold work | 50.0 |
| Plaster laborers | 50.0 |
| Composition roofers' helpers | 45.0 |
| Elevator constructors' helpers and tile layers' helpers | 43.8 |
| Marble setter helpers | 42.5 |
| Excavating laborers hodcarriers, and steamfitters' helpers | 40.0 |

*Railway employees.*

| | |
|---|---|
| Locomotive engineers in Chicago railroad yards | 42.5 to 44.0 |
| Switching foremen | 38.0 |
| Switchmen | 35.0 |
| Locomotive firemen in Chicago railroad yards | 27.0 to 27.5 |

**Amendment to the Legislative, Executive, and Judicial Appropriation Bill.**

# SPEECH

OF

# HON. JAMES P. BUCHANAN,

OF TEXAS,

IN THE HOUSE OF REPRESENTATIVES,

*Thursday, March 9, 1916.*

The House in Committee of the Whole House on the state of the Union had under consideration the legislative, executive, and judicial appropriation bill, and having reached the Department of Commerce, Mr. BUCHANAN of Texas offered the following amendment:

Amend, page 122, line 20, after the figures "512,000," by inserting the following:

"*And provided further*, That the Chief of the Bureau of Foreign and Domestic Commerce be, and is hereby, authorized under the direction of the Secretary of Commerce to collect for the census reports and publish from time to time statistics of the production and consumption of cotton and cotton goods in foreign countries, including the number of spindles in activity, number of cotton bales on hand, amount of cotton goods on hand, value of same, construction of new mills, closing down of mills, and demand for and probable purchasers of cotton and cotton goods, and methods of merchandising the same. That in order to carry into effect the above provision the Secretary of Commerce is authorized to appoint four expert agents to cover England, France, Russia, Germany, Austria, Italy, China, Japan, and India, and an additional sum of $25,000, or so much thereof as may be necessary, is hereby appropriated to be expended in carrying into effect the provisions of this act, including clerical assistants in the District of Columbia or elsewhere or to secure by purchase or otherwise such reports, manuscripts, and publications as may be necessary to carry out in the most efficient manner the provisions of this act."

Mr. BUCHANAN of Texas. Mr. Chairman, the fundamental law creating the Bureau of Foreign and Domestic Commerce provides:

It shall be the province and duty of said bureau, under the direction of the Secretary, to foster, promote, and develop the various manufacturing industries of the United States, and markets for the same at home and abroad, domestic and foreign, by gathering, compiling, publishing, and supplying all available and useful information concerning such industries and such markets, and by such other methods and means as may be prescribed by the Secretary or provided by law.

In carrying out the interest and purposes of this act the Secretary of Commerce by this bill is given an office force of 95 employees in this bureau in Washington, at various salaries, aggregating $130,640. In addition to this the sum of $125,000 is appropriated to be used by the Secretary to further promote and develop the foreign and domestic commerce of the United States; to investigate the cost of production at home and abroad he is given $50,000; to promote and develop the commerce of the United States with South and Central America, $100,000; and for the employment of commercial attachés, duly accredited through the State Department, to investigate and report upon conditions in the manufacturing industries and trade of foreign countries as may be of interest to the United States he is given $100,000, making a great total to be expended under the bureau for promotions, development, and expansion of our markets, domestic and foreign, of $505,640. Closely related to and interwoven with the Bureau of Foreign and Domestic Commerce is the Bureau of the Census. The duties of these two bureaus in many respects are so blended that they suggest two parallel streams whose waters run harmoniously side by side to the sea.

Mr. Chairman, both of these bureaus are properly under the Secretary of Commerce. For securing information for the census reports, including office force, he is given an appropriation of $1,176,460, making a grand total of $1,682,100 that we are spending through these two bureaus for the primary purpose of furnishing information to the people of the United States and promoting, developing, and expanding our foreign and domestic commerce. That this is a commendable and laudable undertaking, and one that can only be efficiently performed by the National Government, no one can truthfully deny. Great and beneficial results have been accomplished under the administration of Secretary Redfield, which was abundantly established by the evidence produced before our subcommittee during the hearings on this bill. Through the efforts of his commercial attachés, who were sent out into the marts and trade centers of foreign countries, large and numerous orders were obtained for our exporting manufacturing industries and our exporting middle men, amounting to millions of dollars. Thus we are expanding our foreign commerce and placing our export trade firmly on the highway that leads to the greater expansion of a world-wide market. But it seems to me that Congress and the Secretary of Commerce have failed to heed the biblical injunction.

The formation of their magnificent foreign trade superstructure should have been founded on the solid rock of cooperation with the producer who tills the soil and who is naturally interested and justly entitled to our very first consideration.

Mr. Chairman, this amendment has two objects in view. One of them is to equalize the information furnished by the Census Office and to give the American producer of cotton, the American purchaser of cotton, and the American manufacturer of cotton goods the same information which our department gives to the purchaser and manufacturer of foreign countries.

Now, I want to call your attention especially to the current law as it now stands. It provides for semimonthly reports of cotton production in the United States, leaving off foreign countries. How can our manufacturers of cotton goods, our middlemen who purchase and deal in cotton, our cotton producers ascertain how much cotton is produced in foreign countries? Our Department of Commerce is absolutely silent, under the law, on that proposition. I think it is an outrage, in fact, for our own Department of Commerce to furnish England, Russia, Japan, and all foreign countries detailed information of our cotton production and the amount of baled cotton that we have on hand, and yet to furnish to American manufacturers of cotton, American producers of cotton, and American purchasers of cotton no information as to the amount of baled cotton on hand of the production of foreign countries.

The amendment has another object in view. Under the law as it has existed for some time, the Department of Commerce has made an index in which it keeps the names of all the exporters of the United States, listed with their names and addresses, and the foreign representatives of the American Government send probable and prospective purchasers to the Department of Commerce, and the Department of Commerce, in turn, notifies the American exporter, thereby extending American commerce and bringing the American exporter of this commerce into direct communication with the foreign purchaser.

I want the great Department of Commerce to do the same thing for cotton and cotton goods that it does in the case of the products of other industries. Let me illustrate for a moment. In the hearings before our committee it developed that through the Department of Commerce one order had been placed for 40,000 bales of cotton per year for five years, to be shipped to a Russian house. I asked with whom this order was placed. The answer was that it was placed with a cotton broker of New York, who, in turn, placed it with a cotton broker of Germany, and the cotton broker of Germany, in turn, placed it with a Russian cotton broker, and the Russian broker sold it to the spinner.

In the name of God, why can we not originate an agency there and establish it so that it will bring the Russian spinner and the German spinner and the Italian spinner and the Japanese spinner and the English spinner into direct communication with the producer of cotton in this country and save the enormous extra expense of all these middlemen?

Those are the two objects I am seeking. I ask for an appropriation of $25,000 for four special agents, to cover all European countries. I feel that it is a duty that we owe not only to the cotton producer but to the coal producer and the producer of every other commodity which affords a large export of goods.

Mr. SMITH of Texas. Mr. Chairman, will the gentleman yield there?

The CHAIRMAN. Does the gentleman yield to his colleague?

Mr. BUCHANAN of Texas. Certainly.

Mr. SMITH of Texas. Does not the gentleman think that four special agents would be wholly inadequate for this work in all those countries?

Mr. BUCHANAN of Texas. Along this line I have the opinion of the Department of Commerce, an opinion in writing, to the effect that four special agents would serve the purpose, and the writer further thinks that now is the opportune time in the history of this country when we should have those agents abroad, because the commerce in foreign countries has been cut to pieces by the European war. At the conclusion of the war a great opportunity will come to America to regain her past position in foreign countries that she held up to the Civil War.

Let me read you this from the Department of Commerce:

We have made efforts to collect this information from the consuls, and instructions were sent out by the State Department in 1915 fully covering the information desired. It has been found, however, that the consuls are unprepared to gather the information and the result has been a complete failure. The statistics that we have collected are incorrect and inadequate. This is through no fault of the consuls, but simply because they have so much other work, and most of them are so unfamiliar with the cotton industry that it is impossible to expect them to get complete and accurate information.

We are not asking much, gentlemen, but so far as I am concerned I stand willing to help the producers of corn or coal, or any other productive enterprise in the United States, in or-

der that the producers and creators of wealth may be helped, rather than those who speculate on the toil of others. [Applause.]

The law in force and reenacted in this bill requires our Department of Commerce to make semimonthly reports of cotton production in the United States, periodical reports of stocks, of bales of cotton on hand in the United States, and of domestic and foreign consumption of cotton.

It would only require four agents of personality, common sense, and tact to show the foreign buyer the advantage of this simpler and quicker way of dealing directly with the American producer and to enable the producer to avoid the immense and wasteful cost of the useless chain of brokers that profit as middlemen on the cotton farmer only to sap the vitality of his toil.

And with this impetus thus given to all our products the stimulus to our seagoing freights would prove the wisdom of a merchant marine that could be so readily applied to the direct commerce we would enjoy in increasing bulk.

The Department of Commerce quotes our cotton production for 1914 at 15,438,000 bales, 62.3 per cent of the output of the world, as follows:

*Percentage of total production of cotton, by countries, 1914 crop (census).*

| Country. | Per cent. | Bales. |
|---|---|---|
| United States | 62.3 | 15,438,000 |
| India | 15.4 | 3,826,000 |
| Egypt | 5.6 | 1,384,000 |
| China | 7.1 | 1,750,000 |
| Russia | 4.6 | 1,126,000 |
| Brazil | 1.8 | 440,000 |
| All others | 3.2 | 800,000 |
| Total | 100.00 | 24,764,000 |

The following table shows the consumption pro rata of the various nationalities:

*World's mill consumption of cotton, 1914 (census).*

| | Bales. |
|---|---|
| United States | 5,398,000 |
| United Kingdom | 4,400,000 |
| Continental Europe | 7,100,000 |
| India | 1,750,000 |
| Japan | 1,600,000 |
| Other countries | 975,000 |
| Total | 21,223,000 |

This 5,398,000 bales of our American cotton consumed at home leaves approximately 10,000,000 bales to be shipped abroad. This gives an idea of the immense cargoes, when we take into account all of our agencies of production, which must have a dependable transportation service to the foreign markets.

To my mind, this is an unanswerable argument in favor of a merchant marine for our own service and subject to our own demand. And when we feel that such service would cooperate in establishing the direct trade between the foreign market and our farmers, saving the agricultural classes the margin of profit now going to the superfluous middlemen and the excess cost of freight charges that go to the Shipping Trust, the necessity of this amendment and the demand for our own merchant marine go hand in hand.

The planting interests are well posted as to the subsidy jobber alert to obtain, if possible, the gift that will enable him to ply his remorseless extortion of high-sea piracy while he laughs in his sleeves over his free compliment from the Government at the expense of the people. Certain it is that agricultural industries are wide-awake to the paramount issues of agricultural life, and, oh, how they pray for the merchant marine that will give them the benefit of the square deal, and they are thoroughly aroused to the only way to secure it. They hope for the cooperative aid of the Government, acting primarily to give itself the auxiliary shipping it must have for its Navy, but giving to our citizens the right to use by conditional purchase or lease the ships especially provided for such partnership for over-sea commerce, the freight charges on these as well as all others regulated by the Government. This they are assured is the only way to successfully inaugurate the service imperatively demanded for our commercial thrift, and the only way to successfully compete with the world-wide combination organized to resist and to destroy whatever stands in the way of their infamous design to throttle legitimate and reasonable traffic over the courses of the seas.

No wonder that farmer organizations everywhere are demanding an appropriate and well-ordered fleet to sail the commercial sea routes in the interest of the fruits of the soil. National and State granges and farmers' alliances and husbands of industry and many other similar bodies are speaking in unmistakable meaning to the legislative influences to correct the evils of the transportation service by which the farmers of America have been so mercilessly fleeced.

These representative farmer organizations of the United States are positively opposed to the ship subsidy, but they are just as positively in favor of Government cooperation to create an adequate public and private marine line of mercantile and transport accommodation.

They see, Mr. Chairman, a decided difference between an outright donation in dollars and cents to the shippers and an appropriation for joint and mutual use of the Government and whatever private American interest might engage to cooperate with each other through the secure and liberal advantages provided by the terms of the Alexander bill.

Whatever obstacles stand in the way of the merchant marine for the relief and accommodation of our Government and our commerce the United States Congress is expected to meet and overcome, for the enormous freights that are piling up in the hands of our producers and on the platforms and wharves of our depots and ports must be handled, and that with dispatch and safety.

Woe be to the representative of the people who so construes a question that he makes its technical importance superior to the public good and who stickles over a constitutional quibble to the benefit of a theory when the cause of humanity is the paramount issue in its struggle to escape the fatal dangers of mercenary greed.

It is difficult to understand, Mr. Chairman, how the conservative legislator can regard with any degree of patience or toleration the cold-blooded enterprise that deliberately schemes for the manipulation of the transportation rate to defraud the workman of the legitimate fruits of his toil.

We have the most abundant proof of the existence of the organized conspiracy that dominates the marine tonnage cost of the world, and its tentacles reach into the vitals of every seaport of the earth that presumes to control the facilities of a harbor. Our statistics have been gathered at great pains, and they are ample and reliable and at the convenient command of whoever desires to consult the disgraceful budget of shameful revelations. The report of the hearings of the Committee on the Merchant Marine and Fisheries in the investigation of shipping combinations testified through hundreds of pages of evidence obtained by the most patient examination and cross-examination of competent witnesses to the facts.

There can be no doubt about it; there exists at the present time a world-wide organization of the combined individual and corporate shippers, pledged by all sorts of understandings and agreements to profit by their control of the freight rates of the deep-sea trade. At the word of this all-powerful collusion the rate of any article or kind of produce is dictated. And such arbitrary charges by the owners of all the lines of the world's shipping, of course, are regardless of the principles of fair dealing, and utterly indifferent to the welfare of any interest except their own selfish and malicious combinations. This universal marine trust has depredated on the business of the carrying trade of the ocean without let or hindrance for years, and has bent its ingenuities and its energies to perfecting its machinery, and has succeeded in creating an impregnable transportation machine so strong that no competition of private capital can oppose it with any degree of encouragement.

On page 639 of the committee report shippers were charged on an average of 8 per cent and 9 per cent to European markets in 1910. These charges increased by multiples of 12 by 1912.

Mr. R. L. Cummings, distinguished in the affairs of the grange work generally and a leader of national repute, tabulates the ocean rate, per hundred pounds, to foreign markets, February 10, 1910, as follows: Apples, 34¾ cents; flour, 7 cents; hay, 11 cents; wheat, 5 cents; and cotton, 10 cents.

By September 1, 1912, these rates had increased as follows: Apples, 42 cents; flour, 20 cents; hay, 38 cents; wheat, 28 cents; and cotton, 45 cents.

In 1914 the average rate was 70 cents per hundred pounds. At the present time they range at from $25 to $35 per ton.

Senator DUNCAN U. FLETCHER, of Florida, as quoted in the February number of the Farmers' Open Forum, declares:

Through lack of merchant vessels to carry its cotton abroad the South suffered a loss of over $200,000,000 last year.

These are not overdrawn figures, and our Texas farmers and producers do not relish the facts that show them to be the victims of the sea-robber barons to the tune of hundreds of millions of dollars annually.

If any class should be favored especially in marketing its produce, the farming people, on whose shoulders rest the living of mankind, should be privileged; but because, in the nature of

things, the practical agriculturist is to a larger degree than the trading, mercantile class isolated and away from the competitive centers, and therefore not in the arena of commercial struggle, he has always been the victim more or less of designing and unscrupulous schemers. In every conceivable way the sharpers of commerce have preyed upon the tiller of the soil.

If it were necessary, statistics galore could be cited to prove the incalculable monstrosity of the Shipping Trust, that should be treated as the common enemy of mankind. The Committee on the Merchant Marine and Fisheries of the House of Representatives deserves a special vote of thanks for its thorough investigation and complete report. It must prove the means of opening the eyes of the citizens of the world as to the enormity of the criminal spirit that has fortified itself to resist the mercantile rights of legitimate commerce, and to make plain the absolute and positive necessity of a merchant marine backed by the power of the Government.

There is no other agency that can overthrow the soulless and vicious monopoly of ocean navigation, because no other can withstand its immense financial strength and the infinite venom of its marauding spirit and skill. Nothing but the Government can fathom and compass its defeat.

Mr. Chairman, for many years this proposed merchant marine for the benefit of our industries and the Nation has been ably discussed by our best and wisest statesmen. No phase of it has been overlooked or ignored. Our political actuaries have figured it from every angle and for every development and result, and they indorse it unequivocally as justified, practicable, and advisable.

There is an emphatic demand by the American people that the United States shall build its own fleet, ample and strong, to insure our rights and privileges in all the marts of the world, and to provide a navy to cope with that of any maritime power that sails the ocean to satisfy our national pride and to guarantee respect wherever our flag is unfurled.

Mr. Chairman, it is plainly evident that we are in the vortex of a world-wide commotion, and that we must move with the changes of time and tide. Our cherished old fashions have been ruthlessly swept away; the sacred treasures of the old homestead have gone at the command of these iconoclastic times. Convenience and luxury make up the only elixir of life worth while, and all sorts of fad and fancy, born of some fantastic "new-thought" doctrine, hold the key of immortality.

The activities of this new dispensation have borne us upon its resistless current into the billows of an astonishing tide of advancing civilization, and suddenly we realize that adjustments, to meet the innovations that prevail, are compulsory.

Everything responds to the march of events, and our republican Government under the stress of its Revolutionary trials, is bound to see that "There is a tide in the affairs of men which taken at the flood, leads on to fortune." And, Mr. Chairman, the natural inference leads us to see that "there is a tide in the affairs of" a nation, which if not "taken at the flood, leads on to" humiliation and decay.

The supreme moment, Mr. Chairman, comes to every individual—comes to every organization and institution. And when that crucial moment is on, the intelligence to direct the destiny to be determined invokes the wisdom and discretion due the difficulties of the occasion.

Our habit of thought and language is replete with line upon line and precept upon precept of common sense. The "circumstances that after cases" have often served to justify the determination of a mighty event. "There are exceptions to all rules" is the proverb of all time to solve the problems before the most conscientious thinker as he sits in judgment on the most momentous questions.

There is no law, Mr. Chairman, that we may not appropriately amend or enact to meet the crisis of alarm when the public safety is menaced and in danger. Martial law suspends the orderly social regulation when extraordinary conditions call for the arbitrary exercise of the Executive power. A declaration of war deliberately revokes the civil authority when the ordinary forces are incompetent to control the situation, offensive and defensive, between alien peoples and governments.

And so, Mr. Chairman, in the crisis at hand, and others to be, we must establish an adequate merchant marine to insure our domestic tranquillity, to the end that our mercantile, manufacturing, and agricultural industries shall prosper. Or if the dreadful signal of war shall call us to the colors, to avoid the accusation of criminal neglect and to be able to defend ourselves, we must be ready to respond promptly for the transport duties of the Navy, with the auxiliary equipment, indispensable to the war-vessel fleet. And these ships should be amply provided and equipped by the enactment of the legislation to make sure our defensive condition, due to the safety of every person, family, community, and the Nation.

And, Mr. Chairman, there is no excuse for neglect or delay, for this richest country of the globe abounds in building material of every kind; its labor is equal to any demand and its resources of cheap fuel oil and all needed materials are inexhaustible. We are far more favored for a great shipbuilding enterprise than any country of the earth, and we can build and supply and man and navigate all the ships of whatever kind we may desire. So that, Mr. Chairman and gentlemen of the House, if you will adopt my amendment it will be the first step toward establishing the direct sale of our cotton to the consumer of raw cotton in foreign countries and the elimination of the middlemen and cotton speculators, who have heretofore grown rich upon the toils of the cotton farmer. Add to this the creation of an ample merchant fleet to carry our export cotton to the foreign markets and marts of the world at a reasonable freight rate, which under pending legislation will be regulated through the agency of the Government, we will have performed a service that will prove a blessing to the present and future generations, and the lasting gratitude of a greatful people will be bestowed upon us.

---

## The Minimum-Wage Bill for Unclassified Government Employees.

### EXTENSION OF REMARKS

OF

### HON. EDWARD E. DENISON,

OF ILLINOIS,

IN THE HOUSE OF REPRESENTATIVES,

*Wednesday, August 30, 1916.*

Mr. DENISON. Mr. Speaker, it is now estimated that the total appropriations of the present Congress for all purposes amount to about $1,650,000,000. We have appropriated about $267,596,530 for the Army and about $313,300,095 for the Navy, and about $25,750,000 for fortifications. We have appropriated $50,000,000 for the Government to go into the shipping business, $11,000,000 to invest in an armor-plate plant, and $20,000,000 for a nitrate plant. We have provided for the expenditure of $85,000,000 for the construction of public roads, $43,000,000 for the improvement of our rivers and harbors, and over $50,000,000 for the prevention of floods in the Mississippi and Sacramento Valleys. We have provided for the construction of several battleships, each of which will cost between $15,000,000 and $20,000,000. The aggregate of these appropriations, when considered in connection with the appropriations made by Congress in former years, becomes staggering. Yet a large part of these appropriations will be expended in preparations for national defense and in the development and conservation of natural resources of the country; the remainder will be expended in the payment of the usual running expenses of the different departments of the Government.

So this Congress has been quite liberal in making appropriations to meet what has been considered the popular demand for better preparation for the future defense of the country, for the future development of the country, and for the future conservation of our resources. We can now well afford to show some liberality in making provision for a needed reform that will improve the social welfare of those who do the work for the Government.

In preparing for our future defense and the future development of our natural and industrial resources we should not overlook the social welfare of any part of our people upon whom the Government must depend for its defense and its development along those lines. The success of every government in time of war, as well as its prosperity in time of peace, depends ultimately upon its laboring men and women. If proof of this fact were needed, the experience of the countries now engaged in the war in Europe would furnish it. I am sure all of use have been impressed with the remarkable results that have been accomplished in those countries by the organization and mobilization of the working men and women for the production and manufacturing of munitions and materials necessary for the prosecution of the war. We have been equally impressed with the measures that have been adopted by the different Governments there to improve the conditions and better reward the efforts of the men and women of these countries who are doing the work at home.

I have, therefore, been led to the reflection that while we are liberally spending money to increase the military and naval

defense of the Government, we should not overlook any legislation that may be needed to improve the conditions of life and the social welfare of our own laboring men and women, upon whom the defense of the country must in the end depend.

The Committee on Labor has already favorably reported to the House seven or eight bills which it is thought will result in legislation that will be beneficial to our working men and women. We have reported a bill for the establishment of a bureau of labor safety which has already received the approval of the House. We have reported the child-labor bill, which has passed the House and Senate. We have reported out a convict-labor bill, a bill for the establishment of a bureau of labor employment, a bill for the establishment of a women's bureau in the Department of Labor, and the minimum-wage bill for Government employees, which I wish to discuss briefly at this time, as well as several other bills of importance. And, Mr. Speaker, I think this bill to fix by law a minimum wage for employees of the Government should receive the cordial approval and support of every Member of the House.

The Committee on Labor heard evidence of representatives of some twelve or more different labor organizations and organizations of employees of the different departments of the Government, as well as the testimony of a number of people working in the departments, all of which is reported in a volume of about 450 pages; and after very careful consideration of the subject has reported the bill with several amendments. As amended the bill contains but two short sections. Its language is clear and easily understood, but its effects will be far-reaching. It provides that the minimum compensation of any person employed by the Government shall not be less than $3 per day; if employed by the hour, not less than 37½ cents per hour; if employed by the month, not less than $90 per month; or, if employed by the year, not less than $1,080 per year. Persons employed in the military branches of the Government, and those holding appointments as postmasters, are excepted from the provisions of the bill. And the provisions of the bill apply only to those who have been continuously in the employment of the Government not less than two years and who are 21 years of age.

On the 1st of July, 1915, there were 488,711 civil employees of the Government and the District of Columbia, including the Postal Service. Of these 42,064 were located in the District of Columbia and 446,647 were located outside of the District of Columbia.

Of this number there are about 200,000 employees in the different classes of service that will be benefited by the provisions of this bill. Of these 200,000 employeer about 30,000 reside in the District of Columbia and 170,000 in other parts of the country.

Of the 30,000 employees working in the District of Columbia something over 42 per cent, or 12,840, will receive increases in their wages; of the 170,000 working elsewhere something over 62 per cent, or 106,590 employees, will receive increases in their wages; these increases will be from $80 per year to $360 per year for each employee, depending in each case on the amount of wages the employee is now earning.

It has been estimated by representatives of the Department of Labor that the aggregate increase in wages which the Government will have to pay to its employees in the District of Columbia will be $3,812,000; and that the aggregate increase in wages to the employees in other parts of the country will be about $21,467,000. In other words, the total additional expense to the Government in wages, if this bill becomes a law, will be about $24,542,000 per year.

At first thought this may seem quite a large increase in the permanent expenses of the Government; but when we reflect that it will be distributed among 160,000 people, most of whom are supporting families, and from all of whom the Government expects efficient services, the amount does not seem very large, especially when we are becoming accustomed to appropriations of from one and one-half to two billion dollars for other purposes.

Mr. Speaker, I am impressed with the far-reaching importance of this bill. So far as I am advised, it is the first time that minimum-wage legislation has ever been favorably reported to Congress. It means the inauguration of new legislation affecting labor. No State has yet passed a law fixing minimum wages for men. California and possibly some other States have enacted such legislation for women and children; and I understand that the city of New York and some other cities have, by ordinance, passed minimum-wage laws for municipal employees. But this is the first time that legislation of this character has come before Congress.

Personally I would not approve minimum-wage legislation, or any other kind of legislation that would attempt to fix the wages which private employers should pay their employees. The amount of wages which private employers should pay their employees is so essentially a matter of private contract that the right of the parties to freely enter into it or alter it should not be interfered with by the Government. The fixing of wages is a question so vital to the welfare of the employer and employees that the right to fix them or change them by agreement of the parties should be preserved.

But the conditions which surround the relation of employer and employee in private life do not obtain between the Government and its employees. There is not that same freedom of action between the Government and its employees that exists between private parties. Men engaged in private employment have the right to organize for better cooperation and improvement of their conditions; they have the right to unite in a common purpose to obtain relief from grievances and demand increases in their wages, even to the extent of striking or quitting their employment in order to influence their employers into yielding to their demands. There is not the same freedom of organization among employees of the Government, and the right of such employees to strike or to otherwise use coercive measures in order to obtain an increase in wages is not generally recognized or approved. Most of us at least would not approve such methods in the Government service, and should not encourage them by failing to recognize and remedy conditions which in private employment might justify them.

Moreover, the right to increase the wages of Government employees does not ordinarily rest in the hands of the heads of the departments; it has even sometimes been expressly forbidden in appropriation bills. The tendency of the men higher up in the Government service to make good showings for themselves by the economical management of their departments has generally resulted in keeping stationary, and even sometimes decreasing, the wages paid to laborers under them. At least that seems to have been the case in many of the departments of the Government, and it has resulted in a condition which should be considered with shame by all of us.

These differences, therefore, between the conditions which surround private employment and Government employment are such that a difference in the method of fixing the wages is fully justified. I think the legislative problem involved in this essential difference is solved by the classification of service, with the right of promotion under civil-service regulations for those employees of the Government to whom such regulations can be applied, and a minimum-wage law for those employees who do not come within or who come below the classified service.

Now, the 170,000 or more employees to whom the provisions of this bill will apply do not come within the classified service. They have no organization, as a rule. They have no privilege of promotion. They are mere laborers, with no political influence. Often they have no one to speak for them or present their grievances to the Government, and timidity or the fear of losing their employment generally prevents them from making demands. These things are not true of all those employees who have civil-service positions; they have the right to earn promotions which will bring increases in their salaries; they sometimes have influence which helps them, as we all know. But the men lower down, the mere laborers, have no such advantages. And I think the time has come when Congress should consider the condition of these underpaid employees and do something for their relief. That is the purpose of this bill.

Mr. Speaker, human labor is no longer considered a mere commodity. We have reached the time when wages can not be determined by supply and demand alone. This should especially be true in fixing the wages for Government employees. A great Government like ours, with the high ideals and purposes which we profess, ought not to determine the wages of its employees alone by the mere supply of labor that may happen to be available. The cost of living must be taken into consideration in fixing the compensation for labor. Questions of social improvement and welfare are to-day receiving consideration as well as industrial efficiency and competition, and in this movement the Government should take the lead. The Government should be a model employer, and by its example influence private employers in the adoption of such policies as will better promote social welfare among their employees and encourage closer cooperation between employer and employee.

The fundamental rule, Mr. Speaker, that the Government should now observe with its employees is that it should pay living wages to its humblest employees as well as to others. None should be asked or expected to work for a great Government like this for less than it actually costs to live.

If this is true, then the cost of living must be taken into consideration in determining the question of wages. The Government expects efficiency of all its employees. It can not get the greatest efficiency of its employees if their wages are such

that they can not decently or respectably support themselves and their families from them. I do not think it is practical for Congress to enter into the details of this subject and determine by legislation what wages should be paid to the different classes of employees. But we do have some knowledge of the cost of living in the District of Columbia and other cities where the men are employed by the Government; and we can see that all employees are at least given living compensation for their labor by passing a minimum-wage law.

I approve this bill, therefore, because I think the Government should pay living wages to all its employees; I approve it because I think the Government should be a model employer. And I approve it because I do not know of any other way by which all of the underpaid employees of the Government who do not come within the classified service can get relief from conditions which are intolerable.

Mr. Speaker, the hearings reported in this case give us some interesting information. It was shown that 60 per cent of the Government employees in the District of Columbia work a regular day of eight hours for the Government and then go elsewhere and work at night or early in the mornings in order to get enough money to live on.

It was shown that many employees can not support their families from the wages they receive, and their wives are compelled to contribute to the family support by washing or other labor; that often employees with families are unable to have the services of a physician when there is a birth or other illness in their families, because their wages will not permit them to do so; that a great many employees living here in Washington are dependent upon the charity of others for clothing for their families.

There are here in the District of Columbia about 7,700 Government employees who receive less than $720 per year and about 2,700 others who receive less than $840 per year. And there are in the country outside of the District of Columbia something less than 31,000 employees of the Government who receive less than $720 per year and something less than 21,000 who receive less than $840 per year.

It was shown in the committee hearings that from actual investigations the cost of living in the District of Columbia for a man with a wife and three children is $767.95, allowing but 5 cents for each person per meal, and omitting entirely any expenditures for street cars, tobacco, stimulants, school books and school supplies, church expense or contributions, newspapers, theaters, excursions, moving pictures, insurance, lodge or union dues, postage and stationery, medicine, cost of sickness, births or deaths, and accidents. Thus it will be seen that omitting many of those things which are ordinarily looked upon as necessities the thousands of Government employees having families of not more than three, who receive but $720 per year or less, can not maintain their families decently, much less comfortably, on their wages. They are driven to other employment at odd hours or to charity for some of the necessaries of life.

It is true the reasons that are urged for this legislation would not apply so forcibly with reference to unmarried employees who have none but themselves to support. But no general legislation can apply with absolutely equal justice to all persons who, though employed in the same line of employment, have different responsibilities and necessarily live according to different standards. We can only legislate with a view to the conditions of the average employee, and it is thought that for this purpose a man with a family consisting of a wife and three children would be the average. The provision in the bill excluding all employees who have not worked for the Government two years and who are not 21 years of age will prevent the benefits of the bill from going to very many employees who do not in fact need them. There are, of course, many Government employees who have larger families than the average I have just given and there are many thousand employees who receive but $600 per year; there are some who receive even less than that. And it was shown that the cost of living in New York was higher than the District of Columbia, and that in Chicago and many of the western cities the cost of living was nearly, if not quite, as high as in the District of Columbia.

In fact, the evidence has clearly shown that there are many thousands of Government employees whose wages are not sufficient to enable them to provide the actual necessities of life for their families. They are not receiving living wages, and this condition has prevailed in the Government service for a long number of years.

I think it is true that in private employment there has been a gradual increase in wages all over the country. This increase has become necessary by reason of the increase in the cost of living. A representative from the Bureau of Labor Statistics has furnished tables to the committee showing the increase in the cost of meat, lard, flour, eggs, butter, potatoes, sugar, and other articles of food which are ordinarily used by workingmen or families of moderate means during the past 26 years in 45 different cities of the different States of the Union. I find upon examining these statistics that there has been a gradual rise in price of all these articles of food, and the increase in price has been in about the same proportion in all different parts of the country. Possibly it has been a little greater in New York and Washington than in other parts of the country. But the records kept by the Labor Department of the Government and tabulated by one of its representatives for the committee shows that the price of beef has about doubled between 1890 and 1915; that the price of smoked ham has doubled; that the price of lard has increased about 75 per cent; eggs, flour, and butter have increased about 75 per cent; and that the prices of other articles of food have increased from 50 to 100 per cent within that time. Where the increase in price has been less than that it has been an exception.

This increase in the cost of living has, generally speaking, resulted in the readjustment of wages paid to laboring men in private employment, where the employees could organize and through their organizations present their reasons for their demands for increased wages. Personally I do not believe this increase in wages in private employment has been fairly proportionate to the increase in the cost of living; but in several departments of the Government service there has been no increase at all in wages for the past 40 or 50 years. Many employees of the Government here in Washington and elsewhere are drawing the same wages that were paid for the same work in 1856.

These facts may seem incredible, yet evidence was submitted to the committee which seemed to show that they are true. Many employees have been working for 15 or 20 years without a raise in wages. It is difficult for me to understand how these people could continue working for the Government year after year for the same wages and adjust themselves to the increase in the cost of living. Some of them came before the committee and related the conditions under which they are compelled to live, and their stories are tragedies which, it seems to me, should appeal to the sympathy and better judgment of all who know them. I think Congress ought to take some action to relieve them from such conditions.

Reasons can easily be found why there has been no increase in the wages paid to these classes of Government employees. They have no one to speak for them. I am told that the public hearings given by the committee on this bill was the first opportunity ever given to these employees to be heard. Many of them were afraid to come before the committee and testify. Others gave evidence, but did not want their names disclosed for fear of losing their employment. Though their positions are humble ones, their services are necessary to the conduct of the Government; they have had no one to speak for them, and no one to whom they could make complaint and ask for relief. The Appropriations Committee can not legislate, and the departments have no doubt felt that they have not had authority to increase the wages of the laborers.

It is this class of underpaid Government employees, for whom no one has seemed to care, that this minimum-wage bill is intended to benefit; and I am convinced, Mr. Speaker, that the help that is due them, and that has now been too long delayed, can be given them only by an act of Congress fixing by law a minimum wage for all such unclassified employees.

Witnesses from the Department of Labor and from other organizations in the District of Columbia and other parts of the country, as well as many individuals, have testified that a man with a dependent family in the District of Columbia and in other large cities where there are any considerable number of Government employees can not support his family in any kind of respectable comfort on less than $3 per day, and I believe this is true.

If this bill becomes a law, it will result not only in the payment of living wages to all of the Government employees who are now underpaid and neglected, but will in time result in a needed readjustment of the wages of other employees who are not affected by the provisions of the bill. Not only that, but it will eliminate an obnoxious system now practiced of paying different wages to different employees who perform exactly the same or similar services. These discriminations have existed for years and are purely arbitrary, and outrage every consideration of justice.

As an illustration, the watchmen at the Bureau of Printing and Engraving are paid at the rate of $60 per month. They have positions of great responsibility. They have to preserve order, guard the building, see that the employees are kept in their proper divisions and do not leave the same without proper cause; they have to keep the time the employees enter and

leave the building, keep the rooms in order, inspect the locks, guard the plates from which the money is printed, watch the electric stove, guard the stamps left in the examining division; they are held responsible for the money before it is numbered and sealed, attend to locking the hundreds of windows, and attend to the lights; they are required to inspect all packages entering and leaving the building, see that no one leaves the building without proper cause, and that no visitors are permitted except at proper hours. These are some responsibilities to assume for the sum of $60 per month or $720 per year. Yet the watchmen in the Federal service in Boston receive $850; those at the Library of Congress receive $900; those at the National Geological Park and in the Forest Service receive $840, while the Capital policemen right in the same buildings receive $1,050 per year.

I am told that there are similar discriminations among other classes of employees who perform similar services. There seems to be no standard rate of wages for men who perform the same class of work. This unfair discrimination will, I think, be eliminated largely if this bill becomes a law.

There is another class of employees in whose behalf I want to say just a word before closing. Substitute mail carriers and clerks are necessary. The Government has to have them in order to carry on its business. These men are required to take the same examinations as are the regular carriers and clerks, and they are induced to do so by the promise of early admission into regular service. But, more often than otherwise, they are compelled to continue as substitutes for five or six years, and during that time are only allowed $30 per month. The Government asks for the very best young men and young women for this service. They are led to enter it by the promise of regular service, where they will have better wages and an opportunity for advancement. Yet they are compelled to continue in this service often five or six years, unless they abandon it before that time in order to support their families or give it up in disgust and despair. I think substitute carriers and clerks should be paid a living wage by the Government, and if this bill becomes a law they will be among those who very greatly need and will receive the benefit of it.

Mr. Speaker, there has been a great deal of important legislation before this Congress. We have appropriated money in almost fabulous amounts to build dreadnaughts and prepare for defense, and for internal improvements. But I think we may well pause long enough to consider the condition and the needs of these long neglected employees of the Government, and provide for paying them wages from which they can live and properly support their families. I think the Government should be a model employer, and should act toward its employees as we would like to see the private employers act toward those working for them.

It will be said that there are a great many employees of the Government who do not earn the wages they are already receiving, and that this bill will but have the effect of putting a greater premium on inefficiency. I have no doubt there are a great many employees of the Government whose services are not really needed, and that if greater efficiency were required a less number of employees would be necessary. Possibly the enactment of this legislation will have the effect of stimulating the heads of the departments to require greater efficiency and to drop from the pay rolls many of those whose services are not really needed. If it will accomplish this, we will be justified in passing the law. I believe that it will not only accomplish that result, but that it will give relief where relief is much needed, and will, moreover, have a salutary effect in the adjustment of wages paid in private employment throughout the country, and I hope this bill will become a law.

---

**Memorial to John Ericsson.**

## EXTENSION OF REMARKS

OF

## HON. GUY T. HELVERING,

OF KANSAS,

IN THE HOUSE OF REPRESENTATIVES,

*Friday, September 1, 1916.*

Mr. HELVERING. Mr. Speaker, I desire to take this opportunity to express my hearty approval of the bill to erect a suitable memorial in honor of one of our most distinguished citizens, Capt. John Ericsson, a man who made himself famous during a critical period of the Civil War by constructing the first ironclad vessel, the *Monitor*.

There is not a schoolboy in this country who has not read of the wonderful inventions of John Ericsson and the battle of the *Monitor* and the *Merrimac* at Hampton Roads.

We have erected memorials to the memory of many of our great men, men who have contributed largely to the unparalleled history of America, and if we hope to serve as an inspiration for men in the future to offer their lives, their genius, and their service in order to do great things for their country, it is but fitting that we, at this particular time, honor the exalted memory and the race of Capt. John Ericsson. We can do this by erecting a monument that will measure up with the result of his service rendered, not in the light of 1861, but in the light of to-day. Can we afford to disregard our debt of gratitude to this great inventive genius? I would especially urge the erection of a monument to John Ericsson because of his loyalty, love, and esteem for the land of his adoption.

In this critical and epoch-making period of human history, with its utter disregard of the rights of neutrals or international law, we find this Republic of ours, standing united as a towering giant, upholding law, justice, and liberty to all, and for this reason I hope all of us will see fit to lend our united support in having a memorial erected to a man who, although a young man when he first landed in America, wrote to Lincoln during the crisis of the Civil War, "Not only do I offer the invention of a vessel which I believe will successfully cope with the *Merrimac*, but I am willing to offer my life as well." Ericsson will ever stand out as one who, though he cherished his mother country, became a public-spirited, enthusiastic citizen of the United States.

Those of our citizens who can boast of Sweden as their native land have proved themselves to be liberty-loving, peaceful, law-abiding, and progressive people and who readily adapt themselves to American customs and traditions. But, Mr. Speaker, I care not whether a man be born in the land of the midnight sun, on the Rhine, in sunny Italy, or the Emerald Isle, if he has become inspired by American customs and traditions and has sworn allegiance to the American flag he is entitled to the full benefits and mutual interests which blend us as a united people.

It may be said of John Ericsson that he was a man whose unrivaled success in the engineering world was due mainly to intense and persevering study, whose habits of sobriety and industry were formed in boyhood, and his life and achievements stand out as an inspiration to every young man.

I shall now call your attention for a few moments to the early life and career of the patriot whose memory we hope to exalt by the erection of a monument in our beautiful Capital.

Take a journey over the sea to the southern part of Sweden and you land in the romantic Province of Vermeland, with its rugged mountains and deep, dark caverns. In that little Province, before the railroad was built or a steamer plowed over the ocean, lived an honest God-fearing man named Ericsson engaged in mining. It was there amid beautiful mountain scenery that John Ericsson, of the *Monitor* fame, was born. Providence had given him a remarkable intellect and a future prominent place in the world's progress and a nation's deliverance from threatened ruin. While other children were playing with common toys he was watching the machinery of the mines and with pencil or penknife was marking or cutting his little copies of what he had seen. It is wonderful to note how the young student of large and small revolving wheels, engine strokes, and levers advanced in his career. At the age of 9 he was the builder of a mill finished in every detail.

When but a young boy his marvelous attainments had reached the ears of the great men of Sweden. Count Platten, the greatest engineer of his day and the builder of the Gothenburg Canal, sought an interview with the boy, examined his drawings and the tools he had made, and told him that if he continued as he had commenced he would some day produce something extraordinary. It was through the friendship and influence of Count Platten that young Ericsson was appointed a cadet in the corps of engineers; that is to say, he became attached to the engineering corps as a pupil to prepare for active public service. When in his thirteenth year he was ordered to lay out work on the national highway for 600 men. At the suggestion of Capt. Stockton, a capitalist, Ericsson decided to try his luck in the land of opportunity—America—and in 1839, at the age of 36, he landed in New York City. He worked with Capt. Stockton for many years and finally, in 1842, constructed a steamship of war for the American Navy. At that time we had no steam vessels in the Navy.

England had spent immense sums in trying to use the paddle wheels, but with no permanent success for the fiery work of battle. After two years of careful experimentation, Ericsson, with the help of Capt. Stockton, perfected the *Princeton*, the

first American war steamer, which awakened the greatest enthusiasm wherever it was sighted. A few years of comparative quiet in Capt. Ericsson's life followed the grand triumph of the *Princeton*. America to Ericsson became a land of enchantment, for success crowned his every effort; he became patriotically devoted to the land of his adoption, whose broad-minded, farsighted men and liberal Government gave him opportunity and assistance for his inventive genius. Shortly before the Civil War he planned and built the *Monitor* and offered it to Napoleon III, who rejected it. As the Civil War drew on and the North in particular felt its lack of adequate preparedness Ericsson was busy perfecting his ironclad vessel, the *Monitor*, which must be impregnable to shot and shell.

Most of us know as a matter of history that the capital of the Confederate States and that of the North were in close proximity and caused the inhabitants of each city to tremble in fear lest they should be attacked or their city bombarded. The *Virginia*, a reconstructed vessel, had been playing havoc with all the Union vessels at the mouth of the Potomac River and in Hampton Roads. For a time little hope was held out for the Capital. But at the very critical moment John Ericsson constructed the *Monitor*, offered it to President Lincoln, sent the vessel forth without any trial to ward off any of the enemy's ships at Hampton Roads, and successfully engaged the Southern vessel, the *Merrimac*. A new power and a new method of naval construction had arisen to check the breaking of the blockade; to check the invasion of the northern ports, and, in other words, helped save the Union. Mr. Speaker, we have not only Ericsson's *Monitor* as a contribution to the science of war, but every propeller that turns in the waters of America owes its origin to the boy of Vermeland, Sweden.

John Ericsson, after the Civil War, contributed much to the cause of science and engineering and enjoyed the distinction of being honored by many European countries in recognition of his valuable inventions. On the 8th day of March, 1889, he finished his interesting, useful career at the age of 86 years. Upon request of the Swedish Government his remains were taken to the land of his birth, and to-day we find a beautiful chapel erected over his last resting place at Filipstadt, in Vermland, and to this place we make pilgrimage whenever we visit Sweden; although his lifework was done in and for America, not for Sweden, yet you will find a beautiful statute in Stockholm telling of the great reverence his people have for the genius who did so much for the United States, the country of his adoption. Let this Republic recognize the lasting achievements of the greatest engineer of his day, who gave the best there was in him to this great, beloved country. By erecting this monument there will be established an incentive for others. Let us give recognition to those who have contributed a large share to the upbuilding of civilization and who have made it possible for us to enjoy the blessings and liberty of a rich, prosperous, and liberal nation.

---

**Address of President Wilson at Columbus, Ohio, Before the Federal Council of Churches, December 10, 1915.**

## EXTENSION OF REMARKS
OF
## HON. CLEMENT BRUMBAUGH,
OF OHIO,

IN THE HOUSE OF REPRESENTATIVES,

*Wednesday, August 30, 1916.*

Mr. BRUMBAUGH. Mr. Speaker, under the leave granted to me to extend my remarks in the RECORD I include an address of President Wilson at Columbus, Ohio, before the Federal Council of Churches on December 10, 1915.

The address is as follows:

ADDRESS OF PRESIDENT WILSON AT COLUMBUS, OHIO.

Mr. Chairman, ladies, and gentlemen, I feel an unaffected diffidence in coming into this conference without having participated in its deliberations. I wish that I might have been here to learn the many things that I am sure have been learned by those who have attended these conferences. I feel confident that nothing that I say about the rural church will be new to you. I am here simply because I wished to show my profound interest in the subject which you have been considering and not because I thought I had anything original to contribute to your thought.

I think that as we have witnessed the processes of our civilization in recent years we have more and more realized how our cities were tending to draw the vitality from the countryside, how much less our life centered upon country districts and how much more upon crowded cities. There was a time when America was characteristically rural, when practically all her strength was drawn from quiet countrysides, where life ran upon established lines and where men and women and children were familiar with each other in a long-established neighborliness; but our rural districts are not now just what they used to be and have partaken in recent years of something of the fluidity that has characterized our general life. So that we have again and again been called upon from one point of view or another to study the revitalization of the countryside. There was a time, no longer ago than the youth of my own father, for example, when pastors found some of their most vital work in the country churches. I remember my dear father used to ride from church to church in a thickly populated country region and minister to several churches with a sense of ministering to the most vital interests of the part of the country in which he lived.

After all, the most vitalizing thing in the world is Christianity. The world has advanced, advanced in what we regard as real civilization, not by material but by spiritual means, and one nation is distinguished from another nation by its ideals, not by its possessions; by what it believes in, by what it lives by, by what it intends, by the visions which its young men dream and the achievements which its mature men attempt. So that each nation when it writes its poetry or writes its memoirs, exalts the character of its people and of those who spring from the loins of its people.

There is an old antithesis upon which I do not care to dwell, because there is not a great deal to be got from dwelling on it, between life and doctrine. Here is no real antithesis. A man lives as he believes he ought to live or as he believes that it is to his advantage to live. He lives upon a doctrine, upon a principle, upon an idea—sometimes a very low principle, sometimes a very exalted principle. I used to be told when I was a youth that some of the old casuists reduced all sin to egotism, and I have thought as I watched the career of some individuals that the analysis had some vital point to it. An egotist is a man who has got the whole perspective of life wrong. He conceives of himself as the center of affairs. He conceives of himself as the center of affairs even as affects the providence of God. He has not related himself to the great forces which dominate him with the rest of us, and therefore has set up a little kingdom all his own in which he reigns with unhonored sovereignty. So there are some men who set up the principle of individual advantage as the principle, the doctrine, of their life, and live by that, and live generally a life that leads to all sorts of shipwreck. Whatever our doctrine be, our life is conformed to it.

But what I want to speak of is not the contrast between doctrine and life, but the translation of doctrine into life. After all, Christianity is not important to us because it is a valid body of conceptions regarding God and man, but because it is a vital body of conceptions which can be translated into life for us, life in this world and a life still greater in the next. Except as Christianity changes and inspires life, it has failed of its mission. That is what Christ came into the world for, to save our spirits, and you can not have your spirit altered without having your life altered.

When I think of the rural church, therefore, I wonder how far the rural church is vitalizing the lives of the communities in which it exists. We have had a great deal to say recently, and it has been very profitably said, about the school as a social center, by which is meant the schoolhouse as a social center; about making the house which in the daytime is used for the children a place which their parents may use in the evenings and at other disengaged times for the meetings of the community, where they will be privileged to come together and talk about anything that is of community interest and talk about it with the utmost freedom. Some people have been opposed to it because there are some things that they do not want talked about. Some boards of education have been opposed to it because they realized that it might not be well for the board of education to be talked about. Talk is a very dangerous thing, community comparisons of views are a very dangerous thing, to the men who are doing wrong, but I, for my part, believe in making the schoolhouse the social center, the place that the community can use for any kind of coordinating that it wants to do in its life. But I believe that where the school is inadequate, and even where it is adequate, the most vital social center should be the church itself, and that not by way of organizing the church for social service—that is not my topic to-night; that is another topic—but of making the community realize that that congregation, and particularly that pastor, is interested in everything that is important for that community, and

that the members of that church are ready to cooperate and the pastor ready to lend his time and his energy to the kind of organization which is necessary outside the church, as well as within it, for the benefit of the community.

It seems to me that the country pastor has an unparalleled opportunity to be a country leader, to make everybody realize that he, as the representative of Christ, believes himself related to everything human, to everything human that has as its object the uplift and instruction and inspiration of the community or the betterment of any of its conditions; and that if any pastor will make it felt throughout the community that that is his spirit, that his interest, and that he is ready to draw his elders or his deacons or his vestrymen along with him as active agents in the betterment of the community, the church will begin to have a dominating influence in the community such as it has lost for the time being and we must find it means to regain.

For example, in a farming community one of the things that the Department of Agriculture at Washington is trying to do is to show the farmers of the country the easiest and best methods of cooperation with regard to marketing their crops—helping in their effort to learn how to handle their crops in a cooperative fashion so that they can get the best service from the railroads; to learn how to find the prevailing market prices in the accessible market so as to know where it will be best and most profitable to send their farm products; and to draw them together into cooperative association with these objects in view. The church ought to lend its hand in that. The pastor ought to say, "If you want somebody to look after this for you, I will give part of my time and I will find other men in my congregation who will help you in the work and help you without charging you anything for it. We want you to realize that this church is interested in the lives of the people of this community and that it will lend itself to any legitimate project that advances the life and interest of this community."

Let the rural church find that road and then discover, as it will discover, that men begin to swing their thoughts to those deeper meanings of the church in which we wish to draw their attention; that this is a spiritual brotherhood; that the pastor and his associates are interested in them because they are interested in the souls of men and the prosperity of men as it lies deep in their hearts. There are a great many ways by which leadership can be exercised. The church has too much depended upon individual example. "So let your light shine before men" has been interpreted to mean, "Put your individual self on a candlestick and shine." Now, the trouble is that some people can not find a candlestick, but the greater trouble is that they are very poor candles and the light is very dim. It does not dispel much of the darkness for me individually to sit on top of a candlestick, but if I can lend such little contribution of spiritual force as I have to my neighbor and to my comrade and to my friend, and we can draw a circle of friends together and unite our spiritual forces, then we have something more than example: we have cooperation.

Cooperation, ladies and gentlemen, is the vital principle of social life; not organization merely. I think I know something about organization. I can make an organization, but it is one thing to have an organization and another thing to fill it with life. And then it is a very important matter what sort of life you fill it with. If the object of the organization is what the object of some business organizations is and the object of many political organizations is, to absorb the life of the community and run the community for its own benefit, then there is nothing beneficial in it. But if the object of the organization is to afford a mechanism by which the whole community can cooperatively use its life, then there is a great deal in it. An organization without the spirit of cooperation is dead and may be dangerous. The vital principle is cooperation, and organization is secondary. I have been a member of one or two churches that were admirably organized and they were accomplishing nothing. You know some people dearly love organization. They dearly love to sit in a chair and preside. They pride themselves upon their knowledge of parliamentary practice. They love to concoct and write minutes. They love to appoint committees. They boast of the number of committees that their organization has and they like the power and the social influence of distributing their friends among the committees, and then when the committees are formed there is nothing to commit to them.

This is a Nation which loves to go through the motions of public meeting whether there is anything particularly important to consider or not. It is an interesting thing to me how the American is born knowing how to conduct a public meeting. I remember that when I was a lad I belonged to an organization which at that time seemed to me very important, which was known as the Lightfoot Baseball Club. Our clubroom was a corner, an unoccupied corner, of the loft of my father's barn, the part that the hay had not encroached upon, and I distinctly remember how we used to conduct orderly meetings of the club in that corner of the loft. I had never seen a public meeting and I do not believe any of the other lads with whom I was associated had ever seen a public meeting, but we somehow knew how to conduct one. We knew how to make motions and second them; we knew that a motion could not have more than two amendments offered at the same time; and we knew the order in which the amendments had to be put, the second amendment before the first. How we knew it I do not know. We were born that way, I suppose. But nothing very important happened at those meetings, and I have been present at some church organization meetings at which nothing more important happened than happened with the Lightfoot Baseball Club. I remember distinctly that my delight and interest was in the meetings, not in what they were for; just the sense of belonging to an organization and doing something with the organization, it did not very much matter what. Some churches are organized that way. They are exceedingly active about nothing. Now, why not lend that organizing instinct, that acting instinct, to the real things that are happening in the community, whether they have anything to do with the church or not?

We look back to the time of the early settlements in this country and remember that in old New England the church and the school were the two sources of the life of the community. Everything centered in them. Everything emanated from them. The school fed the church and the church ran the community. It sometimes did not run it very liberally, and I for my part would not wish to see any church run any community, but I do wish to see every church assist the community in which it is established to run itself, to show that the spirit of Christianity is the spirit of assistance, of counsel, of vitalization, of intense interest in everything that affects the lives of men and women and children. So that I am hoping that the outcome of these conferences, of all that we say and do about this very important matter, may be to remind the church that it is put into this world not only to serve the individual soul but to serve society also. And it has got to go to work on society with a greater sense of the exigency of the thing than in the case of the individual, because you have got to save society in this world, not in the next. I hope that our society is not going to exist in the next. It needs amendment in several particulars, I venture to say, and I hope that the society in the next world will be amended in those particulars—I will not mention them. But we have nothing to do with society in the next world. We may have something to do with the individual soul in the next world by getting it started straight for the next world, but we have got nothing to do with the organization of society in the next world. We have got to save society, so far as it is saved by the instrumentality of Christianity, in this world. It is a job, therefore, that you have got to undertake immediately and work at all the time, and it is the business of the church.

Legislation can not save society. Legislation can not even rectify society. The law that will work is merely the summing up in legislative form of the moral judgment that the community has already reached. Law records how far society has got, and there have got to be instrumentalities preceding the law that get society up to that point where it will be ready to record. Try the experiment. Enact a law that is the moral judgment of a very small minority of the community, and it will not work. Most people will not understand it, and if they do understand they will resent it, and whether they understand it and resent it or not they will not obey it. Law is a record of achievement. It is not a process of regeneration. Our wills have to be regenerated, and our purposes rectified before we are in a position to enact laws that record those moral achievements. And that is the business, primarily, it seems to me, of the Christian.

There are a great many arguments about Christianity. There are a great many things which we spiritually assert which we can not prove in the ordinary, scientific sense of the word "prove"; but there are some things which we can show. The proof of Christianity is written in the biography of the saints, and by the saints I do not mean the technical saints, those whom the church or the world has picked out to label "saints," for they are not very numerous, but the people whose lives, whose individual lives, have been transformed by Christianity. It is the only force in the world that I have ever heard of that does actually transform the life, and the proof of that transformation is to be found all over the Christian world and is multiplied and repeated as Christianity gains fresh territory in the heathen world. Men begin suddenly to erect great spiritual standards over the little personal standards which they thereto-

fore professed and will walk smiling to the stake in order that their souls may be true to themselves. There is nothing else that does that. There is something that is analogous to it, and that is patriotism. Men will go into the fire of battle and freely give their lives for something greater than themselves, their duty to their country; and there is a pretty fine analogy between patriotism and Christianity. It is the devotion of the spirit to something greater and nobler than itself. These are the transforming influences. All the transforming influences in the world are unselfish. There is not a single selfish force in the world that is not touched with sinister power, and the church is the only embodiment of the things that are entirely unselfish, the principles of self-sacrifice and devotion. Surely this is the instrumentality by which rural communities may be transformed and led to the things that are great; and surely there is nothing in the rural community in which the rural church ought not to be the leader and of which it ought not to be the vital actual center.

That is the simple message that I came to utter to-night, and, as I began by saying, I dare say it is no message; I dare say it has been repeatedly said in this conference; I merely wanted to add my testimony to the validity and power of that conception. Because, ladies and gentlemen, we are in the world to do something more than look after ourselves.

The reason that I am proud to be an American is because America was given birth to by such conceptions as these; that its object in the world, its only reason for existence as a Government, was to show men the paths of liberty and of mutual serviceability, to lift the common man out of the paths, out of the sloughs of discouragement and even despair; set his feet upon firm ground; tell him, "Here is the high road upon which you are as much entitled to walk as we are, and we will see that there is a free field and no favor, and that as your moral qualities are and your physical powers so will your success be. We will not let any man make you afraid, and we will not let any man do you an injustice."

Those are the ideals of America. We have not always lived up to them. No community has always lived up to them, but we are dignified by the fact that those are the things we live for and sail by; America is great in the world, not as she is a successful Government merely, but as she is the successful embodiment of a great ideal of unselfish citizenship. That is what makes the world feel America draw it like a lodestone. That is the reason why the ships that cross the sea have so many hopeful eyes lifted from their humbler quarters toward the shores of the new world. That is the reason why men, after they have been for a little while in America and go back for a visit to the old country, have a new light in their faces—the light that has kindled there in the country where they have seen some of their objects fulfilled. That is the light that shines from America. God grant that it may always shine and that in many a humble hearth, in quiet country churches, the flames may be lighted by which this great light is kept alive.

---

**What Wilson Thought on Various Subjects.**

## EXTENSION OF REMARKS
OF
## HON. AUGUSTUS P. GARDNER,
OF MASSACHUSETTS,
IN THE HOUSE OF REPRESENTATIVES,

*Wednesday, August 30, 1916.*

Mr. GARDNER. Mr. Speaker, under leave granted me to extend my remarks in the RECORD I insert the following:

(A) WHAT WILSON THOUGHT OF LABOR.

I. On the 13th day of June, 1909, in an address to the graduating class of Princeton College, Dr. Woodrow Wilson expressed his remarkable views on labor in the following words, which are taken from the Trenton (N. J.) True American of the succeeding day:

You know what the usual standard of the employee is in our day. It is to give as little as he may for his wages. Labor is standardized by the trades-unions, and this is the standard to which it is made to conform. No one is suffered to do more than the average workman can do; in some trades and handicrafts no one is suffered to do more than the least skillful of his fellows can do within the hours allotted to a day's labor, and no one may work out of hours at all, or volunteer anything beyond the minimum. I need not point out how economically disastrous such a regulation of labor is. It is so unprofitable to the employer that in some trades it will presently not be worth while to attempt anything at all. He had better stop altogether than operate at an inevitable and invariable loss.

II. The following is an extract from the New York American, Wednesday, March 13, 1912:

Woodrow Wilson, at a dinner in the Waldorf Hotel given March 18, 1907: "We speak too exclusively of the capitalistic class. There is another, as formidable an enemy to equality and freedom of opportunity as it is, and that is the class formed by the labor organizations and leaders of the country—the class representing only a small minority of the laboring men of the country, quite as monopolistic in spirit as the capitalist and quite as apt to corrupt and ruin our industries by their monopoly."

Woodrow Wilson in an address at the People's Forum, New Rochelle, N. Y., February 25, 1905: "The objections I have to labor unions is that they drag the highest man to the level of the lowest. I must demur with the labor unions when they say 'you must award the dull the same as you award those with special gifts.'"

III. The following are extracts from Volume V, pages 212 and 213 of Woodrow Wilson's History of the American People:

Now, there came multitudes of men of the lowest class from the south of Italy and men of the meaner sort out of Hungary and Poland, men out of the ranks where there was neither skill nor energy nor any initiative of quick intelligence; and they came in numbers which increased from year to year, as if the countries of the south of Europe were disburdening themselves of the more sordid and hapless elements of their population. The people of the Pacific coast had clamored these many years against the admission of immigrants out of China, and in May, 1892, got at last what they wanted—a Federal statute which practically excluded from the United States all Chinese who had not already acquired the right of residence; and yet the Chinese were more to be desired, as workmen if not as citizens, than most of the coarse crew that came crowding in every year at the eastern ports.

* * * * * * *

They (the Chinese) had no doubt many an unsavory habit, bred unwholesome squalor in the crowded quarters where they most abounded in the western seaports, and seemed separated by their very nature from the people among whom they had come to live; but it was their skill, their intelligence, their hardy power of labor, their knack at succeeding and driving duller rivals out, rather than their alien habits, that made them feared and hated and led to their exclusion at the prayer of the men they were likely to displace should they multiply. The unlikely fellows who came in at the eastern ports were tolerated because they usurped no place but the very lowest in the scale of labor.

(B) WHAT WILSON THOUGHT OF THE RAILROADS AND OF BRYAN.

In April, 1907, Adrian H. Joline, president of the Missouri, Kansas & Texas Railway Co., at Parsons, Kans., made a speech to his board of directors in which, among other things, he said:

But I venture to utter what is perhaps a feeble protest against the blind and foolish outcry against all railways. You and I know who are responsible for this socialistic, populistic, antiproperty crusade. It is the cry of the envious against the well to do—the old story. It is not new to this generation, only it is louder and more bitter than ever before in this country.

Mr. Joline sent a copy of this address to Dr. Woodrow Wilson, president of Princeton College, who answered it as follows:

MY DEAR MR. JOLINE: Thank you very much for sending me your address at Parsons, Kans., before the board of directors of the Missouri, Kansas & Texas Railway Co. I have read it with relish and entire agreement. Would that we could do something, at once dignified and effective, to knock Mr. Bryan once for all into a cocked hat.

(C) WHAT WILSON THOUGHT OF VARIOUS MATTERS.

Here is a letter from Hon. George Fred Williams, of Massachusetts, to Senator R. F. Pettigrew, of South Daktota:

BOSTON, MASS., *December 15, 1911.*

Senator R. F. PETTIGREW,
*Sioux Falls, S. Dak.*

DEAR SENATOR: Since we visited Gov. Wilson last summer, and carried away such pleasant impressions of his personality and conversation, I have had hopes that he might be the solution of our presidential problem.

This week I have been shocked at the reading of the fifth volume of his History of the American People, published in 1902.

It is toryism of the blackest type; it is not a history of the American people, but a history of Woodrow Wilson's admiration for everything which the radical democracy now seeks to change and a series of sneers and insults to every class of men who have sought to alleviate the injustice of capitalism. I think Senator Aldrich would have written with more charity and less bitterness. The worst is that there is no note of sympathy for any suffering and protesting class, but he seems to search for phrases to show his contempt for them. Read the volume and judge whether I exaggerate in this statement.

One thing is clear: The contents of this volume should be fully known and considered now and not developed in the headlines of the Republican press after a nomination based upon ignorance of a man's own history of himself.

The radicals of the country may overlook the past utterances, but they should be fully informed of them. Gov. Wilson has undoubtedly changed materially his old points of view, but this book proves that a revolutionary change of heart is also necessary.

I array the quotations according to the classes of men he treats and cite the pages.

First. The laboring classes.

He discovers during the first Cleveland administration that the air was filled with anarchy and "cities filling up with foreigners of the sort the Know-Nothings had feared 'who' came to speak treasons" (p. 186). "The air of the industrial regions—thickened with vapors of unwholesome opinion."

The Haymarket riot of 1886 proved "the strength and audacity of the anarchist leaders 'and' a concerted plan to practice defiance of law" (p. 187). "Men of American training began to take the taint of anarchistic sentiment." The Knights of Labor "were touched with it," "and in proportion as it became anarchistic the great order suffered disintegration and decay" (p. 187).

He describes the march of Coxey's army with sneers; how the villagers fed them "lest they should linger or grow ugly in temper." "Good natured sympathizers and men who wished to see the comedy played out subscribed funds for their most urgent needs; the painful farce was soon over" (p. 236).

"Other armies gathered in more sullen mood," bituminous coal miners and railway employees struck. "It began to seem as if there were no law and order in the land. Yet the President (Cleveland) moved in all matters with a vigor and initiative which made the years memorable" (p. 238).

He speaks of the "firmness and decision" of Cleveland in his use of the United States Army during the Pullman strike without any application from the State authorities or the courts. He states that the governor of Illinois had "not even called out the militia of the State to maintain order and protect property * * * and sympathized indeed with the strikers and resented interference" (p. 262).

[NOTE: This untrue statement shows that Mr. Wilson in writing such so-called history did not even take the pains to ascertain facts.]

Later he notes "the difficulties which Mr. Cleveland had been obliged to settle by the use of Federal troops" (p. 269).

He speaks of the railroad men and miners in 1877 as not only "idle but bent upon mischief" (p. 142); expresses his satisfaction with the violent methods used to suppress them by saying: "But they (the outbreaks) were at least gross, tangible, susceptible of being handled by counterforce and sheer authority" (p. 142).

He touches upon government by injunction by referring to the use of the boycott as a system of terrorizing those who would not yield to their demands and then says: "The courts were forced to execute, sometimes very harshly, the law against conspiracy, fitting formulas, originated in an age gone by," to new circumstances (p. 168).

I find in this history no mention of the Carnegie Homestead strike and carnage.

Speaking of industrial monopolies: "No wonder thoughtful men, as well as mere labor agitators, grew uneasy," etc. (p. 266).

Second. Immigration (in the nineties).

"Now there came multitudes of men of the lowest class from the south of Italy and men of the meaner sort out of Hungary and Poland, as if the countries of the south of Europe were disburdening themselves of the more sordid and hapless elements of their population" (p. 212).

He thinks the Chinese which were excluded by law "were more to be desired as workmen, if not as citizens, than most of the coarse crew that came crowding in every year." He claims that despite the unsavory habits of these Chinese, "it was their skill, their intelligence, their knack at succeeding and driving duller rivals out rather than their alien habits that made them feared and hated and led to their exclusion at the prayer of the men they would likely displace should they multiply. The unlikely fellows who came in at the eastern ports were tolerated because they usurped no place but the very lowest in the scale of labor" (p. 213).

History does not seem to require that the negro should be described as "the incubus of that ignorant and hostile vote" in the South (p. 136).

Of most important party significance is Mr. Wilson's attitude toward the humbler class of party workers who seek office. Of the period of 1880 he says: "The brazen, indecent clamor of the meaner sort of partisan for preferment seemed of a sudden to work with fatal violence upon affairs" (p. 156).

Third. Farmers' Alliance, Populists, Farmers.

He says of the Farmers' Alliance proposals: "These were vague purposes, and the means of reform proposed showed the thinking of crude and ignorant minds" (p. 127).

The farmers of the South after the war he describes as "men new in politics as new in political thinking and constructive purpose, as much bound within the narrow limits of their own experience as the men of the western farms. Anyone who noted how the tenets of the Farmers' Alliance and the new and radical heresies with regard to money took root there could see how the South had in fact become itself a new region" (p. 203).

"The country's knowledge of his (Cleveland's) conviction in that critical manner—silver coinage, 1892—had probably saved his party the discrediting suspicion which the fusion of Democrats with Populists upon the Pacific coast might have brought upon it. The country has never needed a man of his fiber more" (p. 220).

"The People's Party, which the newspapers of the country (1892) promptly dubbed 'Populist,' had put forth a platform which demanded that the Federal Government should itself acquire the ownership of all railways, telegraphs, and telephones," the free coinage of silver, a graduated income tax, postal savings banks, and "all lands held by aliens, or by corporations in excess of their needs, reclaimed—a radical program, which jumped with the humor of hundreds of thousands of workingmen and farmers the country over" (p. 216).

"He (Cleveland in 1892) led a party in which silver advocates abounded, men who lived remote from the seats of trade and knew nothing of its law" (p. 224).

Fourth. Grover Cleveland.

Mr. Wilson treats him throughout as a somewhat God-like person and finds nothing to criticize in his entire political course. Mr. Cleveland is described as "compact of frankness, conviction, and force; no mere partisan, but a man of the people with the spirit of service strong upon him" (p. 194). The Democrats (1884) won because they nominated "an instrument of integrity and sensible rectification in public affairs" (p 170). "Courage, directness, good sense, public spirit" made him a man whom all the country marked" (p. 192).

"Mr. Cleveland was a man of the sort they (the Mugwumps of 1884) most desired, not touched with the older sophistication of politics, his face set forward, his gifts the gifts of right action" (p. 176). "His quality was as unmistakable as Gen. Jackson's, and yet he had none of Gen. Jackson's blind impetuosity or mere willfulness" (p. 180).

On pensions he says:

"Both Democratic House and Republican Senate (in 1885) were inclined to grant any man or class of men who had served in the Federal armies during the Civil War the right to be supported out of the National Treasury, and Mr. Cleveland set himself very resolutely to check their extravagance" (p. 180).

Fifth. The campaign of 1896.

Men "were easily persuaded that money would be more plentiful for the individual as for the Nation if scarce gold were abandoned as the exclusive standard of value and abundant silver substituted, so that there should be metal currency enough for all; and they were easily beguiled to dream what a blessed age should come when the thing should have been done. They were not studious of the laws of value" (p. 255).

"The Republicans had their chief strength in the Central and Eastern States of the Union, where trade and manufacture moved strongest and men were most apt to understand the wide foundations of their business; the Democrats drew their support, rather, from the South and West, where disturbing changes of opinion had long been in progress and where radical programs of relief were most apt to be looked upon with favor" (p. 256).

The platform of 1896, he says, "uttered radical doctrines of reform which sounded like sentences taken from the platforms of the People's Party" (p. 258).

Of the campaign of 1896, "The battle was to be won by argument, not by ridicule of terror or mere stubbornness of vested interests. It was won by argument" (p. 262).

(NOTE.—This was Mark Hanna's campaign of "argument.")

Sixth. Greenbacks and silver.

"Money (after the war) was more easy to get, the paper money of the Treasury, and could be used at its face value as well as gold itself to pay the mortgages off which the older time of stress had piled up. The 'greenbacks' of the Government became for the agricultural regions of the North and West a symbol of prosperity" (p. 143).

"Thoughtful public men saw, nevertheless, that the business interests of the country rendered it imperative that specie payments should be resumed by the Government, the redundant currency of the country contracted, and money transactions put once more upon foundations that would hold fast" (p. 144).

He then speaks approvingly of the demonetization of the silver dollar in 1873 and the act of 1875 for the resumption of specie payments by the country, and says:

"The real functions of money, the real laws of its value, the real standards of its serviceability, the real relations to trade and to industry have always been hidden from the minds of men, whose thought in such matters has not been trained in the actual experiences of the open markets of the world, in actual exchange, or in the actual direction of the financial operations of government" (p. 145).

Of the South in 1890 he says, "Errors of opinion began to prevail there, as in the new regions of the West ———; hopes that the credit of the Government itself might in some manner be placed at the disposal of the farmers in the handling and marketing of their crops, demands for a 'cheap' currency, of paper or of silver, which should be easier to get and easier to pay debts with than the gold which lay secure in the vaults of the banks and of the Federal Treasury. The communities from which such demands came lay remote from the centers of trade, where men could see in the transactions of every day what real laws of credit, of value, and of exchange must always be, whether legislatures would have them so or not" (p. 203).

Mr. Wilson questions the decision validating the legal-tender notes and says that from the immense issues of war times legislators "got a novel and misleading sense of power in the creation of values." He condemns the Sherman Act because "the law of supply and demand governed the value of the metal, as of all other things bought and sold, and the statutes of no single government could set the efficiency of that law aside." "Mr. Sherman and his colleagues were playing to the galleries" (pp. 205–208).

Of the financial situation in 1892, under the Sherman Act, "So soon as the Government ceased paying in gold, the artificial parity between gold and silver which the laws sought to maintain would be destroyed; every piece of property in the country, tangible and intangible, would lose half its value and credit would collapse" (p. 222).

"The real force of the sentiment came from the uneasy economic conditions of the country, '———' prices had fallen; money was not easy to get as it had happened to be when abundant issues of paper came pouring every month from the Government's Treasury."

"If the bankers set themselves against every proposition to provide an irredeemable paper currency again or even a fresh coinage of silver there was the more reason to believe that paper or silver was only real 'people's' money. The sentiment grew; reason had not established it and reason could not check or dislodge it" (p. 146).

I end the quotations with one which discloses Mr. Wilson's fundamental conception of money. Study this if you study no other; it is fearful and wonderful:

"The coincidence of high prices and eager markets with floods of paper, coupled with the indisputable fact that the return to slacker demand, lower prices, and a greater scarcity of money had been accompanied by a considerable contraction of the redundant currency and by laws which were soon to bring about a return to specie payments, a turning back from 'cheap' money to 'dear,' confused the thinking of some men who had long been in contact with public affairs, and those who could not go quite the length of the greenbacks turned to silver for relief."

"I venture in behalf of the crude and ignorant minds to give a paraphrase of this sentence, even though my attempt may seem to jump with the humor of hundreds of thousands of workingmen and farmers the country over." It is as follows:

"The coincidence of heavy rains and high rivers, as well as the indisputable fact that in time of drought the rivers were low, led many experienced men to the confused notion that the supply of rain had something to do with the height of streams."

I venture to say that a few millions of Democrats "live remote from the seats of trade and know nothing of its laws" and have a right to ask whether Mr. Wilson, as their President, would apply such conceptions of finance to Senator Aldrich's currency measure, which is becoming a political issue, if a half million dollar campaign fund can make it an issue.

I have repeatedly defended the sincerity of Mr. Wilson in recent change of his views. I do not doubt it at all. But it is clear that he has had profound contempt for the Farmers' Alliance, the Populists, Greenbackers' bimetallists, trades-unions, small office seekers, Italians, Poles, Hungarians, pensioners, strikers, armies of unemployed; to him these classes represented no economic wrongs; Cleveland has been his worshiped idol as a President; he has regarded the East and the bankers as the sole custodians of financial wisdom; the vital question is, "Has a year destroyed all these impressions and put mercy, charity, love, and nationality into a hardened heart?" I am eager to believe it, but I rely on faith for justification. Two arguments are against him. Jefferson taught us that the great menace to the Republic was the courts, but Mr. Wilson objects to the recall of judges; in other words, he is willing that one of the three great branches of government shall be beyond popular control, and he does not see what all real Democrats see clearly, that the courts are the final intrenchment of privilege.

I dislike to call in question Mr. Wilson's application for a Carnegie pension; but I can not understand how a real Democrat could touch such money; it is steeped in human blood of Carnegie's workers, shot down by his hired Pinkertons while struggling for a decent wage out of the hundreds of millions which their labor was rolling into the Carnegie coffers. The gigantic fortune, which furnishes the pension, was gained by unjust legal privilege, which it is our function to destroy. No man should ask a pension from such a millionaire without contemplating some service in return. We know what that service is, and Mr. Wilson ought to know.

It must not be forgotten that Mr. Wilson presents himself for the presidential nomination without any apology for his past, except concerning direct legislation; but this is popular and vote getting; he has done no penance and served no apprenticeship to real democracy; just espoused. High proof of his patriotic purpose would be to retire in the face of his unhappy record.

I yield to no one in charity for a man who has been wrong and has been converted, but charity must yield to the mighty importance of our presidential nomination to a hundred million people.

This record of Mr. Wilson has fixed some points in my mind beyond turning:

First. The radicals constitute nine-tenths of the Democracy and should nominate only one of their kind, a thoroughbred. We have a paddock full of them and should not waste time firing, blistering, and bandaging old nags with bad records.

Second. The men who can carry Republican States because they are sufficiently near Republicans are not fit presidential timber for us.

Third. We must understand the mathematical law that the capitalistic press abuses a man according to his loyalty to popular interests. The candidate whom this press asserts to be most feared by the Republicans is the man we should most fear.

Fourth. We are not selecting a candidate because he wants the place, but because he is the best man in the country for it. If he does not consent, we can draft to this place a leader, a strong, loyal, brave, self-sacrificing patriot.

Fifth. The people have decided to come to their own; they have ceased party worship. The Republicans are doomed unless we blunder. We can open up a future for our Republic such as mind has not conceived when once the people rule. But our leader must be a real one; a thoroughbred; our watchword, "No mongrels need apply."

Tell me what you think of all this.

Sincerely, yours, GEORGE FRED WILLIAMS.

## Comments on the Seamen's Law.

### EXTENSION OF REMARKS
OF
### HON. J. HAMPTON MOORE,
OF PENNSYLVANIA,
IN THE HOUSE OF REPRESENTATIVES,

*Wednesday, August 30, 1916.*

Mr. MOORE of Pennsylvania. Mr. Speaker, the chairman of the Committee on the Merchant Marine and Fisheries in his closing remarks on the $50,000,000 ship-purchase bill spoke also of the seamen's act, which he included in the legislation coming from his committee, which he held to be beneficial to the country. We have been hearing a great deal on both sides of the question since the seamen's act was passed. The employers and the employees have certainly not agreed as to all the provisions of the seamen's law. It is said to have done much to drive the American flag from ships on the Pacific Ocean. On the east coast it has also been the subject of much complaint.

In view of the statement of the chairman of the Merchant Marine and Fisheries Committee upholding the seamen's law, the ship-purchase bill, the American registry of foreign ships and their admission to the coastwise trade, I insert a communication just received from one of the active concerns in my district which has to contend with some of those new administration laws. It illustrates difficulties that confront some of those who are trying to do business under the conditions that have been imposed.

PHILADELPHIA, PA., *August 28, 1916.*

Hon. J. HAMPTON MOORE,
*Crozer Building, Philadelphia, Pa.*

DEAR SIR: We inclose clipping taken from the New York Journal of August 24, 1916.

The writer has been a resident in your congressional district for 40 years, and our firm has been here in the shipping business for 70 years in the old fifth ward of Philadelphia.

We have never seen shipping conditions worse than they are at the present time in regards to handling men and getting work done. This is not any more due to war conditions on the other side than to the operation of the so-called seamen's law, which has had a more or less demoralizing effect on all classes of men depending on the sea for a living. It used to be that we could depend on men reporting for work and continue at work, but under the operation of the present seamen's law men have no respect for agreement or promises of any kind, sometimes deserting within an hour or two after they have made an agreement to go, leaving the vessels in the lurch, causing a great deal of lost time, expense, and annoyance to all concerned, because "Jack Tar" has no longer a mind of his own. This we attribute to the direct working of the seamen's law

We have always hired men by the month, and they would give us notice if they intended to leave and take a better job, and we would try and fill the vacancy, but now we do not know what to look for. Wages are from 50 to 100 per cent higher than ever before, and they are being fed twice as well as they feed themselves at home. There is more or less conspiracy amongst men to compel members of crews who are not affiliated with organizations to force them to become members of labor bodies wherever they can do it, in whatever port the tug happens to be, at the expense of holding up the boat when she is ready to sail by refusing to work or leaving the boat, unless the captain or some other officer abroad the vessel accedes to their demands to become a member of such bodies. This has happened in a number of cases. The captains and engineers have lost all authority over the men. The discipline has been demoralized. There seems to be no head of authority on board ship, as there should be and used to be, for the successful operation of a vessel. As soon as one of our tugs touches a port, such as New York or Norfolk, the firemen quit unless the boat is held up 12 hours, and then go back to work in the morning. In the meanwhile we are put to additional expense trying to secure other men, and also losing time and frequently the job itself.

We have vessels which are equipped with day and night crews, and the men work six hours on and six hours off. They have good quarters, good working conditions, good wages, and all they can eat; and if any additional labor laws are put on the books by these hostile organizations the end of this business is in sight.

It is very hard to get capital to invest in this line of business any more, and out of 360 to 400 vessels that are being built on the Atlantic coast and Pacific coast there are only two tugboats being built, which is in itself an indication of the changed conditions of this trade.

Our operating expenses have more than doubled in the last five or six years and we are still trying to do work on the old basis; in fact, are often compelled to accept work sometimes for less than old prices.

The shipping interests of this port, represented by the Philadelphia Maritime Exchange, the Vessel Owners' and Captains' Association, and other bodies of a similar nature, all of which are located in your congressional district, are vitally interested in the operation of the present laws, and in the enactment of any future legislation, having a tendency to make conditions worse than they are, and after reading the inclosed clipping, we felt impelled to protest to you, as our Congressman, against these conditions. We have never written a letter of this kind to our Congressman before, and we would consider it a great favor to be allowed to talk to you more freely on this condition of affairs, than we could possibly cover in a letter, and we know of a great many others within a few hundred feet of us in the same lines of business, who would be very glad to give you the fullest information of the effect of the "Seamen's law" and other measures, coming from their experience in handling vessels.

We take great pleasure in noting that you have always championed the interests of shipping communities along the Atlantic coast in the position as Congressman for this district and hope that you will take a lively interest in the contents of this letter, as there will be more to follow, if more seamen's laws are to be passed.

The present administration has done more to unsettle conditions in the shipping trade than war times ever did.

Hoping that you may be able to give our shipping very much needed assistance in the near future, we remain,

Yours, truly,
A. S. HUGHES' SONS TOWING & TRANSPORTATION CO.,
PER JAMES E. HUGHES.

SEAMEN URGE NEW LAW PROTECTING WORK.

WASHINGTON, *August 31.*

Congressmen from the Great Lakes and coast districts are being bombarded with appeals from members of organized seamen's associations to enact laws which will make more stringent certain clauses of the seamen's law, which, it is claimed, are interpreted too liberally in favor of shipping companies.

The wide discretion vested by the law in Secretary of Commerce Redfield, it is said, has resulted in the waiving of numerous explicit provisions designed to protect the union seamen.

## Rural Credits—Land-Loan Banks Put Farmers on Even Keel with Business Men in a Financial Sense.

### EXTENSION OF REMARKS
OF
### HON. WARREN WORTH BAILEY,
OF PENNSYLVANIA,
IN THE HOUSE OF REPRESENTATIVES,

*Friday, August 11, 1916.*

Mr. BAILEY. Mr. Speaker, what the Democrats in the Sixty-third Congress did for commerce and industry by the passage of the Federal reserve act, emancipating credit and unhorsing the Money Trust, the Democrats of the Sixty-fourth Congress have done for the farmers in the adoption of the farm-loan act, perhaps one of the longest steps in advance in the interest of the agricultural class that have yet been taken in the United States.

NOT A CURE-ALL.

It is not my purpose to imply that the farm-loan act will prove a sovereign remedy for all the ills which the American farmers have experienced. It was not intended as a cure-all and it will not be applied as such. But it will undoubtedly facilitate farm development and aid the farmer in utilizing his credit to better advantage than ever before. For the first time in his history the American farmer, under this beneficial legislation, is on an even keel with the merchant and the manufacturer in a financial sense. He can as readily utilize his assets in securing funds for the prosecution of his enterprise, whether it be in the form of liquidating or refunding an old debt or in that of needed improvements.

Under the new law a system of agricultural credit has been worked out with the same painstaking care that marked the creation of the Federal reserve bank. And this system will be as advantageous to the farmer as the Federal reserve bank has proved to be to the business man. Perhaps there is not a mer-

chant nor a manufacturer in the United States to-day who would vote for the repeal of the Federal reserve act, and there is not likely to be a farmer in the United States a year or so hence who would vote for the repeal of the great measure which President Wilson signed July 17 last.

In some of its important aspects the farm-loan act resembles the Federal reserve act. The scheme of regional distribution of Federal reserve banks has been followed with reference to the farm-loan banks, these having a like distribution and a similar form of organization and management. In other words, the Federal reserve act has simply been adapted in the farm-loan act to the needs of the farmers of the country. And it is believed that the latter will vindicate itself as indisputably as the former has done.

TWO SYSTEMS PROVIDED.

Under the farm-loan act two farm-mortgage systems are provided, both under the general supervision of the Federal Farm Loan Board. Both systems have for their prime object the promotion of agricultural prosperity by putting it in the way of farmers to borrow money on farm-mortgage security for relatively long periods on reasonable terms. One is a system operating through 12 regional land banks, to which Federal aid is to be extended; the other is through joint-stock land banks, which may be privately organized. These may be indefinite in number. No Federal aid will be given them. But they will be, in a general way, under Federal jurisdiction and control.

While the primary object of the farm-loan act is to make it easy and cheap for the farmer to obtain money, there is another object scarcely less important, those who framed the law having had in mind the matter of making the farm-loan field attractive to those who have money to lend. This, indeed, may eventually prove one of the most beneficial features of the law. It will at once serve the borrower and the lender. By stabilizing farm credits it will attract money in the direction of the farm that would otherwise seek investment in manufactures or in business.

These investments will take the form of debentures or bonds issued by the land banks and secured by farm mortgages. The funds for the loans are to come in part from the capital of the banks and in part from the sale by the banks of bonds secured by first mortgages on farm lands. These bonds and the mortgages securing them are exempt from all taxation, Federal, State, and municipal, thus adding to their attractiveness to the investor. They are to be in denominations of $20, $50, $100, $500, and $1,000. Federal reserve banks and member banks of the Federal Reserve System are authorized to buy and sell these bonds.

One of the first duties of the Farm Loan Board will be that of dividing the country into 12 districts, in each of which is to be located a Federal land bank. These banks are authorized to lend on first mortgages on farm lands in amounts of $100 up to $10,000 for approved purposes. However, before loans are made to individuals 10 or more farmers in each district must have formed a national farm-loan association. These associations become stockholders in the land banks in proportion to the amount their members wish to borrow. That is, if they wish to borrow an aggregate of $100,000, they must subscribe for $100,000 worth of the stock of the land bank. In the long run all stock in the Federal land banks will be owned exclusively by these national farm-loan associations; in other words, by the farmers themselves. Each one of these regional land banks is to start with not less than $750,000 capital, making a total of $9,000,000, this amount being appropriated by the farm-loan act. Each bank is liable for the bonded indebtedness of every other bank in the system. This affords the practical advantages of a central bank, with the added advantage of distributed authority in administration. The particular needs of the several districts will naturally be better understood by these regional banks than it would be possible for a central bank to understand them.

WILL MAKE FOR UNIFORM INTEREST RATES.

It is believed that the system will make for uniform interest rates throughout the United States. In fact, the law prohibits the exaction of a higher rate than 6 per cent, and the fees charged will be subject to the control of the Farm Loan Board. The borrowers are thus very effectively protected against extortionate fees, as well as against high interest rates. Loans may be made for periods ranging from 5 to 40 years. Upon these loans a small annual or semiannual payment on the principal is a fundamental requirement, but there is nothing in the law prohibiting the borrower from liquidating his indebtedness whenever convenient. The farmer has never had an advantage of this sort before. The insuperable obstacle in his path has been the short-time requirements which he had to meet when he became a borrower. The mortgage on his farm has been the nightmare which rode him without ruth.

The money interests of the country have stood in the way of this beneficial legislation in the past. It is no new idea. It has, in fact, been advocated for many years. But there were always influences sufficiently powerful to restrain action on the part of Congress. It was left for the present administration to realize a dream which had long been cherished by the farmers of the United States.

In this connection it may be well to outline the practical workings of the measure; and for this purpose I shall draw upon a writer in the New York Evening Post, who has made a careful study of the act and has undertaken to show how it will apply in practice. His statement of the practical workings of the law follows:

PRACTICAL WORKINGS OF LAW.

"In practice the law works about as follows: A man wishes to borrow money to make improvements on his farm. If a national farm-loan association of 10 or more farmers has been formed in his community, he makes application to them. If one has not been organized, he applies to that in the nearest district or an agent of a Federal land bank. These associations are formed by the farmers themselves. Ten or more men who desire to borrow in the aggregate as much as $20,000 for the improvement of their land, or who desire to pay less interest on mortgages that they already hold, and not be burdened with expensive renewals or live in fear of not being able to renew, apply to a Federal land bank for the necessary blank forms and form an organization. In due course, unless there is some good reason to the contrary, a charter is granted authorizing them to do business and receive money from the land banks.

"Any member of the farm-loan association may apply for a loan of not less than $100 and not more than $1,000, but 5 per cent of the desired loan must be paid in at first as capital stock. The borrower really is compelled to become at the start also an investor. And on the 5 per cent of capital stock to which he subscribes he, of course, receives dividends. In requiring every borrower to set aside 5 per cent of his loan for capital stock, the system automatically increases the amount of the stock of the Federal land bank every time that a loan is made, so that in reality the total amount of increased stock contributed by borrowers can never be below 5 per cent of the mortgages or loans it makes.

"The act specifically defines the purposes for which loans may be obtained, as (a) for the purchase of land for agricultural use; (b) for the purchase of equipment, fertilizers, and live stock necessary for the proper and reasonable operation of the mortgaged farm, the term equipment to be defined by the Federal Farm Loan Board; (c) to provide buildings and for the improvement of farm lands, the term 'improvement' to be defined by the Federal Farm Loan Board; (d) to liquidate indebtedness of the owner of the land mortgaged, existing at the time of organization of the first national farm-loan association established in or for the counties in which the land mortgaged is situated, or indebtedness subsequently incurred for one of the purposes mentioned.

THOSE ENTITLED TO BORROW.

"Only those who own and cultivate farm lands or are about to own and cultivate such farm lands are entitled to borrow, and no one can borrow save for the purpose stated in the act. Those who after borrowing do not use the money for the purposes specified in the mortgages are liable to have their loans reduced or recalled. The secretary-treasurer of each association is required to report any diversion of borrowed money from the purposes stated in the mortgages.

"No loan may be made for more than 50 per cent of the value of the land mortgaged and 20 per cent of the value of the permanently insured improvements upon it.

"Every mortgage must provide for the repayment of the loan under an amortization plan by means of a fixed number of annual or semiannual installments. The bank is given power to protect itself in case of default by recalling the loan in whole or in part or by taking other necessary action.

INTEREST CHARGES.

"While no Federal land bank is permitted to charge more than 6 per cent interest on its farm mortgages, it is provided that the interest charged also shall not exceed by more than 1 per cent the rate paid on the last issue of bonds. For example, if the bank pays only 4 per cent on an issue of bonds, it can not charge more than 5 per cent for the next farm loans it makes. Out of this margin of 1 per cent, together with such amounts as can be earned on paid-in capital, the bank must set aside certain reserves and meet all expenses, any balance or net profit being

distributed as dividends to the loan association or other stockholders.

"In addition to the system of 12 Federal land banks and the national farm-loan association, the act permits the establishment of joint-stock land banks. These are authorized to lend money on farm-mortgage security and to issue farm-loan bonds. These joint-stock banks must have a capital of not less than $250,000. Not receiving any Federal aid, these second kind of banks are free from many of the conditions imposed on the Federal land banks. They may make loans for purposes other than those specified in the case of the Federal land bank. But the joint-stock bank can not charge more than 6 per cent and is subject to the same 50 and 20 per cent value limitation and the limitation of territory. They must also provide an amortization system of repayment, and can not receive under any form or pretence any commission or charge not specifically authorized by the act or approved by the Farm Loan Board. Their capital stock, unlike that of the Federal land banks, is not exempt from taxation. The necessary machinery for frequent examination of these banks is also provided for by the new law."

MAY HAVE ONE ADVERSE EFFECT.

Mr. Speaker, let me say in conclusion that I am not here either to say that this measure is perfect in detail or that in its workings it will offer a solution for all the problems which confront the farmer. In former remarks of mine on the general subject of agriculture and the interest of the farmer I have sought to indicate the limitations of measures such as the one providing for farm-loan banks. One fear which has possessed me in connection with the act mobilizing the credit of the farmer is this, that it will tend in a marked degree to stimulate farm land values and thus to make it harder for the landless man to obtain a footing on the soil. My fear may not be warranted; and I earnestly hope that the event will prove it groundless. Yet I can not overlook the fact that every advance in civilization and the arts, every improvement in means of communication, every step in the progress of society, every facilitation of production and exchange has been marked by an increase in land values and by a tendency of ownership to concentrate in fewer hands, the independent farm owner giving way to the tenant farmer and the tenant farmer in turn giving way to the farm laborer. That the improvement which this measure is expected to bring in the facilitation of farm development can have a different effect or be attended by a different sort of manifestation it is not easy to believe.

But let us all hope that at least this may serve in some sort to clear the way for the more fundamental legislation which many of us look forward to with growing hopefulness, legislation which will tend to discourage land monopoly, to promote improvement, to check tendencies which to-day are so alarming and to bring about a new era in social development along normal lines, at once relieving the congestion of the centers and the isolation of those who have gone to the very margin in quest of free opportunity. It seems to me no greater cause than this challenges attention to-day. It is one that sooner or later must be dealt with seriously. And I have lent my support to the farm-loan act largely because I have considered it a step toward the greater issue which it is likely to force into view.

---

**Record of Charles E. Hughes.**

## EXTENSION OF REMARKS

OF

## HON. WILLIAM S. BENNET,

OF NEW YORK,

IN THE HOUSE OF REPRESENTATIVES,

*Friday, August 25, 1916.*

Mr. BENNET. Mr. Speaker, under the leave granted me to extend my remarks in the RECORD I include "Record of Charles E. Hughes, governor of New York, 1906–1910—A call to national service."

The matter referred to is as follows:

RECORD OF CHARLES E. HUGHES, GOVERNOR OF NEW YORK, 1906–1910—A CALL TO NATIONAL SERVICE.

*I. Regulation of public-service corporations.*

Gov. Hughes advocated and secured direct State control over every public-service corporation, great or small, in the State of New York.

Adequate public-service regulation meant to the governor, on the one hand, "strict supervision to insure adequate service and due regard for the convenience and safety of the public," and, on the other hand, provision that corporations be "permitted to operate under conditions which will give a fair return for their service." The governor believed that legislative action which would secure a sound balance between these two objects must in every case be based upon legislative investigation into the facts.

His policy of public-service regulation is, therefore, expressed in part by his advocacy and approval of the public-utilities act and in part by his veto of two important public-service bills which were not based upon an investigation of the facts.

In his first message to the legislature in 1907 Gov. Hughes pointed out that the existing regulation of public-service corporations was inadequate because the powers of the present board of railway commissioners were not sufficiently well defined and because no suitable means was provided by which they could enforce their decisions. No penalties were provided in case of disobedience to the orders of the board, and the board was not authorized to institute and conduct legal proceedings to enforce its orders. The governor recommended that the board of railway commissioners and the commission of gas and electricity should be abolished and that a new commission be constituted with adequate powers of regulation and supervision over all public-service commissions.

PUBLIC-UTILITIES ACT.

After a vigorous legislative battle the public-utilities law which the governor recommended was passed in the legislature early in June. It placed under direct State control every public-service corporation, great or small, in the State of New York, with the single exception of telephone and telegraph companies. It applied to railroads, street railways and subway lines, express companies, and gas and electric light companies. The previously existing State railroad commission and commission of gas and electricity were abolished and a public-utilities commission, with two branches, one for New York City and the other for the remainder of the State, or, as it is sometimes stated, two commissions for the two districts of the State, was established in its stead.

These two commissions were given the power and the duty to compel all corporations to give safe and adequate service at just and reasonable rates; to prevent all rebates and discriminations in rates by the different classes of shippers or passengers in all kinds of traffic; to compel all common carriers to have sufficient cars and motive power to meet all requirements for the transportation of passengers and property which may be reasonably anticipated, and to see that every common carrier is held specifically liable for loss or damage due to delay in transit occasioned by negligence. The bill prohibited the issuance of free passes except in a few instances. It provided that no franchise should be capitalized in excess of the amount actually paid to the State as consideration of the grant of the franchise, and that the capital stock of a corporation formed by the merger or consolidation of two or more corporatins should not exceed the sum of the capital stock of the corporations so consolidated at their par value, or such sums and any additional sums actually paid in cash. It also forbade the capitalization in the stock of any corporation of any contract for consolidation or lease, and forbade any corporation to issue bonds against or as a lien upon any contract for consolidation or merger. It provided, moreover, that no corporation should purchase or hold stock in another such corporation or common carrier unless authorized to do so by the commission.

Several features of this bill met with vigorous opposition while it was before the legislature and the people of the State for discussion. The provision making the orders of the commission effective unless declared by a court of competent jurisdiction to be unauthorized or unconstitutional was opposed by lawyers representing the railroad companies, who asked that it be replaced by a provision calling for an elaborate court review for any order of the commission. This substitute provision was not adopted.

Veto by mayor and repassage: As this bill affected New York City, it went direct to Mayor McClellan, who vetoed it promptly. It was passed over his veto without delay, however, and became a part of the statute law of the State.

The governor, in his speech of acceptance (second nomination) the following year, outlined the powers of these commissions and indicated how in its administrative functions the act would protect the interests of both the public and the public-service corporations:

"A plan for the effective regulation of public-service corporations now covering railroad, gas, and electrical companies has been provided. It has been the subject of sharp attack because of its safeguards against predatory financiering and its provisions for the enforcement of public obligations. That there must be regulation of these corporations is obvious. Congress can not supervise commerce within the State any more than the State can regulate interstate commerce. The concerns of the State must be attended to by the State. These corporations receive public franchises because of expected public benefits. They receive these franchises upon clear conditions and they owe a duty to the State to furnish adequate service without unjust discriminations upon reasonable terms. This duty the State must enforce. It must be done either directly by the legislature or through some administrative body.

"But the questions which arise in connection with the enforcement of public rights are varied and intricate. They demand investigation and the consideration of a host of details. Special conditions must be considered, and to deal justly there must be flexibility of action. In view of the vast range of our commerce and the variety of questions presented, it is utterly impracticable for the legislature to attempt to regulate these concerns directly. It would have to resolve itself into an administrative board and sit continuously, and even then, by virtue of the very nature of its organization, it would inevitably fail.

"The natural tendency of legislation, in attempting direct regulation in detail, is toward arbitrary action, and nothing can be more injurious. Increased facilities, better stations, improved roadways, the elimination of grade crossings, additional rolling stock are imperatively required to meet the growing demands of commerce. The convenience of the public, the furnishing of adequate service, and the employment of thousands of men at fair wages are dependent upon earnings. Arbitrary reduction of rates without investigation and definite knowledge of results is the height of folly. We must insist upon just treatment of corporate enterprise while at the same time we demand strict enforcement of the obligations of the corporation to the public.

"These ends can be accomplished satisfactorily only through an administrative board, such as the public-service commission. This, I believe, must be recognized by all. But we do not wish a State commission with mere pretense of supervision, because of inadequate powers, but real regulation within constitutional limits.

"We had a board of railroad commissioners, a State gas commission, and a board of rapid transit commissioners. There was an illogical division of authority and the supervision of the State over railroads was hopelessly ineffective because of the inadequacy of the powers

conferred. There was no reason why the subway in New York should be under one jurisdiction and the elevated and surface lines under another. The powers of supervision were divided while the roads themselves were held under a common control.

"A comprehensive plan has been adopted, uniting in a single scheme the supervision and regulation of public-service corporations, and because of the onerous duties necessarily imposed, the State was divided into two districts. Thus we secure protection against dishonest or improper capitalization, and suitable means for the investigation of grievances, for securing the safety and convenience of employees and the public, and generally for compelling the performance of public duty * * *."

Extension of powers: In 1908 Gov Hughes recommended that the jurisdiction of the public-service commission be extended over telephone and telegraph companies which had been excluded from its control in the law creating it. This was done in 1910 and the control of the commission over all public-service corporations was made complete. Although the governor approved the bill, in his memorandum of approval he called the attention of the legislature to certain respects in which the bill was open to criticism; first, in hampering convenience of administration by failing to divide the jurisdiction of telephone corporations particularly between the commissions of the two districts; secondly, in failing to give a sufficiently wide control over the issue of securities. Upon these points the governor urged amendatory legislation.

Appointments to commissions: The commissions for the two districts were each to be composed of five members appointed by the governor by and with the advice and consent of the senate. In making the appointments Gov. Hughes was actuated only by the best interests of the public and not by partisan cousiderations. To each commission he appointed two Democrats, and all the appointees were men who were distinguished for their ability and knowledge, without regard to previous political record.

VETO OF OTHER PUBLIC-SERVICE MEASURES.

In his comment, already quoted, upon the public-utilities act, Gov. Hughes expressed his general policy of public-service regulation: "We must insist upon just treatment of corporate enterprise while at the same time we demand strict enforcement of the obligations of the corporation to the public."

The governor recognized that "just treatment of corporate enterprise" required a full and accurate investigation of the facts. He vetoed the bill providing for a maximum 2-cents-a-mile railroad fare, and the bill providing for a 5-cent fare to Coney Island because neither bill had been preceded by careful legislative investigation, nor was either bill based upon reports or statistics officially collated. Both bills therefore came, in the governor's opinion, within the field of unsound and arbitrary legislation. His memorandum of veto, in the case of each bill, is quite as important a pronouncement on the theory of public-service regulation as are his memoranda and messages approving the public-utilities act.

Memorandum of veto of 2-cent fare bill: "This bill, with specified exceptions, provides for a maximum passenger fare of 2 cents per mile upon the railroads in this State. Steam railroads less than 150 miles in length which are not within the counties of New York and Kings (or within the limits of an incorporated city) are permitted a higher maximum charge of 3, 4, or 5 cents a mile, according to length of line, unless through consolidation, lease, or control they form a part of a system whose combined lines exceed 150 miles, in which case the provision for a maximum rate of 2 cents a mile is applicable.

"The passage of the bill was not preceded by legislative investigation or suitable inquiry under the authority of the State. Nor is the fixing of this rate predicated on reports or statistics officially collated which would permit a fair conclusion as to the justice of its operation with reference to the railroads within its purview. It plainly reflects dissatisfaction with existing conditions and an effort to provide a remedy through arbitrary action. It seems largely to have been the result of annoying requirements and discrimination in connection with the sale of mileage books on certain roads.

"The bill represents a policy seriously mistaken and pregnant with disaster. It is of the utmost importance that the management of our railroad corporations should be subject to strict supervision by the State, and that regulations compelling the observance of the law and proper and adequate service should be rigidly enforced. It is the duty of these corporations to provide transportation of passengers and goods at reasonable rates, and the State should compel the performance of this obligation.

"But injustice on the part of railroad corporations toward the public does not justify injustice on the part of the State toward the railroad corporations. The action of government should be fair and impartial, and upon this every citizen, whatever his interest, is entitled to insist. We shall make matters not better but worse if to cure one wrong we establish another. The fact that those in control of railroad corporations have been guilty of grossly improper financiering and of illegal and injurious discriminations in charges points clearly to the necessity of effective State action, but does not require or warrant arbitrary reprisals. In dealing with these questions democracy must demonstrate its capacity to act upon deliberation and to deal justly.

"It is of the greatest importance not only that railroad corporations should be compelled to respect their public obligations, but also that they should be permitted to operate under conditions which will give a fair return for their service. Upon this depends not simply the security of investors but the security of their employees and the protection of every form of industry and commerce through the maintenance and extension of necessary transportation facilities. Nothing could be more opposed to the interests of the community as a whole than to cripple transportation corporations by arbitrary reduction of earnings. It may be said that a 2-cent passenger rate is not so extreme as to have a very injurious result. But this is a debatable question. Large and prosperous suburban communities have been built up through the offer of commutation rates much less than the proposed maximum. Upon the maintenance of these rates many thousands of our citizens rely. Considerable differences exist between the railroad corporations with respect to the territory they serve and the cost of service, and it is manifest that what would be fair for one might be far from fair for another. An arbitrary dislocation of tariffs by the flat of the legislature without investigation is a matter of serious concern. The best that could be said for such legislation would be that it should be regarded as an isolated case and not as a precedent. For if flat freight rates, either for all commodities or for different kinds of commodities, were similarly to be fixed by the legislature without investigation or proper ascertainment of their justice, our railroad business and our industrial and commercial interests would be thrown into confusion.

"I do not mean to be understood as saying that a maximum 2-cent passenger rate would be unreasonably low. It might be high enough in many cases. Possibly it would be high enough in all cases. I fully appreciate the fact that those who have promoted this bill believe that such a rate would be fair. But I deem it most important that the policy of dealing with matters of this sort arbitrarily, by legislative rule of general application without reference to the demands of justice in particular cases, should be condemned. Every workingman, every tradesman, and every citizen believing himself to have aught at stake in the prosperity of the country should determinedly oppose it. For it not only threatens the stability of business enterprise which makes our prosperity possible, but it substitutes unreason for sound judgment, the ill-considered demands of resentment for the spirit of fair play, and makes impossible patient and honorable effort to correct abuses.

"There is a better way. It has already been pointed out in the legislation of this State. It is practically impossible in view of the nature of the problems and the many questions requiring consideration for the legislature to deal directly with railroad rates in a satisfactory manner. Where a matter requires investigation in order that a just result may be reached, the obvious course is to create a body which can investigate, with expert assistance, as summarily as possible, and which shall have adequate power to make appropriate orders. Such a body has been created in this State through the public-service commissions law recently enacted."

In Oswego, N. Y., on October 12, 1908, when interrupted by a question from the floor as to his reason for vetoing this bill, the governor said:

"I will tell you. Our railroads are our great highways of commerce. All business, all our activities, depend upon their efficiency. There are thousands and thousands of workingmen depending upon their efficiency. We want better service. We want a constant improvement in those facilities. We want more trains, more freight cars, better stations, the best equipment. We want goods moved, we want no losses from any failure of transportation facilities. We want the best passenger service that we can have. We want workingmen well paid. We want the whole business conducted with a high degree of efficiency and in accordance with public duty. We also want an absence of discrimination and we want reasonable rates. Now, we do not believe in arbitrary legislation in these matters. I do not believe in reducing the earnings of railroads without knowing what you are about. If it is fair and right, then do it. If it is not fair and right, do not do it. I want to know. These matters are matters for study, not for arbitrary action. It is no easy matter to deal justly in all these concerns, justly by the public, justly by those who are dependent on the service, justly by all those who are involved in the service. We have got to deal with these matters so that while we want to correct wrong we do not want to paralyze industry or affect in any spurious manner the necessities of commerce. No; my friends, there is a right and a wrong way about these things.

"It may seem easy to get votes by just getting a pair of shears and a red book and clip wherever you think it would be popular. I do not want to be governor on those terms. I am in this office, and I take pride in being in it only to the extent that I can satisfy my conscience and sense of duty. I won't sign any bill simply because it may be deemed popular. On the contrary, I will sign anything that I can think is in the interests of the people and veto anything I think is not in the interests of the people if I believe it to be right."

Veto of 5-cent fare bill to Coney Island: On May 23, 1908, Gov. Hughes vetoed the bill providing that no railway company, other than steam or trunk lines, etc., might charge over 5 cents for any continuous ride in a city or village unless the public service commission consented to a higher rate. The street cars running to Coney Island had been charging 10 cents each way, and the bill arbitrarily reduced this fare to 5 cents. The governor favored the lowest possible rate, but urged that the facts should first be ascertained to determine what that rate should be, as evidenced by his memorandum of veto:

"It is plainly intended to affect charges over existing lines. It establishes a maximum rate of 5 cents without regard to the length of the route or the reasonableness of such a fare. In other words, it is an arbitrary maximum imposed by legislative fiat. But it is clear that if the rate is not a reasonable one and if the requirement would operate as a confiscation of the company's property, the legislature can not impose it. The attempt to enforce such a rate under such circumstances would be abortive, as a successful appeal could be made to the courts. It is idle to suppose that the companies can be compelled to reduce their fares to 5 cents merely because the legislature says so.

"Whether a 5-cent fare is a fair one depends upon facts and not upon sentiment, desire, or prejudice. Whether the result be agreeable or disagreeable, it inevitably will be reached only after the facts have been ascertained and considered. Justice requires this, and under the Constitution the requirement will be enforced.

"The proper way to deal with these matters is to provide for investigation in which the whole subject can be considered, specious claims sifted out, and a result just, both to the corporations and to the public, arrived at.

"It may be said that the provision of this bill with regard to the public service commission has this effect. But this is not the case. The bill provides for a flat rate of 5 cents unless the commission consents to a higher fare. It does not provide that the commission shall ascertain or fix a just and reasonable rate, or that an increase shall be allowed because it is just and reasonable. Evidently the bill was drawn not to give the commission power to fix a just and reasonable rate, but to fix a rate by the statute with a provision for appeal from the legislature to the commission, and without any proper indication of the conditions under which the appeal is to be heard.

"This can only result in confusion, affording, as it would, opportunity for protracted litigation over the validity of such a statute and postponing the proper settlement of the real question involved.

"It is highly important that we should have transportation in our cities at the lowest fair rates. It is desirable that in New York City there should be low rates for the congested quarters to the breathing spots in the outlying districts and by the sea. The sure way, and the only way, to make real progress in this direction is through ascertainment of the essential facts and the making of reasonable rates in accordance with the facts. This bill is wrong in principle and is not adapted to secure the desired result. I can not approve it."

When told that his disapproval of such measures as the 2-cent fare and the Coney Island bill would mean a loss of votes, Gov. Hughes replied, in his address to the students of Columbia University on October 1, 1908:

"* * * It is proposed that we shall not deal with these important concerns of the State in an arbitrary fashion. There are those who, for the sake of making political capital, would indorse ill-considered measures deemed by the thoughtless to be of public importance.

If our education and our training mean anything, they mean that, while we are rigorous in insisting upon the performance of the public duty, we shall be equally rigorous in the demand for justice to all, and will not allow administration to be perverted, even to so-called popular ends, even at the risk of loss of votes, if, in fact, the proposal is unsound and unjust."

Gov. Hughes followed the same principle in a bill where an arbitrary rate might prove unjust to the public when he vetoed senate bill No. 1538, guaranteeing to corporations a net income of 10 per cent upon the capital actually expended and wrote the following memorandum on May 29, 1908:

"The criterion of rates and charges should be whether they are just and reasonable, and whenever any question arises as to this point opportunity should be afforded for a fair and impartial examination, as provided under the public-service commission's law. A rule that there should be no change in rates and charges unless it leaves the corporation a net income of 10 per cent upon the capital actually expended would in many cases be clearly unjust to the public. Frequently a large part of the capital expended is represented by bonds bearing a rate of interest under 6 per cent, and a rule that would give the company a net annual income of 10 per cent upon the capital expended might be found to provide 12 or 15 per cent for returns upon stock investment."

The principle expressed in the governor's approval of the public-utilities act and in the veto of these other public-service measures is the same—an insistence that all legislation regulating public-service corporations be based "upon the facts and not upon sentiment, desire, or prejudice"; and a further insistence that there be in the machinery of the State permanent facilities for ascertaining these facts.

*II. Banking reform.*

A thorough system of banking reform, comprised in 21 new State laws, was put into operation by Gov. Hughes. These laws secured three things: Added State supervision through extension of the powers of the State superintendent of banks; greater protection for investors; more expert and more responsible methods of bank administration.

In 1907 the large number of failures in bank and trust companies had called attention to the need for radical revisions in the State banking laws. The supervision of trust companies was inadequate, and a plan had been developed by certain financiers which made it possible for them to get control of a chain of banks, although they had only a moderate amount of capital to begin with. Their plan of cooperation was for a man or group of men with such schemes in view to get a controlling interest in a bank of moderate size, to put up this stock as collateral for loans in another bank, using the proceeds of such loans to buy stock in still other institutions, and then to go on repeating this operation, thus making it easy to "pack" the board of directors and to use the bank's funds for speculative purposes.

The governor asked six prominent bankers of New York City to serve as an unpaid commission to suggest the necessary reforms in the banking law. The supervision of trust companies and the question of the extraordinarily high cost of liquidating institutions that had failed were the most important aspects of the work to be done.

REGULATION OF GENERAL BANKING.

The new laws provided for a more adequate supervision over institutions under the jurisdiction of the banking department and for an expert administration of the affairs of institutions that had failed, enabling them to resume promptly when possible and reducing the expense of receiverships. The superintendent of banks was given power to approve or disapprove propositions to open branches of banks, trust companies, and safe-deposit banks.

These laws also defined the responsibilities of directors; provided, among other things, for the elimination of the "dummy" director; and required every director of a State bank or trust company upon being reelected to office to make oath that the stock necessary to qualify him as a director had not been hypothecated during the preceding term. Loans were safeguarded and restricted and underwritten loans prohibited, except under certain conditions, to check the tendency toward the use of corporate funds in untried and speculative enterprises. Banks and trust companies were also prohibited from becoming underwriters and from loaning on second mortgages if the total encumbrance was in excess of two-thirds of the value of the property and from loaning on such securities at all if the first mortgage exceeded 10 per cent of the capital and surplus of the bank or trust company making the loan. The aggregate of real-estate loans by banks in Manhattan was limited to 10 per cent of their total assets, in banks outside of Manhattan to 25 per cent.

The matter of deposits with other institutions and loans secured by the stock of moneyed corporations were also regulated to check the "chain-of-banks" evil. The cash reserve to be maintained by such banks was increased in Manhattan from 15 to 25 per cent of the deposits, 15 per cent to be carried in the vaults and 10 per cent as deposits with a reserve agent, and in Brooklyn 10 per cent cash in vaults and 10 per cent with a reserve agent. Elsewhere in the State the reserve requirements for State banks was increased from 5 to 6 per cent for cash in vaults and from 5 to 9 per cent with a reserve agent.

Trust-company reserves were also altered; in the Borough of Manhattan 15 per cent of the deposits, including certain deposits, was to be carried in cash in the vaults, as against the previous requirements of 5 per cent cash in vaults and 10 per cent with a depository. In other boroughs of Greater New York the reserve requirement was made 10 per cent cash in vaults and 5 per cent with a depository, while elsewhere in the State it was made 4 per cent cash in vaults.

REGULATION OF SAVINGS BANKS.

The new laws were designed to relieve savings banks from the irregularities of market fluctuations. All trustees of savings banks were required to take an oath of office. It was provided that such banks could not borrow money or pledge or hypothecate any of the securities except by a vote of the majority of the board of trustees and with the written approval of the superintendent of banks. The regulations regarding the valuation of securities held by savings banks were also altered. Provision was made for the amortization or gradual extinction of premiums or discounts on all securities owned by such banks, so as to bring them to par at maturity.

SUPERVISION OF IMMIGRANT PRIVATE BANKS.

Many immigrants in New York City had been defrauded by so-called "bankers" and steamship agents who received small savings to be transmitted abroad or to be applied to the purchase of steamship tickets for the depositor's relatives in Europe. Owing to the difficulties involved in proving that the money had not been sent abroad, it was virtually impossible to convict such "bankers."

Early in Gov. Hughes's administration, a law was passed which regulated the taking of such deposits and required such "bankers" to file a $15,000 bond with the State authorities for the protection of depositors.

As a result of the investigation of immigration conditions in the State by the commission of immigration (described under "Immigration"), Gov. Hughes recommended more adequate legislation for the regulation of private banks which were doing business with newly arrived and non-English-speaking aliens. Some 500 such banks were operating in the State, receiving deposits of money for safe-keeping or for transmission abroad, without supervision by any constituted authority, and millions of dollars had been lost by their depositors. Although considerable opposition developed, a law was finally enacted in 1910 bringing such bankers, with certain exceptions, under the supervision of the State authorities. The law was immediately attacked as unconstitutional, but under the governor's direction a legal fight was carried to the United States Supreme Court, where it was finally declared constitutional.

Some of the more important provisions of the law prohibited advertising or holding oneself out as a "banker" unless duly licensed, required the filing of bonds with the State comptroller, and created a commissioner of private banking with authority to inspect and supervise the activities of such "bankers."

CITIZENS' COMMISSION ON WALL STREET.

In the first year of his administration Gov. Hughes urged the legislature to appoint a committee to inquire into Wall Street methods relating to speculation in securities and commodities and to recommend legislation to prevent illegitimate transactions and protect investors. A bill embodying these recommendations was introduced, but failed of passage.

In December, 1908, he therefore appointed a citizens' committee to undertake this investigation without expense to the State. His letter of appointment clearly indicates what he had in mind:

"In this Commonwealth the vast commercial and financial transactions represent the activities of the entire country. It is of the utmost importance that legislation affecting business and exchange should be the result of deliberate study, and that we should neither threaten business stability by ill-considered measures, nor, on the other hand, invite agitation or impair confidence by ignoring abuses and by failing to provide suitable correction.

"It is with this view that I request you to act as a committee for the purpose of collecting facts, receiving suggestions, and making such recommendations as may seem to you fitting with regard to the following question:

"'What changes, if any, are advisable in the laws of the State, bearing upon speculation in securities and commodities, or relating to the protection of investors, or with regard to the instrumentalities and organizations used in dealings in securities and commodities which are the subject of speculation.'"

Report of commission: The commission, after examining many witnesses and investigating the experiences of foreign countries and the legislation of American States, and after overhauling all available sources of information, recommended (1) that all brokers discourage speculation upon small margins; (2) that the stock exchange use its influence and power to prevent members from soliciting and generally accepting business on a margin of less than 20 per cent; (3) that the stock exchange, to prevent losses incurred through swindling advertisements on circulars, in addition to prohibiting advertisements by its members of enterprises "other than of a strictly legitimate business character," should urge and enforce a similar rule upon the curb market—the fact that 85 per cent of the business done on the curb comes through members of the stock exchange making such a rule effective. Many other practices and remedies were considered, such as the advisability of requiring periodical examinations of the books of brokers, corresponding to the examination of national banks, with a view to preventing or minimizing failures, and the incorporation of the stock exchange to subject it more immediately to State control, etc.

The legislature took no action after the filing of this report, but the stock exchange, appreciating the value and importance of the recommendations suggested, hastened to adopt them in toto.

The effect of the banking laws secured by Gov. Hughes was to extend the principle of state regulation and to place upon banks the responsibilities and obligations of public institutions as opposed to those of merely private business bodies.

*III. Electoral reform.*

Gov. Hughes urged comprehensive electoral reforms, which included a simplified form of ballot, prevention of corrupt practices, and publicity for campaign contributions.

SIMPLIFIED BALLOT.

In his first message to the legislature in 1907 the governor urged the adoption of a simplified form of ballot, without the party column, in which the names of candidates were to appear grouped under the names of the offices. The object was to insure the absolute independence of the electorate:

"I believe that the best form of ballot is that in which the names of the candidates for the respective offices appear but once, grouped under the names of the offices. I recommend that such a ballot, with appropriate designation of party opposite the candidate's name, should be adopted. * * *

"The argument in favor of the party column is that the voter who wished to vote a straight ticket should have the opportunity of doing so with a minimum of inconvenience. But the straight voter has no inherent right to a preference, and his constitutional privilege is satisfied if he is allowed freely and secretly to vote by ballot for each candidate. * * * It is wholesome that the voter should be required to express his preference with reference to each office; and it is desirable that each party should be stimulated to additional care in its nominations, particularly for minor offices, because the candidates are to be submitted to this test. It is also important to make the count as simple and easy as possible. No question of party expediency is involved, as all parties are treated alike."

In his next annual message, the governor renewed his recommendation:

"Each voter should be required to express his choice for each office separately. All the parties will be placed upon the same footing and the effect will be to encourage the nomination of candidates who will not suffer by reason of separate consideration. The uncertainty which from time to time develops with regard to the proper method of voting split tickets should be removed, and the best way of accomplishing this result is to put the voters on the same basis. Experience in other States shows that partisan fears of the effect of a similar ballot are

unfounded. There should be no unwillingness to provide for the freest expression at the polls of the popular will, and public policy demands that the strength of party organization should be maintained by the quality of its acts and candidates, and the principles for which it stands, and that it should not be permitted to proceed along the line of least resistance by means of favoring arrangements of our election machinery."

The legislature passed a bill prohibiting the printing more than once, except for judicial office, of the name of any person nominated for office. It failed to meet the governor's recommendations, and on May 23, 1908, it was vetoed. The governor said:

"This bill provides that the name of a person nominated for any office except a judicial office shall not be printed upon the official general ballot for any election more than once under the title of such office.

"This measure is wholly indefensible. Undoubtedly one of the criticisms of the present form of ballot is that candidates' names frequently appear in several columns, but the remedy is to change the form of ballot and to abolish the party column. In other words, we should have a simplified ballot in which the names of the candidates for the respective offices should appear but once, grouped under the names of the offices.

"But as long as we retain the present form of ballot with its party column, it would be a grave injustice to prohibit a candidate's name from appearing in more than one column."

The governor, when renominated, again took occasion to make clear in his speech of acceptance his stand on this aspect of electoral reform:

"I have recommended the adoption of a simplified form of ballot, without the party column, in which the names of candidates for the respective offices shall appear but once, grouped under the names of the offices. I do not regard such a form of ballot as rendering it more difficult for the voter to exercise his constitutional privilege of designating upon the ballot the candidate whom he wishes to support. On the contrary, such a ballot would have the advantage not only of giving him this opportunity, but of encouraging the nomination of candidates who would not suffer by reason of separate consideration. Whatever may be the present state of sentiment in the State as to this, I believe that in the light of the experience of other States the argument in its favor will steadily gain ground."

Using the New York City 4-foot election ballot as his text, the governor, in his last message to the legislature, illustrated the urgent need of ballot reform:

"The defective form of the present ballot has lately had conspicuous illustration. It became such a monstrosity in the recent election in New York City as to receive a well-nigh universal condemnation. The ballot there presented to the voters was about 4 feet wide and had 19 columns for city candidates. The name of one candidate for mayor appeared 8 times in as many separate columns; another 4 times, while the names of 5 candidates for mayor appeared but once. The names of certain candidates for comptroller and for president of the board of aldermen occurred 7 times, and of others 5 times. The names of 3 candidates for justices of the supreme court occurred 4 times, and those of their principal competitors 3 times. The third party column upon the ballot contained no nominations for the general city ticket, while the name of the candidate for mayor associated in the public mind with the name and emblem of this party appeared in the eighth column. For example, in the tenth election district of the twentieth assembly district in the county of New York the ballot contained 184 names, although there were only 19 offices to be filled and only 84 separate candidates; in addition much space was wasted in blanks, and one party column contained no nominations whatever.

"The use under legal sanction of such an unwieldy ballot, with its absurd duplications, in the most important municipal election held in this country is such a serious reflection upon our capacity to devise suitable election methods that we should hasten, out of very shame, to make needed correction."

PUBLICITY FOR CAMPAIGN FUNDS.

Early in his first administration Gov. Hughes secured the enactment of amendments to the corrupt-practices act which provided for the widest publicity of contributions to and expenditure of campaign funds. Chapter 596 of the Laws of 1907 specifically included the candidate within its provisions, and required him to file a statement of any contributions made by him. The limitation making the law applicable only to agents of a political committee who pay money "to an aggregate amount exceeding $200" was omitted. Provision was made for petitioning a court of justice to compel the filing of such statements and for a prompt inquiry "into the facts and circumstances and into such violations of or failures" to comply with these provisions "without respect to any technical requirement" in such manner as the court may direct and to secure compliance with or punish for violation of the law.

In 1910 chapter 429 was passed, amending the election law in relation to the expenditure of money in connection with primary elections. "Political committees" were made to include a combination of three or more persons aiding or taking part in "the election or defeat of a candidate for nomination at a primary election or convention, including all proceedings prior to such primary election, or of a candidate for any office, whether public or not, to be voted for at a primary election; or to aid or defeat the nomination by petition of a candidate under the primary-election law."

All campaign payments not made through political committees, but given for the above-mentioned purposes, had to be accounted for in the manner provided for the filing of statements for regular elections. The other provisions of the law, as to personal expenses and accounting to the treasurer or candidate, were also made applicable to primary elections and nominations for office. The penal law was then amended by chapter 430, bringing "primary elections and conventions and proceedings for the nomination of candidates by petition" within the prohibitions of the election law.

The simplified ballot has grown steadily in favor all over the country. The principle of publicity for campaign contributions is now an accepted part of popular conviction and of election procedures. These facts sufficiently attest the validity of Gov. Hughes's campaign for both.

*IV. Primary reform.*

Throughout his administration Gov. Hughes advocated direct primaries. He believed that this was the reform most needed to insure both the rights of the individual voter and the strength and health of party organization.

The governor lost his fight for direct primaries. But his persistent advocacy of the principle resulted in a broad campaign of popular education which will eventually give to New York and other States sound direct-primary provisions.

He called an extraordinary session of the legislature to pass an apportionment act and to consider at the same time the question of amending the primary-election law.

As a result the legislature passed assembly bill No. 2401, "to amend the primary-election law generally," but the governor vetoed it on July 26, 1907, as it contained provisions which he could not approve:

"This bill, in its preferential provisions for nominations by district committees and for the use of an organization or 'district-committee' column on the ballot, distinctly favors those of any party who are in control. The enrolled voters are not put upon an equal footing. Instead of encouraging care and self-reliance in voting, the proposed form of ballot makes it easy to dispense with discriminations. It is open to the objections I have urged to our election ballot, and its adoption as a feature of a plan of primary reform I regard as a serious mistake. In making changes we should keep in view the end to be attained, and we should proceed in a consistent manner."

In his message to the legislature, 1908, the governor again urged the need for primary reform, and called attention to the wide difference between organization in the interest of the party and the misuse of such organization for purely selfish purposes.

"Within itself the party constitutes a democracy, and its members should be protected against despotic proceedings.

"There should be unrestricted opportunity for the expression of the wishes of the members of the party in the selection of candidates for office. Only in this way can healthy party activity be secured. And in order that the enrolled voter should be encouraged to take part in party proceedings, and that the will of the party in the choice of candidates may be expressed and not defeated by a perversion of party machinery, I am in favor of direct nominations. I renew the recommendation made at the last session that provision should be made for such nominations, at the primary, of candidates for office. In my judgment it is advisable that the provision should take the permissive form; that is, that a method of direct nominations should be defined which party organizations may adopt by suitable rule. I favor this course because I believe that in this manner legislation can be had which will secure a fair trial of the plan and pave the way for its general adoption in the light of persuasive experience."

Carries fight into second term: When renominated for office, the governor again dwelt on the need for primary election reform:

"I believe that the surest way of securing the expression of the will of the voters of a party with respect to candidates for office is by taking that expression directly. There has been a marked development of public opinion upon this subject. I thoroughly believe in party organization. Cooperation and loyalty, leadership and organized effort, are essential to party success.

"The best way to make the organization effective is to keep it in close touch with the voting strength of the party, to secure the largest participation of the enrolled voters in party affairs, and to stimulate interest and the feeling of responsibility for party action.
